In the Revolution it was only the drilling by Baron Steuben that made soldiers out of the American Army. Except when behind entrenchments the Volunteers, when attacked by Regulars, fled like sheep. The only exception which I recall was in the operations which led to the capture of Burgoyne, and the men who there did the fighting, although nominally untrained, were men who had had experience and training in the French and Indian wars. The term of service of the Volunteers was continually expiring and the men going home, notwithstanding that it was at crucial periods when their services were most required.

In Greene's campaign in the South the militia was not expected to stand more than one or two volleys. In the War of 1812 everybody will recall how the New York militia saw their comrades being beaten and driven into the river on the opposite side of the Niagara and refused to cross to their aid on the plea that they could not be sent outside of the State. We have all heard of the "Races of Bladenburg," when a really superior force of militia hardly waited for the first volley before it fled before the English regulars and marines, leading to the capture of Washington.

In the rebellion, in the first part of the war, our soldiers were merely an armed mob; brave but not knowing how to use their valor and hopelessly inefficient, and it was only the equal inefficiency of the rebels that prevented defeat. Of course at the end of the war the soldiers on each side were tempered veterans, equals, or probably the superior, of any troops in the world.

Volunteering, as you remember, in the rebellion broke down. Then came drafting, with all the accompanying scandals, the buying of substitutes, and bounty jumping. Commissions were ordinarily given to elective officers or to men who raised a company or parts of a company or regiment, and, with few exceptions, these proved inefficient. There was a similar record of inefficiency in the Spanish War; plenty of undirected courage, inefficiency of officers, inefficiency of soldiers, all for want of previous training; and in each case the bravest, most zealous, most patriotic ones first, because of volunteering, therefore bore an undue proportion of the loss.

Every man owes a duty to defend his country; owes it as a duty to his country to spend the time which is necessary to enable him to make his services valuable to his country.

I do not myself see how so small a time of training as that required by the Swiss system is sufficient; but those who know more than I do say that it trains them so that good soldiers are turned out, or at least soldiers who, with a very small amount of training, are good soldiers. It must be because they are taken young.

Notwithstanding the Constitution provides for the control of the militia by the States, I find nowhere in it any prohibition of the United States requiring all its citizens to sufficiently train to make them efficient in the protection of the country. With the immense forces now in vogue, and with the easy and swift transportation across the ocean, we can no longer rely upon our small standing Army, and it is necessary that it should be reinforcible at once with men sufficiently trained to be at once useful in the firing line. Without this training, they are a mere armed mob, and it is nothing less than murder to send them against trained soldiers.

But not only is it necessary to have these men trained, but it is necessary to have officers trained. Not only is it necessary to have men and officers trained, but it is necessary to have uniforms, arms, munitions—everything that is necessary to equip and supply an army, ready in the arsenals, so that they can be at once made efficient.

The volunteering system broke down. The National Guard system broke down last summer. Those who could least be spared volunteered;

those who ought to have gone and who could be best spared stayed at home.

Two young men went from our office. We not only held their places open but paid their salaries while gone. Two sons of Mr. McCaslin went. They lost their positions. Whether they will get them when they come back or not I do not know. One was a student at Case School; the other a law student. Both have lost a year at a time when it was most important to them. All four went cheerfully and have suffered cheerfully the loss incident thereto. But why should they suffer this loss and others go scot free because they did not have the patriotic instinct which stimulated these boys.

I urge, therefore, that you support any well-considered bill which requires universal, compulsory military training to an extent sufficient to make persons subjected to it efficient; that you also support and urge a system providing adequate armament and equipment for an adequate army of defense, and I do not mean by "adequate army of defense" one of a few hundred thousand men; I mean enough to equip such an army as England is putting in the field, with arsenals placed in such parts of the country as will be best protected from at least the first stress of attack; that the construction of the Navy be speeded up; that the supply of munitions be speeded up until we have enough to make us secure.

I am told that in active service a rifle does not last more than five or six weeks. I am unable to see why this should be so, yet those who know how things go in the great European war say that it is so; and we must prepare, therefore, upon that basis.

You observe I am not urging a large standing Army. I am urging a large citizen Army which is capable of meeting on an even footing with any professional soldiers who invade us, and which, if occasion shall arise and opportunity present itself, may be able to make our rights respected either beyond any of our borders, or beyond the ocean.

Yours, respectfully,

JOHN G. WHITE.

Investigation in the Supply and Control of Food Products.

EXTENSION OF REMARKS
OF
HON. WILLIAM P. BORLAND,
OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Monday, February 12, 1917.

Mr. BORLAND. Mr. Speaker, under leave of the House I desire to insert here the correspondence between the President and the Federal Trade Commission in regard to the proposed investigation into the supply and control of food products.

The correspondence is as follows:

THE WHITE HOUSE,
Washington, February 7, 1917.

MY DEAR MR. CHAIRMAN: An adequate supply of food products is a matter of concern to the Nation at all times. It is of peculiar importance at present. Our domestic food supply is normally very large and has become increasingly varied. In some respects it has steadily expanded and has kept pace with the increasing population. Unfortunately, this is not true, however, of a number of important staple products, including certain cereals, and particularly meats. While the population of the Nation has increased 26,000,000 since 1900, the production of the two leading cereals, corn and wheat, while tending to increase, has shown only a slight advance; and that of the meat products in the same period has shown an increase of only 3,500,000,000 pounds—a decrease of 29 pounds per capita.

Much can be done, and is being done, to change this situation through improved methods of production and through the control or eradication of plant and animal diseases. But there are problems also of distribution; and in some respects the problems presented in this field are the more difficult. Only recently have official agencies been created to deal systematically with this side of the difficulty. Much work has been done, and considering the limited nature of the powers under which it has been conducted, no little headway has been made, particularly in obtaining and diffusing useful information. Nevertheless, it is not yet clear in many directions just what the nature of the difficulty is or what measures should be adopted to effect fundamental improvements. Many necessary facts are not available, and it is questionable whether any single agency of the Government at present possesses the requisite power and equipment to secure the information needed to enable both public and private instrumentalities to render their fullest service to the people. It is obvious that there will be no sufficient incentive to enlarge production if there does not exist an unobstructed and economical system of distribution. Unjustifiable fluctuations in prices are not merely demoralizing; they inevitably deter adequate production.

It has been alleged before committees of the Congress and elsewhere that the course of trade in important food products is not free, but is restricted and controlled by artificial and illegal means. It is of the highest public concern to ascertain the truth or falsity of these allegations. No business can be transacted effectively in an atmosphere of suspicion. If the allegations are well-grounded, it is necessary that the nature and extent of the evils and abuses be accurately determined, so that proper remedies, legislative or administrative, may be applied. If they are not true, it is equally essential that the public be informed, so that unrest and dissatisfaction may be allayed. In any event, because of the grave public interests which the food supply affects, the efficient performance of the duties imposed upon agencies of the Government requires that all the pertinent facts be ascertained. To this end the power of such agencies should be made adequate, if in any respect they are now deficient.

Pursuant to the authority conferred upon me by the act creating the Federal Trade Commission, therefore, I direct the commission, within the scope of its powers, to investigate and report the facts relating to the production, ownership, manufacture, storage, and distribution of foodstuffs and the products or by-products arising from or in connection with their preparation and manufacture; to ascertain the facts bearing on alleged violations of the antitrust acts, and particularly upon the question whether there are manipulations, controls, trusts, combinations, conspiracies, or restraints of trade out of harmony with the law or the public interest.

I am aware that the commission has additional authority in this field, through the power conferred upon it to prevent certain persons, partnerships, or corporations from using unfair methods of competition in commerce. I presume that you may see fit to exercise that authority upon your own initiative, without direction from me.

The Department of Agriculture has been engaged for several years in studying problems of distribution. I have noted that it has been proposed in the Congress to add to the funds of the department and give it larger powers to conduct its investigations. As its activities will touch phases of the problem I am calling to your attention which may not be covered by your inquiry and may furnish information of great importance for the purposes contemplated, I shall direct that department to cooperate with you in this enterprise.

For the adequate prosecution of the inquiry by both your commission and the Department of Agriculture it is essential that sufficient funds be available. I accordingly request that you furnish me at the earliest possible moment an estimate for an appropriation, if one is needed, to supplement existing appropriations, to enable you successfully to carry out the investigation.

A copy of this letter is being sent to the Secretary of Agriculture, with the direction that his department cooperate with you and with the request that he furnish an estimate for the funds needed by his department.

Sincerely, yours, WOODROW WILSON.

Hon. WILLIAM J. HARRIS,
Chairman Federal Trade Commission,
Washington, D. C.

FEBRUARY 9, 1917.

DEAR MR. PRESIDENT: Your letter of February 7 relative to an investigation concerning foodstuffs, addressed to me as chairman of the Federal Trade Commission, has been presented to the commission, and I am directed to advise that it will gladly undertake the investigation you have directed and will at once prepare an estimate, for submission to Congress, for an additional appropriation necessary to the successful doing of this work.

In accordance with your plan for cooperation between the commission and the Department of Agriculture, the Secretary of Agriculture has been asked for a conference to arrange the measures to be taken.

Very respectfully,

WM. J. HARRIS, *Chairman.*

The PRESIDENT,
The White House, Washington, D. C.

Rates for Transportation on Steamship Lines.

EXTENSION OF REMARKS
OF
HON. WILLIAM J. CARY,
OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

Monday, February 12, 1917.

Mr. CARY. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include a certified copy of resolutions relative to rates for transportation on steamship lines.

CERTIFIED COPY OF RESOLUTIONS.

Resolutions relative to rates for transportation on steamship lines.

Whereas steamship lines operating between Milwaukee and various ports of the Great Lakes and connecting with and interchanging traffic with eastern rail lines have afforded in the past transportation facilities and rates which have been of great advantage and value to the commerce of Milwaukee and the vast territory west of this gateway; and

Whereas the enactment of the Panama Canal act and decisions of the Interstate Commerce Commission relating thereto have compelled almost complete discontinuance of service by steamship lines owned and operated by railroads and during the past season of lake navigation resulted in entirely unsatisfactory transportation service; and

Whereas it has been officially announced that during the ensuing season of lake navigation there will be no regular package freight carriers operated between Milwaukee and eastern lake ports, with the possible exception of one Canadian and one American line; and

Whereas the city of Milwaukee is spending and contemplates spending large sums of money to improve the inner and outer harbor, which money will be needlessly expended if the package-freight business is discontinued; and

Whereas the Interstate Commerce Commission, in its annual report to the Congress, December 1, 1916, on pages 63, 64, and 65, after reviewing conditions created by the provisions of the Panama Canal act, says:

"We think that these facts should be brought to the attention of the Congress, so that in the light of those facts it may determine whether or not authority shall be conferred upon the commission to permit, in such cases and under such circumstances, a continuance of the railroad ownership, control, or operation of the water lines, subject to such further and different orders as the commission may subsequently enter upon a further hearing and a showing of substantially changed circumstances and conditions": Therefore be it

Resolved, That the Common Council of the city of Milwaukee respectfully petitions the Congress of the United States to enact legislation as early as may be that will afford greatly needed relief to this community in the direction indicated by the aforesaid report of the Interstate Commerce Commission; be it further

Resolved, That the attention of all Members of Congress from the State of Wisconsin be called to that part of the report of the Interstate Commerce Commission above referred to and urged to take immediate action to secure the amendment of the Panama Canal act as recommended by the commission; also

Resolved, That a copy of these resolutions be transmitted to the Members of the United States Senate and House of Representatives from the State of Wisconsin.

The German-American Controversy.

EXTENSION OF REMARKS

OF

HON. WILLIAM W. RUCKER,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Monday, February 12, 1917.

Mr. RUCKER of Missouri. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include a patriotic letter received from a very distinguished and intelligent German citizen of my district, expressing some views with regard to the present international situation.

The letter is as follows:

DALTON, MO., *February 9, 1917.*

Hon. W. W. RUCKER,
Washington, D. C.

MY DEAR SIR AND FRIEND: Allow me to express my appreciation to you and your colleagues in Congress who have so ably stood by our President in these strenuous times.

I ascertain from yesterday's papers that President Wilson will hold our Nation aloof from international entanglements regarding the German-American controversy in that we will endeavor to settle our differences without the advice and aid of England, France, and Russia.

This is what I call real American statesmanship, and something to be proud about, and a move which the German and Austrian nations must and will respect.

No doubt, to my mind, if we "go it" alone, respect Germany in the future as we have in the past (from an American standard viewpoint), and not entangle ourselves with their questionable embroilments with other nations, neither give ear to such as would too gladly use us as their tool, then we will retain the respect of every sane citizen of this vast Republic, beside in the final adjustment and summing up of affairs, Old Glory will unfurl itself to the breezes of the world, proclaiming in one universal language that every inhabitant of the globe may understand that justice and mercy were the bulwarks in which we trusted, the defense that defied the world, the arm of strength that won that glory that was due us.

I must admit I can not help but feel proud of the fact a Missourian, Hon. WILLIAM J. STONE, had much to do in bringing about that sturdy patience exercised by our worthy President up to this hour. It means so much to have men of cool and rare judgment at the head of our Government, and it means yet more to have such men in Congress at a time like this.

To my mind it matters not whether we declare war against Germany for their offenses or withhold our grievances until peace overtures become the order of the day. Every American citizen who has any respect for his home, his State, his country, will uphold President Wilson's actions, not alone in sentiment but with his life if need be. As long as the American Government adheres to the policy of taking care of its own troubles, not mixing itself in alliances where strife and contention exist, so long will every patriotic subject within her domain be willing to shed his blood for her honor and glory.

As units in a Christian Nation, we assure you that in our approach to the throne of grace, at the feet of the High and Lofty One, we humbly bring our heart's petition, that He might grant all of you godly patience and wisdom, together with tact and skill, to so order and guide our ship of state that it may safely pass over the troubled waters now raging, and soon enter once more the sweet haven of peace.

Respectfully, yours,

CHARLES W. STEIMAN.

Post Offices of the First, Second, and Third Classes Under Civil Service.

EXTENSION OF REMARKS

OF

HON. CLEMENT C. DICKINSON.

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, February 13, 1917.

Mr. DICKINSON. Mr. Speaker, I am opposed to the Senate amendments 61 and 62 on page 120 of the legislative, executive, and judicial appropriations bill, as it comes back to the House from the Senate, which amendments read as follows:

The office of postmaster in each class shall hereafter be a nonpolitical office and shall be within the classified civil service, and appointments thereto shall be made in accordance with the civil-service rules and, so far as practicable, by promotion or transfer upon merit, without regard to politics, from the employees of the Post Office Department, subject to the permanent civil-service regulations and requirements.

In order to promote economy in the distribution of supplies, and in auditing and accounting, the Postmaster General may designate districts and central offices in such districts through which supplies shall be distributed and accounts audited, but in no case shall the postmaster at the central station be given authority to abolish offices, to change officers or employees in offices included in such district.

I am opposed to further extending the civil-service law so as to place the post offices of the first, second and third classes under the civil service. These are presidential offices, and the appointments are made under the Constitution by the President, by and with the advice and consent of the Senate. I prefer to leave the law as it is.

The provisions of the civil-service law have already been extended far enough—too far, I fear. Over 60 per cent of the employees of the Government are already covered under the civil-service law. I am opposed to turning over the control of these presidential offices to the Civil Service Commission, and the right of the people to express by petition and otherwise their choice as to who shall serve them as postmasters be thereby nullified, so that they shall have no voice in their selection. They are entitled to be heard and to express through their Representatives in Congress, or directly to the appointing power, their wishes and judgment as to who should serve them daily in handling their mails.

I believe in consulting the people with reference to the selection and appointment of the inferior Federal officers as well as those of higher degree. I am opposed to life tenure in office or to covering any public official into office for long periods of time, without giving the people most nearly affected an opportunity to express themselves as to the competency and fitness of those who serve them.

You do not take away this right in the higher Federal offices. The President of the United States can not hold high office except for four years at a time—his selection is subject to popular choice and the will of the people, as expressed at the ballot box; the United States Senators for six years and Representatives in Congress only for two years, without coming back to the people for an expression of their will and desire. The same limitations for State, county, and city officials.

I was opposed to President Taft's order in the closing days of his administration by which he covered into the civil service all fourth-class post offices, and I am opposed to any further extension of this law at this time. I am opposed to striking down the voice of the people and centralizing all power here in Washington into the hands of the head of any department or any commission, that under certain rules and regulations would certify a list of three names to the Postmaster General, from which the appointment should be made.

I am opposed to limiting the right of choice to such an extent, that very probably those excluded from the certified lists would be far more acceptable to the community to be served than those certified. Let us keep the Government and its administration in closer touch with the people, and you will be more liable to preserve this Republic than you will by serving notice on the people that it is none of their concern as to who handles their mail and serves them as their local postmaster.

Let the heart throb of the people be felt in every department of Government, and the Republic will live longer. Put in official life no man by civil-service rules or otherwise who feels that he is independent of and owes no obligation to the people whom he serves. Popularize your General Government in all its departments by consulting the will and judgment of those best qualified to determine who is best fitted to serve them. Personal touch and daily association is worth more than mere rigid rules and selection by far-away officials without knowledge or care of those best fitted to know.

The people are rightfully jealous of their right to be consulted in the naming of public officials to serve them and with whom they will come in daily contact. There is no public officer with whom the people come in closer and more frequent touch than the postmaster, who hands to them their daily mail, and the people of each community ought to have some voice in his selection.

If put under the civil service some man unknown and undesired and personally unfitted by temperament and otherwise might be named, merely because he secured a high rating by being able to pass an examination; that does not give the best evidence as to who would make the best postmaster. It has been well said that the civil-service doctrine with life tenure is violative of the fundamental principles of the American Government and should not prevail. It is undemocratic. It is against the spirit of party government, whether Democratic or Republican.

The presidential post offices are administrative offices, not merely clerical positions, such as are now covered by tens of thousands into the civil service and made subject to certain civil-service examinations in order to determine their clerical ability to fill said positions. I believe that Federal officers who hold administrative offices should be in accord with the party in power, and thus better aid to make successful that administration chosen by the people to control and administer the affairs of Government. Those selected to help administer the affairs of Government should not be those who would tear down, but

those who would help build up and make successful the administration which they are supposed to serve. In this way the country is best served.

Let the ideals of the fathers of our Republic be preserved. Popular government will pass away when the consent of the governed is no longer sought or regarded by those in control. The people of this country have been so jealous of their right to control their own affairs and to name their own public officials that they have refused to permit public officers to hold office except for short terms at one time without reelection, for fear they will become too independent of those who gave them office or will fail, because of long tenure, to faithfully discharge the duties of their office. This power at short periods to select their officials—Federal, State, county, and city—they have retained to themselves. The principle ought to be preserved in its application to the selection of postmasters as far as practicable, so that the wishes of the public to be served may be known and considered along with the fitness and qualification of the applicant for appointment.

Preparedness.

EXTENSION OF REMARKS
OF
HON. LEWIS L. MORGAN,
OF LOUISIANA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, February 13, 1917.

Mr. MORGAN of Louisiana. Mr. Speaker, I suppose all of us at least to-day realize that the greatest problem that confronts the body politic is preparedness.

Now, I am no adept in military or naval science, nor am I versed in the arts of war; therefore I shall look to that great personage who holds in his hands the destinies of the Nation—the President of the United States—and our military and naval consultants and experts for guidance in this gravest of all matters.

If their statements are to be given due credence, we are justified in actively supporting the measure under consideration and thus prevent our Navy from falling below the strength which would render this country reasonably secure against foreign invasion.

I am averse to relying in the merest degree upon the magnanimity or the presumable military disadvantages under which potential antagonists might labor in a struggle against this Government.

However, I shall carefully refrain from undertaking to impugn the motives or questioning the patriotism of those who may differ with me on this question. Nevertheless it is distressing that there should be any effort made to lull our people into thinking that our forces are on a parity with the forces of possible foes; that is, since there is a serious doubt in the minds of thoughtful men touching the adequacy of our own land and sea forces. Under the circumstances, it occurs to me that it is the part of wisdom to immediately increase the efficiency of our own forces and thus remove all doubt on this score.

We must be so palpably prepared that all nations might readily foresee the complete futility of attempting to desecrate American soil.

There is one inescapable fact upon which most of us agree, and that is that the rank and file of the American people, to whom the future of our country can be safely intrusted, have reached the inexorable conviction that the United States is not wholly prepared to cope with a powerful enemy; and you can not convince them otherwise, for the reason that their collective judgment is based upon statements made by no less authority than our military and naval experts, whose personal intimacy with the strength and efficiency of our forces gives their counsel great value.

I am not a disciple of the peace-at-any-price propaganda, yet I decry war and hope that our own sword has been unsheathed for the last time.

Who is there among us that would not rejoice to see the people of the world raised from the degredation of militarism and navalism. If that devoutly wished-for day ever comes, no one will exult over its realization more enthusiastically than the American people. However, in the meantime we must not allow our implements of defense to corrode, for the good and sane reason that autocratic nations have manifested from the earliest days a preference for adjusting their differences with the sword rather than by rational arrangement. Hence, our naval expansion, at least, ought to continue coequal with our political development and commensurate with our political responsibilities. Now, when there is a simultaneous, mutual, coincident abandonment of excessive naval programs by all nations and we have in our possession substantial proof that international peace is to be established on a predurable basis we should then, but not until then, cease to provide against the unforeseen.

Apparently there is an impression in the public mind that the South is opposed to preparedness. Now, I hold no brief to speak for the South; yet I do know that that section of the country is of opinion that the Nation ought to have a Navy in point of personnel and material second to Great Britain as a purely defensive policy. And right here I wish to add with great emphasis that all questions affecting the honor and the prestige of our common country shall always find a responsive chord down in the land of Dixie, and preparedness being a question which inherently affects our national honor I can say that my section of the South stands for preparedness.

Now, it is well known that war is not one of our national pastimes. We have never manifested any such cannibalistic instinct, and to gratuitously insist that preparedness will inspire a spirit of militarism in our people is to utter a slander against the greatest peace-loving people the world has ever known. There is Mexico, many of whose citizens can be likened to cannibals in their insatiable thirst for blood. They have done their utmost to prod this Nation into declaring war against their country. Do you question this Republic's ability to tame and bring those savages to their knees, leaders and minions alike, at whose hands we have endured injuries and suffered innumerable insults? Yet this liberty-loving, valorous, God-fearing Nation stands, in face of it all, willing and ready to assist the Republic of Mexico to defend itself against its native barbarians. Therefore, how can it be said that a few more guns and several more battleships will transform the United States into a military camp?

Now, the exponents of a small navy insist that preparedness is a propaganda vitalized and carried on by the predatory interests. In all probability these interests favor preparedness, and I venture to assert that if they do, they are largely actuated in their advocacy thereof by a sense of avarice. Yet two wrongs have never made a right. I am unwilling to impair to any extent our Navy, upon the efficiency of which our national existence depends, simply because its expansion may incidentally or directly, if you please, benefit certain industries. In other words, I am unwilling to penalize the American people by jeopardizing their safety because of the avaricious practices of the so-called predatory interests.

I do not believe that the United States ought to impoverish itself or its people by the expenditure of ponderous sums of money for armaments not necessary to its need. But, in my judgment, an Army and Navy capable of engaging in a successful warfare with a mighty nation will have a mighty restraining influence upon the ambitions of imperialistic nations, and personally I have no fear that such an Army and Navy will either impoverish the Government or economically cripple the people.

In the interest of the General Government, the individual citizen from time to time may be required to make some small sacrifice of his personal wealth. But are we not ready to concede that every American, worthy in every particular of that great appellation, will cheerfully make this sacrifice.

We must not at any time forget that soldiers and cannons and personal sacrifices brought this free and independent country into existence. The lack of them may be our undoing. When our fathers wrested our independence from Great Britain they then and there assumed certain duties, responsibilities, and obligations, which we must not undertake to cowardly shirk. The ideals of liberty and free government, for which they fought, must be maintained, else we are recreant to the highest duty of patriotism.

We know that Mexico, Central and South America are commercially and strategically of some importance to other nations. These countries are under the political sovereignty of the United States. Now, the question is, Do you think that this Government should, as a matter of safety, maintain the inviolability of the Monroe doctrine; or, on the other hand, is it your judgment that we should repudiate it? So long as we uphold the Monroe doctrine; so long as we urge its observance by other nations, war, at least, is possible. Every lawyer on the floor of the House knows that law presupposes the exercise of force in its execution. This being true, how are we going to enforce our law, the Monroe doctrine, if we are without an effective Navy? Why it would be like David Copperfield trying to sleep with one eye open.

> Oh, sad estate,
> Of human wretchedness; so weak is man,
> So ignorant and blind that did not God
> Sometimes withhold in mercy what we ask
> We should be ruined at our own request.

The court must have an officer to enforce its decision else its decree is a fraud and a delusion. This Nation must have an efficient Army and Navy to enforce its decisions, founded upon the eternal principles of right, justice, and humanity, else the Government itself will become an object of the saddest contempt.

We are confronting this moment the most critical period in our Nation's history. We know that international complications are continuously arising and that these entanglements are growing in tension and frequency and, perchance, may terminate in war at any time. We have just severed our diplomatic relations with Germany. However, we hope that Germany does not purpose to draw us into that horrible vortex of human slaughter. But be that as it may, you can not honorably urge your country to forego those rights and privileges guaranteed to it by the usage of international law, rather than become involved in a dangerous diplomatic dispute that may lead to war. You are woefully uninformed regarding the character of the American people if you think that they will ever peacefully bear the odium of any such ignoble policy. The American people will never allow the President of the United States to yield a right; and if he does, the hue and cry of an outraged people will be heard in disquieting tones from ocean to ocean and from the ice-clad mountains of Canada to the burning Tropics. We are not going to barter one tittle of our national honor for the peaceable adjustment of any international dispute. Our people will, and well you know it, uphold their honor, defend their free institutions, and maintain their rights in every land and on every sea, even though the draft upon their national happiness be appalling.

These indefensible encroachments have become entirely too numerous. Our ships ply the seas at the sufferance of no nation. The sea is the property of no nation; hence we are going to challenge the right of any nation to interfere with our legitimate utilization of the seas. Independence and sovereignty belong to the American people, and no nation will longer be permitted to desecrate our rights. However, I fervently hope that the Members of the Congress will not permit the intemperate utterances of designing men and newspapers "to put an enemy in their mouths to steal away their brains."

It is unfortunate that some splendid citizens are willing to see their country's Navy, which is in a large measure the sole maintenance of our national peace, deteriorate and become obsolete because its upkeep is a burden which devolves upon and must be sustained by the General Government, the richest Government the sun has ever shown upon. It seems to me that the adoption of their theories would promote rather than avoid human bloodshed and destruction. We must maintain an effective Navy else we shall perish as a force in the world. When we break down the effectiveness of our armed forces that day in all human probability we shall write the obituary notice of American peace. In other words, when you destroy the efficiency of your armed forces you thereby expose your country to the horrors and dangers of war, nay, you invite it, for any pretext will serve as a casus belli; that is, whenever this country becomes defenseless against foreign invasion.

What reason is there for being so cocksure that no effort will be made to force this country to drink the dregs of that bitter cup of which other nations are now tasting under the pretext of redressing some fancied wrong? Absolutely no reason.

I do not think, however, that the day will ever come when the American manhood will signify its willingness to subordinate American honor to American mammon; but if it does, which God forbid, this Nation will then decay and become the scorn of the world.

Mr. Speaker, in spite of what has been said and what shall hereafter be said on this subject, I am still inclined to think there lies in the consciousness of practically every man the belief, fixed and imperishable, that the tenure of this country's peace will continue just so long as it is prepared to hold its own on the field of battle.

Some of us are alive to the dangers of war and also to the dangers with which we are now threatened. Nevertheless I should rather undertake to induce the Sultan to abdicate his Mohammedanism than to convince some Members that preparation for war imports preparation for peace.

I am one of those who believe that when you neutralize the other fellow's force by a corresponding force you thereby make it possible to wend your way through life undisturbed and uncoerced. Why? Because it is the law of the beasts of the forest; it is the law of the fish of the sea; it is the law of the fowl of the air—that the strong prey upon the weak; and with all our boasted civilization, it seems to be the law of nations, even down to this very day. In my opinion that cannabalistic war now in full blast in Europe ought to be an object lesson to the United States. Does it not unerringly point to the fact that American security is wholly contingent upon America's armed forces? For Heaven's sake, do not wait until our people are cringing and bleeding under the enfilading fire of the enemy guns before you undertake to safeguard them.

The proletarians have their eyes open and they see. They are sensible of the fact that if this country is finally drawn into a defensive warfare, unprepared to defend itself against the onslaughts of an invading enemy, the human toll will be infinitely greater than if we were adequately equipped to successfully grapple with a first-class power. Therefore the expenditures involved in the proposed program must be measured by their value to those who must fight their country's battles.

Mr. Speaker, the President of the United States has been able by reason of his scrupulous fairness and great statesmanship to pilot our ship of state over some dangerous and threatening diplomatic rocks, in consequence of which his name will remain enshrined in the hearts of his countrymen long after his detractors cease to rant and rave. He is essentially a man of peace, and yet he urges Congress to prepare this Nation for any eventuality that may arise. Now, do you suspect his patriotism? Do you question his wisdom? Will you impugn his integrity, or do you doubt the sincerity of his purpose?

It is a matter of common knowledge that Great Britain, by reason of her naval efficiency, has without any color of right undertaken to circumscribe our commerce with neutral nations. On the other hand, Germany, obviously assuming that we have no means of enforcing our rights, has arrogated to herself the right to prohibit in toto our commerce with the belligerent nations. In her recent pronunciamento she substantially declared that "I am going to do that which is most advantageous to me, irrespective of right." Yet the unrestricted exportation of our surplus products is absolutely essential to our national prosperity. Our industrial and agricultural development is largely dependent upon our foreign trade; hence we can ill afford to acquiesce in these outrages.

Again, representatives of other nations have colluded, conspired, and plotted with traitors here in this country to destroy our public buildings, dynamite our munition factories, burn our machine shops, and destroy vessels carrying food and ammunition to the allied countries simply because this free and independent Commonwealth has wisely elected to remain neutral and to administer its internal affairs according to its own lights, uncontrolled and untrammeled by any imperialistic nation on the face of the earth. Yet, in spite of the record which you may read as you run, we are given to understand, with the volume of a foghorn, that all nations are friendly disposed toward us and in return desire our friendship. Now, if this be friendship, may Heaven save us from our friends.

Now, we can not know whether any nation will ever attempt to extend or enrich itself at our expense. We possess no such sagacity, no such foresight. However, we do know that there are nations whose growth and development will make expansion ultimately imperative. When that time arrives and these nations realize that expansion by amicable means is impossible, the great laws of necessity may drive them to aggression. Hence, we need a Navy which will leave no lurking doubts in the minds of such nations touching the futility of attempting to invade this country or any portion of any country over which we exercise political sovereignty.

Mr. Speaker, if this Nation is greater than any other, it has become so not by reason of war but by virtue of peace. The verity of this statement no one will undertake to gainsay. But peace, due not to the superiority of our forces, but in the main ascribable to our geographical position. We must not wheedle ourselves into believing that our position is practically invulnerable to-day because of the distance of possible enemies. Conditions have changed. The ingenuity of man has reduced the difficulties of transportation to a mere trifle. A great expanse of waters is no longer an obstacle to a successful invasion of a foreign country. By reason of the rapid transportation facilities available to-day intervening seas are wiped out and nations are made contiguous, as it were. Seas, even broad and fathomless, are treacherous and unsafe allies in this day.

Mr. Speaker, it is urged that if we undertake to fortify and prepare ourselves against the possibility of foreign invasion other nations might be inclined to view our program as an act of hostility, and by way of retaliation augment their own forces. This is unadulterated rubbish. It is notoriously known that other nations are not only maintaining but are increasing both their land and sea forces. This country, as a matter of fact, has no wish to incite the hate or envy of any country. It desires no additional dead weight in the form of new dependencies, no more discontented people to foster. We have no desire to further add to our now endless frontier, no desire to provoke a fight, and no desire to extend our geographical area. However, we are firmly determined to conserve our

national existence; that is, if the Congress of the United States does not permit our armed forces to fall to such a point of inefficiency that they will be entirely incapable of successfully performing their appointed functions.

Mr. Speaker, all our traditions and all our training range us against the inauguration of an aggressive warfare, and all nations conversant with the precedents of our past are not only justified in assuming that it is not our purpose to promote war, but, on the contrary, our determination to prevent war and to promote fraternity between the nations of the earth, if that, in the nature of things, be possible.

So far as we are concerned, Mr. Speaker, preparedness is not suggestive or prophetic of war, but it is a peremptory notice to the world that the United States will continue to exercise all the functions of sovereignty unmolested by any alien power.

The Making of a Representative.

EXTENSION OF REMARKS
OF
HON. CALEB POWERS,
OF KENTUCKY,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 14, 1917.

Mr. POWERS. Mr. Speaker, leave has been granted me to extend my remarks in the RECORD by printing a speech made by yourself on the subject of "The making of a Representative" at a reception given to "baby Congressmen," March 16, 1916.

The Speaker of this House, the Hon. CHAMP CLARK, of Missouri, has served for the last 22 years as a Member of this body. He has been its Speaker for the last six years, and is, by reason of his long and distinguished service here, well qualified to give excellent advice upon this important subject. I shall quote his speech in full, adding merely such thoughts of mine here and there as my more or less limited experience as a Member of this body may suggest. Mr. CLARK said:

"I most heartily congratulate you gentlemen in being even what are facetiously denominated 'baby Congressmen.' It is a high honor to be a Representative in Congress, if for only one term, and with the number of terms the honor increases in geometrical rather than in arithmetical proportion. A Member's usefulness to his country should increase in the same proportion. A man has to learn to be a Representative, just as he must learn to be a blacksmith, a carpenter, a farmer, an engineer, a lawyer, or a doctor."

"Poeta nascitur, non fit"—the poet is born, not made—says Horace; but Congressmen—that is, useful and influential Congressmen—are made largely by experience and practice.

"The old Charlotte district in Virginia knew this, and kept John Randolph, of Roanoke, in the House till he became a great national figure. Then the Old Dominion sent him to the Senate and Gen. Jackson sent him to St. Petersburg. There are sporadic cases of similar action in other districts.

"It is an unwise performance for any district to change Representatives at short intervals. A new Congressman must begin at the foot of the class and spell up. Of course, the more brains, tact, energy, courage, and industry he has the quicker he will get up. If he possesses these qualities, and if his constituents will keep him in the House, he is as certain to rise as the sparks are to fly upward. No human power can keep him down. It is only fair and rational to assume that every Representative's constituents desire to see him among the 'top-notchers.'"

It should be noted that Speaker CLARK lays special stress upon the idea that "a man has to learn to be a Representative just as he must learn to be a blacksmith, a carpenter, a farmer, an engineer, a lawyer, or a doctor," and that it takes time, practice, and experience in order to do it. James A. Garfield, our martyred President, voiced the same great truth when he said: "For all the great professions known among Americans special training schools have been established or encouraged by law except for that of statesmanship; and yet no profession requires for its successful pursuit a wider range of general and special knowledge and a more thorough and varied culture." Statesmanship can not be taken on and off like a coat. It comes only after years of arduous mental toil. A new Member of Congress has about as much chance to make a "record" as a green "plug" turned out into a field with trained racers. He is about as useful to his constituents in framing and passing legislation as a blacksmith in extracting teeth or a lawyer in administering medicine to the sick. Statesmanship is as much of a profession as dentistry. It has got to be learned before it can be applied; and there is so much to be learned about so many things that years, not months and days, are needed in which to do it. The records of Congress show that it is only men of long service who have been able to accomplish much; and, therefore, Speaker CLARK says that "it is an unwise performance for any district to change Representatives at short intervals." Listen to him further on that:

"Let us take the present House and see how long the men who hold the high places have served. I can not name all, but will cite a few as samples:

"Mr. Speaker CANNON is serving his fortieth year. He holds the record, or, in pugilistic parlance, "he holds the belt," for length of service in the House in our entire history. In several Congresses he was chairman of the great Committee on Appropriations and then was Speaker eight years, only one man, Henry Clay, having been Speaker longer.

"I am serving my twenty-second year; Minority Leader MANN is serving his twentieth year; Mr. KITCHIN, chairman of Ways and Means, his sixteenth; Mr. FITZGERALD, chairman of Appropriations, his eighteenth; Mr. MOON, chairman of the Post Office and Post Roads, his twentieth; Mr. JONES, chairman of Insular Affairs and "father of the House," his twenty-sixth; Mr. FLOOD, chairman of Foreign Affairs, his sixteenth; Mr. HAY, chairman of Military Affairs, his twentieth; Mr. GLASS, chairman of Banking and Currency, his sixteenth; Mr. WEBB, chairman of the Judiciary, his fourteenth; Mr. ADAMSON, chairman of Interstate and Foreign Commerce, his twentieth; Mr. STEPHENS, chairman of Indian Affairs, his twentieth; Mr. SLAYDEN, chairman of Library, his twentieth; Mr. LEVER, chairman of Agriculture, his sixteenth; Mr. PADGETT, chairman of the Navy, his sixteenth; Mr. BURNETT, chairman of Committee on Immigration, his eighteenth; Mr. LLOYD, chairman of Accounts, his twentieth; and Mr. SPARKMAN, chairman of Rivers and Harbors, his twenty-second. There are other big chairmanships, but these will suffice to show that as a rule the big places go to old and experienced Members, and most of the men who rank close to the chairman are old-timers. The same thing holds good with reference to Members of the minority. As an illustration, Messrs. GILLETT and COOPER, who are serving their twenty-fourth year, are the ranking Republicans on Appropriations and Foreign Affairs. Both are almost certain to be chairmen of these committees, respectively, should the Republicans ever again have a majority in the House. And in that event, in all probability, Mr. MANN will be Speaker, unless he is nominated for President next June.

"Go through the whole list and you will find, with few exceptions, that the men of long service have the high places.

"New England and the cities of Philadelphia and Pittsburgh have understood the value of long service all along, and, having elected a fairly good man to Congress, they keep him in the harness.

"The Member of longest consecutive service is called 'the father of the House.' Five Philadelphians in immediate succession bore that honorable title—Randall, Kelley, O'Neill, Harmer, and Bingham. Then it went to Mr. Dalzell, of Pittsburgh. When Gen. Bingham announced the death of Gen. Harmer, his immediate predecessor as 'father of the House,' he stated that five Philadelphia 'fathers of the House' had served a total of 147 years, and he served 8 or 10 years after making that interesting statement.

"In the second and third Congresses in which I served Maine, with only four Members, had the Speakership and the chairmanship of the great Committees on Ways and Means, Navy, and Public Buildings and Grounds—a most remarkable circumstance—giving the Pine Tree State an influence in the House and the country out of all proportion to her population and wealth. These four men—Reed, Dingley, Boutelle, and Millikin—each served in the House 20 years or more. Other States might profit by her example.

"No man should be elected to the House simply to gratify his ambition. All Members should be elected for the good of the country. The best rule, it seems to me, is for a district to select a man young enough to learn and to grow, with at least fair capacity, industrious, honest, energetic, sober, and courageous, and keep him here so long as he discharges his duties faithfully and well. Such a man will gradually rise to high position and influence in the House. His wide acquaintance with Members helps him amazingly in doing things. We live in parlous times. Abraham Lincoln's favorite argument for his own reelection was that it is unwise to swap horses in the middle of the stream, which applies to Congressmen as well as Presidents.

"I can speak freely on this subject without violating the proprieties, for my constituents have kept me here 22 years, and for 20 years have given me nominations without opposition, for all of which favors I thank them from the bottom of my heart. Their generous action and unwavering friendship have

enabled me to devote all my time to the public service. I have not been compelled to spend any portion of my time in 'mending my fences.' My constituents have attended to that. God bless them!"

Even though it should not take years of patient study and unflagging industry, which it always does, for a new Member to acquaint himself with the rules and procedures of the House, the varied and various subject matters of legislation, the history and legal effect, as construed by the courts, of laws which are sought to be amended or repealed, and a thousand other things which time forbids me to mention, still the new Member would be greatly handicapped. The real work of legislation takes place in the various committees of the House of Representatives and not on the floor of the House, as too many suppose. A Member's rank on the committee depends upon his length of service in the House and the party in power. A new Member always takes his place at the foot of the class, and generally in the low-grade class at that. Neither political party is willing to risk its raw recruits on the firing line. Only trained regulars are put at the important posts. It is they, and they alone, who are made chairmen of important committees. No new Member is ever made chairman of any committee, not even of the small and relatively unimportant ones. It is the chairmen of the important committees and the ranking members on them that frame, direct, and pass the important laws for the country. When the Democrats are in power Democrats alone are made chairmen of the committees of the House of Representatives and the Senate of the United States. Even the Republicans of the longest service rank on the committees below Democrats of the shortest service, but if we organize the next House we will put our men at the top and theirs at the bottom. I am now the ranking Republican on the great Committee on Education, and will be its chairman if we elect the next Speaker and organize the committees. My promotion has been rapid. Luck has played into my hands. I have been in Congress now only six years and am now in line for the chairmanship of the important Committee on Education. Speaker CLARK tells us that he was in Congress eight years and "never advanced a peg, so far as committees went." Here is what he said in the way of committee assignments: "One other thing. I do not know what committee assignments you new Members secured. If they are good, you are to be congratulated. If bad, do not be cast down. No congressional tenderfoot ever had poorer assignments than I had—Claims and Old Pensions—but I never complained or kicked. I went to work as though those committees suited me exactly.

"Here is an illustration of what may happen and how luck plays an important part: I was next-to-top Democrat on both Foreign Affairs and Patents for eight years—never advanced a peg so far as committees went. Just when, at the beginning of the ninth year on those two committees, I was about to become top Democrat on Foreign Affairs, Hon. JOHN SHARP WILLIAMS, then minority leader, assigned me to the foot of Ways and Means, and at the end of four years, through the happenings of politics in five different States, I jumped from the foot to the head of the Democratic minority on Ways and Means. So it may be with you. Events over which you have no control may advance you more rapidly than you dream of or hope for. My advice is this: 'Whatever your hand finds to do, do it with your might.'"

The advice that the Speaker gives that "whatever your hands find to do, do it with all your might," is well worth remembering. It is impossible to describe the various duties that a Member of Congress is called upon to perform. Usually his correspondence is heavy and takes a good deal of his time. On yesterday I received 55 letters, which were opened, read, and answered. I receive on an average 40 or 50 letters every day. The bulk of the Congressman's work the public never hears of nor knows about. Realizing that this is true, shrewd opponents seeking to succeed him go over his district and ask, "What has he done since he has been in Congress?" The opponent even asks this question when the opposite political party is in power and responsible for the legislation enacted. I am glad to know that constituents in many districts, my own included, are wise enough to make the candidate who asks such a question say what he would have done that the other fellow failed to do.

When the candidate and his friends are forced to say what he would have done had he been a Member of Congress that the incumbent did not do, it usually takes the wind out of their sails.

Speaker CLARK fully answers the objection often raised against a Congressman that "he has been there long enough" and shows conclusively that the long-time men are the ones who become experienced legislators, chairmen of committees, and the real powers in legislation.

Speaker CLARK says that "no man should be elected to Congress simply to gratify his ambition." Rotation in office is never advisable unless the man to be put in office can be of more service to his constituents and the public than the man to be put out. Who can be of the most service to his constituents and the country ought to be and is fast becoming the real question in all congressional races.

Donation of a Location by the City of Cleveland for a Sanatorium.

EXTENSION OF REMARKS

OF

HON. HENRY I. EMERSON,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 14, 1917.

Mr. EMERSON. Mr. Speaker, the City Council of the City of Cleveland, Ohio, having offered to donate space for the location of a sanatorium to discover, if possible, a cure for the white plague, I ask to extend my remarks in the RECORD by inserting the resolution adopted by the City Council of the City of Cleveland as forwarded to me by Richard E. Collins, city clerk.

The resolution is as follows:

Resolved by the Council of the City of Cleveland, State of Ohio, That—

Whereas the statistics published by the United State Census Office show that about 11 per cent of all deaths are caused by tuberculosis, and that the average age at death is 34 years; and

Whereas these facts show that about one-ninth of all our people are robbed of one-half of their life by this one disease; and

Whereas the director of public welfare has communicated with a Cleveland Congressman and obtained the introduction in the House of Representatives at Washington of a resolution (H. J. Res. 355, 64th Cong., 2d sess.) which provides that the United States Government shall appropriate $1,000,000, to be expended under the direction of the President, for the purpose of constructing a laboratory and calling together the best experts in the world in an effort to discover a cure for the white plague: Be it further

Resolved, That the Council of the City of Cleveland hereby urges the adoption by Congress of the above-named resolution; and be it further

Resolved by the Council of the City of Cleveland, That a space of land of 50 or 100 acres near the sanatorium at Warrensville be, and is hereby, offered to the United States Government as a suitable location for such a laboratory; and be it further

Resolved, That the clerk of council is hereby authorized to communicate a copy of this resolution to the three Cleveland Representatives in Congress and the two United States Senators from Ohio.

Adopted by the council February 5, 1917.
Approved by the mayor February 9, 1917.

I, Richard E. Collins, clerk of Council of the City of Cleveland, do hereby certify that the foregoing is a true and correct copy of resolution, file No. 43002, adopted by the council of the city of Cleveland February 5, 1917.

Witness my hand, at Cleveland, Ohio, this 10th day of February, 1917.

[SEAL.] RICHARD E. COLLINS,
Clerk of Council of City of Cleveland.

The Rivers and Harbors Appropriation Bill.

SPEECH

OF

HON. MURRAY HULBERT,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, January 23, 1917.

The House in Committee of the Whole House on the state of the Union had under consideration the bill (H. R. 20079) making appropriations for the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes.

Mr. HULBERT. Mr. Chairman, I no less revere and admire the distinguished chairman of the Committee on Rivers and Harbors, under whom it has been a pleasure to have served, than my colleague advocating the adoption of this amendment, and, although I have on frequent occasions felt impelled to disagree with him, I have never done so with more justification and less misgivings than now.

I am and have been since my appointment upon the committee a consistent advocate of the principle of placing all projects upon a continuing contract basis, for the reason that the committee which adopts the project goes further into an investiga-

tion of its merits and is therefore better able to determine its commercial importance and economic advisability than successive committees constantly changing in personnel, who, under our present system, appropriate from year to year. Moreover, the continuing contract insures a great saving to the Government, and enables the work to progress much more expeditiously.

But, Mr. Chairman, the gentleman from Florida will, on March 4 next, bring to a close his long, successful, and highly commendable career upon the sea of congressional activities. He has been buffeted upon the waves of endless strife, but he has negotiated the squalls, storms, and tempest of legislative complexity, until now he is making for the calm harbor of comfortable retirement with a cargo rich in value to the people of the country, as well as in honor to himself.

We can symbolize the high regard and great esteem in which we hold him in no better way than by providing, within his period of service, for the completion of the project for the improvement of the harbor of Tampa, where he has long resided, and where he intends to resume the practice of the law; let him give to his people this greatly needed improvement which, during his service as chairman of the Committee on Rivers and Harbors, it shall be one of his last acts to conclude, not, however, because he chose to exercise his influence, but in spite of it, and due solely to a genuine appreciation of his high conception of the performance of his duties, his adherence to principle, his genial and kindly spirit, and good will toward all. May he live long to enjoy the fruits of his labor and give counsel by his wisdom and advice.

Elements of the Country's Defense.

EXTENSION OF REMARKS
OF
HON. CHAS. POPE CALDWELL,
OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, February 20, 1917.

Mr. CALDWELL. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include the following:

We are fourth naval power in ships; fifth naval power in men!

TAKE A HAND IN UPBUILDING THE NATION'S DEFENSES AND BE AN AMERICAN!

POST YOURSELF AND TELL YOUR CONGRESSMAN.

[Issued by the Conference Committee on National Preparedness. Compiled principally from data furnished by the United States Government for publication. Henry A. Wise Wood, chairman; Raymond B. Price, treasurer; James E. Clark, secretary. Headquarters, Forty-second Street Building, New York City.]

To be prepared for war is one of the most effectual means of preserving peace.—George Washington.

Said Light Horse Harry Lee, an officer of the Revolution, "A government is the murderer of its citizens which sends them to the field uninformed and untaught, where they are to meet men of the same age and strength mechanized by education and discipline for battle."

Nor paper ships afloat upon seas of ink; nor troops of paper not yet of flesh and blood; nor guns and shells still writ in documents—nor these, nor cowering words, ever a nation did defend.

The Navy—Ships under construction or not yet begun.

[Work on the consruction of a ship starts coincidently with the award of contract, which is generallyseveral weeks in advance of the actual date of contract. In the construction of a ship there is no one definite event which may be designated as the starting of actual construction work.]

DELAY ON SEVEN SHIPS.

The Secretary of the Navy on Jan. 8 wrote to the chairman of the House Naval Committee stating that 4 private companies made proposals for the construction of 4 battle cruisers and 2 scout cruisers at cost plus a percentage to cover indirect costs, plus another percentage for profit, amounting in all to about 35 per cent. The Navy Department considered all bids high and, as the cost would exceed the limit authorized, did not accept the proposals. For 1 scout cruiser no proposal was received.

The time required by the bidders on these 7 ships did not in the opinion of the Department conform to the Congressional requirement for speedy construction. In two cases construction was offered within 48 months, in one case within 51 months, and in the other case no time was named.

The naval construction program therefore faces a setback of the gravest nature. The enlargement of Government navy yards is suggested by the Secretary of the Navy as the best way to solve the difficulty.

On Aug. 29, 1916, the sum of $6,000,000 was authorized for the improvement of Government navy yards so that increased efficiency and capacity might be attained in the upbuilding of the Navy. Ships already assigned to Government yards fully engage all the facilities of these yards. To meet the new conditions the Secretary of the Navy recommended on Jan. 8, 1917, to the House Naval Committee that $12,000,000 be appropriated to be immediately available for further increasing the yards.

The Navy—Ships under construction or not yet begun—Continued.

NITRATE PLANT.

Preliminary to the establishment of a Government nitrate plant for the manufacture of nitrates, essential for ammunition, a committee was appointed to investigate the various nitrate manufacturing processes. This committee has not yet reported.

ARMOR-PLATE PLANT.

An appropriation of $11,000,000, included in the Navy bill of August 29, 1916, provided for the establishment of a plant to manufacture armor plate for the Navy. Coinciding with a military principle laid down by the Army War College, the General Board of the Navy has advised that the plant shall not be located east of the Appalachian Mountains, west of the Cascade or Sierra Nevada Mountains, nor within 200 miles of the Canadian or Mexican frontiers. A board of three officers—Read Admiral Frank F. Fletcher, Commander Frank H. Clark, and Civil Engineer Reuben E. Bakenhus—is now canvassing the many sites proposed within the approved zone.

NAVAL CONSULTING BOARD.

The Naval Consulting Board of 24 civilians, headed by Thomas A. Edison, and whose members were selected because of eminence in science, was organized for the purpose of obtaining from men of industrial achievement expert advice in the many problems entailed in the upbuilding of the Navy. The board held its first meeting on October 5, 1915. The Secretary of the Navy states that of the many problems presented to this board "some have been solved and others are in process of investigation."

The committee of production, organization, manufacture, and standardization of the Naval Consulting Board, popularly known as the committee on industrial preparedness, has completed a confidential industrial inventory of the manufacturing resources of the country. Twenty-seven thousand reports, covering the leading manufacturing concerns in this country, have been secured by this committee. They are completely indexed for the use of the Army and Navy, and have been turned over to the Council of National Defense.

The board has passed upon the value of many inventions offered to the Navy Department. Congress, in the Navy bill approved August 29, 1916, appropriated $1,500,000 for the establishment of a laboratory for the Naval Consulting Board. On September 19, 1916, the board was requested to investigate and report upon a site and plans. A committee of the board has since made extensive study and investigations, which were made the basis of a recommendation as to the best site for the construction of this laboratory.

The existing Navy.

SHIPS IN FULL COMMISSION.

Transport	1
Fuel ship	1
Tenders to torpedo vessels	2
Converted yachts	9
Unserviceable for war purposes	9
Total not in full commission	127

DEFINITION OF TERMS.

"Ships in full commission" are fully officered and manned, either under orders or liable to orders for service without previous notice.

"Ships in commission in reserve" are maintained at some designated navy yard or other suitable place and kept ready for sea on short notice. They have reduced complements of officers and men, and they fly the flag and pennant. No repair work shall be undertaken on them that will render them unable to move upon the expiration of four working days after the receipt of orders without first obtaining permission from the department.

"Ships in commission in ordinary" are maintained at some designated navy yard under the commandant and "in such condition as will best tend to keep them in efficient condition for service if needed, under detailed instructions from the department." They have complements of officers and men aboard only large enough to enable them to be properly cared for in the condition in which ordered to be maintained. They fly the flag and pennant.

"Ships out of commission" have no personnel on board, are under full control of the commandant of the navy yard at which they lie, and do not fly the flag or pennant. Repairs on them may be carried on as authorized by the department or they may be simply held out of commission and not under repair awaiting the department's instruction to commission or otherwise dispose of them.

Included in the ships "Out of commission" are the first-class cruiser *Milwaukee* and the submarine *H–3* recently wrecked off Eureka, Cal., and probably a total loss.

MEN NEEDED TO PUT EXISTING SHIPS IN COMMISSION.

The Secretary of the Navy states that to put all existing ships into commission "the Navy would be short approximately 938 officers, 8,049 regulars, and 23,330 reserves after using 9,000 militia and 463 fleet reserves. The shortage will increase for each new ship commissioned in 1917 and 1918, and the three-year program alone will require 29,127."

CHANNELS TO IMPORTANT NAVY YARDS.

To give free and safe passage of capital ships to and from the Brooklyn Navy Yard on the Atlantic coast and the Mare Island yard on the Pacific 35-foot channels are necessary. The War Department says:

"East River: The present project for through channel provides for a depth of only 26 feet through Hell Gate, but the river and harbor act of July 27, 1916, adopted a project providing for a channel 35 feet deep at mean low water and 1,000 feet wide from deep water in the Hudson River off the Battery, New York City, to deep water in East River off Coenties Slip, Manhattan Borough, in order to give this depth of 35 feet to the Brooklyn Navy Yard. Preliminary steps are now being taken with a view to making a contract covering this work. No actual field operations have yet been commenced. Further congressional authority will be required in order to work on the project for a through channel of 35 feet between New York Harbor and Long Island Sound.

"Mare Island Channel: The present project for the channel in the approach to Mare Island, through San Pablo Bay, Pacific coast, provides for a depth of only 30 feet. This depth was secured, but shoaling has taken place, and work of restoration of channel is now in progress with a new Government dredge built for this purpose. Further congressional authority will be required before work can be undertaken for a depth greater than 30 feet."

The Army.

The Army needs men; help to recruit! The Army needs guns, shells—everything; tell your Congressman!

THE REGULAR ARMY.

The following statement shows the authorized strength of the Army and the actual strength and the number of vacancies on December 31, 1916. Complete returns for December have not been received, but the figures given are based on the best data now obtainable:

Arm or corps.	Authorized strength.	Actual strength.	Vacancies.
Engineers	2,198	2,089	109
Cavalry	17,357	17,556	[1]199
Field Artillery	7,881	7,090	791
Infantry	51,224	39,288	11,936
Coast Artillery	21,423	18,748	2,675
Total line	100,083	84,771	15,312
Recruiting parties and unassigned recruits	11,539	8,866	2,673
Quartermaster Corps	8,000	5,863	2,137
Ordnance	1,241	741	500
Signal Corps	3,369	1,757	1,612
Medical Department	6,614	6,203	411
Miscellaneous organizations (service school detachments, prison guards, Indian scouts, etc.)	2,320	1,758	562
Total	133,166	109,959	23,207

[1] Excess.

Authorized strength on July 1, 1920.

Under the five-year increment plan the strength of the Regular Army on July 1, 1920, should be—

Peace strength:		
Officers		11,450
Enlisted men		175,000
Noncombatant troops, including unassigned recruits		42,750
Philippine Scouts		5,733
Approximate total in 1920		223,589
Maximum war strength:		
Officers		12,030
Enlisted men, including Philippine Scouts		298,000
Total		310,030

Aggregate strength of National Guard troops in the service of the United States.

June 30, 1916	82,927	82,927
July 31, 1916:		
On border duty	110,957	
In State mobilization camps	40,139	151,096
Aug. 31, 1916:		
On border duty	111,954	
In State mobilization camps	26,643	138,597
Sept. 30, 1916:		
On border duty	108,018	
In State mobilization camps	35,684	143,702
Oct. 31, 1916:		
On border duty	102,527	
At home stations for muster out	19,711	122,238
Aggregate strength of National Guard organizations not called into the service of the United States		20,021

The "Unorganized Militia," so called, is the entire eligible male population of the country, being all those male citizens between the ages of 18 and 45, and not disqualified, physically or otherwise, from performing military service in time of war.

PRESENT STATUS OF ORDNANCE.

Procurement of gauges, dies, and jigs necessary for the manufacture of arms and munitions of war. (Appropriation, $200,000.) The War Department says:

"In addition to placing orders for small-arms ammunition through private manufacturers, which necessarily results in these establishments being equipped with gauges, dies, and jigs for the manufacture of said small-arms ammunition, steps are being taken to manufacture master gauges, inspection gauges, and working gauges sufficient to equip five small-arms ammunition plants.

"The procurement of gauges, etc., for the manufacture of .30-caliber rifles has not yet reached the point where orders for these have been given. Specifications governing the manufacture of rifles by private manufactures have, however, been prepared and final action along these manufacturers have, however, been prepared and final action along these in this country.

"Small-arms ammunition on hand or provided for up to June 30, 1916, 227,000,000 rounds; on hand or provided for up to June 30, 1917, 387,000,000 rounds. United States rifles, caliber .30, model of 1903: On hand or provided for up to June 30, 1916, 725,000; on hand or provided for up to June 30, 1917, 836,000."

FIELD ARTILLERY AMMUNITION.

The department states that the manufacture of ammunition for both mobile and seacoast artillery has been inaugurated on a scale that will furnish the prescribed allowances of ammunition within the time allotted for the completion of the program. The increases in the capacity of the various Government arsenals manufacturing ammunition which were authorized by the last Congress are well under way, so that their capacity will be greatly increased in the near future. In addition, large orders have been placed for the various components of ammunition with many of the private manufacturers in the country equipped for this work.

Batteries of 3-inch and 4.7-inch guns and 6-inch howitzers have been ordered, either to be manufactured at the arsenals or to be procured under contract, and awards for additional material heavier than 6-inch will be made in a few days. The department hopes that in addition to the American designs representatives in this country of foreign companies may be able to submit designs of material now used in the European war.

Army aeronautics.

[Total appropriation, $13,281,666.]

PERSONNEL.

Officers authorized	77
Enlisted men authorized	1,800
Present number of officers, including those detailed and retired officers on active duty	96
Present number of enlisted men	600
Machines in service:	
Land machines	67
Hydroaeroplanes	4
Flying boats	2
Total	73
Machines ordered:	
Land machines	206
Hydroaeroplanes	80
Flying boats	16
Total	302

In addition, 5 captive balloons for field artillery fire control have been ordered.

ONE ZEPPELIN TO BE CONSTRUCTED.

A large dirigible of the Zeppelin type is to be constructed by a joint board of Army and Navy officers. They are not ready to say what it will cost or to give its dimensions.

THE VOLUNTEER SYSTEM.

The volunteer system can not now under the most favorable circumstances produce anything like the number of men required for the national defense. It is undemocratic, unreliable, inefficient, and extravagant. It is undemocratic, because it shifts the burden of national defense from the shoulders of the many, where it rightfully belongs, to the shoulders of the few whose financial condition in life or whose patriotism impels them to offer themselves to accept the risks and hardships of war. Furthermore, instead of unifying our people to the extent where all individuals are willing to undergo sacrifice for the national good, it affords great opportunity for the selfish and unpatriotic to stay at home in time of war and to fatten on the adversity of the Nation and on the necessities of the families of better men who have volunteered for the country's defense. (Hugh L. Scott, major general.)

COUNCIL OF NATIONAL DEFENSE.

The Council of National Defense "for the coordination of industries and resources for the national security and welfare," and which is composed of the Secretary of War, the Secretary of the Navy, the Secretary of the Interior, the Secretary of Agriculture, the Secretary of Commerce, and the Secretary of Labor, held its first meeting on December 6, 1916. Upon the nomination of the council the President has appointed an advisory commission to the council, each of whom has special knowledge of some industry, public utility, or the development of some national resource. The advisory commission of the Council of National Defense is composed of Dr. Hollis Godfrey, Drexel Institute, Philadelphia, Pa.; Dr. Franklin H. Martin, Chicago, Ill.; Howard E. Coffin, Hudson Motor Co., Detroit, Mich.; Julius Rosenwald, Sears Roebuck Co., Chicago, Ill.; Bernard M. Baruch, New York City; Samuel Gompers, American Federation of Labor, Washington, D. C.; Daniel Willard, the Baltimore & Ohio Railroad Co., Baltimore, Md.

Headquarters have been established in the Munsey Building, Washington, and Walter S. Gifford has been appointed director of the council. The council has actively entered upon its work of coordination.

Unofficial statement of our needs.

WE NEED A NAVY NOW.

1. An emergency appropriation of $250,000,000 should be made at once to be used in rushing all work on new vessels and the repair of old; for the purchase and manufacture of armament, ammunition, torpedoes and accessories; for the purchase or charter of fast yachts and motor boats for use as auxiliaries; for the purchase or charter of colliers and transports; for hydroaeroplanes; for developing wireless control of torpedoes; for mine layers and mines, and for the accumulation of coal and fuel oil.

2. All Government and civilian yards which are building warships should be required at once to work double shift. They are now working but one eight-hour shift a day.

3. All vessels of the three-year program should be begun at once.

4. The three-year program is short of scout cruisers, destroyers, seagoing submarines, and many auxiliary vessels. There should be authorized and begun at once:

Twenty-five additional scout cruisers.
Seventy-five additional destroyers.
Forty additional seagoing submarines.

A proportionate number of auxiliary vessels.

The British Navy has over 1,000 colliers in commission and as many destroyers.

5. Command of the sea involves command of the air. A great air navy should be begun at once. Congress has failed to make adequate provision for an air navy. This we must have without delay.

6. The Navy is now short 1,000 officers. Many additional officers are needed to handle the new vessels being finished. Ships can not be used or fought without officers. Prompt action of wide scope is imperative. The size of the Naval Academy and the number of midshipmen should be quadrupled at once.

7. The Navy is 26,000 men short. Many additional men are needed to man new vessels being finished. Ships can not work themselves. Means must be found to get these men at once and train them.

WE NEED AN ARMY NOW.

1. Some action must be taken at once looking toward universal training and the organization of our people and resources which will tend to convince other nations that we are a united people prepared to make sacrifices for our country.

2. There should be issued an immediate call of the National Guard, with orders to recruit up to maximum strength and form depot battalions.

3. There should be issued at once a call for 500,000 volunteer troops immediately following the call for the National Guard, these to be organized and trained so as to become dependable troops in six months.

4. There should be applied immediately section 120 of the national-defense act, so as to enforce precedence of all orders given manufacturers for military equipment for the United States.

5. An emergency appropriation of $250,000,000 should be made at once for the purchase and manufacture of arms, ammunition, and equipment, especially the following: Artillery, especially heavy mobile artillery of long range, and great stores of ammunition for the same; machine guns, especially of the light, portable type, and ammunition; aeroplanes in large numbers; antiaircraft guns and ammunition; small arms and ammunition; portable searchlights; field telephones and other equipment for communication; radio pack sets; motor tractors for artillery and trucks for transportation; animals for mounted troops and for animal transportation; entrenching tools and material for obstacles; clothing, blankets, tentage, and individual equipments; high explosives; armored cars and land dreadnaughts; and the full equipment of our coast defenses.

Time Study and Premium-Payment System.

EXTENSION OF REMARKS

OF

HON. WILLIAM GORDON,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 15, 1917.

Mr. GORDON. Mr. Speaker, under the leave granted me today I print a letter from Gen. Crozier, and from Mr. N. P. Alifas, president of District No. 44, International Association of Machinists, on the subject of the Taylor or time-study and premium-payment system and extracts from the hearings before our committee on that subject. They are as follows:

WASHINGTON, D. C., *February 1, 1917.*

Hon. WILLIAM GORDON, M. C.,
House of Representatives, Washington, D. C.

MY DEAR SIR: In compliance with your suggestion during our interview of January 30, I submit herewith some of the reasons why we are opposed to the Taylor system of shop management being adopted by the United States Government.

The Taylor system of shop management consists of an aggregation of measures designed to work men at their highest practicable speed and to pay them the lowest wage in accordance with the "law of supply and demand." The scheme as outlined by Mr. Frederick W. Taylor, and as apparently approved by some officials of the War Department, contemplates:

1. A time study, the purpose of which is to ascertain the quickest possible time in which work can be done.

2. The adoption of a premium or bonus system designed to bribe them to work as hard as they can at the least expense.

3. A disciplinary system designed in every way to intensify competition among the workmen.

4. The maintaining of a force sufficiently large to enable the employer from time to time to discharge a workman who fails to meet his task.

5. The setting of the task as high as the condition of the labor market

6. The displacing of well-paid and skilled labor by unskilled and semi- and the endurance of the workman will allow.

skilled labor whose wages are low, but, if taken in conjunction with a premium or bonus, will be somewhat higher than the ordinary laborer's pay, but not as high as the class of employees displaced.

7. The employment of foremen in such a way that each employee has eight different bosses, the duties of each one of whom are to secure the utmost out of the employee in the particular part of his work under that supervisor's jurisdiction.

The Taylor system contemplates at its inception the establishment of a mild form of premium or bonus, a form which will not unduly speed up the employee and as the machinery of the system is improved to gradually adopt one form of bonus after another until the most drastic form is secured.

As proof of the above assertions, I beg to invite your attention to extracts from the writings of Mr. Frederick W. Taylor, the author of the Taylor system, contained in Exhibit A herewith inclosed, on pages 9 to 12, inclusive.

It has never been contended by us that the War Department has as yet succeeded in introducing the Taylor system in its most drastic form. However, when the fight against the Taylor system was first begun we were unable to secure from the officials at the War Department a positive statement that they would not go the full length recommended by Mr. Taylor in his writings.

In your capacity as a Member of Congress you are oftentimes called upon to pass upon what the probable effect of certain legislation will be. If a scheme of management for employees of the United States Government were presented to you for your consideration having for its aims and objects those indicated in the paragraphs to which I have invited your attention on pages 9 to 12 of Exhibit A, it would seem to me that it would be your duty as a responsible official to protect the well-being of the American people to resist any such program being even started.

The mere fact a Government official states in one breath that he is going to introduce a system of shop management such as herein described and then in another breath tells you he is not going to oppress any workman with it should be judged in the light of probability.

As a member of the Military Affairs Committee I am sure you would not be willing that a foreign power should transmit and maintain in this country large bodies of troops and ammunition and so locate themselves as to take possession of our strongholds even though they gave you positive assurance that they would not press their advantages.

I have read with much interest your address on the floor of the House on January 29 in connection with the anti-Taylor system clause incorporated in the fortifications bill, and feel that if the objections raised by you were the principal ones you had against this legislation that your opposition ought to be withdrawn, because they almost in their entirety appear to rest on a misconception of the matter at issue.

Taking them up seriatim, I desire to comment as follows:

1. The purpose of the legislation is not to make the Government arsenals inefficient, but to protect workmen against undue speeding up.

Exhibit B, herewith inclosed, shows that the Rock Island Arsenal, for instance, in which the Taylor system has never been introduced, is turning out work far cheaper than the same materials can be purchased for from contractors. This in itself is an indication that the men are not loafing. When an arsenal is turning out work for from 25 to 60 per cent less than the same thing can be made for when done by contract, there is no necessity to charge the employees with loafing or to introduce a system of intensive production such as the Taylor system.

2. The legislation we are asking to have inserted in the Army bill and which was incorporated in last year's bill does not prevent cost keeping, since it permits the ascertaining of when work is started and when it is completed, but prevents detailed time study between the starting and completion of work. Both the arsenals and navy yards have accurate cost-keeping systems which are independent and no part of the Taylor speeding-up system. The time study contemplated by the Taylor system is designed to ascertain how quickly work should be done. Cost keeping is keeping tab of how long it is taking to turn out the work. The Taylor system time study does not furnish reliable information about the cost of work, since it only prophesies how long the work should take. The ascertaining of how long it does take is an afterconsideration and is not the practice we are endeavoring to prohibit.

3. The opposition to the Taylor system does not originate with representatives of labor. The numerous petitions filed with the Chief of Ordnance and the Committee on Labor by the employees at the arsenals against the Taylor system are proof of this and can be readily ascertained upon inquiry.

4. The assertion that the cost of work has increased enormously at the Watertown Arsenal since the abolition of the Taylor system is not supported by facts, except such as those that have been gotten up by persons whose special desire is to discredit any move to abolish the system, and upon investigation it would no doubt be found that the conclusions were based upon one-sided information or that there were other contributing causes to it. For instance, at the time the Taylor system was abolished at Watertown the average wages for machinists was $3.13; the average wages at the Boston yard, in the same vicinity, was $3.84. The Ordnance Department refuses to increase the wages, possibly wanting the employees to feel the sting of losing the premium, and in this way they lost many of their best men and killed incentive in the rest because they would not pay the prevailing rate. After this was done for several months they increased wages. It has been our contention that the existence of the premium system has been a bar to securing increases, and that is partially borne out by the fact that the Watertown Arsenal, where the Taylor system was in operation, the basic pay rate was far below what were being paid in other Government establishments in that same vicinity. The Watertown Arsenal, which had virtually been the battle ground upon which the Taylor-system question was fought out, was not at all unlike the condition of the South after the Civil War—that is, in a deplorable state of affairs.

5. The opposition of the employees would have prevented the Ordnance Department from setting the highest possible tasks, even though they had desired to. The fact that they did not set the highest tasks possible is no guaranty that they would not do it had they the opportunity.

6. While the system had not attained the speed which, no doubt, is ultimately desired at the Watertown Arsenal, I know of at least one man personally who suffered a nervous breakdown through being harrassed in his work at the Watertown Arsenal while the Taylor system was in operation; but, regardless of whether or not that be true, it does not detract from the strength of our contention that no such practices as contemplated by the Taylor system should be inaugurated in the Government plants.

7. The isolated cases of increased cost being referred to, I have been advised by employees, can be duplicated in instances where men have materially exceeded the task set under the premium system, due to the fact that the fear no longer existed that the new accomplishments would be held over their heads as a task to be lived up to ever afterwards or which, under an unjust premium system, could be used at times to make up time lost on poor premium jobs.

Certain questions asked of the Chief of Ordnance by the members of the Military Affairs Committee on page 957 of the hearings this year contains the suggestion that possibly such loafing as indicated in the horrible examples cited were allowed for the purpose of furnishing ammunition with which to criticize Congress and their employees in their combined effort to maintain sane labor conditions at the arsenals and to avoid such excesses as the Taylor system contemplates. Certainly any supervisor can prevent men from sitting around on nail kegs if he wants to without the use of the Taylor system.

In conclusion, I desire to assure you that the employees are entirely satisfied with the abolition of the Taylor system and intend to resist any effort to reintroduce it.

Assuring you that I shall be glad to discuss this matter with you personally should you desire and supply you with any information I

may have on hand, and hoping that you can give us your support in the matter of securing again the proposed legislation this year through the Army bill, I am,

Very respectfully, yours,

N. P. ALIFAS,
President District No. 44,
International Association of Machinists.

—

WAR DEPARTMENT,
OFFICE OF THE CHIEF OF ORDNANCE,
Washington, February 3, 1917.

Hon. WILLIAM GORDON,
House of Representatives.

DEAR SIR: I return herewith the letter addressed to you under date of February 1 by Mr. N. P. Alifas, president District No. 44, International Association of Machinists, arraigning the "Taylor system" of scientific shop management, as it was in practice at the Watertown Arsenal before the prohibition by Congress of certain of its features. I inclose a copy of Senate document No. 800, Sixty-third Congress, third session, which relates the experience of the Ordnance Department with the Taylor system, and I have indicated on the first page of the document the order in which I think the other pages would best be read so as to secure the best understanding of the document's contents.

The answers to most of the criticisms of the system made in Mr. Alifas's letter will be found in this document, and, therefore, because of your desire for a prompt answer, I shall refer only briefly to the most prominent of them.

It is not the design of the Taylor system to "work men at their highest practicable speed and to pay them the lowest wage in accordance with the 'law of supply and demand'" but to decrease the cost of production while increasing the wages of labor and improving the lot of both employer and employee.

It is not the object of time study "to ascertain the quickest possible time in which work can be done," but to ascertain the time in which work can reasonably be expected to be done, without injury or disagreeable effect to the workman.

The premium or bonus system is not designed to bribe workmen "to work as hard as they can at the least expense," but to give them a substantial reward for attaining a reasonable time in which work should be expected to be done or for measurably approaching it.

It is not designed to "intensify competition among the workmen," but to ascertain accurately what a good workman, well suited to his job, can reasonably be expected to do, without reference to competition with other workmen.

It does not differ from other systems of employing labor in its attempt to maintain a force of such size that an unsatisfactory workman may be discharged for any sufficient failure.

It does not aim to set tasks "as high as the condition of the labor market and the endurance of the workman will allow," but sets them reasonably and scientifically, so as not to task the endurance of the workman or to require him to work at an unpleasant rate.

It does not differ from other systems in common practice of employing, when practicable, less skilled, in place of highly skilled, workmen to perform certain operations frequently repeated, instead of the variety of operations for which a skilled journeyman is required. In this respect it follows, as do all successful systems, the methods which are so prominently illustrated in the shoe industry and in the gun-making industry.

The system employs foremen who concern themselves with different features of the work being done in an establishment instead of having one foreman in charge of every feature of the work done in a particular section. For instance, there is one foreman who is concerned with the rate at which various machines shall be run, the feed and speed of cutting tools, etc., who is called the "speed boss"; another who is concerned with the order and sequence of assignments of various jobs, and the order of performance, to the different machines in his part of the shops, who is called the "gang boss"; etc. It is believed that this system of "functional foremanship" is more efficient than that of having each foreman attend to every kind of thing, for the reason that it requires of a foreman only the class of superintendence for which he is best fitted.

The extracts from the writings of Mr. Taylor, which are quoted from pages 9 to 12 of House Report No. 1175, Sixty-third Congress, second session, being separated from their context, are in many cases misleading and in many inconclusive. If carefully read, I do not think that they should serve to condemn the system, and in order to give some other indications of the spirit of Mr. Taylor's system I give below some quotations from a treatise on "Shop management," by Mr. Taylor:

"18. It is safe to say that no system or scheme of management should be considered which does not in the long run give satisfaction to both employer and employee which does not make it apparent that their best interests are mutual, and which does not bring about such thorough and hearty cooperation that they can pull together instead of apart. * * *

"30. It must be distinctly understood that in referring to the possibilities of a first-class man the writer does not mean what he can do when on a spurt or when he is overexerting himself, but what a good man can keep up for a long term of years without injury to his health and become happier and thrive under.

"420. He is firmly convinced that the best interests of the workmen and their employers are the same, so that in his criticism of labor unions he feels that he is advocating the interests of both sides.

"423. In the writer's judgment the system of treating with labor unions would seem to occupy a middle position among the various methods of adjusting the relations between employers and men.

"426. The amount of work which a man should do in a day, what constitutes proper pay for this work, and the maximum number of hours per day which a man should work together form the most important elements which are discussed between workmen and their employers. The writer has attempted to show that these matters can be much better determined by the expert time student than by either the union or a board of directors, and he firmly believes that in the future scientific time study will establish standards which will be accepted as fair by both sides.

"432. * * * The worst thing that a labor union can do for its members, in the long run, is to limit the amount of work which they allow each workman to do in a day. * * *

"434. Promotion, high wages, and, in some cases, shorter hours of work are the legitimate ambitions of a workman, but any scheme which curtails the output should be recognized as a device for lowering wages in the long run.

"439. Some method of disciplining the men is unfortunately a necessary element of all systems of management. It is important that a consistent, carefully considered plan should be adopted for this, as for all other details of the art. No system of discipline is at all complete which is not sufficiently broad to cover the great variety in the character and disposition of the various men to be found in a shop."

It is true that the arsenals of this department have frequently been able to do manufacturing work at less cost than the price to be paid for similar work from private manufacturers. This is true of the Rock Island Arsenal, as stated in Mr. Alifas's letter; but at that arsenal there is a good deal of piecework, which is a system which makes the same efforts to pay labor in accordance with output as does the Taylor system of scientific management, but which does not permit as accurate ascertainment of what should constitute a reasonable job and does not permit guaranteeing a minimum wage to the workman, as does the premium system. The Watertown Arsenal, which is the only one where the time-study and premium system has been in operation, did not before the introduction of the Taylor system of management exhibit as economical production as the arsenals at which piecework was in practice.

It is true that the abolition of time study and premium payment has never interfered with cost keeping, but it has seriously interfered with keeping costs down.

It is also true that there have been numerously signed petitions from the employees of this department against the time-study and premium system, but there is a good deal of evidence that these petitions do not represent the real sentiment of the workmen, and you will see by reading Senate Document No. 800, inclosed, the kind of influence which was brought to bear upon the workmen by labor organizations in connection with these petitions. You will also find in this document the principal petitions which have been received and the answers to them, which will show you that the reasons advanced against the system are so trivial and flimsy that they either can not have been properly understood by the signers or can not have been the real reasons for their signatures.

The table published in the CONGRESSIONAL RECORD (pp. 2375 and 2376) shows the increased time required in a number of instances, taken from the records, to do jobs of work after premium payment had been abolished by Congress as compared with the time taken under the premium system. These cases were taken at random and represent the average condition very fairly.

The Watertown Arsenal has always paid the wages of the vicinity for work of like character, and has made the best efforts possible to ascertain what the wages of the vicinity have been. The last ascertainment was made by a representative of the Department of Labor, appointed by the Secretary of Labor, who found that the wages already paid at the arsenal differed but little from those of the vicinity, although the investigation was made at a time when the rising scale of the period since the commencement of the European war had made considerable progress. It is true that in many instances the wages at the arsenal are not as high as those paid at the Charlestown Navy Yard, but the representative of the Department of Labor has sustained the rate of wages at the arsenal. The wages which I am speaking of have been the base wages, upon which percentages have been computed as premiums and paid in addition to these wages under the Taylor system.

No workman has ever claimed to be overworked at the Watertown Arsenal in connection with the Taylor system, and no such case of overwork exists.

I do not know of any case in which tasks set under the premium system have been materially exceeded since the abolition of that system, and I should be glad to investigate any such cases which may be submitted and to give official confirmation of their existence, if they can be found.

Hoping that you may find the information herein given useful, I am,
Sincerely, yours,

WILLIAM CROZIER,
Brigadier General, Chief of Ordnance,
United States Army.

Mr. OLNEY. The bonus system has been done away with at the arsenals under a rider to our bill?

Gen. CROZIER. Yes, sir.

Mr. OLNEY. Has that interfered with the efficiency and economy of manufacturing arms and ammunition?

Gen. CROZIER. Yes, sir; it has interfered considerably. The legislation which was included in the Army bill last year and the year before, and which was included in the fortification bill, and other bills affecting the Ordnance Department, forbids the use of what is known as the time study in setting rates of pay for each piece of work, and forbids the payment of any premium or bonus or cash reward to an employee in addition to his regular day's pay. Now, the time study is a method for ascertaining the time in which a given piece of work can reasonably be expected to be performed. It is a scientific method of ascertaining what output ought to be in reason, and the premium or bonus is one of the methods of paying the employee an extra amount for attaining this reasonable output or for measurably approaching it. Both of those things have been forbidden. At the Watertown Arsenal I had the system of time study and of premium payments in operation to a more complete extent than at any other arsenal.

A short time ago I called upon that arsenal for a report as to the effect upon output which had been had by the legislation forbidding the payment of premiums since that legislation went into effect last summer, and I have received from the arsenal a report giving a number of instances in which the identical job of work had been done under the premium system and under the regular day-rate system. I will say that our method of paying these premiums was so adjusted that if a workman should do a piece of work in the time which had been ascertained to be reasonable he received a premium which amounted to 33 per cent of his pay, in addition to his regular pay, and his regular pay was adjusted with reference to the rate in the vicinity for work of like character and for a man of like skill. Now, there are reported here 49 instances, selected at random, of the same job done under the premium system of payment and under the regular day-rate system of payment, and in many cases—I think in about one-third of the cases—the jobs were done by the same man. I will not read this table, but I will just cite one or two of the examples as illustrative of the general effect. Taking the first job which is mentioned in the list, which is a job of retapping the base of some 4.7-inch shell, a man last August did 100 of those shell in 10 hours under the premium system of payment.

As soon as he had finished that job he was given the next day another 100 to do, but the second 100 were to be paid for out of funds

appropriated in the act forbidding the payment of premiums, and to do the second 100 he took 22.95 hours. The first 100 were done in 10 hours and the second 100, done immediately afterwards, were done in 22.95 hours. That is to say, it took him two and three-tenths times as long to do the same amount of work under the day-rate system of payment as it took him under the premium system.

Mr. KAHN. How much did he get under the premium system and how much did he get under the day-rate system for doing the same work?

Gen. CROZIER. Under the premium system he had earned for the six months preceding the time which I am speaking of an average of 35 per cent over and above his regular pay; that is to say, his average earnings had been 35 per cent, which means that he had done the different jobs of work assigned to him in just a little less than the time which had been set as the reasonable time, and if he had met that time it would have involved an increase in his pay of 33 per cent; but he actually made on an average 35 per cent.

Mr. QUIN. Do you mean to say it took him 22.95 hours to do what he had done in 10 hours?

Gen. CROZIER. Yes, sir.

Mr. QUIN. Ought he not to have been discharged for "laying down" on his job?

Gen. CROZIER. That is not the worst case.

Mr. QUIN. Give us the worst case, because I may change my opinion about this matter.

Gen. CROZIER. The case I have just given you is the case of a job being done by the same man. The worst case which I have of a job done by the same man was a job of cutting a slot in 4.7-inch base plugs. A man did 100 of those in 2.66 hours under the premium system, and then afterwards he did 20 under the day-rate system in 2.25 hours; that is to say, it took 2.66 hours to do 100 and it afterwards took 2.25 hours to do 20, one-fifth the number. It took four and two-tenths times as long to do one under the day-rate system as it took under the premium system.

Mr. OLNEY. It would be a pretty difficult matter to restore the Taylor efficiency system, would it not?

Gen. CROZIER. All that would be necessary would be to have this legislation left out of the bill.

Mr. SHALLENBERGER. Why did he not take twice as much time? Why did he not take 44 hours instead of 22 hours, if there is no restriction upon him in the amount of work he is required to do? If he had taken 30 hours, would you still have retained him, or did you retain him when he took this long time?

Gen. CROZIER. I think all of these men have been retained.

Mr. SHALLENBERGER. Did he know he was doing the job for the purpose of meeting this question? Did he know he was making two competitions there?

Gen. CROZIER. He knew that in one case he was going to get a premium if he met the time or approached it, and in the other case he knew he would not get any premium, no matter what his output was.

Mr. SHALLENBERGER. He did not know you were going to come before us with this case?

Gen. CROZIER. No; he did not know that; nobody knew that; even the officers did not know it.

Mr. GORDON. Did his superiors ever remonstrate with him about these conditions?

Gen. CROZIER. I have not any record of that, but I have a statement in a letter which has come with this report, which is as follows:

"It is perfectly evident by mere observation that a great change has taken place in our shops, the atmosphere that was so noticeable of industry and application has changed materially, there is much more loafing and a much greater tendency to sit around on kegs, etc., than has existed here for several years, but I do not think any of us appreciated just how much the falling off had been until we had the data indicated on the tabulation which I am sending you. There is no doubt at all now that the men have no desire now to exert themselves, and in one case which has recently been brought to my attention the machinist, when taken to task for doing such slow work, stated that now that the premium had been taken away he did not propose to exert himself."

Now, Gov. SHALLENBERGER, in reference to your question, of course the question immediately arises in anybody's mind why should you retain such a man when he is not a good worker and should be discharged. I do not think we are justified in wholesale discharge, because the drop back which we have experienced as illustrated by this record upon the removal of the premium almost exactly corresponds with the improvement which we found when we first instituted the premium.

After the premium system had been in operation at the Watertown Arsenal a year or more we made some comparison of identical jobs done before the premium had been introduced and afterwards, and we found that on an average the men did 2.7 times as much work when working under the premium system as they did when working under the day-rate system. Going back and using these records, we find that in the machine shop where most of these jobs recorded were done the time required for doing the same job of work after the removal of the premium system averages 2.2 times as much as it had averaged for the same job under the premium system, which very closely agrees with the record when we first went up to the premium system. That is, performance went up and down in very much the same ratio.

Mr. SHALLENBERGER. Upon what rule of procedure in armories would you have kegs around for the men to sit on?

Gen. CROZIER. Kegs have to be there for different purposes. As far as sitting on the keg is concerned, that would not indicate that the man was loafing.

Mr. SHALLENBERGER. Why does the superintendent permit a man to loaf under one system? I would not permit a man to do that in private work for me.

Gen. CROZIER. It is almost impossible to tell when a man is loafing. There is no way of telling that absolutely and accurately.

Mr. SHALLENBERGER. When a man is sitting on a keg he is loafing.

Gen. CROZIER. A man might be working his machine very efficiently.

Mr. SHALLENBERGER. But the statement of the superintendent is that the man was sitting on the keg when he should have been attending to his work.

Gen. CROZIER. Yes, sir; undoubtedly. All of the experience which we have had, and I think every other manufacturer has had, is that good work can not be gotten out of workmen by the disciplinary process alone; you have to have the stimulating process. You can reach a certain stage of efficiency by the disciplinary process, but you can go no further, and it is particularly difficult to arrive at a very efficient stage by the disciplinary process in a Government establishment, because all of the men in these establishments have a civil-service tenure of office and when anyone is discharged for cause he must be furnished with a statement of why he is discharged, and that statement must be such that the man making it can sustain it.

Mr. TILSON. What do you know, if anything, about how the men feel in regard to this matter, are they better satisfied under the present system than under the old system?

Gen. CROZIER. There is evidence both ways as to that. These men are, many of them, members of labor organizations. Organized labor is bitterly opposed to this premium system. Organized labor has consistently opposed any system which was intended to increase the productivity of the individual. They have always been opposed to any form of payment for output. They are opposed to any form of measuring what one gives in a day of labor as a basis for payment in accordance with what is received. These men are members of the unions, and they have presented various petitions against this system. Now, on the other hand, there is the general observation of the spirit and contentment of the force, which is to the effect that they have never been so good as they were during the three or four or five years when this premium system was in operation at the arsenal. In addition to that, there have been men, small in number it is true, who have expressed themselves in favor of the premium system.

Mr. TILSON. Have you increased the wages of the men any in the last year?

Gen. CROZIER. Yes, sir.

Mr. MCKENZIE. The wages of the men in private factories have been increased, and you have to pay them a corresponding increase?

Gen. CROZIER. Yes, sir; and the premiums would be a percentage of the increased wages if they were bestowed, just as they were a percentage of the previously existing wages.

Mr. MCKENZIE. Is the wage that you are paying now, after granting the advance, equal to the amount these workmen received prior to the repeal of the law?

Gen. CROZIER. I think that, on the average, the wages may not be very different. For several years the average earning of premiums of the workmen was about 27 per cent of their pay. I think in the last two years I have increased the pay of the men at this establishment, in order to keep up with the vicinity, I should say, something like 20 per cent.

Mr. MCKENZIE. If the system had been permitted to remain, you would have increased those wages just the same?

Gen. CROZIER. Yes, sir.

Mr. MCKENZIE. And with the premium added they would have been making very much more money than at any time?

Gen. CROZIER. Yes, sir.

Mr. MCKENZIE. The Government would have received a great deal more in return according to your table, if that is correct?

Gen. CROZIER. Yes, sir.

A little further in reply to Gov. SHALLENBERGER'S question, I think I can say this in regard to the ordinary wages for work. The ordinary wages as they are paid in any community are not based on the workman's best efforts, but they are based on the kind of efforts under which the wage scale has grown up, which were demonstrated by every kind of test to be very far from their best. For the workman's best efforts he is entitled to something better than the ordinary rate of pay, and it is upon that theory that we give these premiums. We ask from every man his best effort; we measure that effort and we pay him for the better effort. When we cease to pay him for the better effort we have lost the right to demand it. We have not the right to demand anything more than what long experience has shown to be the average—for the regular day wages. I give that as a reason why we do not at once discharge all these men. I do not think it would be fair.

* * * * * * *

Mr. HULL. Going back to the question of efficiency, is it not true that whenever we pay a man an extra amount to finish a job in less time than he would ordinarily take that the quality of the goods is liable to be slighted?

Gen. CROZIER. I think, in general, haste may at any time interfere with the quality, but the quality ought to be insured by inspection.

Mr. FIELDS. It should always be inspected?

Gen. CROZIER. Yes, sir; everything should be inspected carefully enough to insure the proper quality.

Mr. GREENE. There would be no advantage to the workman in slighting the job?

Gen. CROZIER. If a workman spoils his work, the value of it, up to a certain limit, under the usual practice is charged against his pay.

Mr. GREENE. Then there would be no advantage to slight it?

Gen. CROZIER. Generally, the risk is too great. Then, again, the times which we ascertain as the reasonable ones in which it is possible that the work shall be performed are intended to be the times in which it can be performed properly. To the extent that the determination is scientifically made they will be the reasonable times in which the work can be properly performed. The most scientific method of ascertaining the time is to divide the job into its components and study them separately.

Mr. HULL. There is a large increase in your expenses if you have to hire inspectors, etc., for keeping track of all this?

Gen. CROZIER. There is an overhead expense connected with it which is more than offset by the greater output which is secured.

Mr. OLNEY. Please put into the record two or three concrete examples of the work under the old and new systems.

Gen. CROZIER. I am perfectly willing to have this whole table included in the record.

Mr. GORDON. And show the efficiency of the work under the old and new systems also—I mean the quality.

Gen. CROZIER. The work would not be recorded here at all unless it was of the accepted quality.

Mr. GORDON. Is there anything in your records that would disclose whether or not while under the premium system the work performed was more or less defective than under the day-rate system?

Gen. CROZIER. That has been done at various times very carefully.

Mr. GORDON. What is the result?

Gen. CROZIER. The result has been to show that the work done under the premium system was more carefully done.

Mr. GREENE. You cited one instance which so far from the time limit being unfair, one man, whose work you referred to, easily exceeded it?

Gen. CROZIER. Yes, sir.

Last year when this particular item of legislation was under discussion on the floor of the House there was quoted in the debate some testimony which had been given before the Committee on Labor, with

the object of showing that these time studies were very far from being scientific, and that the times which were set for the performance of jobs of work were irregular and varied unreasonably. The testimony, then, goes to show that the same man working on different jobs had an efficiency that varied between very wide limits. Sometimes he was only 45 per cent efficient and at other times almost 200 per cent. The assumption was that the man was an even worker, and that thereafter his varying efficiency was owing to the fact that the standard set for him was varying and uneven. That was rather an important assumption.

The evidence was good as far as it went. That is to say, the facts were correct. The man's efficiency had varied in this way on these different jobs. Upon examining the question we were able to identify the man, whose name was not given but indicated by a number, and we found that the man instead of being an even worker was a very uneven worker, and that upon the same job done at different times his efficiency had varied from something like 60 per cent to something like 180 per cent. In other words, that his efficiency varied all over the time table even when he had the same job under the same circumstances. The value of the evidence for the purpose of showing a variation of the standard was worthless.

I will add, with reference to the liberality of the times which are allowed, that the evidence which was submitted to show that the standards were ununiform, and this point was dwelt upon, showed that the average efficiency of this man during the time when these variations in efficiency occurred was 121 per cent. One hundred per cent would have secured him a premium of 33 per cent over his pay during this period, and 121 per cent gave him a premium over and above his pay of considerably more than 33 per cent. That shows conclusively that the time allowed was very liberal on the average.

Mr. MCKENZIE. You do not want the committee to understand that your purpose in putting in this system in the arsenals of the country was to make use of what is known as the speeding-up process, but it was rather done to secure greater efficiency in the plant?

Gen. CROZIER. Most decidedly.

Mr. MCKENZIE. Am I right about that?

Gen. CROZIER. Yes, sir.

Mr. MCKENZIE. There was a great deal said about speeding up?

Gen. CROZIER. We have avoided everything that could be justly characterized as a speeding-up system or sweatshop system. In all the experience we have had with this system we have had no single instance in which a man has complained of overwork. We have had the general charge made that it was a sweatshop system, but never supported by any specifications.

Mr. QUIN. By revoking the system Congress has opened the gap for a man to do just as little work as possible in order to get by and get the money

Gen. CROZIER. Of course I would not like to say that no matter how poor the return of work the man would be retained, because we do discharge men for idleness and inefficiency; but it is true that the bars have been let down to such an extent that the amount of work which is returned per day is not more than one-half what it was under the premium system, nor is it done as cheerfully and willingly.

Mr. GORDON. I understood you to say that there never has been an individual complaint against this system to the effect that it was bad and resulted in overworking the men?

Gen. CROZIER. Yes, sir.

Mr. GORDON. There never has been one?

Gen. CROZIER. No, sir.

Mr. GORDON. The effect of abolishing the Taylor system prevents you from locating the slackers, if you have any in your employ?

Gen. CROZIER. It makes it very much more difficult to do so; yes, sir.

Mr. GORDON. For that reason the whole institution—that is, the whole factory or set of men—are compelled to bear the odium of the material reduction in the product turned out?

Gen. CROZIER. That is undoubtedly the case.

Mr. TILSON. Has not the cost of manufacture in the arsenals, as the cost of manufacture outside, considerably increased since this system was abolished?

Gen. CROZIER. That must be necessarily the case. I am warned that I must expect reports of deficits and requests for additional allotments as to particular pieces of work.

Mr. FIELDS. What percentage of the men favor the restoration of the Taylor system?

Gen. CROZIER. I do not know. I have never polled the men on that subject, because the men would not be free agents in stating their opinion. Many of the men would like to see the system restored, but they would not care to say so and would not care to be asked.

Mr. MORIN. How much did the man earn who finished the work on the 100 shells in 10 hours?

Gen. CROZIER. He earned 16.50 per cent over and above his pay.

Mr. MORIN. You do not know the amount?

Gen. CROZIER. No, sir.

Mr. MORIN. How much did he earn under the premium system in 10 hours and how much was he paid when he took over 22 hours for the same work?

Gen. CROZIER. In each case he was paid his regular day's pay. When he did the work in 10 hours he was paid 16.50 per cent over and above his pay, and when he took 22.95 hours he only received his day pay.

Mr. MORIN. You do not know how much that was?

Gen. CROZIER No, sir.

Mr. MORIN. And the Government is put to the additional expense of maintaining the plant and factory while the job is being done which is not included in his pay at all?

Gen. CROZIER. The Government loses a great deal more than the amount paid to him.

Mr. MORIN. It costs more for the 10 hours or the 22 hours work; is it a loss of money or just a loss of time?

Gen. CROZIER. The Government loses money in both ways.

Mr. HULL. What proportion of the work at the different arsenals was done under this efficiency scheme?

Gen. CROZIER. At the Watertown Arsenal where I had the most careful records kept the proportion was progressively increased, and I think at the time the premium system stopped it had reached about 50 per cent of the work, as I remember.

Mr. HULL. How much work was done at the Rock Island Arsenal under that system?

Gen. CROZIER. At the Rock Island Arsenal I had never introduced the time study or premium system, but I had employed a piece-rate system.

The People Are Opposed to War.

EXTENSION OF REMARKS

OF

HON. WILLIAM J. CARY,

OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, February 13, 1917.

Mr. CARY. Mr. Speaker, I am hearing every day from my constituents, by letter and by telegraph, about this country being about to engage in war with a foreign country on account of a different interpretation of international law. From these communications, a number of which under the leave to extend my remarks granted to me by the House I will insert, it is easy to come to the conclusion that my constituents are, like myself, opposed to war and in favor of peace. The prevailing sentiment of my constituents must guide me in my official actions now and in the future.

MILWAUKEE, WIS., *February 7, 1917.*

Hon. WILLIAM J. CARY,
House of Representatives, Washington, D. C.

DEAR SIR: What stand do you take in regard to the President's recent action? We trust that you are not in accord with this policy, and that you will oppose more drastic measures to the utmost. It requires courage to do something which others may claim is unpatriotic. Why should this country permit itself to be dragged into untold distress simply to gratify the whims of those who would be directly benefited by such a calamity? The manufacturers of ammunition and all other war accessories are already wealthy, but they want more war to further enrich themselves. They doubtless are the dominating stockholders in the papers which cry for war. These jingo papers certainly do not voice the sentiment of the people at large.

We are told that this is a government for the people and by the people; but is this true? Is it not a fact that we are subject to altogether too much one-man power, vested in the President? Matters affecting the national welfare such as the present crisis certainly should not be subject to the decision of practically one man. In the event of war who bears the burden and who is compelled to face the bullets? The common people, and they do not want war. To prove this a referendum vote should be taken and the decision of the majority then should rule. Only in this manner would the true will of the Nation be known.

It is said the President insists upon justice and freedom of the high seas. This issue can not be made the basis of a conflict with Germany because of our Government's inconsistency. Ever since the beginning of the war our mail has been rifled and our shipping interfered with. There has been no freedom on the high seas, and American citizens have no business to travel in the danger zone. Those doing this are, in our estimation, not worthy of the protection of this Government. Their action can be considered criminal, because it is with the intent of inducing international complications. The writer has talked with a number of men who voted for the President, and these men are now sorry they did so. Had this issue come up before election, there would have been a different result. We trust that you will continue in your efforts and that they may be productive of good results.

Thanking you, we are,
Yours, truly,

E. C. KROPP CO.,
F. J. SCHMIDT,
General Manager.

MILWAUKEE, WIS., *February 10, 1917.*

Hon. WILLIAM J. CARY,
House of Representatives, Washington, D. C.

DEAR SIR: The inclosed resolution was adopted at a regular meeting of the Federated Trades Council of Milwaukee, Wis., held February 7, 1917.

The object of the resolution is to be helpful in an advisory way, as patriotic citizens—ever ready to serve and protect our country—in outlining a plan by which we believe the present crisis confronting our country, and may cause us to enter the present European war, can be avoided.

Yours, very truly,

THE FEDERATED TRADES COUNCIL,
By FRANK J. WEBER,
Corresponding Secretary.

Whereas the Government of the United States has broken off relations with one of the central powers of Europe and our country stands upon the brink of the abyss into which all the civilization of Europe is in danger of disappearing; and

Whereas we know that if war is declared by the United States it will be declared only to safeguard the shipments of ammunition, war supplies, and food to foreign countries; and

Whereas the workingmen of America do not want to submit to being murdered or to murder others, in order to protect the profits of our greedy enemies within our own Nation: Therefore be it

Resolved by the Federated Trades Council, representing the trades-unions of Milwaukee County, That we are for peace and against taking away our food to feed the soldiers of Europe; that we protest against any declaration of war against the central powers or any other powers; and that we protest against the murderous and inhuman agitation of the capitalist press for war; further be it

Resolved, That we demand that American citizens and American ships be forbidden to enter the war zone except at their own risk; and be it also

Resolved, That a copy of these resolutions be sent to President Wilson, the two United States Senators from the State of Wisconsin, the two Congressmen from Milwaukee County, and also to the daily press of Milwaukee for publication.

Respectfully submitted.

THE FEDERATED TRADES COUNCIL,
By FRANK J. WEBER,
Corresponding Secretary.

BRICKLAYERS, MASONS, AND PLASTERERS' PROTECTIVE INTERNATIONAL UNION, NO. 8, WISCONSIN,
Milwaukee, Wis., February 9, 1917.

RESOLUTION OF PROTEST.

Whereas this country has always been neutral and our honorable President, Woodrow Wilson, has always been advocating peace, and was elected on the peace slogan; and

Whereas the workers of the State of Wisconsin—who are also the fighters and sufferers in war—have no interest in the quarrels of Europe: Therefore be it

Resolved, That we, the Masons & Bricklayers Union, No. 8, Wisconsin, of Milwaukee, do hereby assemble this date, Friday, February 9, 1917, to emphatically protest against any measures that may involve this country in any entanglements or war and bloodshed with any foreign countries or powers.

Signed by officers of No. 8, Wisconsin, of Milwaukee.

AUG. VANSLOW, *President.*
WM. ERDMANN, *Vice President.*
CHAS. HOEFS, *Recording Secretary.*
PAUL F. FRITSCHE, *Corresponding Secretary.*

MILWAUKEE, *February 10, 1917.*

Congressman WILLIAM J. CARY,
House of Representatives, Washington, D. C.

HONORABLE SIR: Considering the present important situation that our country is in, we ask you to kindly file our protest against war of any kind against any of the European nations.

It seems to us that our country does not have sufficient cause for such actions just now and it should be saved the burden of a calamity like war.

Kindly do your utmost to prevent war, and rest assured you will ever have the thanks of,

Yours, truly,

THE STANDARD BEDDING CO.,
PAUL J. HETTWER,
907 Fourth Street.
ERNST SIEDENTOPFF,
176 Twenty-sixth Street.

MILWAUKEE, WIS., *February 10, 1917.*

Hon. WILLIAM J. CARY, M. C.,
Washington, D. C.

HONORABLE AND DEAR SIR: For various reasons we are opposed to the presently proposed increase in the postal rates for newspapers. We therefore respectfully request that you endeavor to defeat the bill relating to such increase. If an increase is to be brought about, we would suggest that the privilege of mailing publications in the county of their origin free of charge be abolished.

In view of our relations with the German Government, we further wish to ask you to do all that is in your power to prevent our country from becoming involved in a war which, on account of the disputed privilege of a few, might result in the sacrifice of thousands of American lives and the loss of millions in treasure.

Most respectfully, yours,

EXCELSIOR PUBLISHING CO.,
Per JOS. SPRINGOB, *Manager.*

MILWAUKEE, WIS., *February 11, 1917.*

Congressman CARY,
House of Representatives, Washington, D. C.

DEAR SIR: For God's sake keep our country out of war.

AN AMERICAN MOTHER
(MRS. EMMA SCHOENFELD,
485 Clement Avenue).

MILWAUKEE, *February 11, 1917.*

Hon. WILLIAM CARY.

DEAR SIR: I beg you for God's sake to do all in your power to keep this country out of war.

AN AMERICAN MOTHER
(Mrs. JULIUS HABECK,
120 Lincoln Avenue, Milwaukee, Wis.).

MILWAUKEE, WIS., *February 8, 1917.*

Hon. WILLIAM J. CARY,
Washington, D. C.

MY DEAR WILL: The inclosed clipping, taken from the Sentinel, as well as the editorial of the Milwaukee Leader, I wish you would please hand to Hon. W. H. STAFFORD to read. You and Brother STAFFORD are our Representatives, and as such I have placed my explicit confidence in you both and worked for you before election, cast my vote, and caused my friends to cast their votes for you both, because of our confidence, merited by your record while representing us in Congress. In my humble judgment it would be an insult to Congress's intelligence to consult the people by referendum whether we should create another 100 millionaires during the ensuing year under the excuse of declaring war against Germany. While as you know that I am not a believer in Socialism, yet I confess that their editorial sent you herewith about hits the nail squarely on the head. I want to back up our President; I want to back up our Senate and Congress, but I admire the stand the five Senators took during the recent action on the matter of our breaking with Germany. I am much afraid that Johnny Bull slipped one over on Woodrow, but you know to slip a cog occasionally is only human. For Johnny Bull to say keep off my ocean is all right. I am going to starve out Germany, why that's all right; and I am going to do it with the aid of Mr. Morgan and Charlie Schwab; but Germany found a way to prevent being starved, and instead now threatens to starve England. Germany, by its present action, is working in the direction of opening the waters of the world for the free use of all the world, and without being obliged in future to go to Mr. Lloyd-George and ask him whether or not he thought King George would allow us to run a boat on his ocean. Who under the sun gave King George my navy, my army, my ocean, my England, Ireland, Scotland, and Wales, and all his other claimed possessions in civilized and uncivilized countries?

I want to say in conclusion, use your own head, do as your best judgment guides you, but I sincerely trust you will fight to the last ditch in order to keep this country out of war. Getting back to referendum, let that apply to the prohibition bill the Senate tried to saddle onto Washington. I don't wish to go into a prohibition argument with you nor Mr. STAFFORD, because both have shown the people you represent just where you get off at. This much I wish to say, however, and my remarks are not to the credit of our brewers anywhere in the United States. Can you for a moment imagine, considering the hundreds of millions of dollars invested in the brewing industries throughout the country, and not brains enough back of the entire brewing industries to cope with a few fellows like William Jennings Bryan and the likes of Billy Sunday? Did you ever stop to think about my last remark? "Give" a little think. The whole matter of prohibition is a huge joke at the expense of the brewers and allied trades. Can you imagine that a man like Joseph Uihlein, heading a brewing company with an investment of possibly $30,000,000, can not devise ways and means to prevent his business being destroyed by a few fanatics? Now, Joe Uihlein is a brainy man, a good business man, a success in business, yet he possesses the weakness and submits to his vast business being destroyed. The brewers now want to clean up the saloons, close them up near our soldiers' home—anything at all to please the prohibitionists. I told some of our Milwaukee brewers recently it seems rather strange that they did not know of the existence of disreputable saloons until some crusader informed them about the existing conditions, and the very informant has never seen the inside of a saloon, yet this fellow's talk is the basis for putting saloons out of business, and closing breweries, too, in every State of the Union. An old rum soak does no harm to society, for he hurts himself only, but the prohibition crank that tears down and destroys the liquor traffic and its manufacture is the fellow that does the harm, fills his coffers with shekels under the plea of unlifting society, and by his act causes more poverty and the enlarging of our poorhouses. We need no laws to close saloons. Keep out of them if one don't like them. If you go into a saloon to buy a drink or a pretzel, that's your business. What in de hotel is it my business? While I don't think national prohibition will carry for some years to come, yet if the cranks are real sincere and know their business they can get away with it during the next session of Congress. You know all our brewers are scared to death and haven't enough grit left in them, than the fellow in a fight who is just taking the count. Don't lose heart, Bill, because we need a few who displayed the courage you have in the past.

Yours, truly,

OTTO E. SCHULZ.

[From the Milwaukee Leader.]

A DAY OF RECKONING.

With the threat of war hanging over the country Congress is considering means to meet the extraordinary expenditures which will be required to prepare for eventualities.

The first method proposed, and the one that likely will be adopted, is to authorize an immense issue of bonds. By issuing bonds the Government will enable our capitalists to finance the war and yet be none the poorer for it. Every cent that the Government may spend will be owed to them. They will have their bonds and at the same time their profits.

It is notorious that war contracts are filled with graft. Most of America's swollen fortunes had their origin in the corruption flowing out of the Civil War.

The house of Morgan came into prominence in the Civil War when the late J. Pierpont Morgan, then winning his spurs as a fledgling financier, bought condemned muskets from the Government for $2.75, and without even unpacking them turned around and resold them to the War Department for $19.50.

In the Spanish-American War, old hulks were sold to the Government for treble their value. The embalmed beef and other scandals are yet fresh in the public memory.

We have made some progress since Hanna and the Republican campaign fund ceased to be the determining factors in the favors of Government. But the recent leak investigations have not been altogether reassuring. There is need for vigilance.

If Congress should do its full duty to the people, it would devise a system of taxation that would relieve all necessity for bond issues. Our great capitalists should be made to pay the cost of war from their war profits. Instead of being permitted to grow rich from the public's necessities, they should be held in restraint.

There is no justice whatever in asking the boys from the mills and shops and mines and farms to place their lives at the Government's disposal and at the same time give the capitalist a bond for the wealth that he may contribute to the public defense.

A man will give all that he has to save his life. When he is brought to the foot of the gallows or when his life is placed in jeopardy he hesitates at no expenditure to obtain his freedom. He will strip himself bare to prolong his life for a few days or years. Yet, in case of war, the capitalist ordains that it shall be his opportunity to pile up greater profits and that the cost shall be borne by the men who serve in the field and survive when they return to peaceful pursuits and find a mortgage issued by the Nation hanging over them.

If the United States should be so unfortunate as to be plunged into the war, our capitalist class will find that a different spirit exists than has been present before in the United States. The American people have the example of Europe before them. They know what European Governments have been doing to force the capitalist to surrender his profits and his accumulations to national needs. It is highly improbable that the people will remain silent while they are being plundered or acquiesce in the graft and favoritism that heretofore have characterized the prosecution of our wars.

The Morgans and Schwabs and their greater and lesser associates may be in high feather as they see even greater profits than they have yet reaped flowing into their coffers, but their elation may be short lived. Nemesis is close at hand.

A day of reckoning is at the threshold of the world's lords and masters.

[From the Milwaukee Leader.]

WHO WAVES THE FLAG?

Declaring the United States has "not been neutral," that Great Britain has persistently violated rights of the United States to the seas, that the United States has borne these violations as if it had been an ally of Great Britain, and that Germany had no reason to feel friendly toward the United States, Senator JOHN D. WORKS, California, Republican, has voiced the opposition in Washington to the President's action in severing diplomatic relations with Germany.

Senator WORKS said the action of the President in stating in the *Sussex* note that diplomatic relations would be severed unless Germany abandoned her methods of submarine warfare was "unwise." He justified Germany's submarine methods on the grounds that the rules of the old international law can not stand in case of the changes of the methods of actual warfare.

In order to deal frankly with the situation "we must search our own national conscience and learn how far our own conduct has gone to place us in the present crisis.

"The first wrong done to the right of American citizens by the German Government was in sinking the *Lusitania*. But at the very time of this occurrence we were supplying to the enemies of Germany arms and munitions of war to enable them to carry on the war against that country, with whom we were at peace.

"The *Lusitania*, a passenger ship, was loaded with these missiles of death."

Senator WORKS criticized the administration "for permitting the *Lusitania* to sail, in view of the warnings given, carrying American citizens into the very jaws of death." He said he questioned "the moral right of the United States to tempt Germany to sink the *Lusitania*.

"This Government can not shield itself from the fearful responsibility it is bound to accept for this dreadful tragedy. Certainly Germany has no reason to feel kindly toward us.

"Germany must be judged as we must, by the conditions as they then existed, conditions brought about by us for mere ill-gotten commercial gain at the expense of German lives."

Senator WORKS also questioned the President's right to sever relations with Germany.

"There is another and far better choice open to us," said Senator WORKS. "I say keep our ships and our people out of this danger zone until the war is over. American citizens in Mexico have been compelled by the Government to abandon their permanent homes, lose everything they had in the world, and become homeless and destitute refugees to keep us out of war with that country."

Senator WORKS insisted that neither a private citizen nor the President nor Congress is justified in driving the Nation into war by "any such false sense of courage or national prestige or dignity."

We are not going to criticize or justify WORKS's position on the *Lusitania* affair.

Every unprejudiced observer will agree with Senator WORKS, however, that our country is guilty of participation in the bloodshed of this war.

It can not be denied that from the beginning of the war the United States has not been neutral. Our Government nominally has obeyed the letter of international law, but our ruling class has constantly and viciously violated its spirit and received the encouragement of our Government and the protection of the American flag in every instance.

Our manufacturers and speculators have been shipping munitions and other supplies to the allies, while they were prevented by the allies from shipping them to the other side. To claim it was not the fault of America that these munitions and supplies could not also be sent to the central powers is dishonest quibbling, of course. As a matter of fact, Mr. J. Pierpont Morgan, the agent of Great Britain, from the beginning of the war acted as if he were also the agent of our Government. He practically monopolized the supply of metals and other war material in this country.

A hardware merchant in a town out West who would willingly furnish guns and ammunition to a dozen cowboys that are fighting with two others in the street would undoubtedly be considered guilty of accessory to murder, although he might plead that he was in no position to furnish guns and ammunition also to the other two. Court and jury would justly hold that by not furnishing it to either side he might have prevented the murder entirely.

It is a violation of neutrality to help only the allies and to injure only the Germans. It is all the more so when we have it in our power to stop the war within a short time by refusing to furnish ammunition, war material, and food to both sides.

Our Government has not done so because our ruling class was glad to give some of our trust magnates a chance to gather in a few billion dollars by the war traffic. Our "kept press" calls this war prosperity. That bloody and criminal traffic has not only killed many hundred thousands of men in Europe—most of them workingmen—but it has also doubled the cost of living for the working class of our country.

Are we now to fight to protect this war traffic?

Are we to finance the Czar of Russia, as is now suggested by the English press?

Are we to go to war to protect the profits of our worst exploiters, of our worst enemies at home?

Are we to shed our blood that the high cost of living might continue to rise and the profits of some freebooters grow still larger?

Or are we to withdraw our ships from the war zone?

Has reason flown to the beasts? Are our workingmen to stifle what little brains they have the moment a crook or a foll waves the flag before them?

—

[From the Milwaukee Free Press.]

QUESTIONS.

Editor FREE PRESS:

Having yielded peacefully our right to ship noncontraband to Germany, why should we now go to war to defend our shipments of contraband to England and France?

Is our Government more interested in getting war munitions into England and France than it was in getting American grain and cotton into Germany?

Having surrendered our sea rights to England's "illegal and indefensible" blockade, conducted not along German but along American shores, why must we go to war for the privilege of passing our munition-laden ships to England and France through Germany's actual and legal blockade of their shores?

If our "national honor" was smirched by Germany's refusal to let us ship war munitions to England and France, what happened to our national honor when England refused to let us ship noncontraband food, or even Red Cross hospital supplies, to Germany?

If we could remain calm while England's warships were trying to starve the women and children of Germany, why do we become suddenly ferocious when Germany's warships try to starve the women and children of England?

Is the pro-English press campaign for universal military conscription a campaign for the defense of the United States; and, if so, against whom?

Or is it a pro-English scheme to raise a vast army of American boys to be sent to slaughter in France?

England and her allies having declared they will make peace only on terms ruinous to the central powers, do we wish to send an American army to Europe to help them conquer that kind of peace?

Germany and her allies having offered a peace guaranteeing freedom and reparation to Belgium, restoration of conquered territory to France, freedom for Poland, and equal rights for all powers on the seas, do we wish to send an American army to Europe to prevent that kind of peace?

The issue of peace or war between the United States and Germany having been made automatically dependent upon the commission by Germany of an "overt act," ought not our Government to inform the American people exactly what is meant by an "overt act"?

Is our Anglo-French-Russian ammunition trade really worth a war?

FRANK PUTNAM.

MILWAUKEE, WIS., *February 12, 1917.*

Hon. WILLIAM J. CARY,
House of Representatives, Washington, D. C.

DEAR SIR: I hope you will do your best to keep us out of war. War is not necessary for us. Let the Europeans fight if they want to. If our country is attacked or in danger of being attacked I am willing to sacrifice my life and that of my six sons for it, but until that time comes let us have peace. Our boys are too valuable an asset to this country to be sacrificed for any nation in Europe.

All the belligerents are doing unlawful deeds, but there is no law for anybody whose life is threatened, so let them do as they think they have to in order to save their existence, but let us stay out of the fray.

Very truly, yours,

OTTO L. KUEHN.

TO BE SUBMITTED TO A REFERENDUM.

I have also received a large number of votes cast by some of my constituents on the following questions submitted to them by a newspaper published in my district:

Shall we resort to arms to protect Americans traveling in the so-called danger zone?
Shall Americans be permitted to travel in the danger zone?
Shall we continue to export munitions and food supplies?
Shall war be declared without a referendum vote by the people?

Ninety-nine out of every hundred of my constituents to whom these questions were submitted voted "no" on the first three of these propositions and "yes" upon the question of a referendum. The following constituents have mailed their votes to me: H. W. Freund, 494 Twenty-seventh Street; Paul Bluhm, 917 Twenty-second Avenue; J. C. Cummings, 2809 Wells Street; Fred. W. Hein, South Milwaukee; B. W. Bigley, 686 Dover Street; Emil R. Lochman, 785 Cass Street; Otto E. Schulz, 341 Twenty-sixth Street; Herbert Hultz, care of F. Kestner, rural route 1, Station D. box 117; E. C. Schulz, 414½ Twenty-fifth Avenue; Ludwig C. Kreiss, 1129 Cedar Street; Henry Biezel,

555 Sixty-eighth Avenue, West Allis; A. S. Schroeder, St. Francis, Wis. While on the subject of deciding the question of war or peace by a referendum vote of the people, I insert here the following resolutions adopted at a mass meeting in Newark, N. J., on February 10, 1917:

Animated by the same sentiments of unsullied loyalty which have ever marked the Germanic elements in America, and to which every contest for justice and liberty on American soil bears witness;

Appealing to the blood poured out by our Germanic fathers and predecessors in the war of independence and the war of the Union;

Pointing with just pride to the 200 years of loyal Germanic cooperation with all the other elements that have been engaged in the peaceful task of building the Nation;

We join those millions of our countrymen who to-day in this hour of anguish have formally appealed or in mute desire and trust look to the Representatives of the Nation for assurance that we shall not be swept into the hell of war.

We call upon you not merely to remember, but also to let operate upon your action and determination a reasonable appreciation of that "ancient friendship" between the people of Germany and our own, to which the President has so properly referred, and which has hitherto remained unbroken.

We call upon you to keep ever in sight that neither the German people nor the German Government desire conflict with us.

We call upon you to hold steadfast to this cardinal fact against every endeavor to cloud your mind or to sweep you along against your better judgment in a temporary tide of passion.

In weighing the future conduct of the German people can you ignore the keen perception of President Wilson, voiced on a notable occasion, when he said:

"No man can rationally live, worship, or love his neighbor on an empty stomach; and if he is in doubt where the food is to come from, if he fears he will be without work and sustenance, it is impossible that he should have a rational attitude toward the life of the community or toward his own life."

In weighing the future conduct of the German people can you ignore that if the course adopted by their Government in naval warfare is the result of madness, as our President intimated to you in his address, it is the madness induced by the fear of starvation, which obliterates a "rational attitude toward the life of the community"; that such fear of starvation is a product of the course maintained by Germany's enemy against the protests of our own Government?

Can you ignore that the madness of hunger or fear of starvation in Germany is increased a thousandfold by the plenty which has been vouchsafed us and of which the German people are not permitted to partake—against our will and the protests of our Government?

Can we as a Nation ignore those facts and still be a Nation "always guided by exalted justice and benevolence," as the Father of his Country enjoined upon us?

We affirm our solemn belief that if a census of the whole American people were taken the overwhelming mass would be opposed to the inauguration of a war between our country and Germany, or any European belligerent, because of the methods by which each seeks to master the other's might at sea.

We find that such belief is as deep as it is general and widespread. And equally deep and widespread is the belief that the dangers to our unprejudiced and continued existence and vital interests come from another part of the world.

We therefore appeal that before you think to set in motion the dread machinery, whose course, when once released, no living man can tell, there be taken, under provision of a law to be enacted by you, a secret vote of the 100,000,000 people whose lives and fortunes rest in your hands.

Such vote will show the national will.

Against the majesty of that decision no voice would dare be raised nor subtle tongue nor power of gold prevail.

—

MILWAUKEE, WIS., *February 13, 1917.*

Hon. W. J. CARY,
House of Representatives, Washington, D. C.

HONORABLE SIR: As one of your constituents I ask you to do all in your power to keep our Nation out of the European war and thereby avoid unnecessary and needless suffering and hardship, especially where we can find absolutely no just cause for throwing this country into warfare.

I trust sincerely that this may meet with your views.

I expect no reply to this letter, only hope that you will do all in your power to avoid such a threatened conflict.

Very respectfully, yours,

A. H. ANGER.

—

WEST ALLIS, WIS.

Hon. WM. J. CARY.

MY DEAR MR. CARY: As an American I appreciate the stand taken by you as regards the present crisis. We do not want a war as is waged on the other side of the ocean; we do not want to favor or help one side or the other; but we do want to keep at peace and, if possible, stop trading arms with the belligerent. We have, of course, people who, for reasons of their own, wish a war; but they are a small minority and should not be counted.

Thanking you for your efforts in this direction, I am,

Yours, truly,

CARL SCHINDLER.

—

MILWAUKEE, WIS., *February 12, 1917.*

Hon. WM. J. CARY.

DEAR SIR: As a wife and mother, an American-born citizen of the United States, I earnestly entreat you to do everything in your power to keep this country out of the European war. In my opinion nothing has happened that would justify our participation in this terrible European carnage. Sincerely hoping that you may be successful in your unceasing efforts in behalf of peace, I am,

Yours, sincerely,

Mrs. WM. D. TYRE.

—

CONCORDIA COLLEGE,
Milwaukee, Wis., January 12, 1917.

Hon. WILLIAM J. CARY,
Washington, D. C.

DEAR SIR: We, as loyal citizens of the United States, most earnestly request you to use all your influence to prevent our country from becoming involved in a war with the central powers. While we can not see that the attitude of our Government with reference to the belligerent countries of Europe has been one of strict and absolute neutrality, we nevertheless wish to state that whatever the outcome of the present crisis may be we will faithfully support the action of the administration. We beg to add, however, that in the event of hostilities the question of the declaration of war should, in our opinion, be submitted by referendum to the voice of the people.

On behalf of the faculty of Concordia College,

Very respectfully, yours,

M. J. F. ALBRECHT, *President.*
CARL HOMANN, *Secretary.*

—

MILWAUKEE, WIS., *February 12, 1917.*

Hon. WILLIAM J. CARY,
Congressman Fourth District of Wisconsin,
Washington, D. C.

DEAR SIR: The members of this organization do hereby solemnly and emphatically protest against the entanglement of this country in the European war.

We hold that the life of a single American is worth more than the billions which will be made by the war speculators who are so anxious that this country be drawn into this inhuman and bloody conflict.

Let those Americans who take passage in boats carrying contraband in the war zone do so at their own risk.

We demand a strict embargo on all necessities. *Starve the war and feed America is our motto.

Hoping the above will receive your earnest consideration, we remain,

Respectfully, yours,

CAP MAKERS, No. 16,
Per D. ROSENTHAL, *Secretary.*

—

Joint resolution (H. J. Res. 387) warning American citizens from taking passage or employment on board vessels of belligerent registry.

Whereas by recent measures of the European powers at war the distinction between peaceful traders and vessels in Government service has been practically obliterated: Therefore be it

Resolved, etc., That American citizens taking passage or employment on any ship of belligerent registry do so at their own risk and place themselves outside the pale of the protection of the Government of the United States.

The President's Peace Message.

SPEECH

OF

HON. MEYER LONDON,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, January 27, 1917.

The House in Committee of the Whole House on the state of the Union had under consideration the bill (H. R. 20453) making appropriations for fortifications and other works of defense, for the armament thereof, for the procurement of heavy ordnance for trial and service, and for other purposes.

Mr. LONDON. Mr. Chairman, I wish to say a few words. A great deal has been said about the message of the President to the Senate relating to the European situation. The President is an artist of the written and spoken word. There is so much in his message that many a man will find more than one meaning in it. We must, however, first of all look upon that message as one of the steps in the peace negotiations; and when we look upon the message as a step in that direction the whole world is bound to applaud the President for having taken that step. There is another thing in that message which is to be commended by all, and that is that a serious attempt is made to introduce a moral principle into international law.

The difficulty with international law is that it concerns itself only with the rules of the game of war. It does not lay down principles that justify war under certain circumstances and condemn it under others. For instance, the general opinion of the world has condemned the invasion of Belgium and the attack upon Serbia, but there is no principle in the textbooks on international law which would condemn any big nation for invading the territory of a small nation. As a matter of fact, all of the great European nations have been busy invading the territories of small and helpless nations. As a matter of fact, the United States of America is to-day in possession of the Philippine Islands and Porto Rico, and our Navy is now at Santo Domingo trying to establish a stable form of Government. The establishment of a stable form of government for a small nation by a big one is usually followed by the swallowing of the little nation by the big one. It would have been a fine thing if, following the message of the President of the United States to the Senate proclaiming to the world a new moral principle of international ethics, there had been a withdrawal of the Navy from Santo Domingo, just as the President has decided to withdraw the Army from Mexico. Of course by withdrawing the Army from Mexico he has invited the criticism of some people who think that in addition to having expended more than $100,000,000

in Mexico we should have done some killing and grabbed some Mexican territory.

While the President attempts to introduce this new principle of international ethics, there is one thing in his proposition which is dangerous, and that is the proposition that was indorsed by the able gentleman from Massachusetts [Mr. GILLETT] who spoke a little while ago. There is nothing more dangerous than the entry of the United States into an international alliance if membership in the alliance would involve the use of the armed forces of the United States in the joint enterprises of the alliance. I certainly favor a league of nations, but my contention is that as long as each member of the international league maintains an army and navy, and as long as the nations of the world have the power to loose these forces, just so long will there be no opportunity for permanent international peace. It is the possession of armies by nations which have conflicting interests that is bound to lead to war.

Mr. GILLETT. Will the gentleman yield for a question?

Mr. LONDON. I will.

Mr. GILLETT. Does the gentleman think there is any possibility of doing away with armament except by some concert of nations?

Mr. LONDON. Exactly so.

Mr. GILLETT. So is not this a first step toward that?

Mr. LONDON. The first step which must be taken in the direction of international peace is to lay down a principle which is to guide nations in their relations to one another, particularly in their relations toward the smaller and helpless nationalities. Then it will be necessary to provide means of enforcing this principle. An agreement to use the armed forces of nations in order to secure obedience to this fundamental principle is bound to lead to new alliances, to new combinations, which is after all new combinations of armies and navies, and therefore dangerous. I suggested in the resolution which I introduced on the 6th of December, 1915, that the commercial boycott be used as a means to punish the recalcitrant or offending nations. If the United States should now join an international league, it would simply mean that there will be one more member of the entente, for surely there is no possibility of the United States ever joining the other side. If I had a little more time, 5 or 10 minutes, though I may not desire to use it, I would feel a little freer——

Mr. SHERLEY. I will yield the gentleman three more minutes.

The CHAIRMAN. The gentleman has two minutes remaining and the gentleman is recognized for five minutes.

Mr. LONDON. We are dealing with a big proposition. What has been the bone of contention among the nations of the world, if not the desire of powerful nations to aggrandize themselves at the expense of small nations, or of nations occupying large territories but industrially undeveloped, and therefore offering an easy prey.

Morocco, Tunis, Tripoli, the Balkans, Persia, China tell the same story and have the same grievance against the so-called civilized nations.

Now, if we lay down the principle that no big nation should be permitted to attack the rights of any little nationality, you have eliminated the principal cause of modern war. What should we adopt as the next principle? The reduction of armaments, and you have international peace very near to realization. I can not agree with the man who believes international peace is impossible. I can not agree with the man who looks upon every effort in the direction of a brotherhood of nations as the effort of dreamers. On the contrary, just as true as civilization has consolidated small nationalities into big nations, just as true as the thirteen little Colonies found it necessary to unite into one great Republic, extending its influence over a continent, just as surely can a foundation be laid for a universal concert of nations. Let us understand the causes of war, and we will be able to eliminate it. Let us understand that the principal cause of modern war is the clash and conflict of economic interests, and we will find a way of making war impossible. In nine cases out of ten what is supposed to be a question of national honor is but a question of national interests. When it is a question of national interests let the democracies of the world decide whether the national interests involved are serious enough to justify the country in entering into war. [Applause.] That is the long and short of it. That is why I welcome the President's message as a step in the direction of peace, as a step in the enunciation of a great moral law for the guidance of the nations of the world, as an invitation to the democracies of the world to study the causes of war and to take up these great questions of international relations. There can be no safety until they have been democratized. [Applause,]

Mr. AUSTIN. What about the President's proposition about the United States entering into combination with other nations by armament and arms to enforce peace?

Mr. LONDON. The gentleman came in after I had started. I opposed that suggestion. The President's message is welcome, because it attracts the attention of the world to the fundamental principle of international peace.

Mr. Chairman, I ask unanimous consent to correct and extend my remarks in the RECORD.

The CHAIRMAN. Is there objection?

There was no objection.

Books for Growing Boys.

EXTENSION OF REMARKS

OF

HON. ROBERT M. McCRACKEN,

OF IDAHO,

IN THE HOUSE OF REPRESENTATIVES,

Monday, February 19, 1917.

Mr. McCRACKEN. Mr. Speaker, for some years past I have been deeply interested in the selection of suitable books for growing boys, and I have no doubt but that there are many parents and teachers in this country who would like to have a list of books for such a purpose which has been prepared by some one of experience and with a full appreciation of the literary tastes of boys. Not long ago I heard Mr. Fred E. Woodward, of Washington City, read a paper upon the subject of "Books for growing boys," which greatly impressed me as containing some timely observations upon the subject, and I submit the same under a privilege heretofore granted to me by the House to extend my remarks.

The paper is as follows:

BOOKS FOR GROWING BOYS.

"Books should to one of these four ends conduce,
For wisdom, piety, delight, or use."
—John Denham, 1615–1668.

In speaking of books for growing boys, one is inclined to transpose the order of Denham's four great "ends" and place delight first in order, then may follow use, wisdom, and piety, as three later upward steps. To the youth having small knowledge of books at large, all books must at first sight appear very much alike.

Up to a certain age, varying according to circumstances, boys have books put into their hands; that is, selected and purchased by parents or older persons, and in this particular are under obligations to such persons for making a suitable selection.

A little later there comes a time when a partial choice is put into the hands of the boy, to be followed in the course of time by a period when the boy selects, as he will, his own reading.

This does not imply that others may not even then advise him as to styles and courses of reading, but means that by the process of selection, even after being advised, the boy is, in many instances, left to his own and final choice.

Richard Steele says:

"Reading is to the mind what exercise is to the body," and those of you who are in any sense frequenters of the Y. M. C. A. and who have seen and enjoyed its physical opportunities, have a good chance to carry to its logical sequence this striking comparison.

The world is full of books—thousands, hundreds of thousands, millions. Some one has estimated that 80,000,000 books have been issued since the invention of printing from movable type, and probably 1,000,000 books are in print at this time and are more or less available.

The average number of books issued in the United States is about 10,000 annually, and of this number those classed as juvenile are about 600 per year.

These books are not all good; very few of them are bad and many of them are indifferent, coming as they do from writers of every variety and quality of education, or, in some cases, by writers of very small educational promise.

These books carry no certificate of character, as neither the name on the title page nor the color of the binding nor the attractive colored wrappers can atone for dullness or worse.

Then, there are many unworthy books—unwholesome, vicious books, the kind which Herbert Spencer calls "Books written not for any good purpose; unhealthy literature," and such we are to avoid.

In this day, when good books abound, when good literature is so comparatively inexpensive, when the little red schoolhouse equips every pupil with the necessary stock of knowledge, and when good companionships opens the way for readings of various kinds, and when, to our sorrow also, there are so many unworthy books thrust into our hands and flaunted before our eyes, lacking as these are oftentimes in the first principles of book construction, defiant of the rules of syntax, debasing in tone, untrue in fact and theory; with the knowledge of these things at our command, we are only too glad to speak a word to growing boys. Therefore, out of the mass choose the good, the healthy, the vital. Let the sunlight of purity illumine every page. Then, out of a wise choice of good books, the companionships of life become broader and grander as the years roll on.

BOOKS THAT DELIGHT.

The books that delight us are uniformly the ones chosen for us by our elders, not that every book given by an elderly person to a boy is

always a delight, but that generally the book that does delight us is the one selected for us by an older mind. This comes from experience.

Phaedrus, an old Latin author, writes: "The book has a double portion; it moves to laughter and by its counsel teaches a wise man how to live."

If a book delights us we laugh over it and invite others to join in the delight, so insidiously the moral; the wise counsel finds a lodgment in our minds.

First of all, we may mention fairy tales, the food of extreme youth. And what a debt we owe to Hans Christian Andersen and to the brothers Grimm for the delightful tales of childhood, the facts of which were impressed upon our youthful mental states, to be recalled later in life as wise counsel.

The charge has been made that they are dreams, but Wordsworth, the late poet, says in this connection:

"Dreams—books are each a world, and books we know are a substantial world, both pure and good."

Readers of a later age than the fairy tales find increasing joy in the two ever-welcome stories called "Robinson Crusoe" and "The Swiss Family Robinson," and these two books occupy a well-used shelf in nearly every boy's room.

They never fail to delight, and there are always to be found older friends to suggest the books of their own youth. What matter if in later years we find that our companions on the desert isle performed the impossible, we can well believe, even now, that under the same circumstances we could perform the same or similar feats. Such is the boon of hopefulness.

Boys books pertaining to the earlier years of American history are thinly scattered, especially when we look for good quality at an early period. The Rollo books, written by Jacob Abbott in the fifties and sixties of the last century, are well remembered and helpful first-aid books, giving much information.

Oliver Optic, who wrote in the seventies and later, was one of the first who produced abundantly and in a serial or successive form, and his books were singularly free from cant and from vicious suggestions, and virtue always triumphed.

Prior to this J. Fenimore Cooper had written his famous Leather Stocking Tales, and while they are sold to-day to boys and largely read by boys, they were written for adult readers; Walty Bumpo was a man.

The first man who made literature a profession in the United States was Charles Brockden Brown, and one of his books called the Green Mountain Boys still survives. It is of the same type as Cooper's tales and not extremely youthful.

Oliver Optic contributed nearly 100 books before his long career was closed.

This same period brought into prominence Horatio Alger, jr., Edward S. Ellis, and Harry Castleman, with some others of lesser note.

Some of these mentioned were able to write and market three books in a year.

The books of these men were extravagant in action and statement, for nearly everyone of them tell the story of very youthful boys, hardly young men in any instance, performing deeds of valor, having wonderful escapes, and making hair-breadth rescues in incredible short spaces of time.

Vice appears hideous and virtue uniformly wins the prize.

Their immediate successors have been, in the first place, Boy Scout writers, and in this class there are so many books, so many series, and so many writers that one stands amazed.

It sometimes seems that every man who had a pad of paper and a pencil was writing a Boy Scout book.

In the second place, there has come into great prominence a group of writers who aim to supplement the schoolhouse by providing a short cut to success, in the line of practical lifework stories. They are showing "How to make good" and teaching efficiency. Some take the form of "How to make things," "How to do things," and the Square-dollar Boys is on the same shelf with the Range and Grange Hustlers.

Life as depicted in the various years at school, at college, at Annapolis, and West Point make as many more, while the various departments of the United States governmental service are shown fully.

The newest one is The Boy with the United States Mail: Romantic episodes of life in the United States Postal Service, with graphic explanations of its workings, past and present, throughout the country, and a reviewer adds "for boys of 10 to any age."

Time fails to more than mention the names of The Rover Boys, The Motor Boys, The Motor Girls, The Submarine Boys, Aviator Boys, and a host of other similar titles which are being rushed from the presses at a simply astounding rate.

The impending crisis in the paper trade, if it succeeds in curtailing the production of such books, may be, instead of a calamity, a genuine blessing in disguise, especially if in the curtailment in numbers, there comes an improvement in the quality.

With it all there are some good books, and George A. Henty, of blessed memory to some of us older boys, may be mentioned as one who produced 70 historical novels of juvenile age of more than ordinary merit.

Black Beauty is a simple story of a horse told in the first person, which has had a very wide circulation, and Beautiful Joe is a dog story, of which more than 1,000,000 copies have been sold, and this was after it had been rejected by several publishers.

The Boys of Liberty series depicts in somewhat extravagant manner two score notable incidents of the Revolutionary War, The French and Indians Wars and the naval wars of 1812, imparting at the same time much valuable information concerning these little known historical facts.

Robert Louis Stevenson contributed two robust and heroic books to a growing boy's shelf in Kidnapped and Treasure Island. They abound in strange oaths and extraordinary feats of strength or muscle, and, however objectionable they may seem from a prudish point of view, they are so true to life as to find an echoing lodgment in every man's heart.

In earlier days Dana's Two Years Before the Mast had been thought to show the hardship of a sea voyage under such unfavorable colors that one doubted whether a seafaring life was at all desirable.

One of the books for all time is Little Lord Fauntleroy, by Mrs. Burnett, and this with Little Women and Little Men, by Louisa M. Alcott, almost constitute a library of themselves. If ever the people who have read these books have an opportunity of voting in a body they would carry any resolution. These books have each made fortunes for their authors.

The last 20 years has seen the growth of a forest of books on athletic sports, and in this connection the names of Ralph Barbour and A. T. Dudley are prominent.

Baseball, football, school athletics, camping, and boating all are exploited in manly fashion.

Christy Matthewson even has entered the arena with three baseball stories under his name.

The classics are made easy by educators like E. S. Brooks and others, who have put in readable form the stories of the Odyssey and the Iliad, the story of Seigfried as well as King Arthur and his Knights of the Round Table, and Robin Hood, that prince of good fellows.

Books pertaining to the higher sciences are much in evidence for growing boys' reading in these recent days, especially books on electricity and its relation to our everyday life; its application to various forms of warfare, mechanical devices, etc. Others show the wonders of machines and shops, great works of engineering, the conquests of the gasoline engine, automobiling, and chemistry, and astronomy.

Joel Chandler Harris created a high niche for himself in the delineation of Uncle Remus, and his stories of Br'er Rabbit and Br'er Fox will surely go down to posterity with the Tar Baby enshrined in the hearts of thousands of growing boys.

Thomas Nelson Page has written two books of the Civil War, called Two Little Confederates and Among the Camps, which are continually called for in the bookstores and are worth having.

Jules Verne was a pioneer in extravagant dreams of what science might do, and some of us used to read his Twenty Thousand Leagues Under the Sea with bated breath, but the rapidity with which we have outstripped his vivid imagination by our actual experiences of the day is a rebuke to us all.

His books teem with scientific speculation and are good reading for everyone.

The Jungle Books, by R. Kipling, are in a class by themselves and the reviewer who proclaimed them as suitable for boys from 9 to 90, builded better than he knew.

The Just So Stories need to be placed on the same shelf, for they afford the same pleasure in reading.

Religious books sometimes make a name for themselves and some of us can remember the immediate successes of The Simple Life, by Wagner, and What Would Jesus Do? by Sheldon.

The Bishop's Shadow, by Mrs. I. T. Thurston, is a sweet and helpful story of a street waif who was made to follow a very high ideal in his life by the life and example of Bishop Phillip Brooks.

The growing boy may possibly read theology, but that, as Mr. Kipling says, "is another story." However, such books as Ben Hur, Quo Vadis, Titus the Comrade of the Cross may be read as not as theology, but as biblical novels of more than ordinary interest and merit.

Ben Hur has sold upward of a million copies, and has been the foundation of a substantial fortune. This is also true of Dr. Van Dykes's book Out of Doors in the Holy Land.

Novels for growing boys calls for an hour of itself alone, yet I shall venture to say in the few remaining moments that growing boys should read some sentimental stories, of which the Cloister and the Hearth, by Charles Reade; The Mill on the Floss, by George Eliot; are good types. Two others are Told in Hills, by Marah Ellis Ryan; and The Way of an Eagle, by E. M. Dell.

Rosa N. Carey's novels, and there are many, are eminently satisfying.

Mystery stories should be read sparingly, and The Woman in White and The Moonstone are good examples.

Good detective stories should find some place in a reading course. No one has excelled Anna Katherine Green in this field, although Sir A. Conan Doyle's Sherlock Holmes stories delighted a past generation and are good reading to-day.

Edgar Allen Poe with his Murders in the Rue Morgue and the Gold Bug may be said to have paved the way over which a host of imitators have since passed.

Historical novels are legion, but some of the good ones easily obtainable are Richard Carvel and The Crossing, by Winston Churchill; Order No. 11, by Olmstead; as well as many by Stanley Weyman like Under the Red Robe and the White Company.

Mark Twain has bettered the world of boys by two wonderful books of boy life—Tom Sawyer and the Adventures of Huckleberry Finn—and these books will be read and remembered long after his Joan of Arc, which he hoped would be his masterpiece, has been forgotten.

Every boy has read Tom Brown's School Days and Tom Brown at Oxford, and nearly every boy has read a little book called the Man Without a Country, by E. E. Hale.

No other book that I know so stirs the heart's blood and thrills one's being with waves of patriotism.

Hans Brinker or The Silver Skates, by Mrs. M. M. Dodge, is a universal favorite, as the author has happily blended a sketch of boy life in Holland with a series of semihistorical incidents of a very picturesque country.

The growing boy should have a few of what the world calls standard authors, such as Ivanhoe and Kenilworth, by Scott; Tale of Two Cities, Barnaby Rudge, and David Copperfield, by Dickens; Henry Esmond, by Thackeray; Adam Bede, by George Eliot, one of the best novels ever written by a woman; The Three Musketeers, by Dumas; and Les Miserables, by Victor Hugo.

The growing boy should read poetry by all means, but discriminate. For stirring enthusiasm, read Scott's border legends, like The Lady of the Lake and Marmion; or The Ride of Paul Revere, by H. W. Longfellow.

Tennyson will be found to be a boon companion to the boy in love, and for joyous hours seek Eugene Field and James Whitcomb Riley.

The boy should have a good Bible with a concordance, a good English dictionary, a book of synonyms, a book on good form or etiquette, and quite as important as any, three books on personal purity, called What a Young Boy Ought to Know, What a Young Man Ought to Know, What a Young Husband Ought to Know.

I began by saying that good reading might lead to wisdom and piety.

Lord Bacon says "Reading is converse with the wise," and an ancient Greek maxim says "The fountain of wisdom flows through books."

If I read the signs aright, the fountain of wisdom which flows through books has its source in supreme wisdom, and this leads us very close to piety, and the longings of the heart are sure to be satisfied only by the good things which God has prepared.

May the words of Denham become true in our life and purpose and prepare us to listen to John Milton, the dear old blind poet of all peoples.

"A good book is the precious lifeblood of a master spirit, embalmed and treasured up on purpose to a life beyond life."

Speech of Hon. William Barnes, delivered at the Lincoln Dinner, at Albany, N. Y.

EXTENSION OF REMARKS

OF

HON. ROLLIN B. SANFORD,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Monday, February 19, 1917.

Mr. SANFORD. Mr. Speaker, under leave granted me to extend my remarks I insert the speech of Hon. William Barnes, delivered at the Lincoln dinner, at Albany, N. Y., February 15, 1917.

The speech is as follows:

SPEECH OF HON. WILLIAM BARNES, DELIVERED AT THE LINCOLN DINNER, AT ALBANY, N. Y.

Everyone in this room knows that the United States of America may become engaged in war with Germany at any moment.

I can contribute nothing to your inherent patriotism. This is a Republican meeting. But possibly I may be able to refresh your minds a little on one or two subjects.

America, unlike most of the other nations of the world, is not the outcome of countless tribal conflicts or wars, but was practically born full grown. Our form of government, which has remained the same since its inception, was the outcome of deliberation, not the result of internal revolution, the victory of one king over another, or an assimilation of races or a conquest, like the Norman conquest of England. A theory of government, to which all the people agreed, was the basis of the union of the States, after independence had been achieved, into a central government.

WRITTEN DOCUMENT.

What was that theory? It was laid down in the Declaration of Independence and embodied, 11 years later, in our written document known as the Constitution, which contained not only the instrument of government, but provisions for the protection of the rights of its citizens against others and against that Government itself.

The theory that citizens had rights of their own upon which the legislative and the executive bodies could not infringe was absolutely unique at that time. The theory has not been adopted by the European nations, whether they are republics or monarchies. There the conception of the State is that it does not consist of the individuals comprising it, but of a separate entity represented in various ways, from absolutism to the highest development of legislative power, as in Great Britain and France.

You are, of course, aware that in the last decade there has been a distinct tendency on the part of the Government of the United States and the States to depart from the theory of the individual right against the legislative power, when that power transcends those established rights. We frequently hear that, in order to be an efficient country, we should copy legislation which has been enacted in Europe; first in Germany, under Bismarck, and now generally throughout the whole of Europe.

We are celebrating to-day the anniversary of the birth of Abraham Lincoln, who understood the American principle as thoroughly as any great American ever has.

THE AMERICAN IDEAL.

In the midst of the doubtful outcome of the War of the Rebellion, Mr. Lincoln in his perfect speech at the dedication of the battle field at Gettysburg, expressed the American ideal with such lucidity and simplicity that no one has ever attempted to improve upon it. It stands as the declaration of the American purpose in the relations of government to life.

The word nation is derived from the Latin participle natus, meaning born. So in the very derivation of the word we find a parallel between the individual and the nation comprised of individuals.

As the individual can not exist without birth, and is in the years of his life a constant visual expression of his birth, so a nation must in its growth and development be the visual expression of the meaning of its birth or must be reborn.

PRINCIPLE ASSAULTED.

The constant aggression of groups of our citizens to secure privileges denied to others; the weakness of legislative bodies to cater to or be ruled by such punitive groups, reflect violent assaults upon the American principle of equality, and must, if persisted in, inevitably lead to the election of weak executives who will promise, legislatures which will perform, and judges who will interpret as the ballot box thoughtlessly may declare. Large groups, not realizing that in securing what they desire at the expense of other citizens, are placing themselves in a position where at some future day the tables may be turned upon them.

The swift retribution impending upon those who advocated the passage of the Adamson wage-increase law last September in the threatened action of Congress to take from them their right to quit work when they desire, is the most remarkable demonstration of the truth that those who succeed in securing privilege may be deprived of their rights.

There are some laws which no Congress and which no legislature can amend or repeal, and those are the laws of nature. One can not have his cake and eat it too. No humanitarian impulse, no noble aspiration, no sympathy for others, can change that law.

It is generally believed that in the event of a conflict our Army is hopelessly unprepared and insufficient in numbers. Our Navy has fallen below the standard of marksmanship that prevailed some time ago, is weak in a number of departments, and the doubt is expressed in naval circles as to what account it may give of itself if put to the test.

But whatever there may be of military unpreparedness, the mental unpreparedness of a part of the people unquestionably exists. Their stamina has been sapped to such an extent that only the real spark of conflict can awaken the afflicted to the spirit of American nationality and the reason for our independence and our life.

POSITION BRYAN TAKES.

I am not questioning the motive of any man or set of men, but I must read you the words that Mr. Bryan uttered in Madison Square Garden only a few days ago and since the breaking off of diplomatic relations with Germany:

I have faith not only in the President's desire to keep us out of war but in his ability to do so—

Said Mr. Bryan in part—

But if the time ever comes when we can not settle a dispute by peaceful means, and that we must have a war, I believe that we should postpone it until the present war is over. We should postpone it because it is not fair to ask a nation engaged in a death struggle to consider things calmly. If we postpone it till the war is over the chances are many to one that we can settle the dispute.

But if, after all, we must have a war, I would rather wait and have a war of our own, one that would be our own war, in which we should have something to say about when to commence, when to get through, and the terms of peace. This is everybody's war. They did not consult us about the beginning of it or about the conduct of it. If we enter it, we will have to stay in until they come out of it, and when we are in we must fight for what they fight for. God forbid that we should entangle ourselves in the quarrels of the Old World.

Mr. Bryan has never achieved the Presidency, and doubtless never will; but he represents a large body of opinion which lives in the atmosphere of piffle and scuttle.

His first campaign was an appeal to voters that the Government, if he was elected, would by legislation make it possible for them to pay their debts 50 cents on the dollar. His second campaign was in advocacy of the abandonment of the Philippine Islands to their fate. His third was an attack upon American industry and development; and now he occupies a portion of the stage with pacifist idiocies while the *St. Louis* and the *St. Paul* lie at their docks in New York under the threat of another nation that if American ships and American people pursued their rightful errands upon the high seas—as Mr. Wilson put it in his utterance to Congress on the 3d of February—they will be sunk at sight, contraband or no contraband.

What insensate provincialism, cowardice, and ignorance can exist, when I tell you that 5,000 people in Madison Square Garden applauded Mr. Bryan's utterances.

Insidiously the virus of submission and abasement in the name of humanity, in the name of peace at any cost, has crept, inch by inch, into the thoughts of some of our people.

NOTHING NEW.

This is nothing new. In the year 1864, the Democratic Party at Baltimore declared, just a year after Lincoln's speech at Gettysburg, that the war was a failure, and that peace at any price should be secured. For a long time the issue was in doubt. As the weeks went by it appeared that McClellan might be elected on that platform and the Nation dismembered. Sherman marched with the victorious troops of the United States from Atlanta to the sea, and when the votes were counted a few weeks later, Mr. Lincoln was reelected and the Nation was safe. But in that very election, the State of New York, which had given Mr. Lincoln 60,000 majority in 1860, gave him a beggarly 6,000.

There were Vallandighams in the North then, who cried for peace at any cost; peace with dishonor; peace without vic-

tory. But peace came without dishonor, with victory, with the Nation saved.

We that were born in that war period of loyal parentage, the men who are between 50 and 60 years of age, are imbued with the spirit of heroism and inveterate national will which our mothers felt and transferred to us even in embryo. The younger generation which will be called to defend the Nation has no such precious physical heritage as has the generation to which I belong, but that is no reason why it should not disclose the vigor, the character, and the spirit of the generation which preceded mine and fought the battles of the Union.

Our controversy at this time is exactly the same in principle as is the controversy for the protection of individual rights within the United States. The United States of America as an individual in the group of nations demands its rights for its people to traverse the high seas without fear of violence and death.

It does not matter how extreme is Germany's necessity, how dire her condition may be, or that the methods of warfare may have changed since the rules were laid down in the declaration of Paris in 1856 relative to the right of visit and search.

As the Declaration of Independence and the American Constitution laid down the doctrine of inalienable individual right, so the United States must lay down to-day her inalienable devotion to the doctrine of the national right, whoever may assail it.

I can not close with any words better than those of Senator Root, delivered at Carnegie Hall last October: "The Nation which will not protect its own citizens has already begun to die."

Resolutions Adopted by the Colored Citizens of New Hampshire.

EXTENSION OF REMARKS
OF
HON. CYRUS A. SULLOWAY,
OF NEW HAMPSHIRE,
IN THE HOUSE OF REPRESENTATIVES,

Monday, February 19, 1917.

Mr. SULLOWAY. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include resolutions adopted by the colored citizens of New Hampshire February 12, 1917.

The resolutions are as follows:

Resolutions adopted by the colored citizens of New Hampshire, February 12, 1917.

In accordance with the wishes of ex-Governor Spaulding, of New Hampshire, expressed through the appointment of Mr. William T. Pattillo, of Portsmouth, N. H., as the New Hampshire appointee of the National Memorial Commission affiliating with the National Memorial Association at Washington, D. C., which association has caused to be introduced in the Congress of the United States a bill (H. R. 18721) invoking Congress to appropriate $100,000 for erecting a suitable monument to the memory of the soldiers and sailors of Negro blood who have so conspicuously served the Nation in all her wars, a meeting was called by Commissioner Pattillo on Lincoln's birthday, February 12, 1917, and the following resolutions were adopted:

"Whereas whenever our country's welfare has been in jeopardy and a call for men either to win her independence, to defend her honor, or to preserve her as an inseparable Union was issued, the Negro has always been among the first to respond: Therefore, be it

"*Resolved*—

"First. That the colored citizens of New Hampshire unite their plea with those of their race of other States and Territories of the United States of America in urging upon Congress the appropriateness and justice of erecting at Washington, D. C., the National Capital, a suitable monument to the bravery, loyalty, and fidelity of Negro soldiers and sailors who have served their country so well in her hours of peril.

"Second. That this assembly instruct our representatives at Washington to do all in their power to have Congress act favorably on bill (H. R. 18721) introduced by Representative DYER of Missouri.

"Third. That a copy of these resolutions be forwarded to the headquarters of the National Memorial Association at Washington, D. C., to be handed to the Committee on the Library; that a copy be sent to the press of Portsmouth, Manchester, and Concord, N. H., for publication; that a copy be spread upon the minutes of this assembly, a copy sent to the governor of New Hampshire and ex-Governor Spaulding, and a copy sent to each of the New Hampshire Representatives and Senators now in Congress."

Done by order of the colored citizens of Portsmouth, N. H., assembled February 12, 1917.

COMMITTEE ON RESOLUTIONS.
Rev. JOHN L. DAVIS, B. D., *Chairman.*
Mrs. ALBERTA C. VIRGIL.
GEORGE M. KING, *Secretary.*
WILLIAM T. PATTILLO,
Commissioner of New Hampshire.

Army Appropriation Bill.

EXTENSION OF REMARKS
OF
HON. HENRY I. EMERSON,
OF OHIO,
IN THE HOUSE OF REPRESENTATIVES,

Saturday, February 17, 1917.

Mr. EMERSON. Mr. Speaker, I desire to extend my remarks in the RECORD by printing an article written by Daniel C. Stearns, of Cleveland, Ohio, one of the best-posted men in this country on National Guard affairs:

THE NATIONAL GUARD AND ITS CRITICIZERS.

[By Maj. Daniel C. Stearns, formerly lieutenant colonel, United States Volunteers.]

Permit a guardsman who has served more than 35 years as an enlisted man and officer in the guard and Volunteer forces of our country to comment on the National Guard as now organized and the criticisms that are being made relative to its merit as a part of the armed force of our country. The opinion of one so closely associated, and drawing conclusions from various sources of information and observation, ought to carry weight similar to that of those who have already given expression.

The national-defense act had been approved just two weeks when the State forces coming under the provisions of the act were called into the service of the United States. The call recognized the fact that some of the organizations were below the minimum strength and more that were barely above minimum peace strength. The call came at a time of unusual prosperity. Every commercial industry was (and still continues) offering pay of more than $15 per week for just such men as the Government is willing to pay only $15 per month and keep. Thus is the usual yearning for adventure and exploitation (generally so well defined in young men) overcome by the much greater pay. The question may be asked, "But where does patriotism play its part?" This is well answered by Gen. Scott in his report, wherein he says, "Hundreds of thousands marched in so-called preparedness parades to the plaudits of onlookers, but when the militia was called out in June to protect our border it was with the utmost difficulty that its units were recruited to the small number required, and some were never filled. The spirit was rife to let somebody else do it." Evidently patriotism with the masses has reached an ebb where it is in many places only "scum deep." Viewing the situation with the above aspects in mind, it is unfair for those opposed to the guard as a part of the national force to criticize it for lack of numerical strength or for being otherwise unprepared, inasmuch as the Government had never completely equipped them as Organized Militia. Even the charge of a lack of recruits after the mobilization order of June 18 applies no more to the guard than it does to the Army, as neither, for the reasons stated above, have been able to recruit to war strength, and skeleton organizations are to be found in the Army as well as in the guard. As well organized as is the recruiting service of the Army, even to this day it has not been able to recruit anywhere near the increment authorized by the defense act for the Army, so that it would seem quite unfair to charge the guard with something that the Army can not do. Hence, if the National Guard system is wrong, inefficient, and unpopular by reason of its inability to increase its numerical strength at this time, why not make the same charge against the Army and let the master minds of the Congress devise a more popular system for both? No opportunity having been given, with events and business normal, for recruitment under the pay section of the defense act it is not known whether the young men of the States would have readily enlisted, so it would be unfair to condemn this part of the act until it can have a fair trial. It is also unfair to charge that the guard will gradually disintegrate by reason of the long-term enlistment of the defense act and the long period of service on the border. Such predictions were made during the Spanish-American service, but the guard survived and became a better force, many of the objectors becoming its most ardent supporters.

The guardsman is primarily a man of commercial pursuits, and that is the direction in which his best efforts should lie. The Army man desires distinction in the field. Take the soldier from the Army and he is as restless as the guardsman in service, unless, in either case, kept alert by unusual activities. The desire of the guardsman to return to his trade or professional duty, after an apparent crisis has passed, is no stronger than that of an Army man to return to his duty at the end of his furlough. Consequently most of these negative criticisms pertaining to the National Guard are quite fallacious and come at a time when recruitment and equipping have been at a disadvantage. The service, however, of the guardsmen now on duty can best be told by those of the Army under whom they are serving.

The Army and guard should be brought into closer association by longer periods for development, so that a finer comradeship may be cemented between the officers and men of both organizations. This lack of fellowship may possibly result from a feeling that the Army is a superior fighting force and the belief of the guardsman that the guard lacks many of these qualifications, thus causing a situation akin to an aristocrat and a commoner. However, it is noticeable that this feeling does not prevail where members of the Army and guard are thrown into association for long periods and are enabled to exchange confidences. Some of the best officers in the Army are the strongest friends and factors in the maintenance of the guard. There are some officers in the guard, however, who can not bring themselves to believe that the Army is in any sense a friend of the guard. The officer and soldier of the guard must recognize the officer and soldier of the Army as the trained fighter and with the technical knowledge to carry on warfare. This is the daily work of the Army. On the other hand, the Army must look upon the rank and file of the guard as the commercially trained body—that is their daily employment—but ready to adapt itself by periodical training for emergencies. If each will look upon the other in this consistent light a gracious comradeship will cement a bond that all the powers on earth will not be able to break through.

To return again to the lack of enlistments in ordinary times to the guard, the following points are conceded: The necessity for acting in

aid of the civil authorities for the States; the lack of a natty uniform for parades; inefficient officers and unsuitable quarters, all of which can be counteracted. There seems to be no real reason for condemning the guardsman features of the defense act nor for changing its intent, unless it be for the purpose of expanding it to make universal training compulsory for boys and girls, beginning in their sixteenth year, and followed by national-defense work in their eighteenth year. As Gen. Scott says in his report: "A young man between 18 and 21 is at the least earning capacity of his career. It is a time of anxiety to the parent and uncertainty for the son. During these years few settle in their life's vocation. They are an expense to their parents; their average earnings will not pay for their board and clothes. They can begin military training without the slightest disruption to business, etc."

This will apply in many ways to the young woman and will give to both a more robust body and a much better physique. The training would be along lines of discipline, hygiene, gymnastics, and other matters that would lead to a real military training and Red Cross work, giving us men for national defense and women for Red Cross work. The preliminary work can be done in our schools (public or otherwise) by and under the supervision of Army and guard officers and Red Cross workers. This would be followed later by the young men taking service in the Army, Navy, or Marine Corps for a fixed period and then transferred to the National Guard or Naval Militia as a reserve, doing incidental service at the armory for a certain number of years with national maneuvers, military and naval, every few years. The young women, too, to receive advance training under the supervision of the Government. This would necessitate some special training in special schools for guard officers, and some enlisted men and women, the details of which could be worked out by the War and Navy Departments. If this were done no mother's son would be depending on some other mother's son for his defense, but in case of unfortunate circumstances a mother's daughter would be an able aid in the comfort and care of the injured.

District Prohibition Bill.

EXTENSION OF REMARKS

OF

HON. MARTIN A. MORRISON,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, February 16, 1917.

Mr. MORRISON. Mr. Speaker, in anticipation of early and favorable action by the House Committee on the District of Columbia on the so-called District prohibition bill, I desire to discuss it briefly.

I shall vote for the pending bill in whatever form it may come up for final passage, but I prefer that it be perfected before it shall come to a final vote. It is constantly referred to as a "dry bill" and a bill to make the District of Columbia "dry." The temperance workers of the country have been led to believe that it is all of that in its present form. The Members of this House know, however, that the bill in its present form is an "antisaloon" measure as distinguished from "antialcohol" legislation. The men and women who are the real supporters of temperance legislation now being successfully urged throughout the country, believe in and demand effective legislation against all alcoholic liquors available for beverage purposes, including the abolition of the licensed saloon. I earnestly hope that our action may respond fully to their judgment and confident expectations.

In order to make the pending bill genuine "prohibition," I desire so to amend the bill as to prohibit the importation into the District of any intoxicating liquors to be used for beverage purposes.

The present state of the public mind and its present attitude toward alcohol are due primarily to two organizations, the Women's Christian Temperance Union, which was organized almost four and a half decades ago, and the Prohibition Party. The latter organization is a political party, having a national party organization and State party organizations. It was organized as a national party in September, 1869, and held its first presidential convention in 1872. The Women's Christian Temperance Union is nonpolitical, but has wrought more mightily in the creation of public sentiment and ultimately in the enactment of temperance legislation than all the strictly professional political prohibitionists that have sought to ride into public office on the back of a public sentiment they did not have the desire or the courage to help to create. Of course, no student of the temperance question will class the members of the Prohibition Party along with the professional prohibitionists to whom I have referred. Theirs has always been a labor of love and self-sacrifice. They have campaigned for a principle, not for personal political advantage. In 44 years they have elected but one Member of this House, our colleague, the gentleman from California, Hon. CHARLES H. RANDALL. I congratulate the party on its first Member of the Congress. He is, of course, a true exponent of the principles of his party, but he is much more. He is broad-minded, intellectually endowed and equipped, industrious, and efficient in the whole range of his duties as a Representative and legislator.

The fundamental principles of these two organizations are substantially identical and include the prohibition by law of the manufacture, importation, transportation, sale, or barter of alcoholic beverages, or other traffic therein. In popular parlance, the word "prohibition" includes and means just that and all of that.

During the intervening years, the work of these two organizations has been supplemented by the work of many organizations that have been faithful and efficient. I will not undertake to enumerate them or to estimate their comparative services to the cause. In my own State, the Indiana branch of the Antisaloon League has long rendered valuable services in a series of battles for the enactment and enforcement of temperance legislation. It is at this time cooperating with the Indiana Dry Federation, into which the temperance forces of the State have thrown their combined force and power, so that there is now complete harmony among the temperance organizations of the State.

The District of Columbia is not a political subdivision of the Republic in the sense that it has, or ought to have, local self-government. It is the National Capital, belongs to the Nation, and ought to represent and reflect all that is highest and best in the thought and purpose of the people of America. Legislation by the Congress affecting alcohol in the District of Columbia ought to be the perfection of human wisdom on that subject. Many serious-minded friends of temperance are not fully persuaded that a city of 300,000 people can be made actually dry, but they desire to see the experiment given a fair trial under favorable conditions. No city in America is so favorably situated for the effective administration of a "bone-dry" law as is the city of Washington. In no other city are there more elements that make for the success of such an undertaking or fewer elements that would tend to make the administration of such a law difficult. In the circumstances, the Congress can not in fairness enact a law patterned after the weakest of the weak States. It is rather our duty to make the dry law for the District of Columbia as strong as the strongest.

The pending bill as it came to the House is fatally weak at two points. It permits the manufacture of alcohol within the District for beverage purposes and its exportation from the District. Of course, alcohol once carried beyond District lines passes beyond the control of the officers of the District and beyond the control of the Congress under the pending bill.

The bill as it came to us also writes into the dry bill for the District of Columbia the fatal weakness that has for many years made States nominally dry actually wet, to wit, the right of interstate shipment of liquors into the District for beverage purposes. Until recently States have had no power to prevent the evasion and practical nullification of State constitutions and statutes by interstate shipments, and until recently the Congress has refused to place it within the power of the States so to protect themselves. Just now, for the first time, the several States are in position to enact and enforce laws that are completely and effectively prohibitory.

The weak spot in State legislation has always been the failure of the Congress to outlaw interstate shipments in violation of State laws. For the District of Columbia the Congress exercises both the general police power exercised by the legislatures of the several States and its own general plenary power over interstate and foreign commerce. If the otherwise drastic provisions of the pending bill are to be legally subject to nullification by importation of alcoholic liquor for beverage purposes, it can be accomplished only by the deliberate refusal of the Congress to exercise for the benefit of the people of the District of Columbia the power it indisputably has and has already exercised for the protection of the people of every State of the Union.

The bill as it stands is distinctly and exclusively "antisaloon," but is in no true sense "antialcohol." If it shall remain substantially unchanged it will be little less than a ghastly joke to continue to refer to it as a "dry bill" or as a bill "to make the District dry."

I have heard it charged that the Anti-Saloon League prepared the present bill and has resisted all attempts to amend it so as to prohibit importation of alcoholic liquors for beverage purposes. I am not supposed to sustain confidential relations with the officers of this body of reformers, and express no opinion as to the probable truth or untruth of this most serious charge. The bill is so scrupulously limited to the one purpose of eliminating the licensed saloon as a means of distribution, without denying the right to make, to procure, to import, to possess,

and to use liquors for beverage purposes, that it bears strong internal evidence of having been written by the friends of alcohol.

Every student of the temperance question knows that the makers of intoxicating liquors and the men who desire to preserve the right to drink them have long since become reconciled to the elimination of the licensed saloon, and have been seeking some highly respectable institution that would join in the movement and be satisfied to go no further. They feared that the reform, if openly advocated by the makers and users of beverage liquors would be looked upon with suspicion by the temperance workers of the country. In that event the bartenders and bar flies, who were selected for solitary sacrifice, were liable to join with the nonprofessional temperance workers of the country in destroying completely all alcoholic beverages.

With this fact in mind, I desire to submit a strong item of evidence to sustain my contention that the present bill is the work of the distillers and brewers. In the Literary Digest, of March 27, 1915, I find that Mr. T. M. Gilmore, publisher of Bonfort's Wine and Spirit Circular, and who is recognized as authority among the makers of wet goods, used this language:

This so-called prohibition movement is not prohibition at all, and the millions behind it do not intend to be prohibited, but it is a mighty protest, a blind striking out, and the object aimed at is the saloon.
The saloon is doomed, and liquors must seek new channels.
To save the business we must let go of the saloon.

This statement is authoritative and typical. I submit that the pending bill, skillfully framed to work the will of the makers of alcoholic liquors, can not in fairness be charged against an organized company of gentlemen to whom the friends of temperance have committed the leadership of a great and growing public sentiment against all intoxicating alcoholic beverages.

Four times I have been nominated and elected on a platform declaring for prohibition in the District of Columbia and for the exclusion of intoxicating alcoholic liquors from interstate and foreign commerce. On these propositions there has never been any division of sentiment among temperance workers. Indeed, the word "prohibition" includes both propositions. The man who does not favor both propositions may be a reformer of some character or in some degree, but it is certain that he does not stand for prohibition. A reformer who is willing to go no further than the distillers and brewers in a temperance legislative program is not a genuine, thoroughgoing prohibitionist. He may be of an uncertain degree of wetness, but he certainly is not "dry."

The Prohibition Party has always included in the prohibition it favored the exclusion of intoxicating beverages from interstate commerce; so has the Women's Christian Temperance Union.

Hon. Eugene W. Chafin, presidential nominee of the Prohibition Party in 1912, expressly so declared. In an editorial in the National Enquirer, official organ of the Prohibition Party, on December 28, 1916, Hon. J. Frank Hanly, editor of the National Enquirer, and last nominee of the Prohibition Party for President, declared in favor of barring alcoholic beverages from all shipments, State or interstate.

If any temperance organization has declared for prohibition in the District of Columbia or elsewhere and for the right of interstate shipment of alcoholic beverages, I have not learned of that fact.

On December 21, 1914, the Anti-Saloon League in a signed letter mailed to the Members of this House expressly pledged the "organized prohibition and temperance forces" of the country to support a bill to exclude from interstate commerce all shipments of intoxicating liquors for beverage purposes.

In May, 1916, the Methodist Episcopal Church, in general conference assembled, adopted a declaration in these words:

We urge upon the Federal Congress the immediate passage of laws prohibiting all interstate commerce in intoxicating liquors and forbidding the use of the United States mails both to liquor shipments and to liquor advertisements.

The Amethyst is the official temperance organ of the General Assembly of the Presbyterian Church. In its issue of September, 1916, the attitude of that church on the temperance question was declared to be "antialcohol," and to call for "the absolute prohibition of the manufacture, importation, sale, and transportation of alcoholic beverages in all forms."

These two express declarations by religious bodies are typical of all declarations by churches and religious boards or official assemblies.

On July 9, 1915, the Anti-Saloon League of America was holding a national convention at Atlantic City, N. J. On that day the national board of trustees of the league unanimously adopted a declaration in these words:

We believe that the Congress of the United States should bar all intoxicating beverages from interstate commerce.

On July 19, 1915, Rev. Edwin C. Dinwiddie, legislative superintendent of the Anti-Saloon League of America, expressly declared the attitude of the league in these words:

Our organization is in favor of a law which will deny to intoxicating liquors the facilities of interstate commerce.

Quotations might be multiplied indefinitely, but these will suffice to show that "prohibition" for the District of Columbia of necessity includes prohibition of importation from beyond District lines for beverage purposes. These quotations make it impossible to believe that any temperance organization, and least of all the Anti-Saloon League, prepared the pending bill and stands sponsor for the doctrine of prohibition for the District of Columbia, coupled with the right to nullify the prohibition by the importation of alcoholic liquors for beverage purposes. The preposterous story that this is the bill of the Anti-Saloon League will not justify the Members of this House in working the ill-concealed and selfish will of the distillers and brewers. Let us resent a trick so transparent as this one. Let us vindicate the good name of the Anti-Saloon League by striking from the pending bill the palpable fake and fraud which the enemies of the league are seeking to include in the bill by the unwarranted use of the good name and popularity of the league in its pretended indorsement.

Revenue Bill.

EXTENSION OF REMARKS
OF
HON. JOHN R. FARR,
OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, February 17, 1917.

Mr. FARR. Mr. Speaker, by right of leave to extend, I am inserting in my remarks the following communications from constituents concerning provisions in the pending revenue measure, House bill 20573, expressing opposition to the same and giving reasons for their disapproval. Knowing these petitioners as substantial business men of high character, I ask the most careful consideration of the facts and arguments they present:

SCRANTON LIFE INSURANCE CO.,
Scranton, Pa., January 31, 1917.

Hon. JOHN R. FARR,
House of Representatives, Washington, D. C.

MY DEAR CONGRESSMAN: This week we received the telegram of which you will find copy inclosed. It is in essence as well as substance a protest against Federal taxation of life insurance premiums. If enacted, this tax must be derived from premiums paid by individuals who on the average are able to provide less than $2,000 of insurance for their dependents. To make matters worse, the tax does not appear to fall impartially on all policyholders, but is vitiated by unreasonable exemptions.

Since the Scranton Life Insurance Co. has thousands of policyholders in the tenth congressional district, I feel sure you will exert your influence to resist for them this unwarranted imposition.

It is worthy of note that in England life insurance premiums, being a function of thrift and personal economic independence, are immune from tax. The rule there is, I believe, that even income tax holds exempt that part of an income which is paid for life insurance up to one-sixth of such income.

It is also interesting to note that the State of Pennsylvania collects about $2,000,000 annually in taxes from policyholders, and of that amount spends only $80,000 to maintain its insurance department; the balance is general revenue.

With kind regards,
Yours, very truly,
WM. E. NAPIER.

NEW YORK, *January 27, 1917.*

JAMES S. MCANULTY,
President Scranton Life Insurance Co., Scranton, Pa.:

Democratic House caucus last night ratified provisions of proposed Federal emergency revenue measure, which applies to all life insurance companies except those doing the business of life, health, and accident insurance combined in one policy issued on weekly premium payment plan. Tax imposed by act is computed as follows: From amount of taxable income as reported under Federal income-tax law deduct $5,000; also 8 per cent of your paid-in capital and paid-in or earned surplus and undivided profits. The remainder, called excess profits, is taxed at the rate of 8 per cent. Three pertinent fundamental facts apparently ignored by Congress: First, over 70 per cent of the life insurance in the United States is mutual; second, including participating business of stock companies, over 86 per cent of all life insurance policies are participating; third, the burden of all taxes upon the income of life insurance funds falls upon the individual policyholder. Bill exempts industrial insurance where life policyholder is insured also against sickness and accident, but taxes policyholder who insures only his life for benefit of family. Average size of ordinary life insurance policy in United States has decreased from $2,580 in 1894 to $1,850 in 1915, showing that 7,000,000 ordinary policyholders of United States on whom tax would fall are providing only this modest sum for their dependents. The 25,000,000 industrial policyholders who would also be taxed are providing but $134 each for their families. Would suggest that your officers, agents, and representative policyholders immediately communicate their views by wire and letter to their Representatives and Senators. Kindly advise what action is taken.

ASSOCIATION OF LIFE INSURANCE PRESIDENTS.

AMERICAN SURETY CO., OF NEW YORK,
Scranton, Pa., February 5, 1917.

Hon. JOHN R. FARR, M. C.,
House of Representatives, Washington, D. C.

DEAR MR. FARR: The proposed 8 per cent excess profits tax in the Federal revenue bill would add enormously to the burden of overtaxation already borne by surety companies. This burden now consists of:

(a) State, county, and city taxes on real estate and nonexempt personality.
(b) State franchise taxes.
(c) License tax on agents in practically all States.
(d) State premium taxes.
(e) Municipal license taxes.
(f) Special district franchise taxes.
(g) Federal 2 per cent income tax.
(h) Federal franchise tax on capital and surplus.

These taxes will probably cost our company $200,000 this year. This sum is disproportionately large to the capital stock and gross premium receipts of the company. It is also out of all proportion to the returns to our stockholders who risk their money in the enterprise. Other surety companies are undoubtedly taxed in the same proportion.

The imposition, therefore, of the proposed additional 8 per cent excess profits tax on surety companies would, in my opinion, be extremely unjust, and would undoubtedly adversely affect every interest identified with the surety business.

In my opinion, the Federal taxing authorities can readily provide the revenue required for governmental purposes by taxes that are more general in their nature and less burdensome to those who are already overtaxed.

I should be pleased to have you oppose this measure if you can consistently do so without any embarrassment to yourself.

Thanking you in advance for your courtesy in this matter, I am,

Very truly, yours,

D. R. THOMAS, *Manager.*

SCRANTON, PA., *February 14, 1917.*

Hon. JOHN R. FARR,
House of Representatives, Washington, D. C.

DEAR SIR: We desire to enter our protest against the passage of revenue bill H. R. 20573 in its present form, and we trust this will receive your earnest consideration.

This bill we believe to be inequitable, because of its exemption to certain classes of income. Furthermore, it discriminates against partnerships as compared with corporations. You will realize that as members of the New York Stock Exchange our business can not be conducted as a corporation. A conservatively conducted business of this class must of necessity provide a large surplus and undivided profit account to protect it against unforeseen business conditions in periods of depression and financial disturbance. This forces organizations of the character of ours to maintain small capitals and large surplus and undivided profit accounts. As a matter of fact, the good will and all of the assets of such an organization are essentially capital, but should not be capitalized. This bill necessitates an unconservative increase in capital account, which in turn through the Federal income-tax law places a burden upon such an organization, necessitating a capitalization of all its assets which exist only at their full values for short periods.

We oppose no bill which levies alike upon all interests to provide funds for the maintenance of our Government, but this specific bill, which penalizes conservatism in capitalization of business, and in effect is a special tax upon a business which of its nature involves hazards and is reasonably profitable but about two years in ten, should be defeated and supplanted by a taxation measure which includes partnerships, corporations, and all classes of business alike. Include income from agriculture, professional services, from business conducted by individuals, and tax every corporation and you will effect a measure which will reflect the sincerity of your purpose.

An acknowledgment of this communication will be appreciated by,

Very truly, yours,

BROOKS & CO.

Danish West Indian Islands.

EXTENSION OF REMARKS

OF

HON. MURRAY HULBERT,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Monday, February 19, 1917.

On the bill (H. R. 20755) to provide a temporary government for the West Indian Islands, acquired by the United States from Denmark by the convention entered into between said countries on August 4, 1916, and ratified by the Senate of the United States on September 7, 1916, and for other purposes.

Mr. HULBERT. Mr. Speaker, several Members of this House feel that $25,000,000 is too much for this country to pay for the islands of St. Thomas, St. John, and St. Croix. The first proposal to purchase these islands was made during the administration of President Lincoln by Secretary of State Seward, who afterwards consummated negotiations for the purchase of the Territory of Alaska, for which we paid Russia $7,200,000 in 1867. In 1866 the United States made a definite offer of $5,000,000 for the three Danish West Indian Islands, which Denmark refused to accept, and made a counter proposal to sell St. Thomas and St. John for $10,000,000, or $15,000,000 for the three islands.

A compromise was subsequently effected whereby the United States would secure the islands of St. Thomas and St. John for $7,500,000, provided the consent of the people of the islands should be formally given before the sale was consummated, and on January 9, 1868, out of 1,039 votes cast in St. Thomas there were but 22 opposed, while in St. John there were 205 votes in favor and not one against the cession. The treaty was subsequently ratified by the Rigsdag and signed by the King of Denmark, but the Committee on Foreign Relations of the Senate reported adversely, and the Senate declined to ratify it. The purchase of the islands was again considered during the administrations of Presidents Harrison and Cleveland. During the administration of President McKinley the Committee on Foreign Relations reported to the Senate a bill authorizing the Senate to purchase the islands for use as a naval and coaling station. In 1902 a convention was signed for the cession to the United States of the islands for $5,000,000, which was ratified by the United States Senate but failed to secure the approval of the Danish Government.

In my opinion the United States should raise the money, pay the price, acquire the islands, and provide a temporary form of government without further delay. If the value of the Danish West Indian Islands corresponds to-day proportionately to the value of Alaska, as it did in 1867, at the time of its purchase, we shall not have lost anything; but, on the contrary, just as there are conditions which make the acquisition of these islands more desirable now so do these conditions enhance the purchase price; and I have no doubt that there are other Governments more willing to acquire these islands at the price they are offered to us than some of us think the Government ought to be.

At the close of the Spanish-American War, notwithstanding the fact that our victory was full and complete, we paid $20,000,000 to the vanquished King of Spain for the privilege of exercising temporary sovereignty over the Philippine Islands until such time as we might have educated them for citizenship and independence to govern themselves. The acquisition of the Philippines, temporary in its nature, was likely to embroil us at any time in international complications. The purchase of the Danish West Indies is designed to be a permanent acquisition to help keep us out of war, and in the event of war to better enable us to protect and defend the Panama Canal.

I shall vote for the bill.

Under leave to extend my remarks, I include an editorial from the Gazette of January 20, 1917, published in my district:

THE UNITED STATES WEST INDIES.

A recent dispatch from Washington states that the above is the name which it is said the administration intends to adopt for the newly acquired possessions in the West Indies, St. Thomas, St. Croix, and St. John, and Crab Island and the islands adjacent thereto. Porto Rico is not to be included in this new designation, but it probably will in time.

In deciding to name this newly acquired territory "the United States West Indies" the United States is following the example of European countries which have colonies in the Caribbean. And viewed from a historical and sentimental point of view, it is well that the new name be adopted, for no matter what flag may float over the islands the name "West Indies" will always cling to them. And in this connection it is worth while recalling what may or may not be true—that Columbus named the lovely group of islands which dot the Caribbean "West Indies" because of his belief that he had reached the East Indies by a western route.

But there is a greater significance which attaches to the proposed name. It is that the first serious step has been taken whereby all of the West Indian Islands will be acquired by the United States either by purchase, cession, or conquest. Nothing is more certain. Just as Denmark has become tired of her far-off possessions in the West Indies and has rid herself of what was undoubtedly a burden to her, so in time the other European Governments that still have possessions down there that are a liability to them rather than an asset will turn them over to the United States for the best price this country is willing to offer. If this is not done voluntarily, then the other two alternatives—cession or conquest—will bring them under the jurisdiction of the country to which they logically belong, geographically, politically, and commercially.

But, nevertheless, we do not think the name "The United States West Indies" should be applied to the former Danish islands or the other islands when they shall have been transferred to the United States. The style smacks of colonialism and is indicative of an intention to govern the islands after the fashion now in vogue there. Colonialism should have no place in the government of a republic. St. Thomas and her sister islands, as soon as the transfer from Danish to United States rule has been effected, should be organized into a Territory, their inhabitants made citizens of the United States, with all that that carries with it, and as soon as possible created a State of the Union, with Representatives in the Congress of the United States. Any other procedure is likely to prove unsatisfactory alike to the people of the newly acquired possessions and to this country.

Of course, a very large percentage of the people of the three islands are British, not Danish, subjects, and care will have to be exercised in conferring citizenship upon the islanders that no blanket grant be made less many receive it who will not be entitled thereto and matters be complicated for this country. But those entitled to it should receive it immediately, and Congress owes it to the country to see to it that no such anomalous condition is created in our newest possessions as still exists in the case of Porto Rico.

The same dispatch stated that Secretary of State Lansing, the Secretary of War, and Members of Congress were debating the form of government best suited to the islands at the present time. Our belief, based upon knowledge of West Indian conditions, is that the most helpful and the one that will prove the most beneficial to the islands, and which will at the same time show our good intentions and superior

methods of government over those that have prevailed, will be a form of government such as we maintained in Cuba after the close of the Spanish-American War and later in Panama. And the type of governor whom we should send to the islands should not be a mere politician; he should be a Gen. Wood or Gen. Goethals, with a corps of sanitary engineers. With a governor of this type and sanitary experts to assist him, the islands should soon become healthy, attractive places, both for business and as pleasure resorts for people from this country.

Problems of War and the Possibilities of Peace.

EXTENSION OF REMARKS
OF
HON. JAMES H. DAVIS,
OF TEXAS.

IN THE HOUSE OF REPRESENTATIVES,

Monday, February 19, 1917.

Mr. DAVIS of Texas. Mr. Speaker, to maintain the stability of our Union, repel invasion, and perpetuate the sublime ideals of our democracy, our national soul, I am willing to vote billions from the Treasury and surrender my life and all I have if needs be. But to line up with the lions and bears, kings and tyrants of Europe in defense of a doubtful technical right and waste untold American blood and treasure in a war the chief result of which will mean more millions for Morgan and the war-mad munition makers followed with untold debt and despair, I would suffer my body torn limb from limb and my flesh fed to vultures before I would cast such a vote. However, a majority of Congress rules in such matters under our Constitution. In their action all loyal Americans must concur. Though their action may fill my life with deepest regret I shall accept their verdict as the binding power of my country and acquiesce. In the midst of war's most woeful calamities our President had the courage, the unalloyed love of democracy, and the glorious ideals of our Republic—which find their grandest essence and basic foundation in that immortal declaration which says "all political power is inherent in the people and all just powers of government are derived by consent of the governed"—to urge these warring nations to consider the questions of permanent peace, based upon that sacred principle that "all just powers of government rest upon the consent of the governed," glorious, grand, wonderful thought, divine in concept, immortal in truth. The courage of the expression at that time is typical of the devoted Americanism of our President. But why, oh, why, should we now ignore that doctrine and plunge this country into a foreign war and become the military consort of cold-blooded and cruel kings who look with disdain upon common manhood and consider "the people mere chattels to serve their royal rapacity?"

The great normal desire of all mankind is peace. The difference between heaven and hell is the difference between peace, with its placid and sweetened life, and hell, with its turmoil of suffering and strife. For nearly 2,000 years the followers of Christ have prayed and begged for peace. Millions of prayers wafted on the winged winds have gone to Heaven in fervent supplication to that end. All civilized countries have peace officers and courts in which they punish people for disturbing the peace. Following all this clamor and anguishing heart throbs for peace, why is it that practically the whole earth is in a baptism of fire and fury, engrossed in the turmoils of a wicked world-wide war? The answer is that greed and gold, kings and crowns, emperors and aristocrats, and cold-blooded corporations and combines control the earth for their own aggrandizement, profit, and preferment, and with a stoic indifference and a total disregard for all human rights are decimating and devastating the earth in a rivalry for world power. This they do to augment their special privilege, pile more wealth in their already plethoric coffers, and spread their dominion for plunder. Take the profits out of war and the aggrandizement to the few out of conquest and give the people control of their governments and establish all governments to rest upon the consent of the governed and war will cease.

Recounting the terrifying horrors of the present war and looking back over the pages of history, I stand abashed and amazed at man's inhumanity to man. Man's genius demonstrated by modern achievement makes him not only the image of his God but in his prowess is almost rivaling Deity itself. He has reached his deft hand in the azure blue, plucked the very lightnings that flash around the thrones in heaven and brought it to earth tame and submissive. But instead of devoting this great discovery to bless humanity he gears it up to the touch of a trigger, stores it away dormant in bombs and shells, and makes the most powerful instruments known for the destruction of human life and property. This discovery which ought to be a blessing is converted into an instrument of calamity and a curse to the race, all to satisfy the covetous greed of ungodly passions. He has extracted the flames from the very furnaces of hell and these he has made to obey his commands, yet this massive power, so sublime and supreme, which ought to be used to bless the world with industrial energy, is applied, in great part, as a great motive power for the wholesale murder of mankind. Gunboats and transports, dreadnaughts and leviathans, great naval mammoths and mastodons ride the bosoms of the ocean, puffing and panting a hot and furious breath, seeking whom they may destroy and lying in wait, watching for the time when they can belch forth a thousand pounds of shot and shell to batter down the homes and houses and consume the lives and labor of men. The whole genius of the human race seems to have been invested in devising ways and means to curse, blight, and kill humanity. Put the world under the white flag of peace, turn these vast powers into whirling the wheels of industries and beautifying the earth and rendering it more healthful and habitable, and you would make the world a paragon of beauty, a paradise of contentment, and an Eden of joy, and progress and advancement in the wonderful prosperity under such a program is almost immeasurable.

While man has been able to conquer space and distance and can make the very air bear his messages around the world, he has yet never been able to conquer himself. His greed, his avarice, his passions and prejudices are still the controlling elements of his life. It is these in man that make for war.

After two years' experience in the horrors of our own fratricidal conflict of the sixties, one of the leading generals of that war, in a term of stolid philosophy, said, "War is hell." Without feeling profane in the use of the term, with strict reverence for my God and His laws, I want to add that if war is hell, then it is hellish indeed to provoke war and put our country in hell.

When war prevails the golden rule becomes a myth, the decalogue a dead letter, the love of God and the love of man is lost in a riot of revenge and rapacity,

> The Golden Rule is a hollow sham—
> The lions turned loose to feed on the lambs;
> Laws to protect humanity's right
> Are lost in the frenzy of the fight,
> And the right to kill, slaughter, and slay
> Is the battle cry of the raging fray.
> The man who pleads for the laws of God
> Is goaded away with a savage prod.
> "To hell with peace!" We must win the fight;
> In the rules of war might is right.
> Your pacifist dreams and prattle for peace
> Must be silenced, you must cease.

When Napoleon stood in front of his half-starved and ragged legions and told them the enemy had plenty upon which they might feast, if they would only slaughter the foe and take what he had, he was laying down the law of loot and lust that has actuated most of the wars of history. All these things only show how false, fickle, and fraudulent is the flummery and pretence of hell when the devil assumes to be clothed in righteousness under a hypocritical pretense to vindicate national honor in the brutal savagery of war.

Standing in the dreadful prospect or possibility of war today, in which we are to take part and become embroiled in the ruinous, ravenous, rapacious rows of kings in the Old World, the cry comes up over the four quarters of the land to stand by the President.

Friends, I think we have a wonderful man at the head of our Government—a splendid embodiment of American life. I love him for his greatness and his goodness. But if you want me to stand by the President, show me that the President is right; show me that the program to be played will best serve the millions of people for whom I, in a humble way, am commissioned to speak. The fathers who made our Republic, many of them fresh from the gory fields of battle, taking into account the woeful wars that have drenched the earth in blood, clothed Congress and the people's representatives with the sole power to declare and provide for war.

I have the highest respect and regard for our President, but under my oath and the obligation I assumed I am expected to exercise my own judgment in matters of war. When I think of declaring war I think of the blanched faces and bleeding bodies of millions of men. I think of the murder machines that fill the air and rave over the land, floating over the bosom of the ocean, and even crawling on the very bottoms of the seas in their search for human victims. I hear the widows' wails and the mothers' moans. I hear the cries of despair and the dying groans that make the earth a maelstrom of misery in war. I see the dead and the dying in a hundred miles of trenches, where liquid fire, poisonous fume, leaden hail, and shot and shell make that trench a veritable hell. I see millions

of orphan children holding out the withered hand of hunger to a cold and cruel war-mad world, while billions of dollars' worth of food and raiment and all the blessings of life are being burned and blasted, go up in flames, or sink to the bottom of the seas.

Therefore, before I cast my vote for war I must know that every honorable means to prevent war has been exhausted.

The war-mad fiends, whose judgment, beclouded by the smoke from the Steel Trust, Powder Trust, and munition plants, who are already coining the blood and butchery of the European war into millions of dollars, cast away with scorn the man who pleads for cool, calm consideration and prefers an honorable peace to a deadly, damnable alignment among kings in war. This element, whose heart and conscience seem to be petrified in hate and aflame with fury, calls with imperious demand to "stand by the President." I answer, the voters last November stood by Wilson against war. This callous, cold-blooded call seems to imply that the President intends to plunge us in war. This I deny. But their call to stand by the President is but the accented echo of the same call that makes the poor, benighted, and oppressed Russian stand back of the Czar in his tyranny, that makes the German stand back of the Kaiser and support him in his cruelty, that has made kings and tyrants in every land the masters and murderers of millions of people.

I thank God that in 1776 there were brave and noble men, who preferred to stand for liberty rather than stand by their president—their king. Patrick Henry, Washington, Jefferson, Hancock, and hundreds of others preferred to follow the dictates of their own conscience and part company with their president—their king. There was a large element of educated, strong, and wealthy men who raised the same cry then that the war-mad maniacs raise now, branding as traitors men who refused to stand by the king. They were Tories, and their very name to-day is a stench in the nostrils of liberty-loving America. Thanks be to the grandeur of those men who refused to stand by their president—the king—calling upon God on high to witness the rectitude of their conduct, they parted company with him, and through seven years of struggle and misery, passing through fire and blood at Bunker Hill, Brandywine, Valley Forge, and Yorktown, they brought forth from the womb of eternity a Glorious Republic.

These rampant ranters for war spread glowing headlines across the papers and with imperious unction lecture Congress about the sacredness of international law. If international law is sacred and its willful violation is a crime, then I affirm that England as well as Germany has from the beginning shown an insolent disregard for American rights and has spurned, contemned, and overrun every principle of international law. And long before Germany created a war zone or threw her soulless submarines in the sea, England had forbidden the people of the earth to use the North Sea except as she, in her damnable designs, was willing to admit.

For more than two years she forbade us to trade with her enemies, dragged our commerce from the seas, and with pusillanimous perfidy kept us from trading with Germany and Austria, and, through her minister of munitions and international financial agent in this country, Pierpont Morgan, she killed the cotton market of the South, robbed the Southland of nearly $400,000,000, bought our cotton on a dead market at 5 and 6 cents a pound, then, by the strategy of their business control of our country and the seductive power of their press, they induced this Government to insure that cotton against German attacks, while they carried it to England, France, and Italy, and sold it at a price ranging around 17 cents. This diabolical outrage was perpetrated while Germany was begging for the privilege of dealing with us as a free people and offering the southern farmer from 15 to 40 cents a pound for his cotton. But the jingoes tell us that England did not kill any of our citizens on the high seas. Ah, that is true. A part of Mr. Morgan's plan was to prevent such conduct as that. We were saved from murder, we were simply robbed of our money. On the high seas we Americans met two unscrupulous, insolent, and murderous robbers, England and Germany. England scuttled our ships, rifled our mails, took us by the throat, and dragged us to her ports, robbed us of our money, then had Morgan, her minister of munitions in this country, issue cards of thanks spread across the pages of the press in great gusto, because she left us alive. Germany, unable with her submarines to rob us without killing us, too, after warning us of her intentions to rob, kill, slaughter, and slay, carried out her hellish designs with merciless cruelty. But when they talk to me about the sacred rights of international law I ask myself and ask men, "How does it come that we have been forbidden for two and one-half years to land a cargo of our commerce on German, Austrian, or Turkish shores?" I ask, too, with earnest solicitude under what international law, and under what law of God, England has had the right to forbid us delivering goods to neutral Governments?

Let us suppose a parable which bears a perfect analogy to our condition regarding the treatment Germany and England have given us.

The American Goddess of Liberty, the Holy Virgin of our national Union and democracy, was crossing the high seas. She met John Bull, who assumes to be the militant master of the seas, who with shameless lechery and lust, by force of arms, outraged her, but condescended to leave her alive. Injured by the brutal treatment, but undismayed, she went on her course, but soon met William, the conquering Kaiser, who, with lecherous lust and depraved design, not only outraged and despoiled her but mangled and murdered her. The treatment of both these heartless fiends is a dastardly crime never paralleled before except by pirates, pagans, and heathens. But when we condone and excuse England and put up with her infamous, insolent, and infernal outrages for two years it does not strain my mental faculties to at least refuse to go raving mad and rush into war because of our unholy, ungodly, and inhuman treatment by Germany. The intolerant bigotry and brazen effrontery of both of these usurpers is reprehensible, inexcusable, and unjustified by any rule of civilization.

Why should we grow so frantic and frenzied over Germany's infamous blockade and insulting defiance of our natural rights of trade? England has had one of her royal round-up agents, one of her political popinjays, strutting around the English Embassy here under the royal flummery and cockades of the Crown, forbidding our people to carry American commerce on American ships under the American flag to European ports without his consent for nearly two years. Under the arrogant orders of this insolent cockswain cock-a-doodle-doo or royal rooster, I am told millions of dollars' worth of cargoes, including the ships, have been dragged from the seas confiscated. American freemen here on American soil are forced in ignominy to get the gracious consent of this grandee before they are allowed to exercise the inalienable right of trade for which our forefathers fought, bled, and died, and for which we are now preparing to fly at the throat of Germany.

Abraham Lincoln said in discussing slavery under our flag:

He who willfully denies liberty to another deserves it not himself and under the dispensations of a just God can not long retain it.

This Nation had denied liberty to the black man for a hundred years, but under the laws of God's retribution it paid the penalty in four years of bloody war that justice might be retrieved. Feeling to the fullest the providence of God, I assert without hesitation that nations like individuals must atone for their sins.

The greater part of all this fulsome, flamboyant verbiage about war for "national honor" is but the designing lingo of munition manufacturing, money loaning, bond clipping "jingoes" who want to continue to puff their purse with war profits. Of course they want war. Every time a ship is destroyed the Steel Trust sees the hope of another contract and chance to scoop millions out of the miseries of murderous war. War means untold misery and misfortune for the masses, but it means mansions and palaces for the classes. Of course all the money-mad munition makers are war mad.

If I wanted to court laudation and praise from the Tory element of the press and be glorified by the jingoes, my name heralded as a great statesman and patriot by those who deal in war stocks and hope to coin the woeful calamities of our country into cash, I would clap my hands in a frenzy for war, make a furious, foaming, frothing speech, bloodthirsty and seething with vengeance and slaughter, and close by proposing to turn billions of money and bonds and our whole manhood in conscription over to the Steel Trust, munition makers, and Money Trust with instruction to save our "national honor." I would propose to mortgage the unborn for 50 years bound, gagged, and looted by coupon clippers in bond syndicates and soulless corporations.

I can agree with the press and the patriots who arraign Germany for her brutal treatment. Germany has been savage, brutal, and bestial. England has been cold-blooded and criminal, but has been cunning enough to keep her scoundrelism concealed; whether under the influence of Morgan, her minister of finance and munitions in this country, or otherwise, I am not prepared to say, but her venal conduct has been smothered while Germany's has been headlined and heralded as hideous beyond description.

The United States met two pirates, highway robbers on the seas—Germany and England—both malignant, mercenary, and voracious. England waylaid us with gunboats and tugs, scuttled our ships, and took millions of our property, but con-

descended to let us pass with our lives if we would raise no row about the robbery, turning us loose on parole of honor to be quiet, submissive.

Germany, more stern, rabid, resentful, rapacious, and bigoted, waylaid us with submarines, savage sea dogs, claiming we carried contraband, shot dynamic thunder under us, tore us asunder, and sent persons and property to the bottom of the sea.

Now, it seems Morgan and his minions and some good people and all the jingoes who demand war at any price want us to generously forgive England's infamous robberies and send our noble Army over to help her catch and kill the other robber. To do so, in my opinion, would well befit the ethics of hell and merit the admiration of the devil. The whole structure of our large cities is infested with big business marplots and war plots. Wall Street, Morgan, and his plunderbund want to reguild and emboss their allied war bonds with the blood of American soldiers and seamen in helping England to vanquish Germany.

My father had seven granduncles in the Revolutionary War; 200 years of American ancestry make up my title to American citizenship. I am neither pro-German nor pro-English; I am an American who believes war is hell and feel that I am serving my God in the grandest degree and serving my country in the sublimest sense when I insist on using all honorable means to keep my country out of that hell.

I refuse to be stampeded by the abnormal and unnecessary war spirit that is raging through our country.

"Vengeance is mine," saith the Lord, and I refuse through vengeance and other exciting influences to become embroiled in a war conducted by kings, emperors, and despots for conquest and aggrandizement in an effort to determine which among those despots shall be able to dominate as a world power.

The present war experience has convinced me that though a nation may have the biggest fleet, with the biggest gunboats afloat, it is helpless in a sea infested with submarines.

England's experience in trying to land on Turkey convinced me that even a helpless country, so far as the navy is concerned, can with a few hundred thousand dollars' worth of submarines and mines make it impossible for the most powerful navy afloat to land on her shores.

The international laws were made when the whole world was filled with slaves, serfs, and peons, when the seas were covered with pirates, and when piracy, under letters of marque, made highway robbery on the seas legal, when the conscience of civilization made cold-blooded and premeditated murder honorable by the codes of dueling. All things have changed. Modern warfare and implements of war are so immeasurably more destructive, means of communication and transportation so vastly more rapid, that it is unreasonable to expect nations in war to-day to be governed by those obsolete, inapplicable, and effete rules of warfare. Nations in war are expected to put forth their most efficient and effective service. When a nation must use its best and be at its best to grapple with its enemy in conflict it may be expected to use its most terrible instruments and use them in their most terrible and destructive capacity. To talk to them as Sunday-school pupils and point them to the laws of God and the principles of humanity is sweetness not wasted on the desert air, but poured into a rotten sink hole of savage brutality.

Now, in this hour of agitation and anxiety, while we are yet supposed to have our consciousness and our senses, the damnable war craze runs so rampant that the man who dares to talk of peace and stands for the glory of God and pleads with prayerful anxiety for calm and conscientious consideration is met with insolent jibes, jeers, and calumny covered with condemnation and scorn by the war-crazed cranks who clamor and scream for blood and butchery, craving to revel in the brutalities of war. If we as Americans thus manifest such reckless disregard for the laws of God and the rules of righteousness, what can be expected of the nations already drawn in battle line and mowing each other down by the million. Friends, I stand without tremor or dread to declare myself a man of peace. The God of the universe, the God of Abraham, Isaac, and Jacob—our God—knows no double standard of honor, mercy, love, and justice. What did God mean when He said from the mystic heights of Mount Sinai, "Thou shalt not kill"? Did He mean that some lonely man out in the fastness of some forest should be forbidden to kill, then turn nations loose to kill by the millions? Did He mean that men acting as individuals must not kill, and intend that nations should manufacture great monster machines of war to plow the earth and plunge the oceans in their savage rage of murder, death, and desolation? Did He mean that when you murder an individual and destroy his property you are a villain and a criminal, but when you organize in the name of government and prate about "national honor" and national dignity and lead a ravenous rampage of carnage and conquest and murder millions in heartless cruelty, despoil the virtue of their women, rob them of their homes, that you are a patriot and a hero? Let me answer—ten thousand times, no! I am one of those who believe that nations, like individuals, must atone for their sins. "The wages of sin is death" applies to nations as well as individuals. When a nation spurns, contempts, reviles, defies, denies, and repudiates the laws of God and goes on a maddened rage of murder to stifle, strangle, and crush the life out of millions and with wanton, woeful, unscrupulous venality tears asunder helpless homes, kills the people, and confiscates their property, I say now to that nation, "The wages of sin is death. Whatsoever a nation soweth, that shall it also reap." When a nation sows to the flesh, sows to the base, vicious, venal life of the flesh, it challenges the vengeance of God, and under the laws of a just God does not deserve to live, and of its own depravity corrodes, cankers, and rots at the base and tumbles into wreaking ruin like Babylon, the mother of harlots, filled with "abomination and filthiness." When God Almighty told man that he should forgive his brother who offended him seventy times seven he put 490 offenses between the offender and the offended before a row should occur. With this wonderful care and anxiety that our God manifests to keep down a row, keep down war, can it be conceived that He meant for a Nation like the United States to fly into a fury and plunge millions of people into untold agony and death, simply because Germany committed some overt act of violence when we had been condoning and forgiving England's nefarious, insulting robbery for two years? Nay, verily.

A fiery evangel of democracy has been sweeping over the earth for a generation. It has been spreading universal education, intelligence, and social elevation. It has laced and interlaced the world in commercial communication and business relation. It has broken down the barriers that prevented the free intercourse of governments in the past and has put humanity on a higher plane, moving onward and upward, and this, in my opinion, is a direful death grapple, instigated by kings and their clans to decide which shall be the supreme world power. But, sirs, I believe that in this age of intelligence and information the dispensations of a just God will intervene and deny any nation the right to be the dominating world power. The world itself will make a world court, a system of world colleges, and, finally, a world parliament to control the world's international affairs, so as to prevent any two or more nations from interfering with the world's peace, prosperity, and happiness by instigating and perpetrating a cruel war.

It has only been a short while back in our own history when the anthems of peace, universal peace, were sung in a glad refrain throughout our land, along with the heart swells of a new freedom, championed by Woodrow Wilson, W. J. Bryan, and a thousand tongues known to fame in our country. This glorious sentiment, born of the love of God and the God-given rights to life, liberty, and happiness, must not be supplanted, overthrown, and cast aside for the pernicious rules, laws, and customs, the ruinous relics of paganism known as war. Let this Government, standing by the people and for the people, representing a government of the people, whose foundations are laid in the grandest principles of heaven on earth, set the pace and in the name of God, in the name of humanity, acting under the transcendent principles of the golden rule and the decalogue, abolish the hellish doctrine that makes wholesale murder, slaughter, rapine, and plunder honorable under the cruel codes of war.

The jingoes and champions of war at any price tread the front deck of the ship of state and prance up and down the highways of our country looking with scorn upon men who say war is cruel, cold-blooded, and calamitous and who beg for calm consideration. They tell us with an air of unctious disdain that they stand for national honor, national dignity. These terms have a charming, sweet, and savory meaning. With such terms the war fiends and murder-mad maniacs expect to cajole the careful, conscientious men of our country into standing still while they and their pals stampede us into a terrible war. "National honor and national dignity." These terms would have far more sacred meaning to me if I did not know that every page of history certifies that many of the most heinous crimes, ruthless and venal conduct ever committed by men have been perpetrated under these terms. Whole nations, innocent and helpless, have been ravaged, ruined by some murderous conquering tyrant, who, like a cold-blooded colossus, trampled it to death in the name of national honor and national dignity. I might begin with Xerxes, come down the bloody pages with Alexander, Cæsar, Napoleon, and a thousand others who drenched the earth with blood, prostituted every law of justice, mercy, and honor, debased every decree that was made

to protect the rights of men, making greed their god and vengeance and venality their virtue, murdered millions in cold blood, spreading terror and devastation throughout the known earth. All this calamitous, egregious, and unscrupulous conduct was committeed in the name of national honor and national dignity.

Rome with ruthless rapacity pounced down on the sacred city of Jerusalem, the seat of government of God's chosen people, the people who had saved the history of creation and civilization, the people who had given to earth the glorious codes the hand of God had chiseled in tablets of stone on Mount Sinai, a people who had walked with and talked with God. With torchlight and terror, in conflagration and crime, Rome burned, ravaged, and desolated the holy city, sacked its sacred temples and shrines, confiscated and appropriated the accumulated wealth of ages, manacled and bound tens of thousands of her sons and daughters as slaves, plowed up their fields and gardens and sowed them in salt to render them sterile and barren, seeking to enforce starvation on all who might have escaped her slaughter and her slave pens. She then issued an edict exiling forever from the sacred soils of Judea and Jerusalem the remnant of the Jewish race that the Roman eagles could not catch or kill. All this was done in the name of the honor, the glory, the dignity, the patriotism of Rome.

Scipio, a Roman proconsul and general, returned to Rome in a great pageant as one of the earth's most monstrous and mighty murderers. He came with the most stupendous and dazzling display of dress parade, pomp, and splendor the world has ever known, having looted in merciless, marauding warfare two continents, murdering and robbing in cruel cupidity millions of victims, making their flower of manhood slaves and the flower of their womanhood liaisons-concubines, to serve the lust of the venal conquerors. All these crimes against God and man, unscrupulous villanies against feminine virtue and chastity were enacted under the sweet terms of national honor, national dignity, and patriotism, and then, as now, if a man dared to plead for peace he was pointed to as a political reprobate, void of all national honor, and guilty of every stage of treason. And if men like Mr. Bryan and myself had lived in those days and plead for the glory of God and the grandeur of men for peace on earth and good will among men and asked for calm consideration in the name of God and humanity we would have been condemned as guilty of traitorous treason and fed alive—as they did then—to wild beasts in the amphitheaters, while the conscienceless crowd, the Roman aristocracy, and foes of humanity shouted in fiendish joy.

All honor to President Wilson when he urged a peace among the belligerent nations of Europe, resting upon the sacred ground—the foundation for all democracy—the consent of the governed. When he put that plea on the wires and shot it with lightning speed into the face of the kings and crowns of the earth, it served as the bedrock and foundation of his note for peace, which was one of the grandest epochs in the history of statecraft. The Declaration of American Independence, in which that sacred principle was first laid, stands like a beacon light on the ocean of life to guide the liberty-loving sons and daughters of men everywhere to the God-given goal of freedom. To send such a declaration to the kings and crowns, so-called royal rulers, who have made and are now making the whole Continent of Europe a round-up station of royal robbers and rapacious rulers, seemed like the irony of fate. Every tongue in the page of her history tells us how they have vanquished the weaker nations, apportioned the earth's surface among themselves. Its teeming treasures of natural wealth they have confiscated and called it their own. The people themselves are political peons, serfs, subordinates, and slaves to the infamous system.

The present war, the most dreadful and ruinous the world has ever known, is an unscrupulous scramble for pelf and plunder, a death grapple in which millions are forced to struggle and die in order to increase the territory of enthroned tyrants and extend the sway of royal satraps. That war is a king's highway of horrors, in which millions are murdered and maimed and wounded, that kings may continue their carnival of royal rapacity, princes prolong their pillage, lords extend their lootings, while they live in leisure and luxury under forms of law, legally devouring the substance of humanity that they may surfeit their voluptuous life in royal splendor. It is—

A pell-mell of perfidy, a bedlam of strife;
Where millions are robbed of property and life;
Where women are forced into lives of shame,
And all that done in government's name.

But the jingoes jibe, jeer, sneer, and sniff at the peace-loving patriots of America and tell us that we ought to join the allies, for they are fighting for liberty and freedom; that the allies are fighting for the liberty and life of small and helpless nations. My God! What a travesty on truth! Was Russia fighting for liberty and the right of small and helpless nations when she ground the life out of Poland under the iron heel of her tyranny? Was she fighting for liberty when she put the midnight of death into the heart of half a dozen other small nations in the last half a century? Does she stand for liberty when she sends a man who dares to read the American Declaration of Independence in exile to the frozen icebergs of the north, to strave or be devoured by polar bears? Was England fighting for liberty and freedom and rights of small governments when she marched her millions into South Africa and snuffed out the light that blazed in the heart of two young Republics in the Boer War, and made them conquered dominions of the king? Was England fighting for the liberty of small and helpless governments when she has stood for an age with her iron heel on the throat of Ireland and with her strong right arm rifled the pockets of her people? England might debate and defend her rule in India and black man's Africa upon the same doubtful philosophy that we defend our rule in the Philippines—that we are holding a dark and benighted people under the sunlight of civilization and lifting them to a higher plane. But how can she defend her tyrannical rule over Ireland? The Irish were famous in song, art, letters, learning, poetry, and patriotism and stood among the nations of the earth like a charm and a magnet, dazzling in intelligent splendor when she was crushed and conquered. England, with merciless avidity, murdered her and robbed her of her national life. In every land and in every tongue throughout the civilized world the Irishman has measured well and made good in every contest.

Ireland! Ireland! Erin's Isle,
Where the serpent was banished by a Saint,
Where martyrs to freedom
Still march to the stake,
Without blemish or blush or taint,
Where patriots perish for freedom's cause,
While tyrants triumphant stand,
For might is right in tyrant's laws,
And usurpers rule the land.

Do you mean to tell me that Russia, the most absolute, arrogant, and damnable despot on earth, is fighting for liberty and the rights of man? My God, what must be the condition of the perverted mind that makes the claim. You had as well tell me that the Devil is preaching the Gospel of Christ.

I have no resentment in person against the mad clamors for war at any price. I am sure that Morgan and men like him, who make millions out of war, want more war and want America in the midst of war. It means that they and their bond-holding brigades can move into mansions and clip coupons for 50 years and devour the substance, toil, energy, and enterprise of the American people on the interest account for war loans. Of course they want war. God has told us wherever a man's treasure is, his heart is there also. Morgan and his clan's treasure, nearly two billion strong, is invested in the government bonds and securities of the allies. When they made that investment they underwrote the stability and perpetuity of these Governments. Hence their heart is with the allies. Their treasure is there, and whether Mr. CALLAWAY, of Texas, Mr. MOORE of Pennsylvania, and other splendid peace-loving Americans, ever make good their charge that a large portion of the metropolitan press is under control of Morgan's money and leading us headlong into war or not, it is reasonable to suppose that when these "big-business" bankers, who have extorted hundreds of millions from the American people through corporate commercial cannibalism, would readily feel it necessary to organize a vast press syndicate to prostitute the conscience of the American people, smother the truth of England's offense, magnify the smallest offense of Germany into national outrage, and use every means possible to produce such a condition as would force this great Republic to help crush Germany and make that investment secure. These myrmidons of mammon, these mercenary minions of the war gods, maddened by their thirst for blood and lust for loot, would gladly plunge this Nation into war, baptize it in blood, submerge it in sorrow, fill the land with desolation and despair, in order to add more millions to their already huge piles of sordid wealth and gather more gold as the heart of our Nation bled. Of course, it is very natural for them to want and have a "patriotic" press. Oh, no; I mean a "paidriotic" press. Set that press apart, sanctify it to the service of "national honor, national dignity," all of which must mean that the United States must become an ally to the allies and help whip Germany. The metropolitan press, sanctified and made pure patriots by Morgan's millions, could by cunning deception, fiction, and fraud beguile the conscience of the country and, through the boards of trade in big cities dominated by big business, sandbag the people, malign and traduce grand, glorious, and good men like

Bryan, covering them with falsehood, villification, and slander, cry down every real friend of the people, the lovers of God and humanity, and magnify every political puppet as a great patriot who with blatant bravado and bigotry boasted and prattled about how he loved the national honor and national dignity.

Let the subtle tongues of those that crave murder and misery rail and vaunt for war if they choose, but I stand with Washington, Jefferson, and a thousand glorious statesmen and thank God that 3,000 miles of briny deep rolls between us and those gory battle fields, and say to you that when the English lion, the German dachshund, the French bear, the grizzly bear of Russia, and the rest of those devouring carnivorous beasts are engaged in this deadly struggle let Uncle Sam take the advice of Washington's Farewell and Jefferson's glorious teachings and refuse to be embroiled in the rapacious rows. By so doing we can save our national honor, save our national dignity, stand for the glory of God and the grandeur of men, and refuse to become a part of that ravenous war which demands that the law of God must give way to the law of lust and loot while the continent runs red with human blood and reeks in cruel and criminal corruption. But they tell us with a loud acclaim that Germany, without the love of God or the dread of hell, began this war. To that I answer that the Christ I adore said, "Let him that is without guilt cast the first stone." Tested by this law can anyone say that England, Russia, or any of the allies are not guilty? Can they stand up in Christian purity and punish Germany when a score of dead, destroyed, and desolated governments are skeletons in their closets as the result of wars they themselves in consciousless cruelty started? But let it be admitted that with malice aforethought, murder in her heart, longing for cruel conquest, she—Germany—started the slaughter. And yet I answer that the crown on every head and the titles that give them seats on every throne in Europe has been bought and held in butchery by crushing, killing, destroying, outraging every known principle of liberty, democracy, and the rights of man in which the whole continent has been saturated and soaked in the blood of millions of innocent victims. And if Germany started that war, and started it with venal design for conquest, she was only following a common custom that has been enacted by kings, emperors, and tyrants through all the whole pages of history. Hardly a page in the history of continents that has not been made gory, gruesome, dark, direful, and damnable by the action of conquering kings, whose depraved lives have led to untold misery, outrage, and wrong. History tells us a thousand times where the tramping legions of conquering kings swooped down on some helpless country, like the eagle on the lamb, and bore it away as a victim of prey.

If Germany started the war, it is useless, an idle dream, to expect her now to acknowledge the guilt, confess her wrong, quit fighting, and ask for terms. You could as well expect the wolf that broke into your sheepfold and took away your lamb to stop fighting your dogs. The wolf got the lamb, but she would stand at the door of the cave in which lie her whelps and fight a thousand hounds until death destroyed her power. Germany, like the wolf, is standing at the door of her cave; She hears the pitiful wail of her hungry whelps in the cave, and in that condition the dachshund of Germany will fight a thousand British lions and Russian bears till death destroys her power to resist. But in God's name, why should we cross the ocean and mix in the miseries of that war? We are now at peace in the midst of a wonderful prosperity; then let us have contentment and speak and think of kindness; let us be sane and not savage; let us be reasonable and not rapacious; let us be kind and not cruel; let us have some respect for righteousness; let us remember that over the archway that spans the golden gate of heaven is enscrolled in letters of living light those transcendent terms given by an omnipotent God for the guidance of men when he said, "Whatsoever ye would that men should do to you, do ye even so to them." There are a thousand honorable ways to keep out of this war. Then let us keep cool. Malice, hatred, and vengeance poison the fountains of humanity and put mankind under the passions of a brutal instinct in which reason is lost and rapacity runs rampant.

If war is hell, every nation at war is in hell. Germany, surrounded by battle lines on every side in which a holocaust of savage slaughter is swathing down thousands of soldiers, the allies having her whole empire under siege through an almost world-wide war zone, sees herself in close proximity to absolute ruin. She sees her homes and the loved ones therein standing just in front of approaching starvation, in which the wolf of hunger is to haunt a hundred thousand homes. In this condition, if war is hell, she realizes that she must soon slide down into the bottomless pits of that hell. In such a case every ferocious and fiendish element of animal life is kindled into action.

A drowning man will catch at a straw,
A dreadful necessity knows no law,
Hence moral rules and moral creeds
Must all give away to direful needs,
Virtue gives way to venality, then,
With no regard for the rights of men.

Contemplating the marching millions and the stifling, starving, innocent mothers and children, the heartaches and heartburns, the woe and want, the travail and tears, the indescribable sorrow, and the heinous crimes and horrors that make up the record of that war which now blights the Continent of Europe, I pray God and plead with the controlling influences of my country to let us stand erect undismayed on our own shores, doing in Europe as we did in Mexico—warn our people out of the war zone—and let those bloodthirsty tyrants carry on their cruel and calamitous war. It is bad enough, ungodly enough, for them to spill each other's blood; but that is their country, the country in which God gave them birth and existence, and it is not my province to forbid them action. Would to God that they could be persuaded to stop their bloody strife! A few weeks ago we were leading the world and pleading for peace, setting a most glorious example for the world's war-mad peoples. To-day we are the only neutral nation that has broken off relations with Germany. Sad, indeed. To-day we are asking the neutral nations of the world to join us in severing relations with Germany, which the world considers a prelude to war. May God intervene. May peace prevail. May Woodrow Wilson walk the paths of peace, resisting all blandishments, allurements, and beguiling environments which would lead us into war. For more than two years he, with the wisdom of his council and Congress, has kept us out of war, for which 20,000,000 mothers and glorious people throughout our land gave to him heart blossoms of gratitude in his reelection. While the maelstrom of war rages in woeful disaster and reckless ruin desolates the continent in despair, my heart mingles with the muses in melancholy forebodings:

O "dove of peace," where hast thou flown?
Is there no peace on earth?
Did the angles sing a false refrain
When they sang at our Savior's birth?

Will greed and gold forever rule
And fill the world with strife?
Is there no way to stay these wars
And reckless waste of life?

Shall gun thunders never cease
And dying millions moan,
While we feed the dogs of war
On human flesh and bone?

Then answering back from other shores
I heard the whisperings say:
We're now in the darkness that precedes
A glorious coming day,

When man shall take his murderous guns
And make of them plowshares;
And loving God be free from war
With all its toils and snares;

When men and women everywhere
Will love and trust each other
And look to God as father of all
And all mankind as brother.

Establishment of a Probation System in the United States Courts, Except in the District of Columbia.

EXTENSION OF REMARKS

OF

HON. MURRAY HULBERT,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Monday, February 19, 1917.

Mr. HULBERT. Mr. Speaker, under the leave granted me, I desire to extend my remarks by printing an exchange of communications between Hon. James J. Hoey, of the Catholic big-brotherhood movement, of New York, who has been actively interested in aiding the enactment of this legislation, and myself.

The communications are as follows:

HOUSE OF REPRESENTATIVES,
Washington, D. C., December 29, 1916.

Hon. JAMES J. HOEY,
80 Malden Lane, New York City.

MY DEAR COMMISSIONER: In October, 1915, on an occasion that you and I visited the New York Catholic Protectory with United States Marshal Thomas D. McCarthy, you suggested to me the advisability

of introducing a bill authorizing the appointment of probation officers to take care of just such cases.

I gave a great deal of consideration to this subject, but upon the convening of Congress on December 6, 1915, a bill was introduced by Congressman HAYDEN, of Arizona (H. R. 42), a copy of which is herewith inclosed, and a similar bill was introduced the following day by Senator OWEN (S. 1092), a copy of which is also herewith inclosed.

I concluded to direct my efforts to the consideration of whichever of these bills would be first reached for consideration in the respective Houses in which they have been introduced.

On January 21, 1916, Congressman SEIGEL, of New York, introduced a similar measure, in which he proposed the designation of a marshal instead of the appointment of the probationary officer.

None of these bills have passed, but on March 20, 1916, Charles L. Chute, secretary of the New York State Probation Commission, addressed a letter to Senator OWEN, inclosing a brief in support of the bill introduced by him and Mr. HAYDEN, and the same has been made a Senate document, and I take pleasure in inclosing a copy therewith.

I believe that some action by the Catholic Brotherhood would help in securing favorable consideration in this legislation, and I should be very glad to know its position in the matter and to be of any service possible in aiding its cooperation.

With kind personal regards, I am,

Sincerely, yours,

MURRAY HULBERT.

NEW YORK, *January 2, 1917.*

HON. MURRAY HULBERT,
House of Representatives, Washington, D. C.

MY DEAR CONGRESSMAN: I wish to thank you very much for your letter of December 29, inclosing copies of bills now before Congress relative to the establishment of a probation system in the Federal courts.

The necessity of a probation system in the Federal courts is a subject which you and I have often discussed and are agreed upon. I am sure that if such a system receives the sanction of the law it will be due in no small measure to the earnest and active support which you are giving the proposition.

It is my purpose to call the attention of various Catholic societies, who are interested in social-welfare work, to this matter and urge them to use their influence in behalf of the bill.

Thanking you for your splendid help in so worthy a cause, I am,

Yours, very truly,

JAMES J. HOEY.

Address of Hon. William S. Bennet Before the Young Men's Republican Club of New Haven, Conn., on Lincoln's Birthday.

EXTENSION OF REMARKS

OF

HON. JOHN Q. TILSON,

OF CONNECTICUT,

IN THE HOUSE OF REPRESENTATIVES,

Monday, February 19, 1917.

Mr. TILSON. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include an address delivered by the gentleman from New York [Mr. BENNET] on Lincoln's Birthday before the Young Men's Republican Club of New Haven, Conn.

The address is as follows:

ADDRESS OF HON. WILLIAM S. BENNET BEFORE THE YOUNG MEN'S REPUBLICAN CLUB OF NEW HAVEN, CONN., ON LINCOLN'S BIRTHDAY.

Peace is the normal condition of our country. Its problems never cease. War is an abnormal condition. Its problems are few. In war we knowingly sacrifice economic, industrial, and governmental advance to the present need of the country. While there may be advance in a country during a war, such advance is accidental or incidental. The one fundamental aim of government during a war is and ought to be the successful prosecution of that war and its ultimate success.

For two reasons, therefore, I make no allusion to the present disturbed condition of our relations with Germany. First, the problems of the German situation are not permanent problems; and, second, now that the Government has taken its stand in a matter affecting our foreign relations, a good citizen has but one duty—stand by the Government.

But side by side with the war go on the same pursuits as in more peaceful times. It is to matters affecting these that I wish to address myself.

Are such pursuits affected by political parties? What is a political party? Are political parties necessary? What is the Republican Party, and what are some of its present duties?

A political party is a group or aggregation of men drawn together by a common belief in a set of principles usually affecting governmental, industrial, or economic conditions.

There is no pursuit in peaceful times that is not affected by the party in power at any given period. The two questions of the tariff and of methods of internal taxation alone touch every industry of our land. As the two great parties differ as to these, the question of which party is in power always affects every industry.

When principles are believed in by any set of men it is, in a free country, a duty which they owe to government to assert and defend such principles, so that if sound they can be adopted for the common good and if unsound their fallacy may be demonstrated. There is no better way for the proper presentation of a political principle than through a political party.

For many years past the two great permanent national parties have been the Democratic and Republican Parties.

The time was when the Democratic Party advocated principles. It was for free trade, for State rights, for a revenue tariff, for free silver, against imperialism. Jefferson was for a limited central government. Though the Republican Party has always stood against each and every one of these doctrines, it has recognized at all times that each presented a question at least of a gravity sufficient to make it worth the while for our party to prove either its fallacy or its inferiority as a political principle. In power the Democratic Party has applied none of its principles, and has abandoned most. It has put neither free trade nor free silver on the statute books. It has not written a revenue tariff. So far as it can be done under the Constitution it has abolished State lines and extended highly centralized government in power.

Under Congresses controlled by the professed followers of Jefferson power has in four brief years been conferred on the Central Government to control within the several States the building of roads, the operation of factories, the course of study in schools, the grading of cotton and of grain, the operation of warehouses, and to some extent the way in which cotton may be bought and sold. Every principle which Democracy ever asserted has been abandoned. We now find it claiming as its own the powerful central government which Jefferson feared and denounced; a central national bank, such as Jackson destroyed; and even a protective tariff, such as Cleveland so solemnly warned the country against, for this very Congress has enacted a protective tariff on dyestuffs for the express purpose of establishing the dyestuffs industry in this country.

The Democratic Party does not now stand for any political principle which it has ever advocated in the past. Apart from the personality of its candidate for the Presidency, it had nothing to discuss in the recent campaign except the Ten Commandments and the beatitudes. To the discussion of these religious topics the Democratic Party brought all the emotional enthusiasm natural to very recent knowledge. Democratic orators induced men to vote for Mr. Wilson by arguments which, followed to their logical conclusion, would more properly have induced them to join the church.

There can be no party division on the laws of Sinai or the beautiful and tender ethics of Jesus.

The Democratic Party having now officially discovered the existence of these great truths, can never win another campaign by discovering them again.

The rapid conversion of the Democratic Party to the passage even of protective-tariff laws has unquestionably had its effect on the Republican Party. Men say, "What is the difference, any way?" If the Democratic Party is now passing laws such as those which we have always advocated and has abandoned, in practice, the enactment into law of the theories which we know to be dangerous, why is not the choice simply one between candidates?

Unless we can clearly demonstrate the difference, men will ask that question in 1920 as they did in 1916.

What then are our distinctive principles? Are we the heirs of the social-justice features of the 1912 platform of the Progressive Party? Neither our party nor the Democratic Party is. That part of the Progressive Party platform of 1912 represented views held and still held by men and women not only in the two great parties but in the Prohibition and Socialist Parties as well. That part of the Progressive platform was really a religious propaganda. It was first expressed by the General Assembly of the Presbyterian Church, meeting at Atlantic City in 1910. Subsequently it was indorsed by the federal council of the Churches of Christ in America, representing substantially all Protestant Christian denominations.

It brought many adherents to the Progressive Party in 1912 because the aim and purpose of that propaganda was and still is high and unselfish. So far as experience proves them to be governmentally sound and useful those proposals will be enacted into law, no matter what party is in power.

Possibly the Republican Party is a little more permanently friendly to such legislation than is the Democratic Party, but it can not honestly claim that there are not men in the Democratic Party who really believe in them also.

Men say we must have more than one or two issues. Have we as a people become so volatile and frivolous that it requires the presence of many issues to insure our attention?

I am not afraid of only one or two issues if they are good ones. In 1896 we had but two—sound money and a protective tariff. But they were fundamental issues which we made the people understand.

Our stand on so-called imperialism and the tariff and in protection of the courts won for us again in 1900. Mr. Roosevelt won largely on his personality in 1904, and our momentum of 12 years of wise and good government carried us through the campaign of 1908, with Mr. Taft well liked and respected as our candidate and Mr. Bryan as the candidate of Democracy. We split in 1912, reunited in 1916, and wherever we made the tariff the issue, as in this State, we won. The first great principle, then, which differentiates us from the Democrats is our advocacy of a protective tariff. Why is the tariff more important as a party principle than the so-called social-justice plan? Because unless we maintain the American wage we can not maintain American ideals, including social justice.

After the war we shall face a desperate commercial strife, with men sharpened by stress, disciplined by drill, hardened by hardship, and under the compelling urgency of the payment of large war indebtedness. Under our present 9 per cent tariff we are naked to our industrial enemies.

The Democratic Party, under stress, may occasionally pass an inadequate and imperfect tariff bill for a particular industry, but it will never attempt a bill of a protective character framed in every schedule to meet the situation after the European war.

The second serious but homely issue which we shall be called upon to raise is that of economy.

With the Democratic Party in power economy is to be found in its platform only, never in its performance.

President Wilson has made many addresses to Congress and sent many messages, but in no single instance has he vigorously advocated economy, and under his administration expenditures have increased by leaps and bounds.

Representative RAINEY, a prominent Democratic Member of the House, said several weeks ago that our next year's budget, in a time of peace, would be greater than that of Russia, entering by that time on her fourth year of war. No Democrat attempts to defend his party's riotous record of expenditure.

Our third great issue is an old-fashioned one, bedded in honor and justice. It is 50 years since our country made the negro a citizen and by constitutional provision guaranteed him every right of a citizen. In a number of the States this provision is notoriously disregarded. As Republicans we have been criminally negligent in our neglect to enforce this constitutional provision. What greater issue can there possibly be than that of sturdy and efficient support of our Federal Constitution?

Now the results of failing to enforce it are being made patent to us. The negro does not vote in the South, but he exists as an individual when the census taker comes around, and the black citizen counts as much as the white citizen in making up the total number of people in a State. As representation in Congress is based upon population alone, injustice is doubled. The negro is deprived of his rights as a citizen, and the fact of his existence as a human being is used to nullify the votes of men in the North in the party with which he would vote if he were permitted. The South, with the colored vote suppressed, is overrepresented. Deduct this overrepresentation and the present House would be Republican. Has the South used generously and magnanimously her power secured through open violation of the Constitution? On the contrary, she has used her power to levy direct taxes on the Northern States out of proportion to both population and wealth. In speaking of the new revenue bill Mr. KITCHIN, the Democratic leader, said very frankly, both in the Democratic caucus and on the floor, that the new taxes had been so framed as to be paid largely in the North. It is to our discredit that our sense of justice to the negro has slumbered until the power which his disfranchisement gives the Democratic Party has touched our pockets in the North; but even so, the issue is there; it is large and fundamental, and our place is firmly and efficiently on the side of right and justice. The South must either permit the negro the right to vote or submit to a reduction in its representation proportionate to the ratio which the negro population in any State bears to the entire population of that State. I have no feeling of bitterness toward the South. Some of my best friends in Congress are from there. What I am contending for is simply the rights of my State which self-respect and common decency demand.

Here are three great problems. The first has to do with the maintenance of the prosperity of the country, the second with the proper expenditure of its moneys, the third with a proper enforcement of the Constitution. I will admit that they are not picturesque; but the daily life of the ordinary individual is not picturesque, and it is for the ordinary individual that the Government should have its chiefest care and solicitude. Legislation should be well considered and statutes enacted to meet substantial and certain needs of the great mass of people.

In this presentation of issues I have not forgotten the need for adequate national defense. But the demand for that is now so universal that, like sound money, it has ceased to be an issue because its acceptance, in theory at least, has become practically general.

Neither have I forgotten Gov. Hughes's magnificent fight against such cowardly governmental surrender to force as was exemplified in the craven passage of the Adamson law. Gov. Hughes lost, but his fearless leadership on this issue alone raised the comprehension of the limitations of government among all our people.

The fight against the rising tide of socialism ought also to engage the attention of the Republicans of New York State. No Democrat dares attack socialism just now, because Democracy depends upon the lone Socialist Member as its sole chance of organizing the next House. In its present position as a purely opportunist party without one fixed principle the Democratic Party sees no danger in enlisting Socialist aid. The Socialist Party is a social menace. A true Socialist must, of necessity, be opposed to all organized religion, every present form of government, including ours, against the family and virtue and chastity in women, against the ordinarily recognized rights of the parent with his child and of the child with his parent, against the right of private property, saving, thrift, business, and commercial progress. The 1916 platform of the Socialist Party is, in its relation to the feeding and transportation of troops, disloyal and possibly treasonable. Its plan if put into effect would be industrial slavery for us all.

These questions that I have so briefly sketched are some on which the Republican Party has a definite faith and a clear duty. This faith it must assert and, from platform and street corners, through book, pamphlet, and paper give reasons for it; this duty it must discharge fully, adequately, and fearlessly.

Are we, as men, qualified to assert a faith and discharge a duty? We hear emphatic statements of the need of a revival of religion. Just as greatly we need a revival of genuine pure party partisanship. We need it because, Republicans and Democrats alike, we are breaking away from the advocacy of political principles and following the personal fortunes of brilliant or superficial leaders. Our thought is becoming Mexicanized. We worship strength. We care not if it crushes down the necessary safeguards which the centuries have erected around the rights of minorities and individuals.

Mexico with her 16,000,000 prospered under Diaz the strong, but his 30 years of despotism had taken virility and fiber from the men of Mexico, and when he passed their inexperience and weakness could neither produce a strong leader nor evolve a single party of strength sufficient to be the rallying point of the law-abiding. I dread to think of the future of our country if we commit our destinies to a succession of brilliant leaders who are not leaders of parties, but who base their power on their individual strength among personal followings.

A candidate, at least for a national office, ought to ask for support not because of his personal character and ability but because such character and ability will fit him to properly strive for the adoption of the principles of the party to which he belongs. An intelligent man pays a candidate a greater compliment by voting against him because he does not believe in the principles of the party to which the candidate belongs than he does by voting for him, despite party principles, because he admires the character and ability of the candidate.

An inferior man who will at least vote for correct principles of government is always to be preferred in a legislative assembly to a man of superior character and attainments whose vote on the same principles will be wrong.

I want to see Republican candidates win, but I want them to win because they are Republicans.

I want Republican success, but I want it not because it is success but because it means the success of sound principle. I want the Republican Party to be what it always has been—a party which earnestly, patiently, persistently seeking after those governmental principles which are true and sound, right and American, honest and foresighted, and, finding them, brings to their advocacy a courage which is dauntless, a zeal which is tireless, a party loyalty linked with the bonds of personal sacrifice, a fanatical love of America; that Republican Party which can say, Our country; ours to enjoy if right, ours to correct if wrong; and, right or wrong, our country still.

The Swiss Military System.

EXTENSION OF REMARKS
OF
HON. CHARLES B. SMITH,
OF NEW YORK,
IN THE HOUSE OF REPRESENTATIVES,

Monday, February 19, 1917.

Mr. SMITH of New York. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I incorporate an article on the Swiss system of military training, prepared by Theodore A. Christen, former officer of the Swiss army.

The article is as follows:

THE SWISS MILITARY SYSTEM.

"It is a law of nature common to all mankind, which no time shall annul or destroy, that those who have more strength and excellence shall bear rule over those who have less."—Dionysius.

These words of the ancient thinker, uttered 20 centuries ago, may well be put at the head of a short consideration of the most important problem before the American people at the present time. Unpleasant as they may sound and disagreeable as they may be to contemplate, the history of the world bears ample witness to their wisdom and truth. When looking over the past or when looking over the world in its present form, there is only one trend of events to be discerned, and that is a continuous change of clans, tribes, nations, the stronger ones replacing the others, the strong and vigorous ones pushing away, absorbing, and covering with oblivion the weak and the worn-out.

In no other way have events of the past taken place, from the dawn of history to the present day. It has always been the better and stronger taking the place of the less good, less vigorous, and that is all.

Where are the empires of old? Where is Egypt, once a state on a high plane of social organization, where a form of socialism ruled and the distribution of wealth was regulated? Her high organization did not protect her. Where are the empires of the East and the West that once were the shrines of wealth, wisdom, and culture? Babylon, Persia, Carthage, Rome, and Byzantium? They all fell, never to rise again, smashed at the hands of a more vigorous and warlike people, covered forever with oblivion; their cultures became memories, their cities ruins, their temples still standing monuments only to their past. Where are Peru and old Mexico? A handful of bold and crafty invaders destroyed them and with them their independence, their culture, their institutions, their nationality.

Look at only yesterday! Where is the Empire of Korea, standing until recently a monument to past greatness? Gone forever. Her protests went out into the world unheeded, for the conqueror was of a more vigorous stamp.

And saddest to us of the Christian world is the loss of Byzantium, the eastern part of the Roman Empire of old; when Constantinople fell, the seat of learning, pleasure, and wealth, and all the corruption and weakness that go with it, a pall fell over western Asia and southeastern Europe that has never been lifted; wars have been fought these nearly five centuries, and war is fought to-day, that has for at least one of its goals the bringing back under the influence and dominion of western progress and civilization that part of the world lost to a wild horde of a few thousand daring adventurers on horseback, whom hunger and the unkind climate of their steppes had driven to seek more fertile regions. The thousand years of existence of the Byzantine Empire, its size and the wealth of its capital city were only additional attractions and incentives for the impecunious conqueror. For wealth is no protection to a nation against aggression; it is no more an augury of military and defensive strength in a people than it is an attribute of health in an individual. Success in war depends on men, not money; no nation was ever subdued through the lack of it.

And every nation swept away has always been swept away by force of arms. Once each was strong and militant. Each one had risen by conquest and military prowess; each one went down by corruption through wealth and through degeneracy of military capacity. The battle field has been the bed on which they were born into this world and the couch on which their worn-out body finally expired.

The past is nothing but an uninterrupted procession of nations taking each other's places, some rising at the expense of the others. Have not the United States done the same; is not our own history the exact counterpart of all nations that have risen? The beginning has been built up from the spoils of combat and conquest of defenseless tribes; the same causes that have produced the decay of other nations will shorten our own national existence. No state is destroyed except through those avertible conditions that mankind dreads to contemplate. As physical vigor constitutes health in individuals, so it does in nations. A brilliant mind and skill of hand have nothing to do with the health and duration of life in an individual, nor the brilliancy and high aims of its culture with the prolongation of a nation's existence. Its periods of greatness are entirely coincident with its military powers, and the decline with the decay of the military spirit, the subordination of national to individual supremacy.

"Nothing, indeed, is more insolent and provocative, or more likely to lead to a breach of the peace than undefended riches among armed men."

And this is what confronts us here in America to-day. We are still under the impression that our military system which was sufficient in the bygone past is adequate for present-day conditions. However, we are suddenly awakening to the realization that conditions are vastly different.

Their chief difference lies in the following:

The first is the change in relative strength and numbers of other nations. All those with whom we might come in conflict have grown vastly superior in strength and equipment on land and sea. Their superiority is still more pronounced through the state of preparedness and the immense reserves in trained men. The disproportion is the greater as new nations have sprung up since our military strength was the last time put to the test. Germany and Italy were then loose aggregations of independent principalities, mere racial and geographical conceptions, as yet unrealized dreams of poets and thinkers. Japan, which, 60 years ago, had no contact with any of the nations outside its Island Empire in the Pacific Ocean, has sprung up and has since vanquished the two vastest empires in hard-fought warfare, and has driven China, Russia, and Germany from their share in the dominion of the eastern seas; she is looming up on the horizon as the future sole and supreme mistress of the Pacific and the owner through conquest of its shores in the Eastern and Western Hemispheres. And all this, in spite of her poverty in money, which to us has seemed a source of security and a barrier to her far-reaching plans for the expansion of her power.

The second is the abolition of distance and the rapidity and ease of transportation. Distance in a military sense is the time required to transport bodies of troops to a desired point. Formerly transportation was very slow and over-sea transportation difficult and hazardous. The result was that countries were separated from each other and isolated. And this isolation afforded us a protection from other nations which, unfortunately, is now gone forever, and we are brought close to the armed camps of Europe and Japan. Our own War College has considered the possibilities of transportation of troops for the invasion of our shores, and has come to the conclusion that England could send 170,000 men in two weeks, France 160,000 in 16 days, Germany 387,000 in 16 days, Japan 95,000 in 23 days, and in subsequent trips of their ships these invaders' numbers would swell to the stupendous number of 237,000 from Japan in 63 days and 827,000 from Germany in 46 days, to whom we would be able to oppose 40,000 first-line American troops to be divided on two shores.

The third difference in conditions is the development of science and its application to warfare. The time has passed when the hardy frontiersman, used to the chase and hardship of pioneer life, had only to take his trusted rifle and shift the stage of his activity to be an efficient defender of his country. Military science has become the most difficult and intricate of occupations, and the day of volunteer forces has passed forever. Nations that expect to make war in the future with hastily raised levies of volunteers against trained armies are doomed to disaster.

If the present world war has proved nothing else, it has proved this. The most terrible words in any language, living or dead, and at the same time the most futile of all, "too late," have become the constant and direful reproach of the nation that has put its trust in a small volunteer army, and nothing is more true than the bitter denunciation of this antiquated system by a French officer who said to an Englishman: "The triumph of the voluntary system is a German triumph; it is the ruin of Belgium and the devastation of France."

The sudden awakening to the realization of our own danger and of changed conditions not only as affects our defensive forces, but our diplomatic relations with the rest of the world, has seized our whole people and steps are demanded and discussed in the remotest corners of this vast country. But, unfortunately, we are left without leadership, and our Congress seems to be waiting for the people to demand measures to remedy the situation. Public opinion is to demand from our Representatives that which it wants; and what it demands it will get.

But what shall we demand? Military matters are not within the range of vision and understanding of the ordinary citizen whose life is spent in peaceful pursuits and the activities of his trade or profession. Let us therefore consider what another people of similar institutions, where the love of liberty and self-government is not less developed, has done and whose military institutions have stood the test of emergency.

I am speaking now of Switzerland, my native country, in whose army I had the honor to serve, first as a private, then as an officer. I may add at once that I have also served in the National Guard of the State of Ohio, and this has given me an opportunity for comparison quite exceptional.

The "Swiss military system" is at present much discussed in the public press and in the halls of legislation, and it was my privilege recently—January 27, 1916—to have the opportunity to explain the workings of the system, so to speak, "from the inside" to the Committee on Military Affairs of the United States.

A great deal of misinformation exists as to the workings of the Swiss system of military organization and training. There is nothing mysterious about it. It is as simple as can be—based upon the fundamental principle of obligation for all and on common sense, uninterrupted effort, and the hearty cooperation and approval of the entire Nation, combined with and reinforced by the most intricate and painstaking attention to details. These few characteristics form the basis of the organization of the defensive strength of the Swiss, and they have worked in such a way that when the great test came they met all the expectations which the Swiss people had in them.

Let us see how it worked and what it did for the Swiss Nation.

"Si vis pacem, para bellum." (If you want to see peace preserved, prepare as if for war.)—Julius Cæsar.

"To be prepared for war is the most effectual means of preserving peace."—George Washington's first annual address.

The history of this war begins on July 23, 1914, when an ultimatum was sent by Austria to Serbia. Within a week most unexpected and direful events had shaped themselves in such a way that a catastrophe was imminent. The Government of the Swiss Republic, watchful and aware of the difficulty, decided upon the most momentous step they had taken in many a decade—complete mobilization of the national forces. Such a decision is the gravest a government can make and none is followed with more anxiety than this one, for upon its successful outcome depends the future of nations. The decree of mobilization was published on August 1, a Saturday. The 1st of August is a solemn day with the Swiss every year, for it is our national holiday. On that day we celebrate in our simple way the anniversary of that first meeting of representatives of the small mountain Cantons of Uri, Schwyz, and Unterwalden in 1291, when they formed an alliance for the defense of their rights and preservation of their liberties against the encroachments of a proud neighbor—the Lords of the House of Hapsburg. Every year the church bells are rung on this day in commemoration of the birth of our independence, and they ask the people to think gratefully of their hardy and brave ancestors. They called the Swiss people out on this day in 1914 not to celebrate the deeds of their forefathers but by their own deeds to preserve their country with arms in hand.

In other words, mobilization was proclaimed and every man up to the age of 48 who had ever had military training and was enrolled in a unit of the army was called out for the 3d of August, Monday morning at 9 o'clock.

Even on the same day the local landsturm—that is, the older men not members any more of any troop in the army, and the youths of 16 to 19, who had undergone rudimentary, so-called preliminary or preparatory training with the rifle—were mobilized for the protection of

railroad tunnels, bridges, and stations, and at once took over these guard duties.

On August 2 the railroads of the country were still open for civilian travel. All the soldiers and officers who lived away from their appointed places of assembling returned to their homes, and on Monday morning at 9 o'clock everybody was at his post. From the distant chalets in the high mountains, from the farms on the creeks and in the level lands, from the factories and workshops, from the houses of the wealthy and the dwellings of the poor, thousands upon thousands poured out to the public places of the little towns or to some meadow in a village, where they knew they had to assemble. Each one was armed and equipped, ready from head to foot. At the same time the horses and wagons, which even in peace time in Switzerland are registered for just such an emergency and for nothing else, were brought out, examined, and taken over by committees of experts, former cavalry officers and veterinary surgeons appointed beforehand for that purpose. The supernumerary horses went into "horse depots," to be immediately available for use in the army and to replace those used up.

After this assemblage was completed, concentration of the smaller units (battalions of infantry, batteries of artillery, squadrons of cavalry) in larger units (brigades, divisions, and army corps) began on the same day. The railroads stopped for civilian travel and transportation and completed the work of mobilization by carrying on timetables, long before prepared by the general staff, to the exposed posts on the frontier the army fully organized, equipped, and officered, from the highest command down to the man in the ranks, to the frontiers and places of strategical importance, long before selected, and the work of putting them into a state of defense, by building observation towers, digging trenches, executing field fortifications, began at once. At some places even the building of new roads or the enlarging of old ones was undertaken by the soldiers, obstacles to the defense were removed, at one place even a forest was cut down—all this on plans and orders long before prepared.

In the meantime our powerful neighbors who were to enter the war themselves as belligerents had started their mobilizations also, but ours was completed before theirs, and we know of proclamations posted in parts of southern Germany, where a surprise attack through Swiss territory from France was possible, telling the people that such need not be feared for the Swiss Army was quite ready to prevent such a surprise.

The success of the mobilization was thus complete. In 48 hours the full strength of the army had been assembled and transported with all the reserves, all the equipment, all the horses, to the full number of 300,000 men. (Three hundred thousand is a fairly conservative estimate. The official figures of the Government are not known. Some experts claim that the mobilization yielded even larger numbers, some going as high as 425,000. We will have to await the official report of the general staff after the termination of the war.)

Three hundred thousand men! One might say, "What do 300,000 men mean in this terrible war, where millions are fighting?" Three hundred thousand men mean 9 per cent of the citizens of Switzerland, 18 per cent of the male population. Three hundred thousand are the equivalent of 9,000,000 in proportion to the population of 100,000,000 in the United States, a number hardly conceivable at present. Three hundred thousand men, trained and equipped to defend so small a country, are a force with which even the strongest military power has to reckon, for to the extent of our full strength would we strengthen our aggressor's adversary. Which one of the belligerents could afford to see the Swiss Army swell its adversary's strength?

For the 300,000 men really meant three armies, as modern armies must always be understood; that is, instruments in the hands of a Government or a commander available for immediate use against a similarly prepared enemy. An army that has first to be organized is no army, though the soldiers be ever so brave or even well trained, and an enemy well organized whose forces are ready to strike, whose armies are on the march perhaps even before a declaration of war, can not be expected to forego his advantage by waiting for his adversary to get ready; immediate striking power alone is preparedness in the heart of Europe and not less elsewhere. The Swiss military forces were in this state of availability on the 3d of August, 1914; that is, they were an army.

And this army knows its ground well. I remember in 1894, when I attended maneuvers for the last time, in Battalion 28 in the Tenth Regiment of Infantry, the supposition of the campaign for maneuvers was that an enemy from the northeast had crossed the Rhine at Basle and was breaking through and moving south of the Alsatian frontier going west toward the French fortress of Belfort over Swiss territory. The supposed Swiss army of defense was going over the Jura Mountains to attack and, if possible, repulse them right there. If an army in this war had tried to invade France that way, it would probably have come through there, and the Swiss officers would have known that territory thoroughly and would have opposed the invading army at positions all selected beforehand.

Complete mobilizations are always an experiment, they are never and can never be attempted in peace time, for they upset and completely paralyze the economic life of a nation. They are a part of war, the first part, often that part where the war is won or lost. The blunders and losses due to a slow and unsuccessful mobilization frequently are hard, often impossible, to retrieve in spite of the bravery of the troops and of their leaders. Successful and quick or tardy and slow mobilizations in the present war are still weighing down the scales of destiny. And a mobilization is a test not only of war time but also of peace time patience and endurance, honesty and application of officialdom, of contractors, of the purchasing and storage departments, and the thousand and one attentions to minor details so prosaic, so plodding, and grinding in the long years of peace. And only one cog has to slip to upset all the plans.

The complete success of the Swiss mobilization must be considered a living proof of the thoroughness and the efficiency of the organization and the soundness of the system. Had it not been a success, Switzerland would have become the battle ground of nations for the advantages to be gained from an occupation of the country, which is a country of passes and routes of transit from one country to the other in the heart of Europe. In one of his sayings, which remain so true forever, and which show his deep insight into conditions, Napoleon the First called Switzerland the key to Europe, and he acted upon his conviction thus expressed by annexing those parts of our national domain which contained these important routes from one country to the other. It was he who took Geneva and the Valley of the Rhone, built the Simplon Pass over the Alps, connecting France with Italy on territory taken from Switzerland; who annexed the northwestern part of the country, which contains a short route from France to southern Germany just south of the French stronghold of Belfort. These and other routes are important to-day just as much as ever, and no belligerent could afford to see them fall into an enemy's hands. Therefore, to prevent this, after Napoleon's downfall, they were intrusted by the Congress of Vienna, when the balance of power of Europe was reestablished, to a buffer State endowed with "guaranteed neutrality," willing and capable of defending them. Neutrality is the foundation of Switzerland's international relations, and it puts her as a neutral State under the obligation strictly and strongly to defend it, and since 1815, when neutrality and the obligation to defend it were instituted and accepted as a part of our international obligations, the Swiss nation has been preparing.

"Neutrality" was "guaranteed" by the great powers of Europe parties to the Congress of Vienna. But at no time has the word "guarantee," though signed by kings and emperors, deceived the Swiss into believing that neutrality merely had that now thoroughly discredited meaning of freedom from war and invasion by voluntarily not interfering or taking part in the struggles between others, or by passively observing international laws, customs, or impartiality. The saying attributed to Bismarck that only the neutrality of the strong deserves to be respected has been a national belief long before Bismarck's time, and the meaning of neutrality with the Swiss has always been coupled with the idea of being strong enough to defend it, and not to rely on the imaginary protection of treaties and signatures, which are not and have never been worth more than the paper on which they are written. Nor did the Swiss at any time indulge in the pleasant pipe dream that on the violation of their territory "indignation of an outraged world—public opinion" would force the invader to abandon his prey or that any "League to Enforce Peace" would spring up and sacrifice the blood of its own men for the protection and salvation of any other nation in trouble. On the contrary, the national creed of the Swiss has always been self-reliance, self-defense, and they always expected to trust to their own strength to accomplish it.

Their state of preparedness has not always been as thorough as it was at the beginning of the present world war. In the year 1798 we were defeated and conquered by two armies of the French Republic, one coming from the west, the other from the north. Our military strength at that time was not unified; the different Cantons, corresponding to the different States of the United States, each had its own military organization and its own army. There was lack of unity; valuable time was lost; some of the Cantons deliberated on the advisability of helping while the enemy was on his way into the heart of the country. The forces of the Swiss were scattered and too small to resist; the victorious French armies effected a junction, and the downfall of the defense took place; and then Switzerland was partly disrupted and untold suffering and humiliation for 17 years were her lot. Army after army marched through Switzerland and fought over our land; the French under Massena, the Russians under Sumorow, ransacked the people. In 1814 the Emperors of Russia and of Austria and the King of Prussia marched through to France; starving war orphans were as numerous then in Switzerland as they are in Belgium to-day. And what was the cause of it all? Control of the army by the different Cantons, translated into terms familiar to us here in America—State control of the army. This is what "State control" has done for the Swiss, and they have learned their lesson well in the hard school of experience. Since that time Federal control of the national defense became more and more developed; "State control" practically ceased, and with good results, for, happily, through untiring effort, preparedness had reached the highest point of efficiency when the world war broke out.

This saved the country. Had we not been able to shut the door that led to the neighbor's domain those neighbors would have had to come in, and in self-protection would have had to close it against their enemies. It would have been a race between France and Germany as to who would get to Switzerland first. Her strong army and the unshakable determination of the Swiss nation to defend herself to the last man have given our neighbors the assurance that they were safe from that side. More than this, our neighbors did not have to await a successful mobilization of the Swiss Army; they were sure of it long before.

In September, 1912, the German Emperor, with Gen. von Moltke and other members of his general staff attended the maneuvers of the Swiss Army. These maneuvers, which I had the privilege to follow personally as an officer in civilian state, were on a large scale and were very inspiring. His Majesty, whom I saw at such close range as to hear his voice, was very favorably impressed with the troops, the organization, and the leadership. A short time afterwards he told "somebody"—some man, woman, or child—"somewhere in Europe", that "another route to France would be chosen." That "somebody"—man, woman, or child—repeated the words to "somebody whom I know" and from whom I have it. It is more than plausible that to the trained eyes of the "war lord" and his suite the endurance and earnestness of effort and the spirit which animates the Swiss soldiers and officers—to the officers he paid the highly appreciated military compliment of "schneidig" (elert, energetic, spick-and-span)—was an indication of the kind of resistance they would be not only willing but capable of offering.

In April, 1913, a report of the German general staff that the Swiss had the will and power successfully to prevent invasion fell into the hands of the French Government. France, too, counted on our readiness, and in this way we have protected both Germany and France from each other, and last, not least, ourselves. The Swiss Army, without firing a shot, has attained a victory more brilliant because it was an entirely bloodless one. The Swiss "army-in-being" did not have to fight; its state of readiness was sufficient.

This is the first time in a century that the readiness, the thorough organization which alone means the ability to "strike," has saved the national existence of Switzerland. In 1847 the small Alpine Republic preceded her big sister on this Continent with a "secession" of some of the Cantons—States—from the rest. The disunion did not arise over the question of slavery, but over a question of religion and the exertion of political influence by the papal legate; in other words, the Catholic Cantons seceded from the Protestant.

The latter, like the North of the United States, 14 years later started to reconquer the seceding parts by immediately taking the field. The quickness of action, the overwhelming victory attained in a few weeks by which Lucerne, the center of the "sonderbund"—as this miniature "confederacy" called itself—fell and the resulting collapse of the movement and the return to the fold of Mother Helvetia of her misguided children put a stop to the threatened interference by some of the strong Catholic countries, notably Austria, whose leading statesman, Prince Metternich, tried to induce other nations to interfere. Had unpreparedness prolonged the state of war, our hostile neighbors would have had time to form a coalition and foreign intervention would have changed the course of history as far as Switzerland is concerned.

The second time preparedness saved the country was in 1857 and again in 1871. Bourbaki, the French general, during the Franco-German War, with 80,000 men, tried to break through Switzerland to invade southern Germany in the rear of the German Armies and thus to relieve the pressure on France. The Swiss Army, ready, stood in the way, and disarmed and interned the French and again saved the country from the curse of war.

"A free people ought not only to be armed but disciplined, to which end a uniform and well-digested plan is requisite."—George Washington's first annual address.

How was it possible to mobilize in such a short time such an immense army, immense, indeed, in proportion to the number of inhabitants? It was only possible through obligatory military service for all and through the fact that all ages of men called to arms had received training in the course of time. If to-day a Swiss dies at the ripe old age of 75 or 80, you may be sure that as a young man of 20 he underwent military service. In this way many men of different ages had been enrolled, equipped, and could be called to the colors at once. What an advantage have countries with this institution, where preparation is going on all the time, one year after the other, one generation after the other, without interruption, over those where training only begins at the outbreak of war? As a matter of course, one might almost say automatically all the young men are trained when they reach a certain age. The Swiss military system is simple and at the same time inexorable.

The military resources and the strength and characters of our four neighbors as revealed by past history, the political and governmental ideals and customs of the Swiss nation, and the limited financial resources of the country made necessary a military system that in its simplest expression had to aspire to the following cardinal desiderata:

1. As large an army in proportion to the number of inhabitants as possible through universal obligatory service in accordance with the traditions of our forefathers dating back over 500 years.
2. As thorough training as the short time allotted by the will of the nation permits and the financial resources of the country justify.
3. Speediest possible mobilization through complete organization and territorial formation of the units.
4. Encouragement of all efforts to foster the military spirit in the nation.

Let us see how it works.

When he reaches his nineteenth year the young Swiss is examined for fitness. He has to appear before a committee of experts who travel around to the remotest districts, and on a date long before advertised the young man presents himself. This date is the most epochal in a young Swiss's life. He looks forward to it with tremendous expectation and his one great concern is that he may fill the requirements upon his physical fitness. If he should not be accepted he would feel himself inferior, and he would be so in the eyes of his friends. His standing with the young ladies of his set would be impaired, and forever afterwards he would have to apologize in some way for his not being a soldier, for likely his father, his uncles, his brothers are, or have been, in the army, and most of his friends and schoolmates will be there, too, and this is the one thing in which he wishes to be their equal. From their earliest youth they have a goal before their eyes—their nineteenth year. Something occupies their mind and consciousness that does not consist in selfish satisfaction of their own wishes, but which brings before their eyes something honorable, yet at the same time demanding sacrifice in time, effort, fatigue, and subordination of their own wills to the will of a qualified and legally appointed superior. This looking forward to their nineteenth year makes all the boys of the same age somewhat solidary. It creates a collective feeling, not collective in the sense of social class, wealth, or education, but collective in the sense of a duty before them which they have to perform together. The same expectations, hopeful and otherwise, permeate their consciousness. They give their thoughts and aspirations something of earnestness which prevents indulgence in thoughtless frivolity. With what impatience does not every young man expect this important moment in life. His friends and relatives likewise take part in it, for future duties and position in the State and society depend greatly upon the outcome of physical and mental examination for fitness for service in the army.

At the age of 20 training begins—the so-called first training or recruit service, in which a raw recruit is molded into a full-fledged soldier. The recruits of a district are assembled in sufficient numbers to organize a full infantry battalion. It takes place in barracks and lasts, for the infantry, 67 days, including one day of entry and one for dismissal; for the Artillery, 77; for the Cavalry, 92; and for the Medical Corps, 62 days. The training is gone through with great energy. In the course of many years a system has developed which brings out of the men in a minimum of time a maximum of results. No time is lost with unnecessary frills or playful games. The young men are there for one purpose only, and that is to receive military training at the least cost in time to them and money to the State. The reproach made against the Regular, or standing, Army of the United States, that the soldier's life is one of deadly tedium for lack of sufficient occupation, does not apply to the Swiss soldier or recruit. His time is so fully occupied that he has no time for thought of desertion, and when he leaves the service he has gone through a school of training that has given him no time to acquire the habits of loafing; on the contrary, he has had to give every moment of his time to some useful purpose.

The day begins in summer at 5.30, in the Cavalry at 3.30; they work until 11.30, then eat and clean up and rest until 1.30, and work again until 5.30. The men receive ample food, and their night rest is long enough, for they must be in at 9. Their treatment is good, not harsh. The only criterion is willingness. The young man does not have to be a genius to satisfy his superiors. The requirements are simple, but woe betide the shirk, the laggard, especially him who offers passive resistance and seems a danger of contagion to the others who would do well. He has no easy time; he is made to change his way; his life is not made pleasant for him. But on the other hand to him who shows willingness to do what is asked, or even a little more than is asked of him, reward comes.

The training is practical and thorough and up to date. Shooting, marching, outpost duty, entrenching, and maneuvering, under day or night time conditions, in squads, company, and battalion, are practiced, together with drill gymnastics, and last but not least, discipline that is the virtue of cooperation with others for a common goal singly or in masses. The moral training in soldierly honor and truthfulness is not less important than the acquisition of physical stamina and technical knowledge, and some of this he will take back into civilian life. And what practical lessons in democracy does he not receive? Class distinctions are abolished, all are wearing the same clothing, live in the same rooms, eat the same food. The son of the wealthy and the poor, perhaps for the first time, are on absolutely equal footing; no distinction is made as to their ancestry or social standing. They are put into the ranks according to height and not according to individual wishes or the whims of mutual attraction. Their military superior may in civilian life be their inferior, but while in service honor and obedience is due them according to their rank; there are no classes, only grades; no social, only military distinctions.

The duties are the same; whether it be washing the kitchen or some other place needing scrubbing as badly, or splitting wood or wheeling refuse, it makes no difference; the knowledge of Greek and Latin or future honors in society do not dispense from any kind of work. As soon as the service is over the man returns to civilian life and its distinctions of individual and social, economic and cultural differences. But, at least for a time, he has seen and lived in conditions where all were equal and of the same standing, the same footing, as regards duty and service.

The military training these men receive has been to many their making. Many a one has been brought out for the first time according to his merit. Those overestimated at home will be found out. Bashfulness and shame will not go. Many a one comes home with new resolutions. He has formed acquaintances which establish his standing and which he will have to live up to. Many a one has seen the light for the first time as to his duties toward others and his position in the whole, his importance as an individual and as a part of the State.

Shall we not, rather, pity the young man who does not have to serve? Pity him because such an experience will never come to him in his life, an experience which is unique, and which can not be replaced by anything else? Shall we not pity him because he has never had the consciousness that there are moments and conditions when his dear self is not of the slightest importance, when he is a mere atom amongst thousands, and, again, others where the responsibility for the whole rests upon his shoulders and his ability to do the right thing at the right moment? Shall we not, rather, pity him because he never had the anticipation nor the remembrance of this important time and important duty?

After this original recruit service the young man is a full-fledged soldier, and takes his uniform, his rifle, bayonet, saber, and revolver, and whatever his equipment is, home with him. In the cavalry even his horse is given to him, and he takes it to his stable on the farm, for only such young men are taken in the cavalry whose fathers or who themselves have stables and facilities to keep a horse. This naturally limits the cavalry to the farmers. This is a distinctive and unique feature, which, as far as I know, is not found anywhere else. It is based on traditions of centuries, for the Swiss have always been armed and have kept their arms in their own hands. It is an evidence of the great confidence the Government has in the individual for the proper care of this valuable and expensive equipment. But the confidence is fully deserved, and the quick mobilization, which was possible through the fact that every man was able to present himself fully equipped and armed, justified the measure a thousandfold. The man is personally responsible for the condition of his equipment, and annually on a certain day in his immediate neighborhood it is inspected, and whatever has not been well taken care of must be replaced at his own expense.

The recruit, on leaving his recruit battalion, is then enrolled into the battalion of his own home district. The Swiss military system is based upon the principle of territoriality; that is, the units are formed of men in a contiguous district. They are assembled in that district where they have grown up or where they are living and which they know thoroughly. Upon his return home he takes off his uniform, and after an absence of just 67 days in the infantry—and that is the majority—he takes up again his work or his studies as a civilian, and he is a better man in every respect, physically developed, intellectually more alert, morally with an added sense of responsibility, and spiritually filled with pride over a task well performed. He loves his country better for having served it with his person and has an added personal interest in it; it is truly part of himself.

The memory of the recruit service will accompany him to his grave, and as the years go by and when the sun of life is declining it will add luster to the past.

His duties as defender of the nation are, however, not over. From now on every year until he is 27—that is, seven times—he has to serve 13 days a year with his regiment, in so-called repeat service and in maneuvers. The repeat service is in the smaller units and is devoted mainly to the training of the individual soldier under his immediate subofficer and officer. Repeat service alternates every other year with regular maneuvers. These maneuvers are in large units, as large as army corps, and they are so warlike that only the shooting of actual bullets would be required to bring about the dire reality of actual warfare. Long marches, rainy nights spent in deep trenches, outpost duty on high mountain passes, and heavy equipment on their shoulders and backs. These maneuvers furnish an opportunity to the commanders and to the administration, and to the staff officers as well as to the railroads, to be tested as to their efficiency and readiness. The army in maneuvers have their own bread furnished them from the army bakeries that are erected at the base of supplies in the rear of the army. The meat cattle are slaughtered by army butchers and bread and meat are carried forward to the units on requisitioned wagons, just as in war time. It is up to the staff and commissary officers of each unit to see that their supplies get there in time, for if they do not the men have nothing to eat just as in war time. Moving kitchens on wheels follow each unit. In villages occupied the soldiers take shelter in whatever building they need, and the medical corps establishes infirmaries for the troops and hospitals in the rear, just as if on the morrow a big battle were going to take place and thousands of wounded were to pour in upon them. There is nothing except actual war that is more soul-stirring than these maneuvers, and for the Swiss they are of the highest interest. The newspapers' space is taxed by detailed descriptions and the names of the commanding officers are known to every one. These annual maneuvers are really annual mobilizations, not complete over the whole extent of the country nor of all age classes, but mobilizations over part of the country, of part of the ages, and while all of the men are not mobilized annually, the material, equipment of units, cannon, supply train, and bridge building supplies are annually taken out of the storehouses and put to the test. If anything is missing or destroyed it at once is replaced or repaired.

Now we come to the training of officers and subofficers, and as every young man is a recruit in the ranks all the officers have started their careers from these ranks; therefore an aristocratic corps of officers that had its training away from the ranks in some secluded officers' college does not exist. It is one of the elements making for democracy in the army and the nation. The young men who in their recruit service have shown greater interest and talent for executive ability are asked to become noncommissioned officers and commissioned officers. Great care

is taken in their selection, as the acquisition of a grade entails great sacrifice, not only in effort but also in money and chiefly in time, and as acceptance of the call, formerly optional, now is obligatory, no one is asked to assume the burden whose shoulders are unable to carry it. They are selected mainly from among the educated men of Switzerland, and among them are found the leading men of every profession and business.

Their career for higher degrees begins at the special training course for corporals. This training course lasts 22 days. After this short course the young corporal has to go now as a corporal to a training course for recruits, and he at once becomes the instructor of the raw recruits in a responsible position in the same way as in his own recruit course his superiors were his instructors. He learns the practical handling of men at once. After that he serves as a corporal in his home battalion when his home regiment assembles. The future officer, after his training school as a corporal, has to go through a training school for lieutenants, which in the infantry and cavalry lasts 82 days, in the artillery and engineer corps 107 days. There he acquires all the knowledge necessary for a lieutenant—army organization, map reading, commanding, hygiene, and all the technical military knowledge that is necessary for a young officer. He then returns to a recruit course, where he at once handles and trains young recruits as a lieutenant. In this way both the officers and subofficers in the shortest possible time become responsible instructors and leaders of their men. The training might be longer, but it certainly is not too long for these young men to stifle their energy and enthusiasm by too tedious and impractical studies. The sciences and mathematics enter their studies only so far as they are necessary for practical purposes. Probably none of them, after he is through such a course, could build a Panama Canal; but then none of them will ever be asked to do that. On the other hand, he is put on his own feet as a practical instructor, moral teacher, and military leader of his men, the men he would lead in battle, and is at once held responsible to his superiors for those under him. The leading men in the Swiss Army seem to consider now, after the experience of the long mobilization, that the theoretical training of the young officers is sufficient; that what is needed is still more service with the men, not away from them.

Afterwards the young lieutenant, after a total of 241 days of instruction of the most intensive kind, is assigned to some troops, preferably to the home regiment of his neighborhood and district in which he lives. From time to time he has to go to some special course before an advancement. No one is allowed to attain a higher degree without having passed through service in the lower and having suitably qualified for the higher. In the course of years he will become a captain, a major, a lieutenant colonel, and a colonel, and successively command larger and larger units, but in between his time of service he always enters civilian life again, just as much as his subofficers and simple soldiers do; only more frequent and longer periods of service and higher requirements distinguish his duties from those of the rest. He is a civilian most of the time and an officer part of the time. It is only in the higher degrees that the officers have to devote all of their time to their military duties, and where they have to leave civilian life altogether. These higher officers, together with some professional officers who act as instructors in the various courses, are not numerous, probably less than 300. These permanent instructors are the teachers of officers and they are interchanged and distributed about frequently in order to produce that uniformity of instruction everywhere, which is essential to produce an evenly-developed whole. They are professional officers who are carefully selected as to their aptitude and who devote their entire time to military matters.

The army is divided into three age classes: First, the so-called "elite," or first line of fighting troops—12 years, from 20 to 32; second, the so-called "landwehr"—from 33 to 40; third, the "landsturm"—from 41 to 48.

Let us see what is asked of a simple soldier of the Swiss Army serving in that branch of the army which always must be the most numerous—the infantry. At his nineteenth year, he spends 1 day in physical examination; in his twentieth year, 67 days in recruit service; from his twenty-first to his twenty-seventh year, seven times 13 days of repeating service and maneuvers—91 days. Hereafter in the "landwehr," once repeating service—13 days—and an annual inspection of clothes and arms, each of one day during the years in which he has no repeating service up to his forty-eighth year—12 days; that is a grand total of 192 days. In addition, if armed with a rifle, every year he has to practice shooting under the supervision of local shooting societies, which receive a subvention from the Government for rifle pits. He has to shoot 30 shots at the target. This is usually done some Sunday morning, takes about two hours of his time all told and interferes in no way whatever with the man's occupation. The full extent of sacrifice in time to the simple soldier—that is, the laboring man, the farmer, the school-teacher, and the large majority of men in general—is 192 days, or one-half year, altogether in 30 years and the only really long continuous period of 67 days is in one year, his twentieth, when his responsibilities are light and when as yet he has no family to support. Truly this is not a sacrifice of forbidding magnitude.

What is asked of the man who is not found fit to serve in the army? Does he simply get by the universal obligation he owes to the country without anything being asked of him? "No," the Swiss say, "if he can not serve in the army he has to help support it." He is, therefore, made to pay a small tax, $1.20 a year for men of small means (this tax during this war time has been doubled), rising with the means, earning capacity, and financial standing of the man or his parents; this tax does not yield a large sum; it has been instituted much more to emphasize "a universal obligation." It goes without saying that only physical unfitness frees from the rank; no influence whatever can interfere with the findings and decisions of the examining committee, either for or against exemption, and no option exists to substitute the military tax for actual service. This tax is quite a distinctive feature of the Swiss military system; I hear that it is to be introduced in other countries.

The whole army organization is based on the principle of territoriality—that is, a certain army unit is formed by the men of a certain district; this is another valuable aid to quick mobilization. The stores and material are kept within that district, are easily moved, and everything makes for simplicity. In this way the territory is subdivided into many districts of battalion size, with a central assembling place designated and known to every man. A number of battalions contiguous in territory form a regiment, a number of regiments a brigade, and a number of these latter a division, recruited from the divisional district. This is the highest we have and there are six of these; in each of these six districts a full army division of the first line, with all the brigades of the first and second reserves, are recruited and trained and equipped; they have all the "matériel" within that district; the officers and staffs, from the lowest to the highest, are not only appointed but have repeatedly commanded in those annual maneuvers—really partial, annual mobilizations; every man knows where he belongs and this gives him that confidence in the army to which he belongs and in his leaders and commanders which can only come from thoroughness in organization and the knowledge that everybody and everything is equally ready.

Any army that is not fully organized and subdivided into its various parts and whose component parts at the same time are not united and coordinate, that is where the basic and tactical units lead a separate existence without working together and combining their different functions in one task under a common command, is no army at all. It is wrong and denotes complete ignorance of military matters to lay stress exclusively on numbers and their training and ignoring the equally or perhaps more important matter of the formation, organization, command of the higher combined units and their staffs. An army not so organized is nothing but a mob and an incumbrance and has the same relation to a completely organized and officered army as a pile of bricks has to a stately cathedral; the real work of construction only can then start. It takes a long time to form and build up the divisions and army corps, with all their officers and staffs working together intelligently and successfully. It would be infinitely more easy to train 50,000 green recruits than to form an efficient army corps ready to go to war with an equal number of trained soldiers without their officers and commanders.

After the divisional commanders are the army corps commanders, with their staffs, the general staff, the minister of war, and finally, in time of general mobilization or war, the general commander in chief elected by congress. His power is supreme and unlimited; he not only commands the armies in the field but all and every means of transportation and the physical and material resources of the country and the nation are at his disposal. The present incumbent of this high office is Gen. Wille, a man of 68 years of age. He is, of course, a soldier who has served all his life and advanced to the highest commands through promotion through merit; there is no civilian commander in chief, though of the highest political position and no war council to hamper him. His powers are dictatorial.

The people, who love freedom most and who do not even allow their chosen representatives to legislate for them without referendum vote during peace time, have thus shown their wisdom, that, in order to have unity of command, singleness of responsibility, and quickness of decision, those three cardinal necessities for the conduct of war—but alas, how often neglected in past and present wars—power has to be conferred unstintedly.

This, in a few words, is the organization of the Swiss Army, a mere outline of how it works and what it is. A few words have to be said as to what it is not.

It is not a schoolboy army. Many people in America have believed and thought they had heard it was. The misunderstanding has its origin in a superficial interpretation of the fact that some attention is given schoolboys and youths which has an ultimate military purpose and which is intended and instituted and carried through with the idea to benefit the army.

Let us see what this attention consists of:

First, the teaching of gymnastics in the schools. The schools of Switzerland are Cantonal and communal, in the same way as they are controlled by the States and municipalities in the United States, and the Federal Government in neither country may prescribe their curriculum. Considering, however, the desirability of physical training for the future defender of the country, the constitution contains an article which gives the Confederation—that is the National Government—the right to see to it that such physical training is generally given in the State and municipal schools by competent teachers. Therefore the National Government prescribes the curriculum of both teachers and pupils, and through a system of inspection sees to it that it is carried through adequately. The curriculum consists of simple exercises of about two hours per week, but it is not military training; it is, to use a modern term, physical culture. Aside from their obligatory school gymnastics the Government encourages private voluntary gymnastic associations and contests, which, by raising the physical standard of the young men are a benefit to the army, but only indirectly.

In a number of schools, however, some military training is given to boys quite young, from about their eleventh to their fifteenth year, in so-called cadet corps. But these cadet corps are neither general nor are all or even most of them "compulsory." It is mostly the smaller towns, not the countryside and the villages and hamlets, that have them. Where they are to be found some of the younger civilian Army officers give instruction, mostly on Saturday afternoons, in military discipline and drill, manual of arms, setting-up exercises, even rifle shooting and sham-battle maneuvering. In my fourteenth and fifteenth years I myself was the captain of the cadet corps of my small, native town; I had "the honor to command" a company of about 120 "men" of from 11 to 15 years of age. At that time I did not dream that this training—although we took it quite seriously—would ever be considered of such importance as to be honored in the Congress of the United States with bills intended to introduce it here. When serving later as a recruit in the Army I found out by experience that real military training is quite a different matter from cadet training, which is really only intended to create enthusiasm for things military in their members, and that a real soldier's duties are infinitely more varied and his instruction more thorough.

There is one more institution which concerns itself with military training before entrance in the Army, and that is the so-called "preliminary instruction." Youths at the age of from 16 to 19 are drilled somewhat similarly to the cadets. This "preliminary instruction" neither is general nor obligatory, and the number and proportion of those that submit themselves to it are not very large. They lack the experience of military life, together with others in large bodies of troops, which is so important for the molding of a soldier, for they live at home and drill once or twice a week, and only in the good season of the year; they can not be considered real soldiers. During the recent mobilization they were called out with the local landsturm to do local guard duty on public buildings, railways, bridges, etc., and thus made it unnecessary to deplete the real Army, which alone is intended to do the fighting, through the furnishing of these guardians.

A word must be said on the Swiss love for target shooting and the rifle clubs. They are one of the national traditions which the Government and the people always have fostered and encouraged in every way. The sweetest music to the ear of the Swiss is the cracking of the rifle and the whizzing of bullets on Sunday when he practices his national sport. There are about 250,000 active members of the rifle clubs—in the same proportion, rifle clubs in the United States would have over

5,000,000 members—and the names of the best shots of the country are as well known as our baseball stars. The National Government furnishes ammunition at reduced rates, and the communes—that is, even the smallest hamlets and townships—have to furnish rifle pits.

The clubs which are private societies receive a subvention for the training of youths in membership, for to that extent the task of the army to give proficiency in aiming, and hitting is made easier. However, the impression that to be able to shoot is equivalent to being a soldier and that the Swiss think this to be so is erroneous. Shooting is only one single requirement of a soldier, and a good shot lacking the other accomplishments and virtues of a soldier would be of slight value to the army; to know how to shoot does not dispense or make unnecessary all the rest of the teachings and instructions of the training service.

Rifle clubs and target practice, as well as gymnastic and preliminary and cadet training are not to be underrated; in the hands of the Swiss they round out, so to speak, a system of short-time service and add efficiency to the training of the individual. As long as a nation does not deceive itself with such aids into believing that this is an army, which it is not, these measures may be of great benefit. The present way has shown the value of organized units and large numbers; the tendency to shorten the length of time under the colors for the soldiers and to increase the number of trained and organized men is apparent, and such propositions are even now discussed and considered both in Japan and Germany.

Most of the recruits, especially those from the country districts, have had neither gymnastics since they left school nor undergone "preliminary instruction" after their school days, but join the colors quite "raw" and untrained.

The fundamental principle of the Swiss system is adult manhood service for all, for only adults can be expected to have their sense of responsibility developed sufficiently to give obedience under military law and the physical development to stand hardship of maneuvers with benefit and not injury to their health. Large maneuvers could not be conducted with schoolboys. A commanding officer in large maneuvers must be sure when he gives orders for troops to march a certain distance in a certain time, in order to have them at a given time and place, that they can do it; and to do it with a view to its applicability to actual warfare the maneuvering troops must have the physical fitness required for actual warfare, and that is not a schoolboy's measure of endurance. And it takes steady nerves to face death under a hail of shrapnel, not to flinch at machine-gun fire, and not to be dismayed by clouds of greenish gases or spouts of liquid fire. Would we want boys to face such dangers, and would it be wise to trust the Nation's fate to their care? The present war has demonstrated the great military virtues and bravery of the older men, who though long ago returned to civilian life have nobly shared the hardship and reaped the glory at the side of those who were still in active service.

We would do well here in America to speedily forget our false ideas about school and college boy military training in the Swiss Army. A well-trained invader could wish nothing better than to have an army of schoolboys oppose him, whether Swiss or American; he would laugh them out of his path in no time.

We do not want to intrust the defense of the country to schoolboys any more than its government.

Obligatory service has existed in Switzerland in one form or another for over 600 years. The Swiss last November celebrated their first battle in their long war of independence from the house of Austria and the old German Empire—the Battle of Morgarten, which took place in 1315; even at that time the men around Lake Lucerne had obligatory service, yet it has not made them a servile race. It has not impaired their capacity to assert themselves and insist upon their individual and political rights. Militarism is not a portion of the Swiss nation, and no country on earth could be more opposed to it than Switzerland. Of all countries Switzerland is surely the one that contemplates the least of all territorial expansion. What we want is to form a community on the basis of common political institutions and traditions, mutual regard for each other in spite of our three different languages, and the setting of an example to the world of lasting democratic institutions. To fulfill this ideal we have to have independence and the ability to defend it, and that is what our Army is for.

This "a citizenry trained and accustomed to arms" through preparedness and obligatory military service has done for over 600 years, amid powerful neighbors and absolute monarchies, during all these dark centuries when feudalism and despotism and even serfdom formed the political institutions of the countries around the small but indomitable Alpine Republic, who alone preserved democratic institutions. In some parts of the country—in 6 out of the 25 local parliaments—even their most ancient form—the "landsgemeinde"; that is, the legislative assembly of all the citizens held outdoors, each freeman armed with a sword as a sign of his freedom—still prevails. One of these assemblies (Uri) as recently as last month was attended by 2,000, another (Gloris) by 5,000, and a third (Appenzell) even by 11,000 men, who discussed and voted on laws submitted to them.

The free institutions of Switzerland have exerted their influence in the world, and even the great and glorious Republic over which the Star-Spangled Banner waves has benefited by her institutions. When the time had arrived and the world was ripe for the message, the words of Rousseau—a citizen of Geneva—"freedome" and "the inalienable rights of man" sounded from the shores of Lake Geneva, and, reaching the shores of America, found their echo in the document forever memorable—the Declaration of Independence, penned by men who were admirers and disciples of Rousseau in the very words of Rousseau.

The Swiss are a military nation, but they abhor war and militarism—that is, the mental attitude of an oligarchic military caste. They are a military people in the sense that they like soldiering and are receptive of discipline and easily trained and molded into soldiers; but in civilian and political life they watch jealously over their traditions of freedom and local customs and reject energetically all semblance of interference. Obligatory service has not robbed them of their self-reliance nor weakened their backbone.

Inseparable from a military force is the cost thereof. The Swiss Army not only furnishes the largest possible number of trained, equipped, and thoroughly organized men, with the quickest mobilization, but it furnishes these at the least cost. For the last few years before the world war the annual cost was about $6,600,000; that is $1.75 per head of the population; and if we divide this sum of $6,600,000 by the number of men now mobilized, the army of 300,000 men has cost on the average $22 a head a year. This is only possible, of course, because the older men who are included in the 300,000 now ready have not cost the Government anything for many years past, yet they are still there, ready, available, and useful, too. This annual budget of $6,600,000, of course, does not include such extraordinary expenses, as, for instance, an entirely new artillery or fortifications, but it includes the running expenses and the new equipment every man entering the army receives. Compared with the war budget of the United States, we see that last year about an hundred and sixty millions were spent for the Army, yet we could not mobilize in a short time 100,000 men. This large sum represents about $1.50 per head of the population. If we take 1913 Army, one hundred and sixty millions; Navy, one hundred and thirty-three millions; and pensions, one hundred and seventy-five millions, we have a grand total for military purposes of $468,000,000; that is, about $4.60 per head, and with what small results in actual preparedness.

We have at present the aggregate of 30,000 men and officers of our standing Regular Army within the confines of the United States proper, mobile and available wherever needed; the rest are in the colonies and immobile at our coast defenses. Reserves for these there are none; in other words, the gaps in the ranks through losses in battle and through disease could not be filled but with entirely different material, vastly inferior, if at all. Under 48 different sovereignties we have on paper about 129,000 men of the State National Guards, with no uniform standard of efficiency in training and command; of these hardly half, according to the expert opinion of a former Secretary of War—not more than 60,000—could in any way be counted upon; these 90,000 men at the utmost have never maneuvered together, have never been under a unified command, no commander in chief knows them, and their material has not been brought together; they are smallest units, that would have first to be taken in hand, reequipped, better trained and officered; coordination and cooperation with each other they know not. How long would it take to do that? Would the enemy patiently wait till we are ready? How many of our American generals have ever had the opportunity to lead in warlike maneuvers an army corps of 40,000 men? And what tremendous sums does it not cost to recruit our Army. In the year 1913 to 1914 the cost of recruiting alone for every new recruit to the United States Army was $60.

Not only have we no Army but we have no military system, deficient equipment, no organization. Our "military system" in the past has been to wait for the emergency and then to begin getting ready. At what cost in treasure and valuable blood it is not here the place to relate. And what disasters have attended warfare with untrained volunteers, military history, and the statistics on the number of desertions in the field relate; they do not make popular reading. In the future conditions will be entirely different. Our future enemy is not going to send untrained volunteers, poorly equipped, against us, but hardened veterans, well led and thoroughly ready to strike. And in what numbers I have mentioned before. What could we oppose to these formidable foes? What would they do to us? Would they not be able to advance and conquer as much as they wanted of our national domain, and then be able by intrenching to hold it indefinitely, ransacking our treasuries, levying contributions in millions and billions?

In such an emergency no amount of patriotic wrath could supply an excited populace with the ability and means for defense against a steel-shod, disciplined invader. Military science is the most complex of all, and when science entered into warfare volunteers made their exit. Volunteers become soldiers only when they cease to be volunteers. Disastrous wars are the failures of peace. And this is to-day more true than ever. All preparations must be made in time of peace even to the minutest details. Improvising armies is a thing of the past. They are technical entities of such a complex nature that it takes years to organize them, 20 and 30 and more years to form officers of the higher ranks. And the organization of the armies, army corps, divisions, and brigades, with all the staff officers and material, the sources of supply, ammunitions, stores, all this must be ready in time of peace. What attracts the attention and gains the admiration of the world more in the present world war, the preparedness of the continental nations or the undignified efforts of recruiting in England? And admire we should, for it denotes not only foresight and forethought, but the spirit and patriotism of personal sacrifice which a country is able to demand of its people and which a people is willing to make.

The benefits that universal training bestows on a nation are not only military and moral, they are also economic. As far as the simple soldier is concerned, he has had the opportunity to see that which perhaps has been completely lacking in his home and surroundings—efficiency of management. A basic army unit, for instance, a company, is really a sort of a family and an economic unit where all the various functions of a common household are assigned and exercised under strictest observation of the principles of economy, efficiency, and accountability. Each grade is responsible to superiors for the acts of those under them, and for each mistake held accountable to the smallest detail.

The habits of orderliness so essential in any army and so severely insisted upon are of lasting benefit and economic advantage, and not only this, but a great many useful things are taught and acquired which will make a more efficient civilian of a soldier. There is, of course, some personal financial sacrifice connected with service, but it almost loses its disadvantage by the very fact of its universality; and as far as the burden on the shoulders of the very poor is concerned, the Swiss law provides that in case of need the family of the soldier called to the colors has a right to claim financial relief from his commune. This help is not to be considered as poor relief and leaves no stigma of shame. The underlying principle is that of solidarity of interest between citizen and state. As for officers and noncommissioned officers, they have to bring a not inconsiderable sacrifice both in time and money, for the pay is not very high; but this is by far outweighed by the stimulating influence of their responsibility as superiors; they have in military service an opportunity to exercise executive ability which will be of use to them in business. The desire, the necessity, to live in civilian life up to the dignity and responsibility of a grade makes for honorable and laudable ambition that finds economic rewards, for an officer or subofficer who is not of the most minute correctness in financial matters in civilian life is not allowed to serve in the army any longer. The greatest efforts are made and economics practiced to avoid such dishonor.

And there is still another advantage which Americans especially will appreciate at its true value, for we in this country are believers in the benefits accruing from vacations. To a foreign observer the hopeless tedium, the monotony of life, and lack of healthful amusement of the laboring classes of this country is apparent; inexpensive Sunday amusements there are none, and for obvious reasons trips away from home are out of the question. A Swiss in the same economic circumstances has, at least during his active years of service, from 20 to 27 years of age, an annual outing at Government expense. It makes no difference that neither the man nor the Government consider it as an outing for pleasure, but, just the same, it brings the benefit which a change of surroundings, occupation, company, and food has on a tired worker. The work of soldiering has to be in the open, and it has the

character of "roughing it" to a high degree. The looks and manners of soldiers returning from their annual 13 days is the visible outward sign of its benefits in health.

The men returning from service are as full of cheer and new energy as if they had been on a fishing trip; they have seen new scenery, not to speak of the trenscendant beauty and spectacular grandeur of warfare in peace conditions, and they tell about it, about their fatigues and exertions, their defeats and their victories, their retreats and their advances. But what they keep for themselves and which in their own breasts acts as a stimulant. a leaven, is the past association with all kinds of men.

Have we an institution where the day laborer, the farm hand, the porter has an opportunity to stand in ranks and work and eat and sleep and rub elbows for two weeks and share life and rebuke and reward with the student, the school-teacher, the clerk, the mechanic? And for him to compete in cleanliness, effort, endurance, and performance with those in better living conditions in civilian life can have only a favorable influence, the desire for emulation. All receive pay from the Government for their service; those not much used to handle money can see how others, perhaps their betters and to whom they may secretly be looking up to, repress their impulses for spending and save. Might not this be a beneficial lesson to many young Americans who pride themselves getting rid of their hard-earned funds as quickly as possible treating others at the bar? It may not lift him sky-high, but who knows, perhaps it makes slower or prevents altogether a descent that otherwise would be inevitable. Thousands of American travelers and sociologists have commented upon the absence of the horrors of city slums in Germany, France, and Switzerland and compared conditions in these countries with the hopeless degradation of the slums in English and American cities. Has perhaps not the training, schooling, and experience of army life something to do with these differences? The time spent in military training is not lost in an economic sense, if it does not last too long, any more than school time is lost, if it does not last too long. Both may be harmful if too long, but the short-time Swiss service is not so. European workers who have served are not inferior as to their producing efficiency, or else their competition would not be such a menace, and fears from the effect of their return after the war to productive labor need not concern our economic prophets as they do.

In an industrial way, in the larger sense of the word, the benefit is apparent; the stimulation through universal service makes of the Swiss a nation of people who want to be independent economically; this is one of the reasons why there are so many small business houses and firms. The man who in military life has attained a grade has the ardent desire of rising in civilian life.

The army as such has no political influence in Switzerland. One of the reasons for this is the fact that it is not a standing army, but really exists only temporarily during training and maneuver service, and afterwards dissolves itself into its many thousand units of civilians returned to their home life, and in civilian garb it completely loses its identity.

Members of the army are members of the legislature and are officials of the Government. As officers they may bring technical knowledge into their deliberations on military measures. But a military party or clique or even "coterie" does not exist and officer members are members of the different political parties and vote with these.

The time officers serve away from their troops and train together in officers' courses is so short that they have no time to develop that feeling of social and professional class distinction that could either socially or politically find expression in well-directed concerted efforts; they come from all sorts of conditions; their mentality is varied; they stay together too short a time and scatter to their own fields too soon to acquire the mental attitude called militarism. For militarism first of all is a mental attitude as to the relative importance of things and becomes a power only when it finds political and social expression. A professional officer and a pupil in a military or naval academy, secluded for several years from the rest of the population, is more apt to nurse militaristic dreams and to set up an imaginary barrier to his own great disadvantage, for unfortunately our own American officers, as fine a lot of men as there is, to a large extent have lost touch with public life, and this, I think, is a loss to them and to us, the public and body politic.

In Switzerland it is quite different. Our officers, individually, not as a class, are the intelligence of the nation, many as civilians are in politics, are renowned as orators, legislators, administrators, and business and professional men; they are not separated from the rest, neither socially nor politically, but they stand in the midst of life and endow our political life with that soldier's honor and uprightness, that faithfulness to principles, and an incorruptibility which freedom from obligatory service does not necessarily give to the social and political customs of the countries where the volunteer system prevails. When temptation asks for favors the honor due to the rank and grade in the army proves a shield and armor not easily pierced by the poisoned arrows of graft and corruption. Whether or not the well-known honesty of Swiss political life and municipal state and federal government is due to the fact that so many of our leading men are officers in the army is difficult to say; but army life has certainly had no weakening influence on character and political ideals and personal conduct in office.

The only organization exclusively of and for officers is the Swiss Officers' Association, with branches all over the country; membership, I think, now is compulsory; its purpose is the giving of supplementary instruction. The "war game" is played under the supervision of superior officers, papers are read, innovations discussed, etc.; it is no social club with exclusive club life. Subofficers, too, have their associations for similar purposes, and it would take too much space to enumerate all the voluntary associations of simple soldiers of the different arms who meet voluntarily to give additional instruction or to keep in practice in some special branch of the service; there is even one of the drummers, and one of the chaplains where the Protestant and Catholic clergy meet in friendly deliberation on the widening of the scope and the enlargement of their usefulness. It is superfluous to say that none aim at political influence. The army is not in politics nor are politics in the army. The officers are promoted entirely on their merit and length of service and according to a strict law. This law provides that any nomination or promotion is subordinate to the possessions of a certificate of capacity given after special courses of instruction by their instructors or commanding officers. Only after such certificate is attained may the proper authorities (for lieutenants of the infantry, cavalry, artillery, etc., the chief of the arm concerned) make the nomination, which in turn is submitted to the highest commanders for their approbation; and for officers above the grade of captain, the nominating body is the committee on national defense. There are therefore no nominations by the political authorities, neither of officers in the army to higher posts, nor of civilians or soldiers, to the rank and degree of officers.

Space does not permit a lengthy chapter on the relations between the Federal and Cantonal Governments in army matters, although this subject is of great interest to us in America and discussions on the control by the various States versus control by the National Government will not end for a long time. Switzerland has had her sad experience from so-called "State control," and gradually though slowly has completely eliminated the latter. The Cantons have retained only strictly administrative functions; they give commands to certain lower officers, but only on the certificates given by Federal authorities, and they may not recommend anybody for promotion; they—the Cantons or States in America—can not appoint any officer to a command without a Federal certificate, and should an appointment be made by mistake, the Federal authorities have the right to invalidate it.

Formerly it was different, and the power of the Cantons over the men recruited from their territory was considerable; but the lessons of history and the requirements of modern conditions have brought about a change, and although the cantonal traditions—historical and cultural, even religious—are dear to the Swiss heart, and a Swiss more loudly and fervently proclaims himself to be a man from the Canton of Berne, or Geneva, or Uri, etc., than from the common "patrie" of Switzerland, he has had the wisdom to eliminate cantonal control to such a degree that the army is federal. The few remaining cantonal functions may occupy much space in the law and seem important, but in reality they are a mere shadow. Certain functions like the keeping of the list of the men living at a place is of course local, and therefore cantonal; but the very blanks are prescribed by federal authorities, and so are all the rest. To look to Switzerland for an example of a "State-controlled" national defense is pure self-deception.

Universal service does not stifle and eradicate patriotism, if by patriotism we mean sentiment and love for one's country ready to spring into action. In the world war, which nations have buried their private and party quarrels more readily in the presence of the common danger to their country, have concluded a truce amongst themselves to last till the country's existence will be safe again, have been willing to and did sacrifice their all more generously for the idea of the common interest of the nation? Those where universal obligatory service is the rule or the one where tradition and custom allowed each man to decide for himself whether the common heritage was worth his personal sacrifice and trouble or not? And which ones grasped the portent more intelligently and with truer appreciation of its meaning?

Even the workers of all the continental belligerents have at once realized that war affected them all as national units and not as parties with apparently divergent interests. German and French, Austrian and Italian socialists have given the answer to cosmopolitanism and internationalism. They have found out that their interests, spiritual and material, bind them closer to their own country and its past, present, and future than to an Utopian state of universal brotherhood, alas, so far away, and that their countrymen of different economic and political faiths are more closely related to them in heart and soul than the men of similar ideas in other countries.

The workingmen in those countries have made common cause from the beginning with the class they formerly antagonized, and their immediate and hearty cooperation with the junkers, the bourgeois, the landowners has afforded us a picture of brotherhood—brotherhood of national common interests and ideals—that in its revelation of the true and underlying sentiments in the hearts of man has been as beautiful and inspiring as it was startling and surprising.

Have not we in America felt, to our own great and not always pleasant surprise, that men from nations with compulsory service have rallied to the cause of their native countries with a degree of enthusiasm that has at times blinded them to the dictates of hospitality enjoyed in this country and its neutrality? The various "plots" to blow up this and that on land and sea had no difficulty of attracting men to execute them at the risk of life and liberty. Where communication was not interrupted, thousands upon thousands flocked to the colors of their countries who could easily have stayed out of the war by remaining where they were. It must have been both heartrending and inspiring to see the thousands of men who had lived in Switzerland for years, married Swiss girls, brought up families of children in Swiss schools under Swiss teachers, go to join their regiments in France, Germany, Austria; even the ties of blood were of no avail, cases being known where sisters, married to men of opposing camps, had to see their husbands leave in opposite directions, ready to die for their countries. Heartrending yet inspiring. And it required no great urging to make them go; no flamboyant posters had to awaken their patriotism.

Universal service is a mighty tonic that exerts its action through the whole body politic in more than one way. It does not necessarily mean militarism and the rule of a military caste; the Swiss system is quite free from it.

Universal service and training as the Swiss practice it is a truly democratic institution. It makes all men equal in duty and rights, and at the same time it is a moral principle and an expression of individual sovereignty; every citizen has the right and claims the right to serve his country as a free man in a free State that he wants to see kept free. Universal service is the law of his own making. The history of universal service and nations in arms in modern times had its origin in the times of the dawn of freedom during the first French Republic. The only freedom that is abolished by it is the freedom to shirk and to let others defend our homes and hearthstones for us instead of doing it ourselves. Don't let us forget that voluntaryism includes the choice to serve the country as well as to shirk our duty to help preserve the Nation. Which system is more noble, more inspiring, more moral, and which one shall we have chosen when fate knocks at our gate and our national destiny is to be decided?

"If we desire to secure peace, one of our most powerful instruments of our rising prosperity, it must be known that we are at all times ready for war."—George Washington.

The principal problem before the American people is to decide what requirements our preparedness has to meet and how we shall meet them; in other words, that old desideratum of George Washington:

"A uniform and well-digested plan is requisite."

Thus, a discussion of the subject must lead us to the consideration of the necessities of our situation as regards defense by land and sea.

Once more, as so often in the past, good fortune is smiling on this blessed country of ours and a kind Providence is favoring America, inasmuch as many of the questions about which we seem to be in the dark are answered for us and decided by other nations at this very moment, not at our cost but at theirs, in treasure, blood, humiliation, and suffering, and all Columbia has to do is to profit by their experience.

The first and principal problem before us is to decide if possible the question as to the relative value of Army and Navy for the defense of American peace and protection from invasion.

Nations no less than individuals are addicted to fancies and like to follow imaginings pleasing to them. One of these national fancies in which the American people like to indulge is the idea that the Navy will be of sufficient protection to us, and that with our untold resources and our almost unlimited wealth in money, we can and should have the largest Navy in the world. Let us analyze for a moment this proposition.

Let us first consider the function of navies in general. The chief function of navies is to keep open or destroy communications on sea and to protect landing parties on the shore; they can not conquer on land. The history of the last two years has proven this, if nothing else. One side of the belligerents, the allies in the west, have been able to keep open the lanes of communication between themselves and the outside world, between the outside world and themselves. This has enabled them to transfer unhindered troops to the Continent and elsewhere, and to get all the food necessary for the population at home. It has at the same time interrupted the intercourse by sea of the enemy with the outside world. Their navy has not been able to conquer on land, as the early part of the campaign against the Dardanelles has proven to the world. Navies therefore have a limited use, and the necessity to have them supreme on the sea depends largely upon the character and geographical position of the countries involved. In this respect there are two kinds of empires, the exigencies of which are fundamentally different as to the relative usefulness of navies.

On one hand there are continental empires bordering on other countries by land which produce almost all of their food and raw materials within their borders and which can get what they need by communication on land from neighbors—as Germany is importing grain from Roumania—and on the other hand there are island empires whose sole means of communication is by sea and which depend on the command of the sea entirely to feed their millions with foodstuffs bought abroad. Each of these two kinds of empires in a different way depends upon an open sea. The history of this war furnishes ample evidence of this condition of affairs. Let us, however, first go back to the Russo-Japanese war. Japan, the island empire of the East, after having successfully bottled up and crippled by surprise attack the Russian fleet and destroyed it in separate units, even though a land campaign against the sea port of Port Arthur was able to land huge armies on the Continent of Asia, driving back the Russians in many a bloody victory. A Russian fleet from Europe finally reached the Japan Sea. Had this Russian squadron been victorious in the battle of the Straits of Tsusima, and, by gaining control of the sea, destroyed communication between Japan and her armies in the field on the Continent of Asia, the land armies that were victorious heretofore, now shut off, would have faced destruction through lack of food and ammunition and the Russians would have won the war. The annihilation of the Russian fleet, however, did not decide the war against Russia. It merely destroyed Russia's chance to end the war in her favor by this one bold stroke. She might still have won the war on land had not internal dissentions at home made an early peace desirable. Nor did the victory of the Japanese Navy end the war for Japan. The destruction of the Japanese Navy, however, would have at once ended the war in her disfavor. In this we see the relative importance of a navy in geographically differently situated countries. Similarly Napoleon, after the battle of Trafalgar, was not defeated through the loss of his fleet. He merely had to give up the idea of an invasion of England. His downfall was the result of defeats on land, the overwhelming superiority in numbers of his adversaries, and the numerical exhaustion of France.

The same is true to-day in this world war. The destruction of the German fighting vessels—dreadnaughts and cruisers—would not have materially affected Germany's position in the war. Her internal resources and production of food and ammunition would have been the same and her campaigns east, west, and south would have gone on as they went on with probably exactly the same results. How different would have been the position of the British after their fleet had been destroyed. Her communication for the replenishment of her empty storehouses would have been impossible, and England—there can not be the slightest doubt about it—would have been forced to her knees. This short exposition of the importance of sea power in differently situated countries is for the purpose of showing the vital necessity of predominant sea power for England and Japan.

The national existence of these two countries depends upon the free communication in time of war on the sea. Neither of them, therefore, can afford to permit others, not even America, to outdistance them in sea power, but would have to strain every nerve to keep their present enormous superiority. England before August, 1914, had 50 dreadnaughts, against 17 of the United States, and the disproportion with all the other naval powers is probably still greater now.

In considering possible future conditions and alignments of powers, alliances, and friendships between nations, we can not help admitting that almost anything is within the range of possibility. Who would have thought that Russia and Japan, in less than 10 years after their bloody struggle, would be allies fighting a common enemy? Who will say that after this world war is over some of the bitter enemies of to-day may be—if not the friends of to-morrow, have at least some agreement as to giving each other a free-hand and standing tacitly by. In fact, nothing is more true than that if the United States are threatened at all they will be so by a combination of powers in which some of them may be aggressors and invaders, whereas at the same time the rest of them must have agreed to stand aside and not to interfere. England, Germany, Austria, Russia, France, Italy, or Japan, or any combination of two or more of these powers, whosoever they may be, will have to have their back free before they can think of crossing the ocean toward our shores, and our sea power will not be sufficient if it only outdistances the greatest navy now afloat. The "two-navies standard" of England would have to be replaced by the "three-navies standard" of America.

This "three-navies standard," to meet successfully any combination of hostile fleets in the future, would require such immense amounts of money, such facilities for building ships in a shorter time than other powers could do, not to speak of the number of men to man the fleet, that it is beyond the power of imagination and calculation to compute it, and, in spite of all our efforts, it would be of no avail, for it would merely set the pace for the other powers to build more and faster than we would do or could do.

Besides, as world conditions are or may be in the future, perhaps not so very long after the present war, the possibility—"the quite conceivable event," as Prof. Paul Rohrbach, of Berlin, writes January 13, 1916, in the now famous letter read by Col. Theodore Roosevelt on May 19, 1916, in Detroit—of aggression by Japan is not so remote. May we be sure that we would not have to divide our fleet between the Atlantic and Pacific to oppose two adversaries, each equally strong as our entire undivided fleet? And what would happen to us then if our divided Navy should not be able to prevent landing on our shores but should have sacrificed itself in the vain attempt?

To rely, therefore, on the Navy of the future, which it would take years and years to build, is but a day dream—a very pleasant one, for it permits us to evade the main issue which our politicians so hate to approach; that is, to demand from our public, from every young man, that personal sacrifice of personal service in the Army of the country. It is self-deception of a most dangerous kind, for it disregards the outstanding fact that the "strongest navy in the world" that is to be victorious against any and all adversaries—and it would have to be that—is not to be attained by us.

How different a defender would be a large mobile army, rapidly mobilizable! No matter how large a fleet the enemy could command, it would never be sufficient to bring enough troops to our shores to effect more than a temporary landing of short duration, such as took place on the Gallipoli Peninsula. The danger of being driven into the sea by the fully prepared mobile American land forces, ready to strike anywhere, would be so apparent that a permanent success of landings in America, in the same way as the landing on the shores of Gallipoli against the superior Turkish land forces proved unsuccessful and disastrous, would be out of the question. Just as the "fleet in being" of England has saved England without fighting, so the "army in being" of the United States would save the United States without fighting. We would not be attacked, because nobody could think of doing so with any chance of success. While we need a Navy of a size to command respect and to be able to imperil landings and transports of troops, a sufficiently large Army would be less expensive, a better protection, and could be organized in a few years under the protection of the world war now going on while our potential future enemies are occupied elsewhere.

We must therefore look to our land forces as that peace insurance that will forever protect our territory from successful invasion and remove the chief attraction for conquest—the combination of wealth and weakness.

In order to do this it is essential that the Army be large enough. The time of small professional armies is passed, now and forever. War in its simplest definition is the supreme effort of nations, and modern conditions and facilities of transportation, the immense and still increasing wealth of the nations, the diversity and availability of their means of production for the production of war material, and last, not least, the spiritual forces of modern times, the energy and strength of national consciousness and cohesion makes that supreme effort. War—quite a different thing from what it was in the past. The armies of Frederick the Great and George Washington were small; lack of the means of transportation, lack of the fluid wealth, and the fact that the only industry at that time was agriculture, which absorbed so much man labor to produce enough food for the Army and the people that only a small part of the males could be spared for campaigning without exposing the population to starvation—Frederick the Great had to import foreign mercenaries—made large armies in the past impossible; to-day this is changed, and will remain so; armies will increase in size still more, for numbers decide, not length of service.

It is of no use to decree by laws on paper an increase in numbers. If men will not enlist, the increase can not take place and the law becomes futile. There are extremely potent reasons why we may doubt that voluntary enlistments will even fill the ranks of our standing army to 200,000 men. First, on account of the bidding of industry for labor at higher wages, then on account of the tedium and lack of outlook of the professional soldiers' life, and finally on account of the stigma attached to service; the soldier feels, and is made to feel, himself as of minor quality and standing in the community, almost as outside of it; therefore the incredibly numerous desertions, the sprees, and infractions of discipline; and the despicable practice of judges to let men go unpunished if they promise to join the Army, makes things still worse; can we blame the young man for not wanting to enlist? Obligatory service for all changes all this at once; the training being of short duration must be intensive, and leaves no time for thoughts of desertion, for the man knows that in a short time he will be in his customary surroundings again and he will be free to follow his career and pursue his ambitions as before; it will be the natural and honorable thing to be in the Army, because it denotes physical fitness and for the same reason undesirable to be outside of it, and all classes being represented, it will represent the high-average standard of American manhood.

Just as in Switzerland certain offenses committed in civilian life disqualify the offender from belonging to the army, so will in America dishonorable deeds exclude the doer from the honor to belong to the institution that is to guard and keep inviolate our national domain and independence. Universal service alone makes a sufficiently large-sized army possible.

The adoption of the principle of universal obligation once decided upon, we may well ask whether the other features of the Swiss system do or do not commend themselves equally for adoption in the United States.

The Swiss system aims, through universal obligation, at a large army, through short time but intensive training at producing this army at the least cost of time to the individual citizens and of money to the state and through thorough, complete organization to the formation of a complete army ready to take the field at a moment's notice, with the aid of the territorial arrangement of its component units.

The same desiderta hold good for the defensive forces of this country, and we may well ask ourselves the question:

Can the Swiss system of military organization and universal training be applied to the United States, or are we over here so radically different from the Swiss? Differences, of course, here are political and economical, but the points of similarity are indefinitely more numerous than the differences. Both countries have a republican form of government and believe in individual rights and in self-government on democratic principles. Both are extremely jealous of their liberties. The main political differences of the two Commonwealths are that the Swiss people, through initiative and referendum, have greater control over the legislative branch of the Government, whereas we in the United States, through frequent elections, are more concerned over the personnel of the executive branch. Otherwise I see no deep-seated difference politically. Temperamentally, the Swiss are rather more serious minded, probably from racial differences and a more inclement climate and poorer soil, and Switzerland is a country the different parts of which speak different languages, but in other respects the two peoples have very much in common.

The size of the country has nothing to do with the introduction of the Swiss military system. Size is merely an incident. The Swiss military system could very well and should be adopted in the United States, not only its underlying principles but even in detail is this possible and desirable. And one of the first principles which we must adopt is exclusive Federal control of the Army. Federal control alone makes uniformity in training, standard of quality, and promotion. Forty-eight different State armies would be the death of any effort; the Swiss have tried it and had to give it up. Federal control alone makes possible the formation of the largest army units, divisions, and army corps. Federal control for the last century had to supersede State control in Switzerland, until to-day it has vanished to a mere shadow.

The second fundamental principle must be adult-manhood service for all. Enrollment and examination for fitness at 18 or 19, first training service 19 or 20, preferably in barracks, continuous for a few months only, and for a number of years afterwards annual assembly and tactical maneuvers and brushing-up service of short duration up to a certain age, then entry into a reserve with occasional mobilizations similar to those of Switzerland. No reliance on voluntary enlistment or other subterfuges and evasions of the main issue by school-boy, college-boy, "business men's camps," and Saturday afternoon rifle clubs. They do not produce soldiers, still less armies, and it is armies we are in need of.

At present the proposition is made to substitute for service with the army instruction of a quasi military character in private academies and to give the pupil credit for this instruction. For two reasons this should be discouraged: First, because it is a class institution; poor parents can not afford such advantages for their sons and the favors afforded the rich would create a gulf and cause class distinction. The favored ones would look down upon the others and resentment might follow where equality should rule. The other reason is that the training for a soldier can only be adequate under real army conditions, and these include in a democracy especially the living, sleeping, and working together of all sorts of men; a future officer has to have gone through real not attenuated soldiers' duties in order to be an instructor of his men. And the "camps," while at present valuable for creating enthusiasm and interest in those who would otherwise have no opportunity to taste military service, have the immense drawback to create the impression that we are on the right way to preparedness for national defense. They, too, are for the so-called upper classes, for the participants have to pay certain sums of money and buy their own outfit. Generally speaking, the participants are too old, for first training should not be given to men much beyond the age of 25 or 30. A soldier's training requires a receptive frame of mind, and a man is more receptive to digest and absorb the elements of military training and the principles of strict discipline, unquestioning obedience, and willing subordination when *he is young*. This first training service ought to be given in barracks. For in such only can bodies of men be housed in wintertime and discipline and thoroughness may be better enforced than in the free and easy life of camps; the maneuvers later, of course, will be outside of barracks and independent of them, in the "terrain" under warlike conditions throughout. In order not to burden the people too heavily with taxes, the pay of the soldiers should not be too high; the young man is performing a duty not only to the country but also to himself and high pay will lower the value of the service in his own and the people's eyes. If we begin to pay our soldiers big wages and increase the cost beyond a reasonable amount, we shall feel tempted to save on the number of recruits.

Third. Adoption of a certain tax for those excused from service for any cause, the tax to be proportionate to the financial means. No possibility of choice between the military tax and personal service. The tax emphasizes the universal obligation.

Fourth. Promotion to any grade, only on the principle of having earned it through service in the lower and after having qualified suitably in special courses through sufficient length of service and command for the higher degree. This would mean a final abolition in this country of appointments of men to high command from civilian life through social or political influence. The science of warfare is so complex and technical that only systematic training from the very ground up will enable the mentally gifted to master it.

Fifth. Territorial recruiting and organization of units. The country should be subdivided into 25 Army Corps districts of approximately equal number of inhabitants. The boundaries of these districts to be determined on geographical lines, independent entirely of boundaries of political, State, or election districts. This is quite essential, for nothing could be more detrimental to the interest of the Army than the suggestive influence of a coincidence of the boundaries of military and election districts; the call on Members of Congress for administrative interference is burdensome enough as it is, and Senators and Representatives should be protected from further encroachment on their time and energy; election districts having become military districts, the clamor of constituents would multiply a thousand times and destroy both the usefulness of the Congressman and the Army; for the Army might enter politics or politics invade the Army, and that would be disastrous for both. These districts should be formed in such a way that mountain ranges or deep rivers should not run through them. They are to form geographical units for the quickest possible mobilization and concentration. Each district should have barracks, storehouses, all the war material, its maneuvering grounds, and general headquarters at a place chosen for its location, as to railway communications and safety from surprise attacks. Most of our many Army posts could be retained and either be used as storehouses for additional supplies, remount depots, training posts of the units of special arms, bridge builders, or medical companies, or officers' schools, while still others might be enlarged to the proposed headquarters of the future Army Corps districts.

Within these districts of about 4,000,000 inhabitants the units of the army corps will be recruited, trained, and organized. The army-corps district is to be subdivided into smaller districts—two or more division districts, each of these into two or more brigade districts, each of these into regimental districts, and finally these latter into the last subdivision for the tactical unit, the Infantry battalion. Within this battalion district the men are recruited for that battalion, and in addition for a certain unit of the Cavalry (perhaps one-fourth part of a squadron), for a certain unit of Artillery and train troops (perhaps one-fourth or one-half a battery), some part of engineering troops (sappers, bridge builders, etc.), the necessary medical troops (litter carriers), and supply troops and artisans (bakers, butchers, horseshoers, wagon makers, shoemakers, etc.). On the seashore certain districts would furnish less Infantry and Cavalry, but more Artillery for the coast defenses, for it would not do to recruit these "at large"—that is, over the larger district—for the simple reason that quick mobilization would suffer if the Coast Artillery men had to travel to their post from a distant interior city.

Thirty-six of these battalion districts in an army-corps district would give each a population of about 110,000 inhabitants. Of these there would be yearly about a crop of 1,000 young men of the age of 19 or 20; and if we suppose 60 per cent of these to be fit for military duty, it would give us an annual contingent of about 600 recruits; 400 to 500 of these would be assigned to the Infantry, in the entire army-corps district about 16,000 (the proportion varies according to changing views on the proportionate number and importance of the various arms). Should first training or recruit service in the Infantry be of two and one-half months' duration, that would give four periods (with cleaning and fumigation of barracks between courses), training of 4,000 men each time, if they were to be trained all in one place. It is to be expected, however, that within an army corps Infantry barracks would be in the divisional districts (let us say two in each army-corps district). That would fill each of the two Infantry training grounds four times a year with a new set of about 2,000 recruits each time. These would be divided into three parts of about 700 each to form a battalion, and three battalions would form a regiment. All the officers and suboffícers of a regiment would undertake the training, and Army life on the basis of a full regiment would be given the recruits, the suboffícers, and the officers. Should there be more training ground—and probably the solicitude of Congressmen would see to it that there would be—a training unit might be a battalion of 700 to 1,000 men. Below the battalion one ought not to go, for both recruits and officers get a better, and especially a truer, idea of Army life in large units.

The recruits would be assigned, if possible, to the courses according to their occupations; farmers would be called to the courses in winter when they can be spared on the farms, students in the summer, etc. Nor should the recruits of one locality all go at once, on account of the too great depletion of the workers; as little inconvenience should be caused as the purpose—best training in the shortest time—will permit. After this training service the recruits return home and are then put on the register of their home battalion, with which they will drill and maneuver in the future (in the recruit service they were assembled from the recruits of the district "at large"), and they are civilians again for a year. Their next service is the following year in the fall after the harvest, when the fields are bare and maneuvers do little or no damage to agriculture. During recruit service the officers and subofficers had their eyes open to discover those that would make likely suboffícers and officers. About one-tenth would be so picked, and the same year or as soon as possible these would in a short course of, say, four weeks be made corporals. This corporals' course would take place either in the same barracks or in some other Army post, and a unit would again be formed. After this course a test determines their merit, not too severe, and they are all made corporals; about one-fifth of the more apt pupils in this corporals' course were asked to become lieutenants from corporals. They all go home and are assigned to "corporalcies" in their home battalion. The next year those corporals who have not been asked to become lieutenants will have two services—a recruit course of two and one-half months as corporal instructors in a recruit battalion and a maneuver service with their home battalion. Hereafter these corporals only serve once a year with the battalion till they go to the reserve. Those corporals, however, who have been selected to become lieutenants have to go to a lieutenant's course of perhaps three months' duration, and after they have attained a certificate of efficiency are assigned to a lieutenancy in their own home battalion or one of the other ones short of officers. They, too, have two services in the following year—one as lieutenant instructors of a recruit course of two and one-half months and one of two weeks in the fall maneuvers of the battalion in which they have a command. This battalion does not maneuver alone but with two or three others in a regiment, two regiments forming a brigade, two or three brigades a division; in addition to the Infantry officers and soldiers, there are in every battalion a number of litter carriers and male nurses, who take courses from the medical department.

Under their officers the two doctors; drivers from the train service with the battalion and company ammunition wagons and field kitchen on wheels and the wagons with the intrenching tools; the Infantry regiment has its staff wagons, wagons for the wounded, etc. And the division is a combination of all the arms, Cavalry, Artillery, Engineers, Medical Corps, Field Hospital, and Supply Department, with their commanders and their staffs, which all work from the top down, transmitting and coordinating the orders given by commander of the division. This is now a complete entity standing on its own feet, ready with officers, staffs, men, horses, and material (guns, wagons, supplies, bakeries, etc.) to take the field. Below the division unit there is no combination with other arms. And these maneuvers are not only for the training of the men, they are just as much, even more, a test of the officers and the working together of all units. The two or more divisions of any Army corps may maneuver together against an imaginary enemy or against each other, as the case may be, and as is done in Europe, even in Switzerland. Not before we have attained this stage of annual mobilizations for peace maneuvers can we say we have an Army worth having ready to take the field. We must think in Army corps, not numbers of men.

To return to our lieutenant; he serves as such for some years, then becomes a first lieutenant and serves as such before becoming a captain (at the age of about 30). He has to take a special course for captains, after which, his certificate attained, he receives a company and advances further, as far as his aptitude, judged by his superiors, will permit him.

The simple soldier, after a few years, say eight, goes to the reserves and swells that important body. Reserves are of immense importance. I regret that space does not permit me to dwell on this subject—too little appreciated and understood in America.

It is sufficient to point out briefly, however, the importance of reserve officers; it is said, and probably with truth, that the lack of such in sufficient numbers has played an important rôle and had a detrimental influence on the success of Russian and British arms. It takes longer to train an officer and his training must be thorough, for only in this way will the men in the ranks have sufficient confidence in the wisdom of their leadership and will the officers easily enforce that discipline in their men that balks at nothing. When the lieutenant says to his men, "Now, we have to advance to die together, come on boys," they will have to have the discipline born of supreme confidence. Germany, France, and Austria seem to have sufficient officers to fill the gaps, and their warfare has not failed them on account of a lack of them.

The "material" is stored within the Army corps or division district complete, so that on mobilization nothing has to be ordered or sent for

from Washington or elsewhere, perhaps with the exception of the flying machines attached to the highest command. All this requires the building of barracks and storehouses and the selection of their location and will cost huge sums.

This is what the territorial organization of the Army means and the division of the country in, say, 25 districts means—if less than 25 they would become unwieldy.

Sixth. Utilization of the officers of the present Regular Standing Army to command the new-formed units of the universal army until the latter can furnish its own lower grades.—The officers of the standing Army to be the first to advance to high command. Of course, there will be a period of transition which will present a number of difficulties. Units will have to be formed from which qualified officers would first have to be trained—regiments, brigades, divisions, army corps. For these the West Pointers should be taken from the standing Army and be given the command of these new units. These new units, of course, would not be under arms all the time; only during annual maneuvers. For the rest of the year, the officers of the standing Army would return to their commands in the latter. The regular officers and subofficers, and even some of the privates of the standing Army, might be used to help train the recruits of the new universal army. After the first year, the universal army would begin to produce its own noncommissioned officers and officers, and these would gradually advance until in a few years the whole machinery could be put into thorough working condition. Until that condition will have been attained the present standing Army would form chiefly the complicated technical branches, flying corps, and the horse services—Cavalry, Artillery, etc.—and also be used for service in our few colonies. The question whether we should give the full equipment to the men and intrust it to their care at home, as the Swiss have done with such success, for almost lightninglike mobilization is a question of detail.

America, fortunately, is much less exposed to sudden attack, coming like a thief in the night, and therefore this question is less overwhelmingly important to us here than it is to the Swiss Republic, amongst and in the midst of the great powers of Europe.

And what would be the result of the above simple proposition? In the military sense we would get an annual contingent of about 900,000 young men of the age of 19. If we assume that 60 per cent would be fit, we would have an annual crop of about 550,000 men to be given training and to be organized into the national defense forces. It would give us in a few years a few million men, and after we had attained a sufficient number we could then reduce the number of years during which the men could be called out, or increase the standard of bodily fitness in recruiting, give exemption to widows' only sons, etc., and mobilize part of the men for so-called industrial preparedness by securing their services for ammunition factories. We would not lack men.

In a larger sense we would gain infinitely by such a training. Every man would get physical, moral, and intellectual training, which would be a benefit to him outside of purely military considerations. The preparedness of body would make for the preparedness of the soul and the spirit, as it does elsewhere.

It would act as a tonic and energizing fluid in the veins and arteries of the Nation. I have no hesitation in saying that once introduced as a national institution the American people will, no less than the Swiss, look upon it as a blessing. It will act as a bridge between the different classes of our population that now have little connections and few points of contact with each other, and it will help making and molding the Nation into one whole. Schools and churches have their influence in this direction, but the Army is the strongest. The antagonism of our labor element—organized and unorganized—to our defensive forces on whom they, too, depend for safety, would disappear, for they, too, would be the Army and the Army would be of them, too; and the American universal Army then would cease to be looked upon as a class institution, as which unfortunately the present National Guard and militia are regarded by the laborers. It ought not to be used for duty in economic struggles at the request and order of State governors and act in strikes under martial law. A police force of the civil power and State constabularly ought to supplement the local police force where the latter is sufficient to stop violence and bloodshed. The unpopularity of the National Guard and the fear of labor—organized and unorganized—of a large army, such as the country, including labor, needs for the defense of its independence, is largely based on the fact that it has frequently been used as a means to interfere in the right to strike in the hands of panic-stricken governors. Federal control of the Army and a rigid limitation for its use in internal affairs would in time do away with labor's comprehensible but nevertheless unnatural position of hostility toward the Army of national defense.

What do we all hope for the future of America—all of us, both laborers and professional men? The abolitions of abuses of all sorts, greater social justice, more just distribution of the fruits of labor, greater equality of opportunity—briefly, the aims of all of us is to make America some day a better country to live in. It does not matter in which form and by what legal means this highly desirable goal be attained, whether by further exploitation and development of our natural resources in the old capitalistic way or by some new form of effort, be it socialism, trade-unionism, feminism, prohibition, single tax, confiscatory inheritance taxes, or whatever remedy may ultimately be found effectual—all aim at the same goal—to make this a better country to live in at some future day.

But in order to be able to do so we need two conditions: Independence that is the freedom to solve our problems in our own way and peace, which means that this country should not become the battle ground for the coming struggle between the white and the yellow races. Only adequate military preparedness will assure us permanent independence, permanent peace, will permit us to fulfill our destiny in the service of humanity.

Of course, it would mean, to a certain extent, a sacrifice. True patriotism should consist in more than self-praise and boasting of the deeds of our ancestors. True patriotism should have the endurance and unflinching energy which have to be inseparably linked to preparedness and training in peace time. In times of stress and national danger it is time enough to shout about bleeding and dying for the country; but in time of peace the slow and heavy work must be performed, which efficient preparedness requires.

Is the goal not worth the effort? Shall we be praised by future generations for our far-sight, sagacity, and energy, or deserve the blame as selfish shirkers of duty and blind cowards, afraid to look facts straight in the eye? Has not warning been given us?

What shall it be?

The Sisal Situation.

EXTENSION OF REMARKS

OF

HON. THOMAS D. SCHALL,

OF MINNESOTA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, February 20, 1917.

Mr. SCHALL. Mr. Speaker, about 80 per cent of all the henequen in the world is raised in Yucatan. In the beginning of the binder-twine industry, the source of fiber supply was Manila, Calcutta, New Zealand, and German East Africa. A small quantity was raised in Yucatan, and the Yucatan planters were glad to dispose of it at low price. Because of this lower price, we bought more and more from this source, until through our demand the raising of henequen became the chief industry of Yucatan, formerly a barren and ill-producing region.

According to the testimony of Dr. Rendon, attorney for the Sisal Trust, before the Senate investigating committee last February, during this formative period of the industry the International Harvester Co. and the Plymouth Cordage Co. forged ahead in marketing this product. Planters were obliged to sell to these two companies, because of their superior facilities for handling crops and supplying money. Even in the event that some few planters were rich enough to ship to New York, in hopes to get an advance in price, in the end they would find it to their advantage to sell to one or the other of these two companies.

The young industry needed financial backing, and these two veteran companies understood the lay of the ground and by furnishing the sinews managed to keep control of the situation.

The varying fortunes of the Philippines managed to hold the price up, what with revolution and a drought, followed by a typhoon which destroyed a great quantity of the plants. It takes seven years for a plant to mature, so that the natural laws of supply and demand worked to keep the price up. When normal conditions returned, the planters were loath to give up their high prices; so as a result they organized a characteristic bit of government monopoly—the Comision Reguladora del Mercado de Henequen, made up of five persons appointed by the governor—to buy and sell henequen. Up to 1915 the Reguladora had but indifferent success. At that time the Carranza government drew up a contract, which they forced all planters to sign, to turn over to them all their crop, for which they were to receive 4 cents a pound.

This concern, backed by American bankers, has rapidly increased the price to American buyers. The Pan American Commission, organized by two American bankers, has agreed to furnish a credit of up to $10,000,000 for a five-year period. In return they are to receive interest of not more than 6 per cent and a brokerage of $1.125 upon at least 400,000 bales of sisal. There is absolutely no sisal obtainable except through its hands. In the language of Chairman Cox, who introduced the House resolution:

> The ability of this commission to hold its deadly grip on this monopoly depends on its ability to finance the scheme through certain high financiers in the United States. If this merciless trust is permitted to operate, financed by American capital, it will be able to exact any price it sees fit from the American farmer.

Consider that every advance of a cent on a pound means that the American farmer has to pay $2,500,000; and Dr. Rendon, though cross-questioned in vain by the committee, would not give an opinion as to what should be a just price for sisal. He openly expressed it as his conviction that a man had the right to use his position to advance the price of a commodity; anyone would, he thinks. He declined to give assurance as to what we might hope for the future or whether even the present high price was the crest of the wave.

Since the committee closed its investigations the price rose rapidly from 7⅞ cents a pound to 16 cents a pound.

This year farmers paid $4,000,000 more than they paid last year, and they stand to pay $16,000,000 next summer. The committee of the Senate in its report delays action instead of recommending drastic and immediate procedure against those American bankers. They hold back on a technicality. They want further action and investigation by the Department of Justice. They want diplomats to take the matter up. In fact, they seem to want to defer final decision. Evidence filling 804 pages was collected. Even though the administration is back of the Carranza government, which has instituted the Reguladora, the vast farmer populace should be considered, and whether they must be robbed at such a high-handed rate. Why

seek additional information? The time to act is now. The original complaints were put before the Government in December of last year. If the farmers are not to be robbed another and yet another season, with pyramiding prices, let something be done now beyond turning the matter over to the Department of Justice and recommending the farmers to "find something just as good." There is yet time in the present session to act. We should have learned by this time that it is bootless to look to the Mexican Government for justice. But we have a remedy within our own land against these bankers who, in restraint of trade, are giving aid and comfort to an institution so iniquitous.

In this morning's mail I received the following petition, signed by over 70 reputable farmers of Mille Lacs County:

The honorable United States Senators and Members of the House of Representatives from the State of Minnesota:

We, the undersigned farmers of the State of Minnesota, users of binder twine, an indispensable article in the harvesting of our wheat, oats, rye, barley, and corn, respectfully call your attention to the conditions affecting the price of this commodity.

In 1916 we paid an advance of 2 cents per pound over the price of 1915, and we are informed that the price of 1917 will show an additional advance of 5 cents or more. These advances, which have added heavily to the cost of harvesting, resulted from the control and manipulation of the sisal fiber market by a Yucatan fiber commission which receives financial backing from American bankers. This commission has advanced the price of sisal fiber more than 8 cents a pound since it obtained control of the market in the fall of 1915. By action of the Government of Yucatan competition has been completely destroyed, and the bulk of the binder twine output of our country is made from Yucatan sisal.

For additional information concerning the organization and operations of this fiber combination we respectfully refer you to the proceedings of hearings held in February, March, and April, 1916, by a subcommittee of the United States Senate Committee on Agriculture and Forestry.

Believing that nearly all of the advance in the price of sisal fiber is unwarranted and that the combination, consisting of the Yucatan commission and the American bankers, exists in violation of the Sherman Antitrust Act, we earnestly ask your consideration and investigation of the situation with a view to obtaining relief for the grain growers from excessive prices on binder twine, of which approximately 30,000,000 pounds are used annually by the farmers of the State of Minnesota and 250,000,000 pounds by the farmers of the United States.

People Want No War—How Peace May Be Assured.

EXTENSION OF REMARKS

OF

HON. CHARLES E. FULLER,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, February 20, 1917.

Mr. FULLER. Mr. Speaker, under the leave given me to extend my remarks in the RECORD, I submit for printing in the RECORD the following two editorials from the Morris (Ill.) Herald of February 5 and February 12, 1917, as follows:

[From the Morris (Ill.) Daily Herald, Feb. 5, 1917.]

PEOPLE WANT NO WAR.

It is the duty of every American to-day to support the Government in the crisis at hand. What the future has in store no man can foresee. How many lives are to be sacrificed, how much American blood may be spilled in carrying out the conceived policy of President Wilson in upholding national honor, can not now be told. Whether we agree with what has come or not, each citizen has the patriotic duty of loyal support to country as represented by official action.

Mr. Wilson has severed diplomatic relations with Germany; in other words, he has slapped Germany in the face, and in his address to Congress concludes with the statement that he "hopes Germany will not strike back and thus actual war may be avoided."

It is certainly the prayer of peace-loving citizens and the mothers and fathers of this land that there may be no actual war. If war follows, right or wrong as the individual may differ or see it, the Government must be supported and the flag upheld.

That there is a wide difference of opinion can not be denied. No one has the hardihood to contend that Germany or any other nation may attack and sink American vessels and kill American citizens without warning on the basis "provided by international law." But does not the American citizen owe something to his fellow men? Because some citizen, or some group of citizens, in the pursuit of the almighty dollar sees fit to imperil life by insisting on running amuck in the very maelstrom of this world war must millions of lives be sacrificed for it?

Citizens have before now been guaranteed safe passage to and from Europe on American ships flying the American flag. Many have defied ordinary caution and insisted upon sailing on ships of nations at war, and upon ships laden with munitions of war. American ships have carried munitions to the allies. Ships of belligerent nations have made it a practice to have on board American citizens, and the apparent deliberate attempt has been to involve this Nation in the war, and against Germany.

Mr. Wilson himself made it plain that Americans who exposed themselves to the risks of revolution-torn Mexico could expect no protection from the United States. When United States citizens, seeking to expand the sphere of American influence and better their own financial condition by pushing peaceful and legitimate enterprises in Mexico, were robbed, outraged, and driven from their homes, the President of the United States told them, in substance, "Americans shall not be killed because you chose to take the risks involved in order to make money. Get out of Mexico." And the bones of those who did not or could not heed this warning are whitening in Mexican hills and deserts—the murders are unavenged.

No less a national figure than William J. Bryan resigned from the Wilson Cabinet as Secretary of State because of the danger. He insisted "fool citizens" of this country had no right to disregard conditions and by so doing involve this Nation in war. He insisted American citizens be warned to keep away from Europe and out of the war zones unless their business was so urgent they must go, and in that event they sail on American vessels under the American flag, and that the administration see to it these ships carried no munitions or contraband of war to involve any possibility of attack.

The present action of President Wilson may be only to emphasize the fact to Germany that ships on the seas with American passengers must not be sunk without warning, as was the *Lusitania*. God grant none shall be.

American ships are no different than others in time of war. All may be sunk if they carry contraband of war. International law, as learnedly expounded, seems to be that the only requirement to sinking any vessel under such conditions is that it first be warned, its crew and passengers taken care of before it is sunk or towed into port as a prize. The submarine has brought about new conditions.

With all that may be justly said in criticism of German methods on the sea, what of other nations at war with her? Men who have personally been on the ground recite that the atrocities of war are by no means confined to any one of the nations—that one is as bad as the other. We all are quickest to appreciate conditions when "our own toes are stepped on."

It must be admitted the people of this country are indifferent to the world war. There is no conception of its horrors or scope. But if there is a single well-settled opinion in the minds of all people of this country it is that this Nation should be strictly neutral. We submit that the administration has failed in this particular.

When England and the allies two years ago gave notice of the blockade of German ports, there was no outcry by the administration. There was no statement the ports of the world must be open to American ships and American commerce. Germany asked food for starving women and children, for noncombatants, and went so far as to offer to leave distribution in the hands of an American commission to insure the armies should get none of it. England objected, and there was no protest about freedom of the seas from Washington. On the contrary, England has interfered with all American business and shipments that did not directly benefit that country or its allies.

Instead of this country saying then, at a time when many people believe the administration could have wielded a mighty force for peace, "Shipments from America go to all ports of the world; step aside, England and the rest of you; if you do not, you shall have no shipments, no ammunition, no money from America." England dictated the ports to which American commerce might go. American as well as vessels of belligerent nations carried ammunition and contraband of war. It is no secret American prosperity of two years has been based on the manufacture of powder and bullets for the enemies of Germany; that vast sums of money have been loaned by Morgan and others to the English cause.

War is not a social parlor diversion; men in personal combat do not stop to reckon consequences of their acts. They seek annihilation of their adversaries. Germany, in the flush of an army victorious, offered peace. The reply of the allies in effect was, "No discussion of peace until we win and lick Germany and can dictate the peace that is made."

Less than three months ago Mr. Wilson was reelected to the Presidency because of the plea, "He kept us out of war." It was charged then, and with apparent basis, that he used the office to call out the militia and send them to the Mexican border to help establish this idea in the minds of the American people—kept them there and sent them home. The Regular troops have been recalled from Mexico. American bullets have been supplied Mexicans to make war on America, if it comes, and who knows now what will come from that quarter?

Let us look at another condition that has arisen. How much has Wall Street to do with forcing the policy of this Government? Everybody knows big newspapers of this country, representing unquestionably money interests in corporation stocks and bonds and the Morgan war loans, have consistently tried to guide the public mind to the necessity of war—and insistently against Germany. A few days ago a public stock-gambling house with which the brother-in-law of the President was connected "with prophetic accuracy," the testimony was, forecast a peace note.

Barney Baruch, a Wall Street stock gambler, testified he made nearly half a million dollars as the result of the "leak," and then electrified the world with the statement he had been asked by Mr. McAdoo, Secretary of the Treasury and son-in-law of the President, to name a "suitable man from Wall Street to head a Federal reserve bank." And Mr. McAdoo is also shown to be a heavy stockholder in an English corporation operating ships between this country and Great Britain.

Prior to November the campaign cry was that Mr. Wilson was antagonistic to Wall Street and the money interests represented there. Were the people fooled, and is that influence strong enough to sway this Government into a war policy to protect its millions for which the youth of this country must be the sacrifice?

Time will tell. There is not a citizen but hopes Germany will yield to the policy of "international warfare," give notice, and seek to protect life before sinking vessels. This country should adhere to a strict neutrality, and not become involved in this world war. The burdens on the people are heavy enough financially now without the added cost of human sacrifice.

Heedless American citizens should be forced from belligerent vessels by Government action, and American vessels should not be permitted to sail with contraband of war; or, if they do, passengers of every nation should be barred. The crew knows the risks taken.

Many American citizens realize and believe in all this. Yet in the hour of national crisis, whatever the sacrifice, they will consecrate themselves on the altar of their country, even in the belief their Government could have averted the need of it by insisting on the same treatment from all nations they seem determined to exact from one, though that one admittedly has in the exigencies of its situation committed acts on the seas that have horrified humanity and for which it is justly censurable.

If the situation may only develop an early peace, with this Nation in position to insure fair treatment to all interests, the people of the whole world will be duly thankful.

—

[From the Morris (Ill.) Daily Herald, Feb. 12, 1917.]

HOW PEACE MAY BE ASSURED.

This is the anniversary of the birth of Lincoln. He was chosen by the people to direct the destinies of this Nation in the strife of civil conflict.

History tells us of the sacrifice of a patriotic people to loose the shackles of slavery and make men free. It was not a war of commercialism. The sacrifice of human life was not asked to insure the safety of merchandise nor the security of adventurers upon the sea of speculative profits in deals of shrapnel and shell to kill and maim men, women, and children.

Lincoln, the most humane character in the government of all nations, is revered by the people of the Nation, who this day have worshiped at the shrine of his memory and paid tribute to his greatness.

It was Lincoln who proclaimed might did not make right; that right made might, and that you could fool some of the people all the time, part of the people some of the time, but not all the people all the time.

American people have much to be thankful for to-day. The Nation has not yet been plunged into war. It is dangerously near it. While all people, whether with the blood of German ancestry, English, Irish, Scotch, French, or others coursing in their veins, are showing their patriotism and proclaiming their fealty to the American Government and flag, a majority of people do not believe there is necessity for war.

Those who give voice to this sentiment are well aware this is not popular with certain elements of citizenship of the country. Truth publicly spoken is seldom popular, but often salutary. Truth is distasteful to the war propagandists, who have been at work in this country for months with no greater impulse of human consideration than the almighty dollar that blazons their way. All who speak the truth are promptly placed in the category of pacifists, traitors to country, or cowards. They are neither.

The people of the United States do not want war. The sentiment against it is overwhelming. The people will answer the call to the colors if conditions lead the President to go the full course he has started. While men will fight, though they believe plunging this Nation into war is wrong, it will be from a sense of duty and not with the fire of patriotism in their hearts.

The people of this country heard no protest about the freedom of the seas when England closed the ports of Germany to this country. Why silence then and now demand that Germany shall not interfere with commerce to English and French ports? Pray, what is the difference, if this be a strictly neutral Nation?

Admit that Germany assumed too much of the dictator in proclaiming to the United States it could have but one passenger ship a week and only to certain specified ports. The American people can not be misled and fooled into the false idea that American ships carrying ammunition and contraband of war have greater rights on the sea than ships of other nations with like cargoes. The American ship with ammunition and contraband of war is, under all rules of warfare, subject to seizure and destruction by countries at war as those of other nations. The crew of such vessels know full well when they sail from an American port that they are gambling with death. This Nation should not be plunged into war because gamblers lose.

Demand has been repeatedly made in Congress and by the people of this country that American citizens be told by this Government they must not take passage on ships of belligerent nations. And ships of American registry, carrying passengers, should be positively prohibited carrying ammunition and contraband of war. If this had been done or if done now, all chance of war with any European nation would be removed. We insist this Government has a duty to perform in this respect, and that if it does not first do this it has fallen short of the first protective step, and there should be no expectation of the people of this Nation backing up war proclamations.

England refused protection to its people who, in the Japanese-Russian war, took passage on ships of those nations, and strongly urged her people to keep away from the scene of war activities. President Wilson himself has recognized the perils of war and proves the rule of international construction when he announced the same policy toward Americans who went to Mexico to protect their property. Americans can be given no greater rights as against German methods of warfare. War is barbarous. It means death and suffering. No one advocates attack that means death to citizens of neutral nations or women and children even of combatant nations. Death comes because it is a part of war. People of this country should avoid the perils. If they are on ships flying the American flag and this Government saw to it ships carrying passengers carried neither ammunition or contraband of war, that alone would be ample safe conduct through the war zones of the world. If such neutrality and restriction is not enforced by the administration at Washington, it assumes a responsibility that grandiloquent phrasing and declarations of "the cause of humanity" and "victory without peace" can not hide.

If there was a blockade of English ports as there is to-day of German ports, do you think England would hesitate to use submarines and sink vessels in any manner it could? In our own Congress only Saturday was uttered protest on the proposed contention of President Wilson for restriction of submarine effectiveness, for it was stated there if his contention was sound, there was no need of building submarines for this country, as they would be useless for attack of little value for defense if thus restricted.

Little by little the truth comes to the people. As a matter of fact, the newspapers of the larger cities of the country are and have been for months urging war, and their effort has been entirely for war with Germany. They progressed so far the President has severed diplomatic relations. Some of these newspapers recognize the temper of the people and are now toning down their utterances. Others are still clamoring for war. All of them are prompted by financial consideration. They either represent men and interests with loans, contracts, or investments, or are being paid by Wall Street and other financial interests that fear losses, and hence seek to involve this country that they may not suffer money loss. It is stated on good authority that one Chicago newspaper has been paid a sufficient sum for its campaign for war to be made independent—and it cries for war, for the sacrifice of the young men of America, to save the dollars of the plutocratic speculators of Wall Street.

The United States has not been joined by a single neutral country in its break with Germany. All of them have ignored the request of President Wilson for support. Each has announced it would maintain a strict neutrality. Many of them are much closer to the actual conflict of war than America. It is rather a reflection on the statesmanship of America that such countries can keep out of war while this Nation allows the money changers to force us into it.

One Chicago newspaper gives expression only Saturday to the sentiment of all its kind in America, and for which they are being paid with English gold directly or indirectly. That is "that since the United States is not joined and backed by the other neutral countries it can not stand alone and must now of necessity join with the fortune of England and its allies." Is this neutrality?

* * * * * * *

What do thinking people see in all this? Well may we ask where are we drifting? Well may we ask how much the ammunition makers and war shouters have had to do with this program? They have been working for two years to force the people to vast expenditures for preparedness. The people did not see the necessity of adding war burdens in the way of taxes. They are already paying the cost in the high prices of everything. But the war scare has now been turned loose. Congress is appropriating billions of dollars to build ships and for coast defenses. The ammunition factories and the shipbuilders are busy. The people will pay the debts which have been voted upon them and which they do not believe necessary. The money changers of the East are harvesting the dollar crop.

Many people believed two years ago, and still believe, if this Government would stop shipments of ammunition to warring nations, would put embargoes on foodstuffs, for which petition after petition has been sent the Government by the toiling masses, this world war could be brought to a close.

This Nation could, by imposed restrictions, have forced the war to a close. Loans could have been refused. But the vast financial power of the Morgans and others has directed affairs. Judas sold his Master out for 30 pieces of silver. We have preached humanity in one breath in this Nation and in the other have seen men chasing the dollar, ready to plunge this Nation into the seething hell of war to get it within their grasp.

Stop this commercialism, withdraw Government protection from those engaged in it, enact a law that will compel newspaper owners and writers and those who commit any act that would bring about war with any nation, so far as America is concerned, to be the first to enlist and sacrifice their lives, and there will be no more danger of war than there would be of a conflagration from the burning of a match in the open air.

Vocational Education.

EXTENSION OF REMARKS

OF

HON. THOMAS D. SCHALL,

OF MINNESOTA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, February 19, 1917.

Mr. SCHALL. Mr. Speaker, vocational education is the training of boys and girls over 14 for useful employment and greater efficiency and understanding in that employment. The passage of the pending bill is overwhelmingly favored. It is indorsed by the Chamber of Commerce of the United States; it is favored by the various trades-unions; the New Zealand Commission urges it as one means to combat the distress due to the high cost of living. It was advocated by our President in his last message to the Congress.

The bill proposes to grant to the States the sum of $500,000 for the year 1916 and 1917, to be divided on the basis of their urban population, for the salaries of teachers of trade and industrial subjects; this amount to be increased till the maximum of $3,000,000 is reached in 1924–25; $500,000 for the year 1916–17, for the salaries of teachers of agricultural subjects, to be divided among the States on the basis of their rural population, this amount to be increased till the maximum of $1,000,000 is reached in the fiscal year 1919–20; $200,000 annually for the Federal Bureau for Vocational Education, for making investigations of service to vocational schools.

The bill provides for three types of schools to cover various needs: All-day schools, where half of the time is put in on practical work in the vocations; half-time schools, where boys at work may supplement their education by half a day's school training in their vocation; and evening work, where workers of 16 and over may have the benefit of vocational training.

In order to receive the Federal grant the States create State boards through which the national board will work. The States

must formally accept the conditions which the Federal board imposes. For each dollar paid from Federal grants the States must pay an equal amount, and shall, in addition, pay the cost of all plant, equipment, and maintenance. Minnesota will receive for the fiscal year 1916–17, $33,650, while the maximum allotment in the year 1924–25 will be $156,700.

About the age of 12, the youth who is practical minded rather than studious, who is faced by the real necessities of life, finds his interest waning. It must be gripped by a reality or he will quit school, because the studies prescribed do not help in making a living. He will take any job he can get, take the easiest way to pick up a meager pittance, and add one more untrained worker to our problem.

There is a waste to the Nation and a waste to the employer in using young and untrained workers. Young labor is more wasteful, requires more supervision, and suffers more accidents than older, trained labor; hence what the employer saves in wages he loses in these less obvious but no less certain ways. A boy who gets a job at a young age finds only a few occupations open to his untried powers. They are not jobs that lead anywhere. A messenger boy at 20 is still only a messenger boy. The result to the Nation is an ever-increasing army of untrained, sliftting, restless young men.

An alarming proportion of the pupils who enter do not continue after reaching the age when they are allowed to work. Eighty-five per cent of the boys and girls drop out before they are 16. Only about 8 per cent of those who do enter high school succeed in getting through. Only a small per cent of that 8 go to the higher schools and colleges. A large percentage of college graduates fail in life, are misfits; should be doing other things than the work into which the limitations of their education has forced them. Now, the boys and girls who leave school have a right to their share of the public money set aside for education, but no provision is made to take care of them. The schools make no pretense of providing training for employment. They are rather framed all the way up for the small percentage who go to college. Real democracy is not possible where the needs of the select few are so ministered to.

The failure in school that comes from trying to fit the square child into the round hole is senseless and unnecessary. It weakens the child. School failure doesn't mean life failure. Often the classroom "dub" outdistances his ready-learning seat mate when it comes to the practical business of life.

The difference between the good child and the bad child is just a matter of directed energy.

Our schools lead away from life instead of up to life. They fail to impart accuracy. They fail to give knowledge of how to become good citizens. They train students not to love and respect industry, but rather to dislike and despise it. Education is looked upon as a path to a "soft snap." Above all, the schools do not develop a spirit of individual responsibility. The schools, in fact, have fallen into a rut; their perspective is backward. They are slow to break the bonds that fetter them.

Business has changed; old conditions are gone; education must change to adapt our children to their changing environment. A right to vocational training is one of the sacred rights of youth. The world is full of opportunities for the man who is ready for them. Our youth must be equipped with an intelligent brain back of intelligent fingers. Industrial success based on industrial intelligence will aid them not only to make a living but also to make a life.

We need training schools for workers. The day of the apprentice, when a man labored seven years or more to learn the details of his craft, are gone. Industry no longer trains its workmen. Yet we must have skilled workmen, or we can not keep our place in the commercial world. The prosperity of the country economically, its success in trade, relates back to the quality of goods made by its workers. Before the war we got skilled workers from abroad. Before the war it was said that in two years there would not be an unskilled worker in the whole of Germany. The committee, in its report on the bill, notes that we are so far behind Germany that there are more trade schools in Bavaria, whose population is less than New York City, than in the whole United States. We have no national system of training for any occupation in which the masses toil. There is no opportunity any more to learn the business. Workers are taught only the one operation they perform. A boy in trade must be very ambitious and active, while doing his own work, to learn the operation next above him and get that fellow's job.

There should be vocational schools of agriculture within the reach of every farmer boy. The facts of the science of farming, of improving the soil, of increasing crop yield, prevention of blights and pests should be put in possession of the men who till the soil. The farmer boy should grow up with such knowledge. It should be part of his daily training. The little red schoolhouse must about face; its day is past; it is being outgrown. The few months the growing farmer boy can spend in school are too precious to be frittered away under unskilled training. He must be taught, and taught exactly, the things he needs to know—not after he has muddled along somehow, till he can go down for the "short course," but along with the three R's he should take in the principles of scientific farming.

When the Nation prepares its youth for the battle of life it is establishing its first line of defense. It is making an investment that will be returned a thousandfold. It is beyond and above charity, for our present attempts at charity only relieve poverty temporarily. Vocational training will remove poverty by giving the necessary push to the youth without initiative who otherwise would drift into the army of untrained workers.

One occupation depends in its output on the output of all others of its kind and on the demand of all in the community for that output. No other way can social understanding come so quickly to a pupil as through the questions and problems indissolubly connected with vocational education.

Knowledge must interest, or its pursuit is time wasted. To learn a trade is the broadest education possible to the practical type of mind. It is real life, not make believe. There is a zest in the work that brings joy to the worker.

The goal of the vocational school is not alone high mechanical efficiency; not at all the making of first-class tools out of our boys and girls, that more and better goods can be produced at less time and expense to the manufacturer. The chief concern before America to-day is that business shall be for the people, not the people for business.

The chief objection to the vocational school comes from those who say that its aim is material and does not make for culture. Personal culture alone is a selfish ideal. Our supply of merely cultural is overstocked. The truth of culture does not come to those who, in the words of Lowell, lavished life's best years amid the dust of books to find her content at last with the cast mantle Truth has left behind her. The thinker is the man who attains culture, no matter whether he is thinking along mechanical lines or literary, just so long as he is not what Emerson called the parrot of other men's thinking. That is what too many pedants have been satisfied to be. Students have run to weeds in bookish lines.

Reading Greek and Latin is not ample qualification for the world's business. There is a culture of the hand and of the eye, as well as of the memory. When the eye and hand are directed by a clean-cut thinking and concluding brain, the result is culture, even though that brain is unable to express itself in the language of those long since dead.

A man who can mold an instrument of use is as much a man of culture as the man who can mold a perfect English sentence. A school that gives the mind a training in the theory, then applies that theory to the actual experience in helping to perfect the eye and shape the cunning of the hand has a more perfect aim than to give the theory without the practical experience. An ounce of practical experience is worth a ton of theory. The head, the hand, and the heart are all essential, and should be evenly developed to make a great nation. The heart and hand must have head training.

The establishment of such a school would give to our youth faith in his ability to accomplish. An estimable service to the man that has it, and to the nation that has such men. The man that knows that he can do and do well is educated, cultured, has understanding. Opportunity comes to such a man.

Vocational education best expresses the complete development that ideal culture should signify. A man's work is his means of returning to the world what it gave him.

The aim of the vocational school is to train boys and girls to fit their environment; train them to earn good wages, and to know how much their services are worth. Show them a way out and up, light the fire of ambition. Industrial and social efficiency should go hand in hand. The vocational school will teach not only a vocation but the social value of that vocation and the ethical character of the community where the vocation will be carried out. In the old days of the guild no one lived to himself. The members of the guild were one great family. They banded together for mutual benefit and protection. As they gained in individual skill and wealth they gained in commercial wealth, and reared great guild halls that were a monument to the social spirit.

So all vocational training is feeling toward cooperation. A trade feeds the want of the community, ministers to the want of many. The results hoped for from vocational education are these: The average at which the child leaves school will be raised. He will consequently enter his vocation at an age when he will be stronger and more able to cope with toil, will bring to his employment a greater physical fitness. The general aver-

age of education will be higher, when to go on in school will not mean to sacrifice so many more years of wage earning.

There will be a saving of valuable time and a directing of valuable energy when the choice of vocation is based on actual experience, not on mere whim. Aptitude will be discovered early, and the futile and aimless hunting for a job, any old job, the false starts and the discouragements and failures, the dread twilight between graduation and adjustment to one's niche in life will be avoided.

Half the failures in life are a matter of not knowing how to work or how to think, so it does not matter if the ultimate vocation be not immediately discovered. A vocational aim will be inculcated. Deficiencies and bad habits can be noted early and corrected before they become a permanent handicap. The qualities for success in one vocation are not amiss in another.

This system of training will provide compulsory training for the idle. Two classes of waste, national waste, will tend to be eliminated, those who wish to be idle, and those who do not wish to be, but who lack training to command a position. It will bring back into school many of the boys and girls already at work. Another benefit will be that education will not cease when the youth goes to work. There will be a constant incentive to improve, to specialize. A result that will inevitably react on our national life. We are superficial as a nation. With the passing of arts and handicraft we have lost thoroughness and depth and careful efficiency. Here is an opportunity for a broad and deep foundation; the character building that comes through thinking and doing, the culture and depth of the performance of useful and beautiful crafts. "Labor, all labor shall be noble and holy, and our great deeds our prayers to our God."

Ruskin advises girls who would be queens to make every day some fine, strong bit of sewing, make it as well as it can be made, and through doing every day one's best there comes the lesson of the dignity of labor and the value of handicraft.

Modern industry, modern farming, modern trade, look to science for perfection and improvement. Therefore a scientific knowledge of methods and materials, a trained skill, and good mental habits are the need of American education. It is in the vocational schools that the gospel of work can best be taught, its ethical as well as its intellectual message.

In spite of the crushed, mangled, overworked little children that toil in the factories, in spite of the butchery of little ones in the Kongo Free State, in spite of the filth and misery and squalor of the Russian peasantry, and of the immigrants here and in their native haunts—these are but isolated peaks of misery. The fact remains that this is the era of the child. Children are engaging the attention of wise men as never before. There is more thought for the health of the children, their care, their training, their toys even, than ever before. There is an awakening in the conscience and a widening of vision. Society feels its responsibility for the education of the young worker. There is concern as to conditions under which a man or a woman or a child shall work; people are beginning to think about factory inspection, occupational diseases, and old-age and mothers' pensions. The State should see to it that every child is adequately prepared to meet the physical as well as the mental emergencies of life. Ignorance and idleness and incapacity are dangers that menace us. We must meet the social problems of the future by training the children of to-day. Social unrest, the decay of cities, pauperism, and unemployment have existed always and are increasing alarmingly.

The root of the trouble we are facing in the almost continuous series of strikes and labor troubles lies in too unequal a distribution of the goods of this world.

Vocational education is planned to lessen the gap between the few thinking men at the top and the great army of automatic toilers. It will evolve profitable servants of society, not dumb toilers on the one hand and exclusive culturists on the other.

When in Sing Sing Prison an opportunity was given the men to learn a trade over 700 responded. It was the first chance they had ever had to know how to make an honest living. The whole social system of a nation is wrong when a man must go to jail before the State will teach him how to live. Who can say what proportion of these crimes would have been prevented if the same opportunity for training had been given them in youth?

What we now waste through ignorance might in time be prevented by intelligent training in vocational education. The American Nation is the most prodigal and extravagant in the world. We have wasted our natural resources. We have squandered the fertility of our soil without return. We have slaughtered our game till bison to moose, partridge to quail, are all but extinct. We have thrown away great tracts of valuable lands; we have exploited our coal till the supply is limited. measured—we know how many tons remain. The rest is gone. Our forests have been denuded, plundered, ruthlessly cut without reforestation. Vast areas of great valuable timber have been burned through lack of adequate forest protection, or to clear the land for crops.

The tendency of the age in education, as in our national resources, has been one of extravagant waste. There is no conservation of our youth. There is no calculation to eliminate the wanton destruction of material. We eat into the future without regard to what kind of a living place we are making for our children's children. We have wasted our natural resources; let us preserve our youth. Let us stop burning great valuable men by educating them to mental work which they loathe. We have all been created to do one thing better than another. Ruskin says, "Happy is he who has found his work." Let us save our coming men, directing misspent and misguided energies into economic independence and civic usefulness.

Aeronautics.

EXTENSION OF REMARKS
OF
HON. MURRAY HULBERT,
OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Monday, February 19, 1917,

On the bill (H. R. 20783) making appropriations for the support of the Army.

Mr. HULBERT. Mr. Speaker, when the Army appropriation bill was under consideration in the House on the 21st of last June, I offered an amendment increasing the appropriation for aeronautics from $3,775,000 to $14,552,900, and in support thereof stated:

When we remember the fact that it was an American who invented the steamship, and yet that it remained for us to adopt a policy of watchful waiting until other nations had demonstrated its practicability in gaining the supremacy of the seas before we brought into this House and enacted only a few weeks ago the shipping bill, looking to the upbuilding and restoration of a merchant marine, which had fallen away until we found ourselves among the lowest of the maritime nations on earth; when we consider that it was an American citizen who invented the submarine, while we have stood silently by and watched and waited for the nations of Europe now in the throes of armed conflict to demonstrate its utility; when we remember that it was an American who invented the airship, and that we are now taking lessons in its development and demonstration from the other nations of the Old World, it seems high time to me that at least as to this great achievement, given to science, as I have said, by an American, we ought to be the first to appreciate our heritage and take it up in a serious manner and endeavor to demonstrate to the people of the world that we are not ungrateful to our citizens who sacrifice their time and talent in order that they may place at the disposal of their Government these great products of scientific research. I predict that the aeroplane in the future will be the real means for the defense of our country. * * *

Not through any unwillingness on the part of the House, but rather because we have not been progressive in the amendment of our rules of procedure, the immediate consideration of this amendment in the House was prevented on a point of order, but after bringing the facts to the attention of the Commander in Chief of our armed forces and the Secretary of War affirmative action was taken by the Senate, with the result that the House was called upon to, and be it said to its credit did, accept the amendment incorporated in the Senate appropriating $13,281,666.

I had hoped that the Committee on Naval Affairs, which last year allotted but $3,500,000, would profit by this example in making up the naval appropriation bill for 1918, but it seems, however, that they have failed to do so. Sooner or later we will realize that the real naval power of the future will not be able to maintain her supremacy by control of the seas, but must be the mistress of the air and aeronautics.

Under leave to extend my remarks, I insert a telegram from the president of the Aero Club of America to the Secretary of the Navy and the chairman of the Senate Committee on Naval Affairs:

FEBRUARY 18, 1917.

Hon. JOSEPHUS DANIELS,
Secretary of the Navy, Washington, D. C.:
Hon. BENJAMIN R. TILLMAN,
Chairman Senate Committee on Naval Affairs,
Washington, D. C.:

The naval appropriation bill under consideration entirely overlooks the importance of aeronautics. This bill allows only $5,300,000 for aeronautics out of an appropriation of $531,000,000, or less than 1 per cent of the total appropriation. It should be between 10 and 20 per cent, which is the proportion allowed by other countries. Great Britain has been spending an average of $250,000,000 a year on her air service. There is being spent $80,000,000 for aeronautics in Canada alone. Great

Britain, France, and Germany have each over 10,000 aviators, one-third of whom are in daily service. Each of these countries has between 100 and 150 aeronautic stations. The administration of the British air service alone occupies large buildings with not less than 340 offices; the Russian naval air service is in charge of seven rear admirals. The United States Army and Navy combined have less than 200 aviators, including the aviation officers who are in charge of administration work. We should have at least 2,000 aviators and 1,000 operators of military balloons. We should also have 20 aeronautic stations for the Army and at least 1 aeronautic station for each of the 15 naval districts. The most economic solution of getting and training personnel is the establishing of universal training. But if there is a possibility that universal training will not be adopted at this session of Congress, then provision must be made for training 2,000 civilian aviators and 1,000 balloon operators as a reserve. A committee of the Aero Club of America which investigated the possibilities of developing the naval air service are advised that the Navy has not the personnel needed to establish immediately even two additional aeronautic stations, but the problem can be solved by having civilian aeronautic stations established which will train the aviators under the direction of naval officers. Therefore, if the more economic universal training plan is not adopted, provision should be made to establish civilian aeronautic stations under the direction of the Army and Navy, and the appropriations for aeroplanes should be increased to allow three aeroplanes for each aviator. We again urge the adoption of universal training and increasing the appropriation for aeronautics.

ALAN R. HAWLEY,
President Aero Club of America.

River and Harbor Bill.

SPEECH
OF
HON. STEPHEN M. SPARKMAN,
OF FLORIDA,
IN THE HOUSE OF REPRESENTATIVES,

Monday, January 22, 1917.

The House in Committee of the Whole House on the state of the Union had under consideration the bill H. R. 20079, the river and harbor bill.

Mr. SPARKMAN. Mr. Chairman, this is the eighth annual river and harbor bill to be introduced into this body since the policy of annual bills was adopted in 1910, and it carries the sum of $38,167,339, all in cash, as there are no continuing contracts contained in its provisions, it being expected that the amount appropriated will be sufficient to carry on the various works of improvement and of maintenance until the end of the fiscal year 1918, when it is supposed another measure will have been passed.

The estimates furnished by the War Department for works of improvement on old projects and for maintenance, examinations, surveys, and contingencies, amounted to $31,123,000, of which $25,220,000 was for works of improvement and maintenance combined, $5,572,600 for maintenance alone, and $350,000 for examinations, surveys, and contingencies. In going over these estimates, however, in the preparation of the bill the committee found it possible without hampering the work in any way, as it believes, to make reductions in the estimates amounting to $2,059,500. But the committee at the same time found it necessary to add to the estimates in a few instances amounts aggregating $136,000, which leaves a net reduction of the estimates amounting to $1,423,500, thus leaving the amount for works of improvement, maintenance, examinations, surveys, and contingencies at $29,199,500. In addition to this provision for old projects, surveys, and contingencies we have included 81 new projects requiring, to complete, the sum of $47,050,112.

The initial appropriations, however, amount only to $8,967,839, which, with the sums for old projects, examinations, surveys, and contingencies, make the aggregate carried in the bill. These 81 new projects were selected from a list of 167 unadopted projects which had been accumulating since the passage of the bill of 1913, that being the last to carry new projects, with the exception of the one of 1916, which contained a few inserted in the Senate, and which remained there as the measure became a law. The list of new projects from which those in the bill were taken call for sums to complete amounting to about $136,000,000. But it is not expected that all of these projects will be adopted. Some of them will likely not be, while others will require reexamination and revision if they are to be favorably considered at any time. Many of them remaining, however, are worthy and should be adopted in the near future. And right here I wish to say to those who may be disappointed at the action of the committee in leaving these projects out of this bill that they will not have long to wait if the policy of annual bills should continue, because they may be taken care of, those of them that are worthy, in the next bill; if not, then in some subsequent measure of the near future.

In face of the criticism against river and harbor legislation during the past two or three years, unjust and unfair though it has been; in face of the hysteria, if I may call it such, growing out of Treasury conditions, and in view of the fact that nearly all these new projects were worthy, the committee experienced considerable difficulty and embarrassment in the selection of the 81 new projects contained in this bill, but we believe that we have inserted all that are urgent, though not all that are worthy by any means, because, as I have just said, many of those left out are meritorious and should receive early consideration. Our purpose was to select and include in this bill only the more urgent of these new projects, and that we believe we have done.

While it was not the intention of the committee, of course, to select these projects with reference to any particular locality or section of the country, the only basis of choice being that of urgency combined with merit, it will nevertheless be seen that, following that policy, the projects selected are pretty well scattered over the country—on the Atlantic, on the Pacific, on the Gulf, on the Lakes—wherever navigable waters exist.

The largest and most important group of projects in the bill is that embracing New York Harbor and its connecting waters, in which we have included eight new projects, aggregating, to complete, something like $18,000,000, only furnishing, however, about $2,600,000 as the initial cash appropriation. The amount involved is a large sum of money, to be sure, but no larger than the conditions justify. New York Harbor is the most important port in the country, if not in the world. It contains a larger amount of shipping and accommodates a greater tonnage than any other harbor in either hemisphere, not excepting those of Hamburg, Liverpool, and London, the three next largest and most important harbors in the world. Indeed, this harbor, with its connecting waters, is in a class by itself. It gathers from and sends commerce to every part of the world. It is benefited by every section and in turn helps all sections of the country, and is therefore national in its scope. Of course, that may be said in varying degrees of every other navigable waterway in the country, all of which benefit the whole country to a greater or less extent, but I risk nothing in saying that none of them is as important to the commerce of the country as is the harbor of New York and its connecting waters, which we can not afford to neglect now or at any time. Nor have we ever neglected them, at least not for the past two decades. For instance, during the time I have been in Congress, now about 22 years, we have appropriated for New York Harbor something like $27,000,000 or $28,000,000, which, being increased by the expenditures which the adoption of the projects in this bill entail, will amount to about $44,000,000 in all. That, of course, is a large sum of money for any harbor, and yet this harbor needs and deserves it.

Anyone who has visited New York Harbor and taken note of the shipping there has observed its congested condition, a situation more acute than is to be found anywhere else. Nor is it possible to entirely remedy this trouble, for owing to the topographical features there it would be difficult to put that harbor in such condition that the shipping would not be crowded to a greater or less extent, and yet it is our duty to do all we can for that port, which will likely continue to lead all other ports in commerce and shipping.

Now, Mr. Chairman, in this connection I wish to call attention to a class of criticisms indulged in by a few, and, I am glad to say, only a few. The charge has been made, for instance, that the Committee on Rivers and Harbors has, at least, for some time, been controlled in its actions by political considerations. That claim was first made a year or two ago, but at the time I paid little attention to it, although I did once, I believe, refer to it on this floor. I, however, thought it was born largely of political exigencies, and that as soon as the election of last year was over that class of criticisms would cease. But it seems that has not been the case, because in at least one speech recently delivered here—maybe there are others—I notice similar claims are made. But what I want to call particular attention to is an article, or perhaps I should say articles, I saw in one of the great New York dailies a short while ago in which the claim was seemingly made that a spirit of sectionalism was dominant in the preparation of river and harbor bills, and that as a consequence certain waters in what is termed the Northern States are neglected. The argument, if such it may be called, runs something like this:

New York contributes so much to the United States Treasury; Chicago, so much; this State, so much; and that State, so much; and yet they only get so much, a very small amount, in the river and harbor bills.

In answer to that I want to say, in the first place, that neither the State of New York, nor the city of New York, the city of Chicago, nor the State of Illinois contributes one cent to the Treasury of the United States. What goes into the Federal Treasury comes from customs receipts collected upon articles brought into the country from foreign lands upon which duties are levied, but those commodities are carried into every part of the United States for consumption by the people who ultimately pay those duties—indirectly, we will say, but they pay them, nevertheless. I do not wish, however, to enter the domain of tariff discussion or give a great subject like river and harbor improvements a political turn; but I think we will agree that somebody pays these taxes, and that it is the consumers who do it; certainly it is not the States or the cities of the country.

Mr. MADDEN. Will the gentleman yield for a question?

Mr. SPARKMAN. Certainly.

Mr. MADDEN. One of the statements that I understood the gentleman from Florida to make was that while the receipts came into the city of New York and the State of New York and into the city of Chicago and the State of Illinois, that neither of these cities nor States, any of them, as such, pay anything?

Mr. SPARKMAN. That is what I said.

Mr. MADDEN. Nor the people of these cities or States?

Mr. SPARKMAN. No. I did not go that far.

Mr. MADDEN. The gentleman would concede, however, that the city and the State as such would be entitled to credit for what its citizens pay as income tax, at any rate?

Mr. SPARKMAN. Oh, no; I would not, for the reason that the people who pay income taxes are citizens of the United States and do not pay those taxes as citizens or residents of any particular city or State. They do not pay them alone for the benefit of New York or Chicago or any particular place but as citizens and for the benefit of the entire country. Patriotism should and, I trust, does have something to do with it. Moreover, these heavy income-tax payers live and do business in those great centers as a matter of choice, many of them for business reasons and because they can increase their earnings and incomes there, which, by the way, come from and are contributed by all sections of the country—North, South, East, and West.

Let me illustrate in part my position by a reference to the city of Tampa, or rather to the harbor upon which the city of Tampa is located. It is my home town and, incidentally, I will say, is the seventh port in the country in the matter of customs receipts. New York, Philadelphia, Boston, New Orleans, Chicago, and San Francisco are the first six, Tampa coming next and ahead of Baltimore, Seattle, Buffalo, Cleveland, Savannah, Charleston, Norfolk, Mobile, Galveston, and every other place except those first above mentioned.

Now, since I have been a Member of this body, the income to the Government through the port of Tampa and her industries has been fifteen or twenty times what the harbor of Tampa has received from the General Government for its improvement and three or four times as much as the waterways in the entire State of Florida have received. Yet, Mr. Chairman, I have never thought of contending here or elsewhere that we were being improperly treated because we did not get every dollar back, or even a considerable part of what the customhouse and the industries at Tampa paid into the Treasury or contributed to the support of the Government. Suppose that contention were carried to its legitimate results? Why, there would be nothing left for the support of the Government. The argument is fallacious and carries with it its own refutation.

Another complaint takes about this shape:

> The South is in the saddle; the chairman and a large number of the Committee on Rivers and Harbors are from that section, not to mention other committees, and therefore the projects in the South receive better treatment than those elsewhere.

Aside from the unpleasant inference one might draw from the charge, or insinuation, if you please, the deduction is not a fair one, nor do the facts justify the claim. The chairman of the Committee on Rivers and Harbors does live in Tampa, which is situated in Florida, one of the Southern States, while six other members of that committee are also from the same section, and, according to the claim of this class of critics, the chairman and these 6 other members dominate the remaining 15 members and take the most of the appropriations to the districts and States represented by them. Do you believe that the other members of that committee are of so little influence or of such weak voting strength that they are absolutely dominated by the chairman and the other six members from the Southern States? Certainly no one else believes that, and I feel confident that upon reflection those who give voice to such a claim will change their views.

Mr. Chairman, I can say of a truth that during the 22 years of my membership here and the more than 20 years that I have been on the Committee on Rivers and Harbors I have never thought that any member of that body was influenced in the least by sectional motives in the making up of river and harbor bills. Each member of that important committee, no matter from what section he came, whether from the North, South, East, or West, has in that great work been influenced alone, in my judgment, by the merits of the project under consideration and what he considered his duty to the whole country.

Among the members of that committee during those years have been such men as D. S. Alexander, of New York; George P. Lawrence, of Massachusetts; James H. Davidson, of Wisconsin; Roswell P. Bishop, of Michigan; Gen. Thomas C. Catchings, of Mississippi; Rufus E. Lester, of Georgia; Walter Reeves, of Illinois, besides a number of other distinguished Representatives, including the Hon. Theodore E. Burton, of Ohio, long chairman of the Committee on Rivers and Harbors, all of whom have, in dealing with the great problems presented to that committee, shown that they were above sectionalism, and could, and did, take a broad and patriotic view of the work they were called upon to do.

Mr. Chairman, let us turn again to Florida, as that is the State from which I come and, on this account, has received some attention by critics of river and harbor legislation, at least, during the last two or three years, the claim being, as I have just stated, that the projects in that State have received more than their share of attention. Now, during the entire history of Florida as a State her navigable waterways, comprising more than 25 harbors and upward of fifteen hundred miles of rivers, have received about $18,000,000, of which about $15,000,000 have been appropriated since I entered Congress in 1894. But of that $15,000,000 only about $4,000,000 has been furnished since I have been chairman of the Committee on Rivers and Harbors, leaving the much larger sum of about $11,000,000 as the amount appropriated for Florida waters after I entered Congress and before I became chairman of the committee.

Mr. MOORE of Pennsylvania. Mr. Chairman, will the gentleman yield?

Mr. SPARKMAN. Yes.

Mr. MOORE of Pennsylvania. Will the gentleman just state the shore line of Florida while he is on the subject?

Mr. SPARKMAN. Yes. Counting the sinuosities of the shore line it is more than 1,800 miles; not following them, but running on straight lines from headland to headland, we have about 1,500 miles of seacoast.

Mr. MOORE of Pennsylvania. Fifteen hundred miles from one end of the State to the other?

Mr. SPARKMAN. Yes.

Now, how much of that $4,000,000 do you suppose has been appropriated for the projects in my own district since I became chairman of the Committee on Rivers and Harbors, outside of those adopted prior thereto? The insignificant sum of $51,000. That is to say, of the entire amount appropriated for projects in that State since I became chairman only $51,000 have been furnished for projects in that district adopted since that time. But I am not complaining of the treatment accorded to Florida projects at any time, for most of those indorsed by the engineers have, up to this time, been very properly adopted and carried to completion. But this treatment has not been the result of any discrimination in her favor or against any other State or section.

In this connection I wish to call attention to a table I have here and which I will print with these remarks showing the amounts appropriated for projects in the different sections since I have had the honor of presiding over the deliberations of the Committee on Rivers and Harbors. I find that $45,899,056 have gone to projects in what might be called the Northern States, $41,181,721 to those in the Southern States, and $19,000,000 for projects in the Pacific Coast States, which in the sectional sense meant by such critics are properly classed with the Northern States, so that we would have $65,000,000, in round figures, as the amount appropriated for works in what you might call the Northern States since I have been chairman of the committee and $41,000,000 for the Southern States.

These figures do not include the Mississippi, Ohio, and Missouri Rivers, which, being essentially and broadly national, should, in my opinion, not be charged to any section. The projects for the improvement of these rivers were adopted prior to the time I became chairman of the committee, which was subsequent to the passage of the bill of 1911; but since and including the bill of 1912 there had been appropriated for these streams, as will be seen, sums ranging as follows: $36,353,000 for the Mississippi, $7,175,000 for the Missouri, and $22,068,500 for the Ohio, or upward of $65,000,000 in all.

I may add further that appropriations for these three rivers have for the past several years made up more than a third of each river and harbor bill, and that more than one-half of the amounts yet to be appropriated for old projects is to go toward the completion of the projects for their improvement adopted in the bill of 1910. So that, eliminating them, you dispose of the larger part of the work yet to be done outside of the new projects in this measure.

Table showing amounts appropriated and allotted under river and harbor acts from 1912 to 1916, inclusive, for the country by sections.

Year.	North.	South.	Pacific coast.	Alaska, Hawaii, and Porto Rico.	Mississippi River.	Missouri River.	Ohio River.
1912	$7,429,070	$7,619,050	$3,196,750	$206,000	$8,945,000	$1,025,000	$5,600,000
1913	13,010,855	12,040,321	6,051,218	225,000	9,001,000	2,325,000	5,550,000
1914	4,125,530	5,103,750	2,442,500	100,000	4,954,000	900,000	1,760,000
1915	6,863,246	5,678,050	3,483,175	43,000	5,371,000	1,100,000	3,640,000
1916	14,470,355	10,740,550	4,242,200	376,800	8,082,000	1,825,000	5,509,500
Total	45,899,056	41,181,721	19,415,843	1,050,800	36,353,000	7,175,000	22,068,500

So you will see, Mr. Chairman and gentlemen of the committee, that there is no ground whatever for this charge of sectionalism. Every section of the country has received the same treatment, the purpose always being to adopt projects and make appropriations upon the merits of a proposition and in accordance with the demands of the commerce to be accommodated. To these considerations we have looked, and to nothing else, and as long as I remain in this body and have responsibility here I shall adhere to that rule and never consciously depart from it. [Applause.]

Mr. Chairman, I wish further to call attention to the small number of surveys carried in this bill, being only 51 in all. These may be increased on the floor or in the Senate; I do not know as to that. But at present the bill carries only 51, which is quite a falling off from those carried in other and recent bills. The act of 1915, for instance, contained 209 surveys. The act of 1916 128, while this bill only provides for 51.

Another matter to which I wish to direct attention in this connection is the small number of surveys, relatively speaking, that have been reported favorably by the engineers. I hold in my hand a statement from the War Department, which I will also print herewith. This statement, prepared recently, shows the number of surveys ordered since and including the year 1902 down to and embracing the year 1916. They aggregate 1,934. Of those, 1,723 have been examined, 637 being reported favorably, 1,066 unfavorably, leaving only 231 yet to be considered. So you will see that about 36 or 37 per cent only of the surveys ordered by Congress during the years mentioned have met with favorable action at the hands of the engineers:

Statement showing number of surveys ordered since and including 1902, together with disposition made of them.

Authority for investigation.	Number of investigations ordered.	Number reported on to Dec. 1, 1916.	Number favorable.	Number unfavorable.	Per cent of favorable reports.

[1] No recommendation regarding worthiness in 2 cases; reduction in 1 case.
[2] No recommendation regarding worthiness in 4 cases.
[3] No recommendation regarding worthiness in 7 cases.
[4] No recommendation regarding worthiness in 3 cases.
[5] No recommendation regarding worthiness in 1 case.

It is interesting also to one so minded to note the percentages of favorable recommendations during the several years mentioned. In 1902 there were 30 per cent of the surveys of that year favorably reported. In 1905, 42 per cent. In 1907, 54 per cent; that is on the bill of 1907. Then they began to fall off. In 1909 there were 43 per cent favorably reported; in 1910, 33 per cent; in 1911, 31 per cent; in 1912, 32 per cent; in 1913, 36 per cent; in 1915, 15 per cent; while for 1916 there were 20 per cent.

The point I wish to stress, however, is that while the number of surveys has been of late decreasing from year to year, the percentage of those favorably reported has likewise been decreasing, which shows, to my mind—as I have contended heretofore—that we have reached the high-water mark of river and harbor improvements and that soon we will have arrived at the point where the annual appropriations for the improvement of rivers and harbors will be reduced to small sums compared with what they are now. That can also be easily demonstrated by a study of the reports, noting the character of the improvements heretofore made and being made, together with the present condition of the various waterways throughout the country.

I risk nothing, I think, in saying that the great bulk of river and harbor work for purposes of navigation alone has been done, and that after the completion of the projects herein adopted and those yet before Congress little of original work of improvement will then be left. Of course completed projects will have to be maintained, but the cost will not be great. Then, too, some channels will have to be lengthened, others deepened and widened from time to time, so as to keep pace with the increased commerce and the growth in dimensions of vessels, but the expense of this work will not be enormously large.

I called attention to this condition and made a prediction of the future of river and harbor work when the bill of 1914 was under consideration. I then stated that, with the projects heretofore adopted and under way—calling for completion something like $250,000,000—together with those adopted in that bill and other projects likely to be presented in the near future, the amount of expenditures in the next 25 years would not exceed much, if any, $450,000,000 for legitimate river and harbor work. Since then I have had no occasion to materially change these figures, as I still believe they are approximately correct, unless we go into other schemes of waterway improvement not strictly for the purposes of commerce and navigation. Then, of course, the cost will be increased in proportion to the extent of these added activities. But, if this is done, it is to be hoped that the people will reap adequate benefit therefrom.

Mr. STAFFORD. Mr. Chairman, will the gentleman yield?

Mr. SPARKMAN. Certainly.

Mr. STAFFORD. The gentleman is just about completing 22 years of very useful service to the country, and we are all deeply regretful that he is going to terminate his service in the House, and especially in this work. I would like to get some valuable information, which I know he can give me. Can the gentleman now estimate the total amount which he believes will be required to complete all the projects, as far as river and harbor improvement is concerned? The gentleman was just on that subject. What is the maximum amount that the gentleman estimates will be necessary to complete those projects which have been recommended as worthy?

Mr. SPARKMAN. Not going beyond those that have heretofore been recommended?

Mr. STAFFORD. Not going beyond those that have been recommended.

Mr. SPARKMAN. There are at this time on the books projects calling for $182,000,000 to complete. This bill adds about

$47,000,000 more, making $229,000,000 in all. Now, this $47,000,000, taken from $136,000,000, the amount of the new projects before Congress, leaves $89,000,000 for future consideration, which, added to the $229,000,000, makes $318,000,000, the sum for which we would be liable if we should adopt all the projects recommended, something we are not likely to do; and I think it safe to eliminate from that amount at least $50,000,000 for projects not likely to be undertaken in the next quarter of a century. Adding to this list, then, of $318,000,000 thus reduced $75,000,000 for contingencies would leave the amount necessary to make all needed improvements for navigation purposes during the next 20 years, which, in my judgment, is a conservative estimate, unless some contingency should make a more radical treatment of some of our harbors necessary.

Of course, the gentleman understands, that even when the unadopted projects are completed the channels in some of the harbors will, in the not distant future, have to be deepened and widened and some of them lengthened, but not to any great extent, as I believe. The channels in New York Harbor, for instance, or at least the most of them, will have to be deepened to 40 feet. The channels in some others may also have to be improved beyond the dimensions required by existing projects, but this can all be done, I believe, well within the estimate I have made.

Mr. KINCHELOE. The gentleman speaks of $75,000,000 for contingencies. What field of improvement would those contingencies cover?

Mr. SPARKMAN. When I used the word "contingencies," I meant work that we can not foresee now, but which may be found necessary. This I illustrated by reference to New York Harbor, saying, further, that in some places channels would have to be lengthened and widened and in a few places deepened, but not to any great extent, during the next two decades, at least.

Mr. KINCHELOE. The point I wanted to ask about was: In these contingencies, would improvements be included which would enable a boat on an inland river to get to some landing or harbor? Would that be included in the purview of such contingencies?

Mr. SPARKMAN. I should say, yes; wherever it is a class of work proper to be undertaken by the Government.

There are places where a channel has been constructed near to a wharf and where Congress has left to individual or local enterprise the carrying of the channel up to the wharf, while in other instances the Government has done the work itself. At Tampa, for instance, my home town, the Government, under a project now about completed, has constructed a channel having a space of 50 feet between the channel and the wharf, to be deepened by the owners of the wharves. That may be a hardship on those people, but the engineers recommended it, and Congress has not seen proper to override their recommendations. The gentleman from Kentucky perhaps has in mind a piece of work at a town in his district on the Ohio River. I have looked into that matter somewhat, and it occurs to me that it is work which could readily and properly be done by the War Department under the appropriations made for open channel work in that river.

Mr. KINCHELOE. If the gentleman will permit a further interruption, that was the project I had in mind. Now, as far as business is concerned, this place is second between Evansville and Cairo, but the engineers have made an adverse report. We have asked that the sand bar be not all of it removed, but that there be a place wide enough for the boats to get in and out. Yet I am sorry to say we have been unsuccessful in having that little work done.

Mr. SPARKMAN. I know little about the matter except what I learned from the gentleman and a conversation I had with one of the engineers who, not having his attention called to it until recently, had not investigated to any great extent. He promised, however, to look into it and advise me later, but has not yet done so. Being under the impression the work could be taken care of out of the appropriation we make for open-river improvement, we did not put anything in this bill for it. As there is a large sum on hand for that class of improvement, sufficient to last until another bill can be passed, I should think the engineers could take care of that work to the extent needed under some equitable arrangement between the Government and local interests.

Now, Mr. Chairman, I want to call the attention of the committee to a provision in the bill creating a commission composed of four departmental secretaries, those of War, the Interior, Commerce, and Agriculture, together with three Members of the Senate, to be appointed by the President of that body, and three Members of the House, to be named by the Speaker, for the purpose of investigating as to the feasibility and advisability of coordinating all the different uses of navigable waters, especially rivers, with their development for the purpose of navigation. This commission is required to investigate, and if they find such a thing practicable and advisable to report a plan therefor to Congress for such action as it may deem advisable. In addition to this the commission is required to investigate and report as to the advisability of a more comprehensive plan for waterway improvement in the interest of navigation, and, if the same is advisable, to report plans for that purpose.

I think this very important and ought to remain in the bill. Several considerations lead me to that conclusion. In the first place, there seems to be quite a sentiment in favor of such a plan. Just how numerous its advocates may be we need not stop to inquire. It is sufficient that they are quite numerous and constantly growing in numbers. For that reason I think we should appoint the commission and have the investigation made.

But, Mr. Chairman, what is more to the point so far as I am concerned is that I think we have about reached the place, not only in river and harbor improvement, but in the development of the country as well, when such work as that contemplated by the creation of this commission might well be undertaken. There is also a demand, more or less insistent, for connecting by canals the various improvements already made or under way.

Now, one to which I will refer particularly, and which has been strongly recommended not by Government engineers, I believe, but by civil engineers, is a plan to cut a channel across from Lake Erie to the Ohio River, thus connecting those two great waterways. There is also another for a channel from Lake Michigan to the Mississippi River. These may not be undertaken this year, nor the next, nor yet the next, but, in my opinion, the work will be done sooner or later. Then, there is the intracoastal system, condemned by some in unmeasured terms, which, however, if completed, would connect nearly every harbor in the country, one with another. Embraced in this is a plan not yet recommended, however, by the engineers in its entirety, for a waterway from Boston to Key West, Fla. Another has been projected and recommended in part across the State of Florida, while a third already before Congress runs from St. Andrews Bay to the Rio Grande. When these plans are carried out and the different links completed there will be a continuous system of waterways from the northern part of the Atlantic seaboard clear around to the Rio Grande, connecting all the harbors of that immense stretch of seacoast and the rivers that flow into the Gulf and Atlantic from Boston to our southern boundary.

Water-power development by the building of reservoirs is another thing, as we know, that can be properly undertaken in connection with improvements for the purposes of navigation and for flood protection. I have one such place in mind just now, that of the Allegheny River, where engineers have thought that the flood waters could be collected in reservoirs constructed up toward the head of the stream and the water used for the development of hydroelectric power, thus conserving the coal supply in that section, a very praiseworthy object, and one well worthy the attention of Congress and the careful study of such a commission as is provided for in this bill.

Then there are also places, many of them, where land can be reclaimed in connection with the improvement of rivers for the purposes of navigation without increasing the expense of such improvement to the Government, as the cost of the reclamation made would be borne by local and private parties.

So, viewed in all its bearings, I think the provision we have in this bill for the appointment of a commission—not a permanent commission at present, but one simply to investigate and report to Congress a plan for the various purposes mentioned—a very important one, and that it should remain in the bill. Let me also add that I sincerely trust it may not be stricken out.

Now, Mr. Chairman, I wish to refer again to the spirit of criticism more or less prevalent against river and harbor legislation. I do not object, and no one else should, to fair and legitimate criticism of any measure presented to Congress, but in order that criticism may be fair it must have a legitimate basis. It must be predicated upon facts. I do not care, provided the facts are correctly stated, what deductions a critic may draw from those facts, for then the members here, as well as the reading public, will know whether the deductions are correct and the argument sound; but the trouble with the most of these criticisms is that the facts are not always correctly given. Too much of loose statements are presented for facts, and these statements, with the arguments founded upon them, going out over the country have done great harm to legitimate river and harbor work and the legislation necessary to carry it on.

I have not the time to call attention to all of the statements which I regard as unfair and inaccurate. I do not claim that anybody has willfully made them. Indeed, I am sure no one has intended to do so, and yet, I fear, they will not bear the test of close scrutiny. I see my good friend, Mr. FREAR, of Wisconsin, is present, and I wish to call attention to several mistakes, or what I regard as such in a document recently submitted by him to this body, as it will illustrate the point I am making. I have in my hand the minority views filed by the gentleman, and I wish to read a little from some of the statements made in it: First, I want to say, as I have already said, that I have no idea that my friend intended to convey any erroneous impressions. My knowledge of him, gained while sitting with him here, and my association with him upon the committee during the last two years, have convinced me he does not intend at any time to mislead. I quote first from his minority report, page 1:

Nowhere will be found evidence of wasteful methods in governmental affairs to be compared with the autocratic demand of Army engineers in 1917 for the following amounts from Congress.

Now, sending such a statement as that out through the newspapers, or by printed document, to the public, to be read by people who do not understand the functions and duties of the engineers would tend to create the impression that these engineers are in position to autocratically demand appropriations from Congress, while nothing could be further from the actual facts. The engineers submit estimates to Congress; they make no demand upon it. They present estimates in obedience to our demands, as they are required by law to make them. They are not autocrats in any sense of the word, but are the servants of Congress in such matters, and can not, and do not, make any demands upon us; and yet, one unfamiliar with the facts, and reading my friend's report, would naturally believe that we are actually subject to the demands of the engineers of the War Department and must do their bidding. Now, I submit that it is unjust to us and to these engineers to hold them up as autocrats, as having and exercising the power to come before Congress and demand action at its hands. The tendency is to create erroneous impressions in the minds of the people and thus to weaken us in our efforts to serve them.

Mr. HUMPHREY of Washington. Mr. Chairman, will the gentleman yield?

Mr. SPARKMAN. Yes.

Mr. HUMPHREY of Washington. As a matter of fact, the engineers never make any recommendation or reports except those which they are required to make by law.

Mr. SPARKMAN. That is correct.

Mr. FREAR. Mr. Chairman, will the gentleman yield?

Mr. SPARKMAN. Yes.

Mr. FREAR. Just to bring this clearly before us, what the gentleman objects to is the term "autocratic demand," as I understand it so far. Is it not true that practically all of the recommendations, or whatever you may choose to call them, of the Army engineers have been accepted entire by the committee—practically all, with the exception of the upper Mississippi, where I recommended that $800,000 be stricken out, and a few other smaller projects. Have we not accepted their figures almost entire in the average case?

Mr. SPARKMAN. I will say to the gentleman that his own report shows that we have not done that. I also have here a list of the reductions, some 30 or 40 of them in all, showing that we were not tied down to the estimates of the engineers, but have in various instances departed from them, cutting them quite freely.

Mr. FREAR. Immediately in connection with that statement appears the list of $18,000,000, or very nearly that, recommended by the Army engineers for eight projects. Is there more than one project in that list in which a change is made by the committee, and that one project the one that I recommended?

Mr. SPARKMAN. I will come to that presently.

Mr. HUMPHREY of Washington. Mr. Chairman, will the gentleman yield at that point?

Mr. SPARKMAN. Certainly.

Mr. HUMPHREY of Washington. I would like to call the gentleman's attention—and I hope he will impress it upon the committee—to the absurd position taken by the gentleman from Wisconsin [Mr. FREAR] in these minority views. Congress has nothing upon which to base an estimate of what these projects will cost except the report of the engineers. The engineers are experts, and they are there for that purpose. It seems to me that if the committee attempted to follow somebody else we would be not only derelict, but verging on idiocy. These engineers are experts, and they have expert knowledge, and it is only proper that we should follow what they recommend.

Mr. FREAR. I want to submit that the argument of the gentleman from Washington [Mr. HUMPHREY] justifies absolutely the proposition that I make, and I accept it. There is no question about that.

Mr. HUMPHREY of Washington. The impression that the views of the gentleman from Wisconsin would make upon the average reader, and upon the newspapers of the country, is that the engineers have the right to demand this money, and that they come before the committee and that we submit to their autocratic demands without regard to the fact of whether they are just, and without his explaining that they are only experts who are required to pass on these projects, which are technical, and that they have expert knowledge and that they are there for that purpose, and they are the only reports we have.

Mr. SPARKMAN. It was just that feature to which I wish to direct the attention of the House.

Mr. McKENZIE. What has been the policy of the gentleman's committee where a survey has been ordered by the House or recommended by the committee and the engineers report adversely upon the project? Has it been the policy of the committee to follow strictly the recommendations of the engineers in all such cases, or does the committee assume the right occasionally to make the appropriation over the heads of the engineers?

Mr. SPARKMAN. It has not been the custom of the Committee on Rivers and Harbors for several years to recommend the adoption of any project that has been reported upon adversely by the engineers.

Mr. MOORE of Pennsylvania. Mr. Chairman, will the gentleman yield?

Mr. SPARKMAN. Yes.

Mr. MOORE of Pennsylvania. I want the gentleman to respond as to one or two cases in point. Is it not a fact—as showing that the committee does exercise judgment in these matters—that in the Schuylkill River project while the engineers recommended upwards of $600,000 and that the committee allowed only $300,000?

Is it not a fact also that in that other very great improvement, the Delaware River, where it is important to complete the work and save money to the Government, that on several occasions the committee has cut down the estimates of the engineers when they desired larger appropriations in order to hasten the work?

Mr. SPARKMAN. Yes; that has been done.

Mr. MOORE of Pennsylvania. Is it not a fact, too, in respect to the Chesapeake & Delaware Canal, which has been reported upon several times, where the engineers recommended the appraised price of $2,500,000, that the committee in this bill has allowed only $1,300,000?

Mr. SPARKMAN. Yes.

Mr. MOORE of Pennsylvania. So that this committee on important projects does exercise some judgment. Is not that a fact?

Mr. SPARKMAN. That is correct.

Mr. FREAR. Will the gentleman yield?

Mr. SPARKMAN. I will.

Mr. FREAR. I now wish to ask the gentleman from Pennsylvania, is it not true that this bill four years ago provided the identical figures of $1,300,000 in the House, and it was immediately doubled to $2,500,000 in the Senate, for the very reason that this does not meet the requirements of the Army engineers for the original purchase? It means nothing at all.

Mr. MOORE of Pennsylvania. The gentleman from Pennsylvania answers that the House committee has too often attempted to pare down items that were deserving of better treatment, in order to bring down the total appropriations. It does not always work economy.

Mr. SPARKMAN. When we reach that item under the five-minute rule I suppose there will be some discussion on it, and I will then give, if it should become necessary, the reasons for reducing the amount to $1,300,000.

Mr. DUPRÉ. Will the gentleman yield?

Mr. SPARKMAN. I will.

Mr. DUPRÉ. Is it not a matter of fact the appropriation recommended by the engineers for Southwest Pass was $2,000,000 and it was reduced to $1,675,000?

Mr. SPARKMAN. I do not recall the figures, but the reduction was something like that. Replying further to my friend from Pennsylvania [Mr. MOORE], we did make these reductions, but we did not to make them arbitrarily. We had reasons for every reduction we made. Now, if the great work of improving the Delaware River had been put under a continuing contract originally, I think it could have been done much more cheaply and would no doubt have been finished long ago. Now, one further matter referred to in the report of my friend from Wisconsin.

The gentleman, referring to other projects, the Norfolk and Beaufort waterway, the lower Missouri, upper Mississippi, the

central Mississippi, Mississippi Passes, Ohio canalization, lower Mississippi, and Cumberland Rivers, has this to say:

Deducting from glittering commercial statistics sand, timber, and coal, all actual river commerce reported on the eight projects probably does not equal that handled at the little harbor of Ashland, Wis., nor one-half that of Milwaukee, nor Chicago, nor one-quarter that of Boston, Buffalo, Cleveland, or many other harbors that could be named.

Well, if coal and iron are not actual commerce I do not know what the gentleman would designate as such. I do not know of anything more important than coal and iron in this country to-day, and while sand is a very low grade of freight, it is of very great importance and ought to be counted not deducted from the reported commerce of a stream or other waterway.

Mr. FREAR. Will the gentleman yield?

Mr. SPARKMAN. I will.

Mr. FREAR. I concede all the gentleman has said in regard to that, but will the gentleman read the second paragraph of the subheading explaining why that deduction is made?

Mr. HUMPHREY of Washington. Will the gentleman yield before he gets to that?

Mr. SPARKMAN. Certainly.

Mr. HUMPHREY of Washington. I just wanted to ask the gentleman whether in the minority report of the distinguished gentleman from Wisconsin if he counted out iron ore——

Mr. FREAR. No.

Mr. HUMPHREY of Washington. How much commerce would be handled at the great port of Ashland and Milwaukee and on the Great Lakes if it was not for the iron ore there?

Mr. FREAR. I say in my report:

The reason for deducting sand, coal, ferriage, timber, and duplications from absurd river reports furnished by the Chief of Engineers is because sand and gravel dug from the river and hauled from a half mile to 1 mile, together with ferriage statistics across the Mississippi, Missouri, and Ohio Rivers, in no way require deep channels, yet such items make up the major part of the elaborate commerce and of freight valuations reported by the Chief of Engineers on these rivers.

That is the idea.

Mr. SPARKMAN. The gentleman, I believe, said coal, sand, and ore.

Mr. FREAR. I have not mentioned iron ore.

Mr. SPARKMAN. If you deduct that from the harbor of Ashland there would not be much left. Iron ore constitutes four-fifths of the commerce of Ashland, and if you deduct it from the commerce at one place why not deduct it from that of the other? But, I say it ought not to be deducted. Iron and coal are important articles of commerce, so also is sand when transported to be used, as it often is, for building and other purposes.

Mr. FREAR. Will the gentleman yield?

Mr. SPARKMAN. Certainly.

Mr. FREAR. For 40 years that coal went down the Ohio River in larger quantities than it does to-day with a larger increased depth. That is the point I want to impress.

Mr. SPARKMAN. Well, I am an optimist, I am not a pessimist. I think, however, one pessimist in a community is a good thing. Similarly I think one pessimist in the House of Representatives, with its 435 Members, is also a good thing, but not more than one ought we to have here. [Applause.] That remark is entirely impersonal. I am not a pessimist; I am an optimist, here as elsewhere. When I look at the work on the Mississippi River and glance into the future of the country through which it runs I can but regard that as one of the most important improvements we are making. By these improvements of the lower, the middle, and the upper reaches of the river, more than 2,000 miles in extent, we have created, with its tributaries, one of the greatest systems of waterways in the world, and it is well worth the money we are spending upon it.

Mr. DYER. Will the gentleman yield for a suggestion?

Mr. SPARKMAN. Yes.

Mr. DYER. I just wanted to state that I thoroughly agree with the statement made by the chairman, and that St. Louis is now building docks and terminals and getting ready to use them for commercial purposes, hauling freight to New Orleans, and laying it upon ocean vessels, to take advantage of the water route to China and the Far East.

Mr. SPARKMAN. That is true, and I am glad to know it. I am informed other places are doing the same thing. I saw the other day the statement that the people of Minneapolis were getting ready to utilize the river for navigation above the high dam and the lock constructed between Minneapolis and St. Paul. They are also preparing all up and down that river to utilize the improvements we are making, all going to prove that the work we are doing is important and will result in great benefit to the people through those sections of the country. [Applause.]

Mr. FOSTER. Will the gentleman yield for a question?

Mr. SPARKMAN. Certainly.

Mr. FOSTER. I notice that last year the bill carried, on page 14, a provision for the levees, and so forth, on the upper Mississippi River. Does the gentleman carry that in this year's bill?

Mr. SPARKMAN. We think the language used sufficient to take care of that.

Mr. FOSTER. Is the language broad enough to carry it?

Mr. SPARKMAN. I think so. The reason we repeated in substance the language of the act of 1916 in dealing with other places and left out that covering the stretch of the Mississippi River between the mouth of the Ohio and Rock Island was because the improvement of the river on that portion for the purposes of navigation, except as to the building of levees, is under the Chief of Engineers, whereas the improvement of the same stretch for purposes of flood protection is under the jurisdiction of the Mississippi River Commission. Hence we thought it best to omit the language used in the bill of 1916, being of the opinion that having once adopted the project and placed that particular work under the jurisdiction of the Mississippi River Commission it would retain jurisdiction without further legislation. I will say, however, that if there is any doubt about it, I would willingly consent to an amendment to make the matter certain.

Mr. FOSTER. Does the gentleman think the language carried in last year's bill, which says:

Any funds which are herein, or may hereafter be, appropriated by Congress for improving the Mississippi River between the Head of Passes and the mouth of the Ohio River, and which may be allotted to levees, may be expended, under the direction of the Secretary of War, * * * for levees upon any part of said river between Head of Passes and Rock Island, Ill.—

broad enough to cover it?

Mr. SPARKMAN. The gentleman means in the 1916 bill?

Mr. FOSTER. The 1916 bill, to carry appropriation hereafter.

Mr. SPARKMAN. We thought so at the time, and I still think so; but when we reach that item under the five-minute rule, if the gentleman thinks the language not sufficient, I will be willing to cooperate with him in inserting language that will make the matter certain.

Now, one more reference to the minority report of the gentleman from Wisconsin to illustrate further the inaccuracy of some of my friend's statements. For instance, under the heading "Waterways that carry commerce," on page 2, he says, "Ashland, 6,534,410 tons, nothing; Milwaukee, 8,119,875 tons"; and then a little farther down he comes to "New York, 100,000,000 tons, $500,500." As a matter of fact, New York gets $2,600,000 in this bill. Now, a statement of that kind——

Mr. FREAR. Will the gentleman yield? The gentleman neglects to read that they are both for old projects.

Mr. SPARKMAN. I was going to come to that in a moment, and what I intended to illustrate is the careless and loose statements which characterize this report. Perhaps the gentleman intended to refer to the estimates for old projects, but the paragraph is so separated from the preceding paragraph by the heading that the average reader would not see the connection. I was at first misled, and I think anyone might readily come to the conclusion, more readily than otherwise, that he was referring to the appropriations in this bill and not to the recommendations of the engineers.

Mr. FREAR. I contend, Mr. Chairman, that there can be no question as to the exact meaning of what appears upon the second page. And I wish to say this in addition, that that was prepared before I knew the committee were bringing in the new projects. It is an accurate statement of facts, I submit.

Mr. SPARKMAN. That fits in with the excuse that I offered for the gentleman a while ago. I know he does not intend to misstate facts. I am sure he is above that, but the trouble is my friend has not the time to look into these things as he would like. Here he prepares the statement before the bill is finished, and after it is finished the statement does not entirely fit the bill.

Mr. FREAR. But is not that absolutely accurate, just as it is stated there?

Mr. SPARKMAN. I think not entirely. I think it can be read either way.

Mr. FREAR. There was no such intention, I assure you.

Mr. HUMPHREY of Washington. Will the gentleman yield?

Mr. SPARKMAN. Certainly.

Mr. HUMPHREY of Washington. Can the gentleman state about when it was the committee decided to take on new projects?

Mr. SPARKMAN. We did not decide to take on any new projects until some time in January. I do not remember the exact date.

Mr. HUMPHREY of Washington. This minority report is dated January 13. I know it was several days before——

Mr. FREAR. January 5 was the day.

Mr. HULBERT. Will the gentleman yield for a question?

Mr. SPARKMAN. I yield to my colleague on the committee.

Mr. HULBERT. I notice in the minority report, at the bottom of page 15 and at the top of page 16, the gentleman who prepared the report in calling attention to the commerce, emphasizes the fact that New York Harbor, with 110,000,000 tons of commerce, is provided with only $40,000 for Ambrose Channel. I would like to ask the gentleman if it is not a fact that no further sum could possibly be utilized during the fiscal year for the improvement of Ambrose Channel?

Mr. SPARKMAN. That is correct, and we gave what the engineers estimated for that and all other places in New York Harbor.

Mr. HULBERT. And it is also true, is it not, that no sum could be appropriated for the improvement of the Hudson River if there had not been previously adopted a project for that improvement, and that the engineers have stated that the sum of $210,500 for the improvement of the Hudson River Channel on the New Jersey side is all that can be possibly expended during the fiscal year ending in 1918?

Mr. SPARKMAN. I do not recall the figures, but the bill carries the estimate of the engineers. We take the estimates of the engineers, but do not follow them absolutely. Where we think they are right we follow them, but not otherwise.

I want to say again to my friend from Wisconsin [Mr. FREAR], and speaking of the upper Mississippi River, that he did make a motion, I think, to cut out the entire sum for that portion of the river, or to have it reduced.

Mr. FREAR. No.

Mr. SPARKMAN. My friend says he did not. I take his word for it. He has a better recollection of the occurrence probably than I have. But the amount was reduced, no matter upon whose motion, much below the estimate of the Chief of Engineers. Possibly it was not wise to do so, but we did it, and we think we were right in so doing.

Mr. Chairman, as I said a moment ago—and I must hasten to a conclusion—I do not object to criticism, if it is a legitimate criticism. But in order to criticize an appropriation in a rivers and harbors bill or any project in such a measure one ought to have some kind of a standard of merit. Yet we have never been able to erect one. Now, in the case of a public-building bill one can say, as I believe it was provided in the last bill, that no building shall be authorized for a post office alone unless the total post-office receipts amount to a certain figure, $10,000, I believe. Now, that is a safe guide. It may be arbitrary, but once established, you know where you will land. One can readily determine whether a proposition falls inside or outside of the rule. But neither my friend nor anyone else has ever been able to suggest any particular proportion or relation between an appropriation and the tonnage or freight carried. It can not be done in justice to the entire country. We might say that for every dollar, or for every thousand, or for every million, there should be a ton for freight. But that would not be fair, because such a rule could only deal with present conditions and would not look to the future. And no one should undertake to legislate for the rivers and harbors in the country who can not go beyond the present and a long way into the future. And, looking into the future, I believe I am safe in saying that every appropriation in this bill is justified. I may be mistaken, but am optimistic enough to believe I am not.

Now, Mr. Chairman, this is a very important measure, more important, if possible, than any other recent river and harbor bill. For the past three years we have adopted no new projects except a few in the bill of 1916. During these years many important projects have been reported the adoption and completion of which are urgently demanded by the commerce of the country. If this bill should fail or these projects should be eliminated great damage, direct and indirect, would be the result. Not only would the commerce of the country suffer, but the loss to the Government by the cessation of work would be great. In this connection I can not do better than to quote from my remarks here when the bill of 1916 was before the House. Calling attention to the same matter, I then said:

Now, this bill, or one substantially like this, should become a law before the end of the fiscal year, otherwise great loss to the Government will occur. I notice the gentleman from Wisconsin [Mr. FREAR] would arbitrarily cut the bill down to $15,000,000, while the gentleman from Massachusetts [Mr. TREADWAY] would postpone the whole matter indefinitely. Both of these recommendations evince a regrettable lack of information on the subject, especially by those clothed with the duty of legislating for our navigable waterways. Why, Mr. Chairman, it has been estimated by those competent to judge that the delay in passing the river and harbor bill of 1914 for a period of about four months, or one-third of a year, caused a direct and definite loss of about $400,000—to be exact, $395,554.23—and what might be called an indirect loss of nearly $500,000 more.

Now, this does not include the loss to the people from the continuation for a longer period of time of unfavorable waterway conditions which the work is intended to remedy, but the direct loss would be sufficient to make the early passage of the bill very desirable. Work of that nature is going on all over the country; plants have been assembled at many places which are being used by the Government; at others work is being done from year to year under contract with parties who, having assembled plants, would also have to tie them up and disband their forces, making the contract price higher when work by them is again desired.

The Government has on hand to-day an aggregate of dredging plants consisting of 153 dredges, with a complement of auxiliary plants numbering more than a thousand vessels of various kinds, the whole costing originally upward of $15,000,000, with a present value of more than $12,000,000. In addition the Government has in its employ to operate these plants, and to carry on works of improvement, more than 1,700 officers and upward of 14,000 men, the most of whom would be thrown out of employment were this bill to fail of passage. Outside the Government plants the department rents more than a hundred boats of various kinds at a cost of approximately $175,000 per year, all of which would likely have to disband if an adequate amount of money to keep them going is not furnished.

I have presented all this to give the House an idea of the nature and extent of the preparedness of the Government for the work it is now doing in river and harbor development, and what it would mean to stop this great work even for a few months. But that does not tell the whole story, for it is only a part of the loss the people would sustain. The country is developing rapidly along every line of human activity. Earth and air, forest and stream, are all being invaded by man in his efforts to cheapen the cost of living and add to the comfort and happiness of the people. The output of farm and garden, or factory and mine, is increasing rapidly, all demanding cheaper and more commodious means of transportation and distribution. The railroads, though we have the finest system in the world, can not do all this work; so the people must look, and are looking, to their harbors and navigable streams to supplement the railroads in their efforts to carry our products to the consumer at home and abroad. The people are primarily responsible for the efforts we are making to deepen their harbors and improve their inland waterways. Their wishes should be heeded and the demands of commerce for ample transportation facilities given without unnecessary delay.

It is much to be regretted that the work on our rivers and harbors has not gone on more rapidly, although during the past three years, with two lump-sum appropriations, about $128,000,000 have been expended, but when we consider the loss occasioned by these lump-sum appropriations, which was much below what was actually needed, those who have been instrumental in making them are hardly to be congratulated.

In this connection I may say that although we are having annual bills it might be a good idea, as soon as conditions become normal again, to place many of the projects for which provision to complete is not made in this or former bills under the continuing-contract system. This would not only be in the interest of economy, but of the commerce of the country as well.

Now, Mr. Chairman, I have very little patience, permit me to say, with the argument that is made against river and harbor legislation, based upon present Treasury conditions. Of course, we consider all that, and it should never be overlooked, but there is nothing alarming in those conditions now, as our critics would have you believe. Those who are frightened on that score, whether they are Members of this House or not, do not take into consideration the almost unlimited resources of this country. Why, Mr. Chairman, our national wealth amounted last year, according to a statement I saw a few days ago, to the enormous sum of $250,000,000,000, or only $22,000,000,000 short of the combined wealth of the allies in the present European war. The entire wealth of England, France, Russia, Italy, Japan, and the other smaller countries allied with them, with all their possessions, does not, according to the same statement, amount to more than $272,000,000,000. France has only $42,000,000,000 and Germany about $60,000,000,000; and yet those countries, in the midst of one of the most devastating wars that have ever afflicted the world, are spending money freely to continue improvements begun before the outbreak of hostilities, and to initiate others in addition. Certainly if little France, with only $42,000,000,000 of national wealth, and Germany, with only $60,000,000,000, can, in the midst of a war taxing their resources to the utmost, find the money to carry on improvements such as rivers and harbors we can do so.

Does anyone believe that there is going to be a deficit in the Treasury a year from now? Does not everyone know that the Committee on Ways and Means is now discussing and devising methods for the purpose of meeting the threatened heavy draft upon the Treasury of the United States, a draft, however, not caused by river and harbor work but largely by our preparedness plans? I am not going to criticize those plans. If it had been left to me, perhaps I would not have gone so far as we have gone, but we went into it with our eyes open, and we will find the money to meet the heavy cost. But, while that is going on, let us not stop these works of internal improvements. We are able to carry them on, and let us do it wherever the commerce of the country, present or prospective, demands the work. [Applause.]

Mr. Chairman, 22 years ago I entered this body, and soon thereafter sought and obtained a position on the Rivers and Harbors Committee—not that the class of work a position on that committee entails was especially congenial to me; on the contrary, my vocation in life had been such that I would, in other circumstances, have preferred a different committee assignment; but I sought and accepted a position on that committee because I thought I could be of more service there to the people of Florida and to the country than on any other committee.

During the years I have remained here Congress has appropriated more than half a billion dollars for waterway improvement, the most of which has been expended on more than 200 harbors and upward of 25,000 miles of navigable waters, including canals, with the result that the waterways of our country have been improved from original and unserviceable conditions to the point where many of them are meeting the demands of even our fabulous commercial growth. During this time our commerce has grown from less than 250,000,000 to nearly 1,000,000,000 tons, valued at $30,000,000,000, while freight rates have been reduced, it has been estimated by some, as much as $1 per ton on water-borne commerce alone. Placing it, for the sake of argument, at 50 cents per ton—and we are carrying 900,000,000 tons each year—you can readily see the saving thus made to the producer, to the shipper, and to the consumer.

All this shows more clearly than any logic or language at my command can demonstrate the absurdity of the claim that the money, or even any considerable part of it, thus expended has been thrown away. But suppose a portion of it has been unwisely spent, and it would be a wonder if some waste did not occur, because in the expenditure of that large sum of money in any kind of work mistakes will be made resulting in loss. It may be that improper projects have, from time to time, been adopted, and I think they have been, but in going over the various river and harbor bills for the purpose of determining as best I could the merits of all the projects undertaken during the past 20 or 22 years I have come to the conclusion that not more than 2 per cent of these projects, if so much, has, in the light even of subsequent events, proven to be without merit. I venture the assertion that in no line of governmental activity has there been as little waste as in our waterway improvements. Still, with the great benefits coming to the people from those expenditures, what difference does it make if a few thousands or even a few millions, of the money used has not been properly expended? The people even then are largely the gainers and can well afford the loss, for the producers, the shippers, and the consumers of our country have been paid a hundred times over for every dollar of this great expenditure in increased shipping facilities and the reduction of freight rates, which, while lowering the cost to the consumers, has increased the value of the product to the producer.

This, Mr. Chairman, has been a great work and is an honor to the membership, Democrats and Republicans, who have responded so generously during the past quarter of a century to the demands of the people for improved water transportation facilities. And, Mr. Chairman, in leaving Congress, as I will after the 4th of next March, I shall look back upon even the small and inconspicuous part I have taken in this work as the most important of the services I have rendered as a Member of this distinguished body. I could ask no greater honor or higher privilege than an humble place in the ranks of those who have thus added to the Nation's wealth and to the happiness and prosperity of the people. [Applause.]

Public Buildings and Grounds.

EXTENSION OF REMARKS
OF
HON. THOMAS D. SCHALL,
OF MINNESOTA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, February 20, 1917.

Mr. SCHALL. Mr. Speaker, there is an overwhelming feeling of resentment throughout the country against any and all forms of pork. This is a wholesome and patriotic change from the spirit that sent down to defeat a Congressman who did not show his caliber by grabbing off for his district a large and succulent slab. It is a hopeful sign when legislators are encouraged to look beyond the local demand to the national good. If the people could only realize that what their Representatives desire is the good of all the people and to do the will of the men who sent them down here. Sometimes these two aims conflict, when a particular section is bent upon fostering a pet enterprise, at the expense of the rest of the country. It is not fair to impugn the motive of individual Congressmen that this inefficient system has obtained, for had the people desired a change in the spirit in which they now demand it, and had they made the voice "back home" sufficiently heard, their Representatives would have perforce responded, and this inefficient system of providing indiscriminately for public buildings would have been discarded long ago. There is no growing figs from thistles, and you will not get broad-minded, fearless Representatives till constituents are unselfish.

The two so-called pork-barrel measures are the river and harbor bill and the public-buildings bill. I voted for the river and harbor bill a year ago and would again this year were we not facing a grave crisis. There were many objectionable items in the bill, yet one fact is obvious. Water freight rates are cheaper than railroad rates. Big mass is easier moved in water than by rail. Any improvement which tends to increase water transportation is a blow at our ancient enemy, high prices. So I am for improvement of the upper Mississippi. I favor making it possible for ships to come from the Gulf of Mexico to Minneapolis, to furnish a further outlet for the vast stream of products of this rich Northwest. I am not in favor of dredging every little rill, then digging a well to furnish water to keep it going.

It is right that the United States should erect beautiful and costly buildings. It stimulates a citizen's pride in his country when he can point to a noble piece of architecture and associate it with his Government. But it is not appropriate at this time, with a deficit of nearly $400,000,000, which has mysteriously popped up since election, staring us in the face, to provide with lavish prodigality post offices of large cost for cities of small size.

A study of the appropriations made, the additions asked for and enlargements later required, throw light on the flaws of such a haphazard system. A man asks for all he thinks he can get. The building is cut to fit the cloth. Perhaps conditions change even before the appropriation is granted. Or a man asks for a site and gets a building, or a town that needs a building very badly gets none at all.

The Postmaster General recommends that the receipts of a post office should be at least $15,000 annually before a building should be erected. But even this arbitrary rule will not meet the issue. The whole question of public buildings is one which had better be dealt with by experts. It is a technical subject. It should be developed scientifically, with system, not at random. All the questions of construction and art, the plan and development, should reflect one grand system. The buildings individually and as a whole should embody all that is best in American architecture. They should stand as examples of all that is finest in modern architecture. A commission of thoughtful, earnest, honest, capable men could frame a building policy for the Nation. They could bring to the problems expert training. Waste would be eliminated. The bad effects on national character, the appetite for pork in constituent, and the consequent angling for it by Congressmen would cease, and at the same time the beauty of our national architecture would be safeguarded.

The pork-barrel method is not good sense, it is not good business, it is not American, and the best minds of the country are agreed that this archaic method should be abandoned.

The Reed Prohibition Amendment.

EXTENSION OF REMARKS
OF
HON. S. D. FESS,
OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 21, 1917.

Mr. FESS. Mr. Speaker, I shall vote to concur in the Senate amendment. While it goes further than the friends of the temperance movement had hoped, it is such a step as will insure results we all strive for in a shorter time than we could have expected. I shall vote for any measure that promises to reduce the evil of the liquor traffic. The attempt of liquor men to load it down so as to produce reaction will avail nothing save good results. If I vote to deny my fellow man his liquor, I should not hesitate to extend the prohibition to myself.

As to the Sherley amendment, I would be inclined to support such measure were it not presented at a time when it will jeopardize the entire measure.

Mr. Speaker, there has been much said here about the opposition of friends of antiliquor legislation—the antisaloon forces. These people take the position that it is wise to conserve all temperance sentiment and extend it as rapidly and as substantially as the state of public opinion will warrant.

This matter I took up with the representatives, as the report reached me to the effect that they were not favorable to the bill now before us. I here insert the answer to my request from Dr. Edwin C. Dinwiddie, superintendent of the Antisaloon League in America:

THE NATIONAL TEMPERANCE BUREAU,
Washington, D. C., February 20, 1917.

Hon. SIMEON D. FESS,
House of Representatives, Washington, D. C.

MY DEAR MR. FESS: In answer to your inquiry permit me to give you, as briefly as possible, a succinct statement of facts concerning the proposed antiadvertising mails legislation and my relation to it.

The allied temperance forces of the country have consistently contended that the mail facilities of the Federal Government should not be utilized by outside liquor makers and dealers to partially vitiate the policy of the prohibition States. I do not hesitate to admit that just as we would naturally like to see the facilities of interstate commerce throughout the country denied to the alcoholic-beverage liquor traffic, so we should like to see the facilities of the United States mails denied to this traffic. When the matter became acute, however, in the present Congress, somewhat over a year ago, because of strenuous opposition by those who appeal for fair play for the liquor interests, both in and outside of Congress, the proponents of this legislation yielded their convictions for the time far enough to limit the prohibition of outside liquor advertising through the mails to States which themselves had or might enact legislation forbidding the advertisement or solicitation of orders for intoxicating liquors within their bounds.

While, therefore, subscribing in principle to the Randall bill, which would prohibit the use of the mails for these purposes altogether, we practically united upon the Abercrombie bill in the House and the Bankhead bill in the Senate. These bills were originally identical in language, and their basic principle was that underlying the so-called Webb-Kenyon law as to interstate commerce. I mean by that that the prohibition of mailing liquor advertisements and solicitations into States was made to depend upon the presence of antiliquor-advertising laws in the States themselves.

The House Committee on Post Offices and Post Roads January 11, 1917, authorized a favorable report on the Randall bill to exclude all such advertising from the mails. The Senate Committee on Post Offices and Post Roads December 21, 1916, favorably reported the Bankhead bill to the Senate, and within a few days this measure was passed by the Senate, with some amendments, practically without division, and the same is now pending before the House Committee on Post Offices and Post Roads. Meanwhile, in connection with the bill (H. R. 19410) making appropriations for the Post Office Department for the coming fiscal year, Senator JONES offered this proposition as an amendment to the appropriations bill, and the Senate Committee on Post Offices and Post Roads added it thereto. When the bill was taken up in the Senate, the point of order being made against the item, upon the motion of Senator JONES, the Senate, by the required two-thirds vote, suspended its rules so as to make in order the consideration and adoption of the amendment. During its consideration, however, Senator REED, of Missouri, offered and championed an amendment which, if finally enacted, would have the effect of prohibiting the ordering, purchasing, or causing intoxicating liquors to be transported for beverage purposes into any State or Territory in which the manufacture and sale of intoxicating liquors for beverage purposes is prohibited.

The Jones antiadvertising amendment therefore, with the addition of the Reed amendment just referred to, will be before the House in connection with the Post Office appropriation bill. This latter amendment goes outside the subject of the mail service, and its effect would be to make all the States which have prohibited the manufacture and sale of intoxicating liquors "bone dry," irrespective of whether the States have proceeded that far in their legislation or not.

There is an honest difference of opinion among friends of the prohibition movement as to the present expediency of the Reed amendment. By some it is feared that this proposed amendment will not be helpful to the prohibition cause, but that its enactment might not only produce some reaction in prohibition States which are not "bone dry" but might deter other States from passing advanced prohibition legislation. They have been content temporarily with legislation which permits limited shipments under certain conditions, because it was thought in some States it would not have been possible otherwise to abolish the saloon, whereas experience has shown that when the saloon has once been abolished the educative effect has always tended to secure the passage of a "bone dry" law later on. Many who hold this view are undoubtedly as earnest and conscientious in maintaining it as those who are immediately in favor of "bone dry" legislation, State and National.

Personally, having had opportunity to weigh the whole matter carefully, and with such knowledge as I possess of conditions throughout the country, I am not as fearful of such results as I have just named. I firmly believe that the improved moral and material conditions which experience universally shows follow effective prohibition will not only make for the retention of prohibition and its permanence in the States, but I believe that the reflex influence from these prohibition States upon those which still tolerate the saloon will facilitate the spread of prohibition in present wet territory. I think also that the loss of such market for intoxicating liquors as the liquor men are now claiming in the dry States will be a serious blow to the traffic itself and will render less formidable their opposition in State-wide and Nation-wide campaigns.

Since the matter has been thrust into the bill upon the initiative of those not friendly to our general prohibition proposition, if I were a Member of the House I should personally support it, without, however, in any wise reflecting upon our friends who, because of their own convictions or the attitude of their States or the sentiments of their constituents, feel they can not do so. At the same time, while this has come to be my personal conviction in the matter, I am here, as you know, in a representative capacity, and the situation is so novel and conditions are so diverse in many of the States that the legislative committee of the league only feel warranted in setting forth the facts to our friends in the House so that their decision can be arrived at with this information in hand.

I do not hesitate to say that since the proposition has come that the Federal Government shall decide that the States shall go "bone dry" whether they have such legislation themselves or not, I would favor an amendment which would extend this prohibition to the wet States as well and deny entirely the facilities of interstate commerce to the beverage liquor traffic throughout the whole country, were it not for the fact that the adoption of any amendment under the existing parliamentary situation in the Congress might jeopard the passage of the antiadvertising amendment itself. I am in fullest accord, therefore, with the idea expressed in the closing paragraph of a communication from our legislative committee to Members of Congress under date of February 19, which is as follows:

"What we hope, above all, in connection with the pending postal legislation is that our friends in the House, irrespective of how they feel constrained to vote on the Reed amendment per se, from their personal convictions and their relation to their constituents and this cause, may be able effectively to cooperate to the end that this Congress may pass an antiadvertising mails law which will deny the mail facilities to the beverage liquor traffic in its nefarious work of flaunting its wares in States that have outlawed it."

Very cordially, yours,

EDWIN C. DINWIDDIE,
Superintendent.

Claim of Mrs. Ellen A. Strom.

EXTENSION OF REMARKS
OF
HON. JOSEPH WALSH,
OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 21, 1917.

Mr. WALSH. Mr. Speaker, recently the Comptroller of the Treasury has interpreted the phase "in line of duty" in a decision allowing the claim of Mrs. Ellen A. Strom, as widow of Alfred O. Strom, late gunner, Coast Guard cutter *Acushnet*, under the provisions of section 8 of the act of May 4, 1882 (22 Stat., 57), as amended by the act of March 26, 1908 (35 Stat., 46), and made applicable to men in the Coast Guard Service by section 3 of the act of January 28, 1915 (38 Stat., 802).

Inasmuch as the decision sets forth clearly the meaning of the statute, and is in some respects a precedent, I believe it ought to be set forth in the records of the Congress. I am therefore, under the consent granted me, inserting as a part of my remarks the decision of the comptroller referred to.

All who are familiar with this most important branch of the Government service realize the dangers encountered by the men engaged in this meritorious work, and it is gratifying to know that the provisions of the law relative to the dependents of those who lose their lives while in the service are capable of a liberal interpretation, and that prior declaration of legislative intent can be harmonized.

The decision follows:

TREASURY DEPARTMENT,
OFFICE OF THE COMPTROLLER OF THE TREASURY,
Washington, February 13, 1917.

Appeal No. 26622.

Ellen A. Strom applied January 11, 1917, for revision of the action of the Auditor for the Treasury Department in disallowing, by settlement No. 54137, dated December 5, 1916, her claim as widow of Alfred O. Strom, late gunner, Coast Guard cutter *Acushnet*, for $1,491, being the amount alleged to be due her under the provisions of section 8 of the act of May 4, 1882 (22 Stat., 57), as amended by the act of March 26, 1908 (35 Stat., 46), and made applicable to men of the Coast Guard by section 3 of the act of January 28, 1915. (38 Stat., 802.)

The laws just cited provide that if any officer, warrant officer, or enlisted man of the Coast Guard shall "die by reason of perilous service or any wound or injury received or disease contracted in the Coast Guard Service in line of duty leaving a widow, * * * during a period of two years, under such regulations as the Secretary of the Treasury may prescribe, the same amount * * * the husband * * * would be entitled to receive as pay if he were alive and continued in the service."

The auditor disallowed this claim upon the ground that the cause of this man's death was other than "by reason of perilous service or any wound or injury received or disease contracted in the Coast Guard Service in line of duty."

The material facts in the case appear to be as follows:

On the afternoon of July 24, 1915, Gunner Strom left the vessel on which he was serving alone in his skiff to go fishing. After leaving the ship he was seen in a catboat, with his skiff towing astern, standing out into the Sound toward Marthas Vineyard. When near Nobska, about 2 o'clock in the afternoon, he left the catboat and started rowing toward shore, saying he was going fishing. He did not return that night, and on the afternoon of July 25, 1915, his body was found on the shore near the Nobska Light. His oars and white uniform cap had washed ashore near his body. His skiff was found later and was in good condition. The commanding officer expressed the belief that

either of two things had happened—(1) that he capsized in deep water, swam ashore on the oars, and was so injured in contact with the rocks that he drowned on the beach; or (2) that he tried to land in his skiff after dark, found himself among bowlders in a moderate swell which was running during the afternoon and evening, and was injured, and drowned in attempting to reach the shore.

It is understood that at the time of the man's death he was not on leave or furlough in the usual acceptation of those terms, but that he was temporarily absent from the vessel for a few hours' recreation at a time when his regular duties would not require him to remain aboard. His action in leaving the vessel in his skiff to go fishing was not in violation of any order, rule, or regulation of the service, but was in accordance with the recognized custom of permitting the men, for the good of the service, to indulge occasionally in such pastimes.

Since the act of 1882 was passed there has been no decision, so far as can be found, by which any Comptroller of the Treasury has held that a death happening under conditions similar to the one in this case was or was not in the line of duty. There have been decisions with reference to disability pay under section 7 of said act discussing whether a disease resulting in a disability was contracted in the line of duty (7 Comp. Dec., 567; id., 770).

My attention has been called to section 4 of the act of March 3, 1865 (13 Stat., 488), providing for bounty for soldiers discharged for wounds received in line of duty, and to the joint resolution of April 12, 1866 (14 Stat., 352), in which it was directed that the true intent and meaning of the words "in line of duty" in said act of 1865 was that the benefit should be extended when the discharge was by reason of a wound received while actually in the service under military orders, not at the time on furlough or leave of absence, nor engaged in any unlawful or unauthorized act or pursuit.

This legislative interpretation of the phrase "in line of duty," as used in the act of 1865 is not conclusive as to the meaning of said phrase when used in any other law.

The phrase "in line of duty" has appeared in various laws of the United States since 1799, and in 1855 it was made the subject of a well-considered and comprehensive opinion by Caleb Cushing, Attorney General of the United States (7 Op. Att. Gen., 149). In the course of this opinion it is said (p. 155):

"* * * An officer or soldier, who is neither under arrest, nor in confinement, nor on furlough, nor absent without leave, may yet die in a thousand ways, which will be neither of disease contracted, nor of casualties by drowning or otherwise, nor of wounds received, while in the line of duty, as, for example, in a chance quarrel or in dangerous amusements * * *."

In the same opinion, on page 156, the following language appears:

"* * * It is impossible to say that the phrase casualties or injuries received 'in the line of duty' comprehends all the possible misadventures of mere private life which may happen to an officer in his personal affairs, and wholly disconnected from his public duty, though he be not on furlough. Suppose, for instance, that an officer is proprietor of a stock farm, or of a dwelling or storehouse on rent, or is interested in a manufactory, as he has a perfect right to be, and to which private property, without neglect of any public duty, he gives occasional attention; and suppose that in the care of this property he is killed by the kick of a vicious horse of his stock, or by fall from the scaffolding of one of his tenements in the course of reparation; can it be pretended that such a casualty or injury occurs 'in the line of duty,' as that phrase is employed in the pension acts? Most assuredly not."

The whole tenor of this opinion is to the effect that a disability or death can not be held to be the result of an injury or disease received or contracted "in line of duty" unless it is shown that an act of duty performed had relation of causation, mediate or immediate, to the wound, the casualty, the injury, or the disease producing the disability or death. (See also 17 Op. Atty. Gen., 172; Rhodes *v.* United States, 79 Fed. Rep., 740.)

In the opinion reported in 17 Op. Atty. Gen., it was said (p. 173):

"The phrase 'in the line of duty' has been uniformly used in the statutes from 1799 to the present time in defining the right of pensions. It received elaborate discussion from Mr. Attorney General Cushing in 1855 (7 Opin., 149), and as Congress, since the publication of that opinion, has not seen proper to substitute any other expression we are justified in concluding that it stands in the statutes invested with the meaning expressed by Mr. Cushing."

In this connection it is noted that the act of May 13, 1908 (35 Stat., 128), which authorized the payment of six months' pay in the case of an officer or enlisted man of the Navy or Marine Corps who should die thereafter from wounds or disease contracted in the line of duty, was amended by the act of August 22, 1912 (37 Stat., 329), by substituting for the phrase "contracted in the line of duty" the phrase "not the result of his own misconduct," and also that the act of May 11, 1908 (35 Stat., 108), providing for similar relief in the case of officers and enlisted men of the Army, was likewise amended by the act of March 3, 1909 (35 Stat., 735).

The reason for the change in these Army and Navy laws is not known. The effect is to increase the number of cases in which payments will be due, and it may be that Congress intended that for the payment of this six months' gratuity there should be no necessity for proving the origin of disease, but the grant was to be dependent only on the fact that the officer or enlisted man was in the service, and the wound or disease from which he died was not the result of his own misconduct.

This office had under consideration the claim of a beneficiary of an officer of the Army who had died in September, 1908, after a leave of absence and while returning to duty under orders. Upon the certification by the War Department that the officer died from disease not contracted in the line of duty, the comptroller held that as the death occurred before the amendment by the act of March 3, 1909, of the act of May 11, 1908, no payment could be made and that the act of 1909 had no retroactive effect (15 Comp. Dec., 896).

The same case was before the Court of Claims upon a suit against the United States for the six months' gratuity, and that court rendered an opinion (Moore *v.* United States, 48 Ct. Cls., 110), to the effect that a soldier is "in line of duty" until separated from the service by death or discharge, if during such period he has submitted to all of its laws and regulations; that he is "in line of duty" while on leave of absence; but that the wounds or disease must not be the result of his own misconduct. The court ordered judgment for the plaintiff, construing the act of May 11, 1908, to mean the same thing as was meant after it was amended, and holding that the act of March 3, 1909, makes certain the intent of the act of 1908.

Having in view the case that was before the court, I doubt if the decision is authority for the proposition that the act of 1909 did not broaden the application of the act of 1908 or that a soldier is in line of duty when on leave of absence. The facts stated in the case indicate that the officer was proceeding under orders to rejoin his regiment.

In each of the cases hereinbefore cited, in which a narrow construction was given to the phrase "in line of duty," (7 Op. Atty. Gen., 149; 17 id., 172; 79 Fed. Rep., 740), the opinion was rendered with reference to pension laws. But an examination of the numerous rulings by the Department of the Interior in pension cases, with reference to the meaning of the said phrase, indicates that notwithstanding these opinions it has not been the practice to refuse a pension in a case where the injury was received while the man was engaged temporarily in a reasonable form of recreation or exercise not required as a part of his regular duty.

It appears to have been the practice of the Auditor in the settlement of claims for benefits under the act of 1882 to construe the phrase "in line of duty" along the lines of the interpretation given by direction of Congress to said phrase in the bounty law, supra, and the interpretation placed upon pension laws by the Department of the Interior. Some cases have been found of claims allowed by the Auditor to beneficiaries when the employees were killed by accident while returning from temporary leave or when they were otherwise not actually in the performance of the duties required of them.

In the present case it appears that Strom lost his life as the result of an accident. He was in the service more than 20 years, with a record marked "excellent" for proficiency, attention to duty, sobriety, ability, and in every other particular. In the circumstances there can be no presumption that his death was due to misconduct.

The fact of his proficiency in handling a boat is well established, and his conduct in leaving his vessel for but a few hours was in accordance with the usual custom of the service. His intention was to engage in a harmless amusement or recreation very properly connected with his service, tending to increase his efficiency in the service, and to keep himself in good physical condition. For a man of his occupation, training, and experience there was nothing hazardous or unusual in going alone in a skiff.

In view of the practice hereinbefore referred to, I believe this claim should be allowed. It is true that there may be many cases not coming within the phrase "in line of duty," but it is unnecessary and will serve no useful purpose now to discuss hypothetical cases. Such discussion does not prove of great value when an actual case, with its attendant facts and circumstances, is presented for decision. It is sufficient to hold that the present case comes within the law.

The papers in this claim bear the following indorsement by direction of the Captain Commandant of the Coast Guard.

"Referred to the Surgeon General, Public Health Service, with the request that he will state hereon whether, in his opinion, the inclosed evidence of death, and that it resulted from disease contracted in the line of duty in the Coast Guard, should be considered sufficient."

The next indorsement is by direction of the Surgeon General of the Public Health Service and reads as follows:

"Returned to the Captain Commandant Coast Guard, with the opinion that the evidence of death herewith submitted, and that it resulted from disease contracted in the line of duty in the Coast Guard, should be considered sufficient."

In view of the fact that there is no evidence with the claim indicating that the deceased suffered from any disease, it is not understood why the claim was referred to the Surgeon General nor why the latter expressed the opinion as to disease shown in the indorsement. Indorsements on other claims for sudden death by accident appear in the same form. Such a pro forma printed indorsement used indiscriminately weakens the value of any opinion upon a real case of death from disease.

From an examination of a list of cases which have been allowed by the Auditor for the Treasury Department where the death was found to be due to disease, it would appear that the question of whether in each case the disease was contracted in line of duty was determined by the auditor largely, if not entirely, upon the opinion of the Public Health Service.

The opinion of a medical officer is of value and is usually to be accepted, but it does not relieve the auditor of responsibility when he allows or disallows a claim if the evidence before him makes it uncertain whether or not the disease was contracted in line of duty or was the cause of death. This responsibility is shared by the Comptroller of the Treasury if he approves the action of the auditor on revision or fails to revise accounts upon his own motion.

The action of the auditor in disallowing this claim is reversed, and a certificate of differences will issue for $1,491.

W. W. WARWICK, *Comptroller.*

The Reed Amendment.

EXTENSION OF REMARKS

OF

HON. FRANK W. MONDELL,

OF WYOMING,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 21, 1917.

Mr. MONDELL. Mr. Speaker, a motion has been made to concur in a Senate amendment to the Post Office bill which contains a number of important provisions. If the House votes to concur in that Senate amendment, the House conferees can do nothing else than to accept the Senate amendment and all of its provisions will become a law. If, on the other hand, we vote down concurrence in the Senate amendment as a whole, the House conferees will be free to agree to certain provisions of the Senate amendment and to disagree to other provisions, and if they can get an agreement on those lines, we shall have whatever is good and desirable in the Senate amendments without those things which are objectionable.

As I believe there are certain provisions in the Senate amendment embodied in the so-called Reed amendment which should not be enacted into law, I shall vote against instructing the House conferees to concur in the amendment as a whole, with the expectation that we may then secure the good without the objectionable features of the Senate amendment.

The Senate amendment as originally offered in the Senate prohibited and punished the sending through the mails of letters, postal cards, circulars, newspapers, pamphlets, or publications of any kind containing liquor advertisements into any State or Territory in which it was at the time unlawful to advertise or solicit orders for liquors. That is a proper and righteous provision. It prevents the United States from being a party to what amounts to a violation of State law. I am heartily for that provision and all of the provisions of the Senate amendment relating thereto.

When this amendment to which I have referred was under discussion in the Senate, an amendment was offered to it, known as the Reed amendment, which is entirely unrelated to the amendment in question. It is as follows:

Whoever shall order, purchase, or cause intoxicating liquors to be transported in interstate commerce except for scientific, sacramental, medicinal, and mechanical purposes into any State or Territory the laws of which State or Territory prohibit the manufacture or sale therein of intoxicating liquors for beverage purposes shall be punished as aforesaid.

This amendment was frankly offered and frankly defended, on the proposition that it was the purpose of those offering it and supporting it, while they did not believe in prohibition, to make prohibition obnoxious by making prohibition territory "bone-dry," as it is called, even though the prohibition laws of the State do not themselves provide for or attempt to create a so-called "bone-dry" condition; that is, a condition under which no liquor in any quantity can be secured in any way.

I am opposed to this provision for various reasons:

First. Until and unless we shall have uniform prohibition all over the country through a Federal amendment, for which I have heretofore voted and for which I would vote again, I do not think that the Congress of the United States has any business to make the prohibition laws of a State any more drastic than the State itself has made them.

Quite a number of the prohibition States, while prohibiting the manufacture and sale of liquor, have made no attempt to interfere with the personal use of liquor if one can secure it. A number of the prohibition States have provided by statute that a certain amount of liquor can be imported into the State by individuals for their own use. There may be some ground for difference of opinion as to the wisdom, logic, or propriety of provisions of that sort, but in the main really sincere temperance and prohibition workers have been inclined to favor such provisions, for a time at least, rather than to attempt an absolutely "bone-dry" condition.

Whatever may be our views with regard to these provisions, however, they are provisions which have been adopted by the people of the States with full knowledge of what they mean, and it is my opinion that Congress is not at this time justified in attempting to make prohibition conditions in a State more drastic than the State itself has made them.

Second. I am always suspicious of measures that, while they may be supported by a certain number of the friends of the cause they are assumed to promote, are also supported by the enemies or opponents of such a cause. From what was said in another body and what we have heard here to-day, it is very clear that the Reed amendment has its support largely among those who are not favorable to prohibition. I think the roll call will develop that it will be voted for by many who are not favorable to prohibition and have not voted for prohibition measures. On the other hand, a number of the most active advocates of temperance and prohibition in this House have spoken and will on the roll call be recorded as against the Reed amendment.

There is no doubt, in my opinion, but what it is hoped and expected by some that the adoption of the Reed amendment will check the prohibition movement. The idea is that if States which have not absolutely prohibited all importation and have not endeavored to entirely prevent limited personal use of liquors under their prohibition laws are to be made "bone-dry" by Federal prohibition of importation, there will be a demand for the repeal of prohibition laws, and that if prohibition when adopted shall, without regard to the character of the State's statutes, be made "bone-dry" by Federal enactment, an increased sentiment against prohibition will be developed in the States that shall hereafter vote on prohibition amendments. That is the view of some, at least, of the supporters of this proposition frankly stated.

No such provision as this is necessary in States that have in connection with their prohibition laws made it unlawful to have or possess liquor shipped in from outside States. The Webb-Kenyon law, which I supported, provides for that. In other words, it invokes the aid of the Federal Government to make the State law effective. The Reed amendment, on the contrary, invokes the aid of the Federal Government to prevent what the State law authorizes.

If the proponents of the Reed amendment really wanted to invoke the authority of the Federal Government in an effective way to prevent the transportation of liquor, why did not they present a measure making it unlawful to transport liquor through interstate commerce for beverage purposes anywhere and everywhere? The Reed amendment does not interfere with the shipment of liquor in any quantity into a "wet" State. It simply proposes in accordance with the frank acknowledgment of its original supporters to make prohibition unpopular and thus prevent its further spread by saying to the people who have adopted laws which do away with the saloons and prevent the sale of liquor, "having gone that far, we will give you a touch of the real thing by seeing that no one in your State gets a drop of liquor from outside the State."

Many temperance advocates, many of the strongest supporters of prohibition here in Washington and elsewhere, have warned against the Reed amendment. Many men who believe in prohibition will nevertheless vote for it, but along with them will be many gentlemen who have been conspicuous in their opposition to restrictive or prohibition measures. If I believed that the legislation prohibiting liquor advertising where the State prohibits it would fail by my voting against the Reed amendment, I would be tempted to vote for the Reed amendment in order to save the other provision, but there is no danger of that, and therefore I shall vote against adopting the Senate amendment as a whole in order to voice my opposition to the Reed amendment.

Migratory-Bird Treaty Act.

EXTENSION OF REMARKS

OF

HON. MURRAY HULBERT,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, February 20, 1917.

Mr. HULBERT. Mr. Speaker, under leave granted me to extend my remarks in the RECORD I include the following letter in reply to a communication which the gentleman from Missouri [Mr. SHACKLEFORD] received from Deputy Commissioner Arthur D. Holthaus, of the State game and fish department of Missouri, and inserted in the RECORD of February 9, 1917, page 308:

PERMANENT WILD LIFE PROTECTION FUND,
New York, February 13, 1917.

Hon. MURRAY HULBERT,
House of Representatives, Washington, D. C.

DEAR MR. HULBERT: On February 9 the CONGRESSIONAL RECORD (p. 308) was made an instrument for the dissemination of certain false statements regarding the Permanent Wild Life Protection Fund, of which the writer hereof is a trustee. Representative SHACKLEFORD, of Missouri, printed, by request, a letter from Arthur D. Holthaus, of St. Louis, Mo., which contains various untruthful statements that now require refutation by the same means that was employed for their dissemination.

After reciting the fact that the promoters of the Weeks-McLean Federal migratory-bird law are actively supporting the Flood bill (H. R. 20080) providing for carrying into effect the terms of the treaty recently ratified with Canada, Mr. Holthaus says:

"I desire to state that all the above activity is being carried on by the arms and ammunition makers in the East," etc.

I hereby declare to you, and to Congress, that the above statement is false and misleading.

Mr. Holthaus also says:

"The American Game Protective Association, of 233 Broadway, New York City; National Association of Audubon Societies, of 1974 Broadway, New York; and the Permanent Wild Life Protection Fund, also of New York City, are the official representatives of the large arms and ammunition makers," etc.

I desire to place on record the fact that the above statement regarding the Permanent Wild Life Protection Fund is totally false and misleading, and without a shadow of foundation in fact. To the best of my knowledge and belief there is not one person in the list of founders, subscribers, or occasional contributors to the Permanent Wild Life Protection Fund who owns even one share of stock in the Remington, or Winchester-U. M. C. Companies, or who ever has owned any interest in either of them. On account of the long-standing fight of the undersigned against the automatic and pump-shot guns of those companies, he is cordially hated by the officers and stockholders of those companies; and that state of hostility is perpetual, because of my perpetual war on those murderous guns.

To the best of my knowledge and belief, the statement of Mr. Holthaus is equally false regarding the National Association of Audubon Societies.

The letter of Mr. Holthaus is a fair sample of the reckless, vindictive, and untruthful methods that have been employed on various occasions by Mr. Holthaus and others in and from Missouri to force upon Congress the rule-or-ruin policy of the spring shooters of Missouri. Many Members of Congress are already familiar with the attacks that have been made on the undersigned by one of the members of another body, who all along has willfully and intentionally concealed the truth regarding my zoological field work in India and Borneo. He has carefully refrained from stating that the animals shot and preserved by me were taken solely as museum specimens, and to-day help to enrich the collections of many American and foreign museums.

Fortunately, however, the Congress of the United States is not easily fooled by the enemies of wild life; and up to date the records of both the House and the Senate as continuous and unfailing defenders of wild life remain absolutely unbroken.

I move that the Flood-Hitchcock bill do pass.

Faithfully, yours,

WILLIAM T. HORNADAY,
Campaigning Trustee.

The Present Crisis in Our International Affairs.

EXTENSION OF REMARKS
OF
HON. WARREN WORTH BAILEY,
OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 22, 1917.

Mr. BAILEY. Mr. Speaker, under the leave granted me, I wish to print as a part of my remarks a number of letters, resolutions, articles, and other expressions bearing upon the present crisis in our international relations, prefacing them with a report of the results of a postal-card referendum in my district up to Thursday morning, February 22. It is thought proper for me to say in connection with the referendum that practically every class of citizens is represented, including ministers, lawyers, doctors, bankers, merchants, mill workers, trainmen, factory operatives, miners, farmers, and laborers, many of them known to me personally. I am convinced that the sentiment developed by the referendum is fairly representative of that of the entire community from which it comes. The figures follow:

Against entering the war and for a national referendum	539
Against entering the war	362
Total against entering the war	901
In favor of entering the war	89
Total number of cards received	990

MASS MEETING AT JOHNSTOWN, PA.

Upward of 700 residents of Johnstown and vicinity assembled in the Majestic Theater, Johnstown, Cambria County, Pa., at 3 o'clock Sunday afternoon, February 18, 1917, in response to the following call:

The men and women of Johnstown are asked to assemble in mass meeting at the Majestic Theater, Sunday afternoon, February 18, at 3 p. m.

PURPOSE.

To encourage President Wilson and the Congress of the United States in their efforts to keep our country out of the European war:

1. By voicing our protest against the agitation by the metropolitan press and other powerful interests which would persuade our Government that war with Germany is inevitable.

2. By emphasizing the fact that our national honor, like our individual honor, can be sullied only by our own acts; that our national ideals on which alone our honor as a nation must rest would be endangered by being drawn into the mighty struggle that is drenching Europe with human blood.

The Rev. J. N. Scholes, First Christian Church; the Rev. R. D. Clare, First English Lutheran Church; the Rev. S. N. Carpenter, Trinity Lutheran Church; the Rev. David Berkey, Beulah United Evangelical Church; the Rev. H. C. Michael, Moxham Lutheran Church; the Rev. A. K. Travis, Grove Avenue Methodist Episcopal Church; the Rev. E. W. Rishel, United Evangelical Church; the Rev. Father Stephen Ward St. John Gualbert's Catholic Church; Rabbi Hyman H. Kaminsky, Rodef Sholem Congregation; C. W. Gould, W. F. Patch, Fred Krebs, Thos. Barnes, P. S. Fisher, B. Elkins Longwell, M. J. Boyle, P. H. Mahaffey, H. S. Bender, Jos. R. Swope, John E. Gable, J. N. Adee, George W. Swank, Henry W. Salus, John S. Gaffney, Albert J. Owen, W. F. Murdock, R. G. Rose, Joseph T. Kelly, Fred W. Church, James E. Kress, Curt Barnhart, Jas. A. Warren.

H. S. Bender presided at the meeting. Addresses were delivered by Prof. J. N. Adee, superintendent of Johnstown city schools; the Rev. J. N. Scholes, pastor of the First Christian Church; the Rev. Stephen A. Ward, of St. John Gaulbert's Catholic Church; the Rev. S. L. Postlethwait, pastor of the First United Brethren Church; John H. McCann, Esq., of Ebensburg, Pa., and Judge Francis J. O'Connor.

Chairman Bender named as members of a committee on resolutions: John E. Gable, Fred Krebs, P. H. Mahaffey, Joseph R. Swope, and the Rev. S. N. Carpenter.

From the committee on resolutions, Mr. Gable reported as follows:

"*Resolved*, That copies of the resolutions here adopted be made, together with a minute of the call for this meeting and of the proceedings, and that they be sent to the President of the United States, to Representative WARREN WORTH BAILEY, and to United States Senator BOIES PENROSE."

On motion the resolution was adopted.

The committee further reported:

"We, the people of Johnstown, Cambria County, Pa., in mass meeting assembled, send greetings to the President and the Congress of the United States, and assurances of our fervent sympathy with and our foldest hopes for the complete success of their honorable efforts to keep our country out of the European war.

"We note that it has been charged on the floor of Congress that a concerted effort of interests, finding expression through a part of the metropolitan press, is being made 'to create sentiment and coerce the Government of the United States into an attitude of hostility to one of the belligerent powers,' and we pray that the war clamors of such interests be not mistaken for the voice of the American people.

"We believe that our national honor can be sullied only by official acts inconsistent with the ideas of democracy set forth in the Declaration of Independence, and that the loss of life and shipping in the European war zone incident to attempted blockade can not be construed as attacks upon our national honor justifying a declaration of war."

On motion the resolution was unanimously adopted.

The committee further reported, for the purpose of testing the sentiment of the meeting on the subject involved, but not as a part of the resolutions to be transmitted to the President and Congress, the following resolution:

"We believe the time to be past when the horrors of war may be visited on a people by their rulers, and that the United States should declare to the world the principle that except to resist invasion no government has the moral right to declare war save by referendum vote of the people."

On motion, the resolution was adopted.

Mr. S. H. Scott moved and it was seconded that the resolution referring to a referendum vote on the question of war be transmitted to the President and to Congress together with the resolution previously adopted. The motion prevailed, and it was so ordered.

(This minute is written by John E. Gable.)

I hereby certify to the correctness of these minutes and to the facts as set forth.

H. S. BENDER,
Chairman of Mass Meeting.

JOHN H. McCANN,
ATTORNEY AT LAW,
EBENSBURG, PA., *February 19, 1917.*

Hon. WARREN WORTH BAILEY,
Washington, D. C.

DEAR MR. BAILEY: I want to be one of the people back home to send you a word of encouragement in this hour when you are fighting for us the greatest battle of your life. I want you to feel that we appreciate your struggle to the utmost.

On Saturday, Mr. Bailey, you proved your worth. We knew it was in you, but the world knows it now, and the service you rendered Saturday to the cause of humanity will not be in vain. Even the vote on expunging the record shows that there is hope that the House of Representatives, when the crucial test comes, will be with you and the people.

Yesterday afternoon in Johnstown the mention of your name was applauded to the echo by an audience of 700. It was a representative audience. There was not one dissenting voice. Johnstown loves you; your district loves you; your people know you are fighting their battles now, and they thank God for you in this hour of need.

The man in the street, the plain man, who earns his bread in the sweat of his brow, does not want this war, and you know, and I know, that he is the one who must bear the burden of the fight, and the economic burden that follows. And these plain men are the ones who possess the physical courage that war needs, but they have the moral courage, too, of which you speak, and they do not want war. From a moral standpoint, they do not feel that our national honor has been insulted. They feel that we might inconvenience ourselves temporarily, in trade, that a great service to the cause of humanity might be performed, by keeping the great arbiter of nations out of the war, and in a position, where it can render the greatest and most disinterested service to the cause of world peace in the future.

The hearts of the mothers of America turn to you to-day, and you voice their prayer that God will let this chalice pass from them.

There is a cumulative quality, or power, in a nation that in great emergencies gathers together all that is best and noblest in a people, and thus we have the "man of the hour," and we believe that you have come to us out of the very soul of the Nation in this hour of distress.

With sincerest regard, I remain, sincerely, your friend,

JOHN H. McCANN.

GERMAN BENEFICIAL UNION,
Portage, Pa., February 19, 1917.

Hon. WARREN W. BAILEY.

DEAR SIR: We, the members of the German Beneficial Union, of Portage, Pa., expect you to do all you can to keep us out of war. Honor not at stake. We want peace.

Yours, truly,

JACOB KREUTZBERGER, *President.*
JOHN ENDERLEIN, *Secretary.*

[From the Johnstown (Pa.) Leader.]

JOHNSTOWN ON WAR.

Upward of 700 citizens of Johnstown assembled Sunday afternoon and declared by resolution addressed to the President and the Congress of the United States that "the loss of life and shipping in the European war zones incident to attempted blockades can not be construed as attacks upon our national honor justifying a declaration of war."

Upon this a representative audience, made up largely of young men, was unanimous.

Johnstown protests that so far as it knows there is not now a state of war or a condition of hostility which makes war inevitable or unavoidable. Johnstown protests against what Senator STONE, chairman of the Foreign Relations Committee, described as a concerted effort of interests finding expression through the metropolitan press to create sentiment and coerce the Government of the United States into an attitude of hostility with one of the belligerent powers.

Men of high standing did the speaking, and men and women of high ideals of citizenship and of undoubted patriotism did the voting. They addressed themselves to the issue of war or peace. Theirs was no pacifist or militarist affair; they did not discuss preparedness, compulsory military training and service, a large or small Army, a strong or a weak Navy. They deliberatly recorded the verdict of their best judgment that no foreign power has wantonly made war upon American interests, American citizens, and the American flag, and that short of this they are for peace.

In the action taken we believe this Johnstown audience approximated the majority view of the country as a whole. Two years ago it might have been different. At that time the best sentiment of the people was overwhelmingly in favor of asserting and unholding our rights as neutrals under all circumstances and against all powers. The people were ready for much more emphatic action than was forthcoming from the Wilson-Bryan administration in our quarrels with Germany and Great Britain. They felt then that belligerents could have been compelled to respect the American flag. When insults and injuries were tolerated month after month they accepted the declared policy of neutrality as having been laid down in good faith.

But recently they have doubted. Now they are certain that this Government is in danger of being swept off its feet and hurled into the war on the side of the allies. They do not want to go to war on any existing grounds, and they refuse to agree that this Nation shall be involved without their consent.

Ordinarily we doubt the wisdom of burying the White House under a flood of memorials and petitions. This, however, is no ordinary occasion. As a speaker said, "Once war is declared, we can do nothing, think of nothing, but to support the Government's armed efforts. Protest then will be treason. Protest now in behalf of truth and justice should be heard at Washington."

"I think we can trust the President" is a fine sentiment. We trust him to do his best for his country. But he and Congress can not do their best unless every step of the way, either toward war or toward peace, is justified in the minds of the people. If Mr. Wilson is denied the benefit of frank expression of public sentiment, if he is to be left in the dark as to whether his people are ready and willing to follow a course which seems to them unwise and uncalled for, the confidence we have in him is worth a great deal less to the country than is the motto stamped upon our coins, "In God We Trust."

—

TYRONE, PA., *February 16, 1917.*

Hon. WARREN WORTH BAILEY,
House of Representatives, Washington, D. C.

DEAR SIR: We, as constituents of your congressional district, and as citizens of the borough of Tyrone, Pa., and as employees of the Tyrone Daily Herald office, hereby commend your efforts for peace.

We hope you will continue to do all you can to keep our country out of war. Honor is not at stake. We want peace. With you, we believe "it is more patriotic to live for our country than to die for it," and that "Strife only means life."

Very respectfully submitted.

GEORGE OBERLY.
EARL W. HART.
W. C. HUSTON.
JOHN H. BRINDLE.
S. E. KELLOGG.
T. C. SMITH.
U. G. LEHMAN.

—

CHICAGO, *February 17, 1917.*

Hon. WARREN WORTH BAILEY:

Your position that a referendum vote should be taken before war is declared is absolutely correct.

Ours is a Government "Of the people, for the people, and by the people," and we are going to have that vote, because in war it is the people who spend their blood.

Stick to it; the people are with you.

CHAS. L. PARKER.

—

MOYLAN, PA., *February 17, 1917.*

Congressman BAILEY, of Pennsylvania.

ESTEEMED FRIEND: I have noted with sincere approval your action in voting against the naval appropriation bill. It is fortunate for our country that we have some men who can not be stampeded and who realize that democracy and war are incompatible, as also are Christianity and war. If we go to war with any country, we must give up our civil and religious liberty and submit to the most exacting kind of autocracy. I would like to be a citizen of a nation having the courage and conviction to declare to all the world: "We stand for the principle of brotherhood; we will not render to any nation evil for evil; we prefer to suffer for well-doing rather than for evil doing. We will take our chances of being 'gobbled up,' in order that we may lead the world to justice, love, and peace."

Please do all you can to keep us out of war and to kill conscription and all other devices of a like nature.

Very truly,

BENJ. F. WHITSON.

—

ST. LOUIS, MO., *February 18, 1917.*

Congressman WARREN W. BAILEY,
Washington, D. C.:

A native American whose father was among first to enlist when our Union was in danger. Accept my congratulations and thanks for showing up Mr. GARDNER and his pro-British friends. There is not now, nor can likely arise, an adequate cause for war involving our Nation's real honor.

ROLAND F. KREBS.

HOLLIDAYSBURG, PA., *February 17, 1917.*

Hon. WARREN WORTH BAILEY,
House of Representatives, Washington, D. C.

DEAR SIR: Hearing of a war advertisement in one of the papers I am writing to say that I am personally opposed to this country declaring war so long as there is any honorable way out of it.

In so writing I am positive I express the sentiment of your district.

Yours, respectfully,

WM. MCKILLIP.

—

CHICAGO, *February 19, 1917.*

Your position on the war is right. Stick to it. Ours is a Government "of the people, for the people, by the people," and we are going to have that referendum vote before war is declared. The people are in no mood to be monkeyed with.

GARDNER is wrong.

CHAS. L. PARKER.

—

INDIANAPOLIS, IND., *February 21, 1917.*

Congressman WARREN WORTH BAILEY,
Washington, D. C.

I wish to thank you for your efforts to keep us out of war. Considering the present state of mind of the people, I believe it would be unwise for this country to enter the European war without a referendum.

ARTHUR BOHN,
610 Indiana Trust.

—

OBERLIN, OHIO, *February 20, 1917.*

Hon. MR. BAILEY, of Pennsylvania.

DEAR SIR: I see with much gratification some extracts from remarks or speeches recently made by you in the House in the line of opposition to our country being maneuvered into war with Germany. Millions of voters in our country will approve of your attitude and hope that there may prove to be an overwhelming majority in Congress who will stand firmly against war.

Will you kindly send me the copies of CONGRESSIONAL RECORD that contain your speech and similar speeches of the past few days? I will much appreciate the courtesy.

Yours, sincerely,

Rev. H. A. TODD,
Of Scotch (not German) Origin.

—

HOLLIDAYSBURG, PA., *February 20, 1917.*

Hon. WARREN WORTH BAILEY.

MY ESTEEMED FRIEND: I have read in our daily papers of your speech and the action taken by Congress regarding it, and I can not help but write you a few lines to say that I am more than proud of you. Surely you are a man that we all can be proud of. Wish to God we had more men like you. I am only too sorry you will not be in your seat the next term, and hope that my boys and I will have the opportunity to vote for you and to see you returned to where you justly belong and have merited a right to be.

Believe me, I am, sincerely, your friend. You voice my sentiments exactly.

A. REISER.

—

JOHNSTOWN, PA., *February 19, 1917.*

Hon. WARREN W. BAILEY.

DEAR FRIEND: Allow me to thank you and congratulate you on the able address you made before Congress for our country, and I hope your work and influence will keep this country from getting mixed up in this war.

Respectfully, yours,

HENRY J. RAAB.

—

UNION FURNACE MANUFACTURING CO. (INC.),
UNION FURNACE, PA., *February 20, 1917.*

Hon. WARREN W. BAILEY.

DEAR SIR: I, a voter in the Commonwealth of Pennsylvania, am opposed to the United States going to war over the present submarine issue with Germany.

Yours, truly,

H. HIMMELWRIGHT.

—

WEST PHILADELPHIA, PA., *February 19, 1917.*

Hon. WARREN W. BAILEY,
Washington, D. C.

HONORABLE SIR: The stand that you have taken during this present crisis is highly commendable. It is a pleasure to know that we still have a few men who have the courage of their convictions.

Very respectfully,

JOHN BABIS, Jr.

—

C. F. BLANKE TEA & COFFEE CO.,
St. Louis, February 19, 1917.

Hon. WARREN WORTH BAILEY,
Congressman from Pennsylvania,
Washington, D. C.

DEAR SIR: I wish to congratulate you on the speech you made in Congress on our relations with the belligerent countries. If more men in public life would have the courage to give their views publicly like you have, it would be better for this country and help keep this country out of trouble. For this country to throw itself into those European troubles at this time would be a crime that should rest upon the shoulders of those guilty of bringing the country into trouble and should be held responsible, for there will be some day when this country will wake up and realize the awful mistake they have made.

Respectfully, yours,

C. F. BLANKE.

—

ALTOONA, PA., *February 20, 1917.*

Hon. WARREN W. BAILEY,
Congressman.

DEAR SIR: I trust that you will do all in your power to avoid our beloved country being drawn into war with Europe or any other country; also that you will oppose with all your force the proposed law

making it obligatory for all young men to spend six months in military training. My sentiments are peace at any price, for there is nothing in war but misery, no matter who wins, and the final outcome is decided by men sitting around a table. So why not sit around the table in the first place and save these countless millions the awful misery that is sure to follow.

Very truly, yours,

H. C. NAGLE,
No. 311 Willow Avenue.
SHARBAUGH & LIEB,
Barnesboro, Pa., February 19, 1917.

—

Hon. WARREN WORTH BAILEY,
Washington, D. C.

DEAR SIR: I wish to congratulate you on your speech delivered in Congress on Saturday, February 17. You certainly voiced the sentiments of many true Americans. We are proud of a man from our district who has the moral courage to stand up against the crowd who would be foolish enough to get the United States mixed up in the war-mad countries of Europe.

Wishing you success in your noble battle for peace, I beg to remain,

Your admiring friend,

A. A. LIEB.

—

JOHNSTOWN, PA., *February 19, 1917.*

Hon. W. W. BAILEY,
House of Representatives, Washington, D. C.

DEAR SIR: It is my desire to express my approval and commendation to you for the emphatic and patriotic stand taken in Congress the 17th instant to keep our people from being rushed into this accursed conflict raging in all Europe; a condition that no man can see the end or predict the outcome other than the destruction of the white man entirely—who now is fast bleeding to death—if we shall become involved.

We have other menaces, if forced to an issue, that are big enough for America.

I believe that you feel as I do that it is the autocratic, plutocratic, and the so-called aristocratic element that propagate jingoism and the war spirit.

My position is: Not one penny for offensive war, but my all for defensive if war be waged on us.

Sincerely, yours,

S. H. CAUFFIEL.

—

CONEMAUGH, PA., *February 19, 1917.*

Hon. WARREN WORTH BAILEY,
Washington, D. C.

MY DEAR BAILEY: Accept my hearty congratulations on your very able address before Congress the other day. It surpasses every other address I have read this winter by long odds. Stick to your ground. The best people are with you in your noble stand.

Yours, very sincerely,

GEORGE MARTIN.

—

FARMINGTON, MO., *February 19, 1917.*

Mr. W. W. BAILEY,
Washington, D. C.

DEAR FRIEND: I write to commend your action in regard to inclosed slip. I am glad to know you take the stand with the Hon. W. J. Bryan for peace. It is a pleasure to know there are a few left who defy British gold; a few who hold principle above a punctilio.

Yours, truly,

E. M. LAAKMAN.

Our Diplomatic Struggle for the Freedom of the Seas as Revealed in Our Controversy With Great Britain.

EXTENSION OF REMARKS
OF
HON. S. D. FESS,
OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Friday, February 9, 1917.

Mr. FESS. Mr. Speaker, by permission of the House I printed on the 8th of this month the documents detailing the controversy with Germany on the submarine issue. On the following day the House granted my request to assemble and print the documents detailing our controversy with Great Britain on contraband, blockade, and neutral rights upon the sea. These controversies between this Government and the two belligerent powers have been treated separately, and having already inserted the German controversy I now propose to insert a logical arrangement of our controversy with England.

The rights of a neutral country in times of war are invariably invaded by belligerents whose incursions, oblivious of international practices, approach the limit where endurance breaks down. This is always placed upon the ground of actual necessity and such necessity as the violator decrees.

To establish rules of the sea for both belligerent and neutral to observe, attempts have been made by groups of nations to agree upon a code.

Such was the Declaration of Paris in 1856, coming at the close of the Crimean War, in which Russia, Turkey, England, and France were interested. This famous agreement which has stood as the law of the rights of neutrals for 60 years was as follows:

ARTICLE 2.

The neutral flag covers enemy's goods, with the exception of contraband of war.

ARTICLE 3.

Neutral goods, with the exception of contraband of war, are not liable to capture under the enemy's flag.

ARTICLE 4.

Blockades in order to be binding must be effective; that is to say, maintained by a force sufficient really to prevent access to the coasts of the enemy.

The chief defender of the neutrals' rights has been Great Britain, primarily because the sea is her chief highway of commerce. Her endeavors have been as a neutral to keep open the lanes of trade. One of the most stubborn questions was that of contraband.

In 1898, when she was a belligerent, then in the Boer War, she took the following position:

Foodstuffs, though having a hostile destination, can be considered as contraband of war only if they are for the enemy's forces; it is not sufficient that they are capable of being so used, it must be shown that this was in fact their destination at the time of their seizure.

The most important and widely heralded announcement of naval operations touching the rights of neutrals and privileges of belligerents was the famous Hague pronouncements of 1907, in which 46 nations were represented, including all the sea powers. It is interesting to note Britain's position on the question of contraband as embraced in Grey's instructions to her delegates:

His Majesty's Government recognize to the full the desirability of freeing neutral commerce to the utmost extent possible from interference by belligerent powers, and they are ready and willing for their part, in lieu of endeavoring to frame new and more satisfactory rules for the prevention of contraband trade in the future, to abandon the principle of contraband of war altogether, thus allowing the oversea trade in neutral vessels between belligerents on the one hand and neutrals on the other to continue during war without any restriction, subject only to its exclusion by blockade from an enemy's port. They are convinced that not only the interest of Great Britain but the common interest of all nations will be found on an unbiased examination of the subject to be served by the adoption of the course suggested.

The recommendation here was made that the delegates to The Hague convention use their power to induce the convention to abolish contraband.

In the event of the proposal not being favorably received, an endeavor should be made to frame a list of the articles that are to be regarded as contraband. Your efforts should then be directed to restricting that definition within the narrowest possible limits and upon lines which have the point of practical extinction as their ultimate aim.

Continuing the instructions of Grey:

If a definite list of contraband can not be secured, you should support and, if necessary, propose regulations intended to insure that nations shall publish, during peace, the list of articles they will regard as contraband during war, and that no change shall be made in the list on the outbreak of or during hostilities.

I here insert the findings of the conference touching the points of interest to us as a neutral power, insisting upon neutral rights upon the sea.

CHAPTER I.—POSTAL CORRESPONDENCE.

ARTICLE 1.

The postal correspondence of neutrals or belligerents, whatever its official or private character may be, found on the high seas on board a neutral or enemy ship, is inviolable. If the ship is detained, the correspondence is forwarded by the captor with the least possible delay.

The provisions of the preceding paragraph do not apply, in case of violation of blockade, to correspondence destined for or proceeding from a blockaded port.

ARTICLE 2.

The inviolability of postal correspondence does not exempt a neutral mail ship from the laws and customs of maritime war as to neutral merchant ships in general. The ship, however may not be searched except when absolutely necessary, and then only with as much consideration and expedition as possible.

CHAPTER II.—THE EXEMPTION FROM CAPTURE OF CERTAIN VESSELS.

ARTICLE 3.

Vessels used exclusively for fishing along the coast or small boats employed in local trade are exempt from capture, as well as their appliances, rigging, tackle, and cargo.

They cease to be exempt as soon as they take any part whatever in hostilities.

The contracting powers agree not to take advantage of the harmless character of the said vessels in order to use them for military purposes while preserving their peaceful appearance.

ARTICLE 4.

Vessels charged with religious, scientific, or philanthropic missions are likewise exempt from capture.

CHAPTER III.—REGULATIONS REGARDING THE CREWS OF ENEMY MERCHANT SHIPS CAPTURED BY A BELLIGERENT.

ARTICLE 5.

When an enemy merchant ship is captured by a belligerent, such of its crew as are nationals of a neutral State are not made prisoners of war.

The same rule applies in the case of the captain and officers likewise nationals of a neutral State, if they promise formally in writing not to serve on an enemy ship while the war lasts.

ARTICLE 6.

The captain, officers, and members of the crew, when nationals of the enemy State, are not made prisoners of war, on condition that they make a formal promise in writing not to undertake, while hostilities last, any service connected with the operations of the war.

ARTICLE 7.

The names of the persons retaining their liberty under the conditions laid down in article 5, paragraph 2, and in article 6, are notified by the belligerent captor to the other belligerent. The latter is forbidden knowingly to employ the said persons.

ARTICLE 8.

The provisions of the three preceding articles do not apply to ships taking part in the hostilities.

CHAPTER IV.—FINAL PROVISIONS.

ARTICLE 9.

The provisions of the present convention do not apply except between contracting powers, and then only if all the belligerents are parties to the convention.

ARTICLE 10.

The present convention shall be ratified as soon as possible.

The ratifications shall be deposited at The Hague.

The first deposit of ratifications shall be recorded in a procès verbal signed by the representatives of the powers taking part therein and by the Netherland minister for foreign affairs.

Subsequent deposits of ratifications shall be made by means of a written notification, addressed to the Netherland Government and accompanied by the instrument of ratification.

A duly certified copy of the procès verbal relative to the first deposit of ratifications, of the notifications mentioned in the preceding paragraph, as well as of the instruments of ratification, shall be at once sent by the Netherland Government, through the diplomatic channel, to the powers invited to the second peace conference, as well as to the other powers which have adhered to the convention. In the cases contemplated in the preceding paragraph, the said Government shall inform them at the same time of the date on which it received the notification.

ARTICLE 11.

Nonsignatory powers may adhere to the present convention.

The power which desires to adhere notifies its intention in writing to the Netherland Government, forwarding to it the act of adhesion, which shall be deposited in the archives of the said Government.

This Government shall at once transmit to all the other powers a duly certified copy of the notification as well as of the act of adhesion, mentioning the date on which it received the notification.

ARTICLE 12.

The present convention shall come into force in the case of the powers which were a party to the first deposit of ratification 60 days after the procès-verbal of that deposit, and in the case of the powers which ratify subsequently or which adhere 60 days after the notification of their ratification has been received by the Netherland Government.

ARTICLE 13.

In the event of one of the contracting powers wishing to denounce the present convention, the denunciation shall be notified in writing to the Netherland Government, which shall at once communicate a duly certified copy of the notification to all the other powers, informing them of the date on which it was received.

The denunciation shall only have effect in regard to the notifying power and one year after the notification has reached the Netherland Government.

ARTICLE 14.

A register kept by the Netherland ministry for foreign affairs shall give the date of the deposit of ratifications made in virtue of article 10, paragraphs 3 and 4, as well as the date on which the notifications of adhesion (art. 11, par. 2) or of denunciation (art. 13, par. 1) have been received.

Each contracting power is entitled to have access to this register and to be supplied with duly certified extracts from it.

In faith whereof the plenipotentiaries have appended their signatures to the present convention.

Done at The Hague, the 18th October, 1907, in a single copy, which shall remain deposited in the archives of the Netherland Government, and duly certified copies of which shall be sent, through the diplomatic channel, to the powers invited to the second peace conference.

[Here follow signatures.]

RATIFICATIONS, ADHESIONS, AND RESERVATIONS.

The foregoing convention was ratified by the following signatory powers on the dates indicated:

Austria-Hungary, November 27, 1909.
Belgium, August 8, 1910.
Brazil, January 5, 1914.
Denmark, November 27, 1909.
France, October 7, 1910.
Germany, November 27, 1909.
Great Britain, November 27, 1909.
Guatemala, March 15, 1911.
Haiti, February 2, 1910.
Japan, December 13, 1911.
Luxemburg, September 5, 1912.
Mexico, November 27, 1909.
Netherlands, November 27, 1909.
Norway, September 19, 1910.
Panama, September 11, 1911.
Portugal, April 13, 1911.
Roumania, March 1, 1912.
Salvador, November 27, 1909.
Siam, March 12, 1910.
Spain, March 18, 1913.
Sweden, November 27, 1909.
Switzerland, May 12, 1910.
United States, November 27, 1909.

Then, Mr. Speaker, the activities of the prize courts make it necessary to review the latest international agreement upon the powers of such a court as outlined by The Hague Conference in 1907.

PART I.—GENERAL PROVISIONS.

ARTICLE 1.

The validity of the capture of a merchant ship or its cargo is decided before a prize court in accordance with the present convention when neutral or enemy property is involved.

ARTICLE 2.

Jurisdiction in matters of prize is exercised in the first instance by the prize courts of the belligerent captor.

The judgments of these courts are pronounced in public or are officially notified to parties concerned who are neutrals or enemies.

ARTICLE 3.

The judgments of national prize courts may be brought before the International Prize Court—

1. When the judgment of the national prize courts affects the property of a neutral power or individual;

2. When the judgment affects enemy property and relates to—

(a) Cargo on board a neutral ship;

(b) An enemy ship captured in the territorial waters of a neutral power, when that power has not made the capture the subject of a diplomatic claim;

(c) A claim based upon the allegation that the seizure has been effected in violation, either of the provisions of a convention in force between the belligerent powers, or of an enactment issued by the belligerent captor.

The appeal against the judgment of the national court can be based on the ground that the judgment was wrong either in fact or in law.

ARTICLE 4.

An appeal may be brought—

1. By a neutral power, if the judgment of the national tribunals injuriously affects its property or the property of its nationals (art. 3, No. 1), or if the capture of an enemy vessel is alleged to have taken place in the territorial waters of that power (art. 3, No. 2b);

2. By a neutral individual, if the judgment of the national court injuriously affects his property (art. 3, No. 1), subject, however, to the reservation that the power to which he belongs may forbid him to bring the case before the court, or may itself undertake the proceedings in his place;

3. By an individual subject or citizen of an enemy power, if the judgment of the national court injuriously affects his property in the cases referred to in article 3, No. 2, except that mentioned in paragraph b.

ARTICLE 5.

An appeal may also be brought on the same conditions as in the preceding article, by persons belonging either to neutral States or to the enemy, deriving their rights from and entitled to represent an individual qualified to appeal, and who have taken part in the proceedings before the national court. Persons so entitled may appeal separately to the extent of their interest.

The same rule applies in the case of persons belonging either to neutral States or to the enemy who derive their rights from and are entitled to represent a neutral power whose property was the subject of the decision.

ARTICLE 6.

When, in accordance with the above article 3, the international court has jurisdiction, the national courts can not deal with a case in more than two instances. The municipal law of the belligerent captor shall decide whether the case may be brought before the international court after judgment has been given in first instance or only after an appeal.

If the national courts fail to give final judgment within two years from the date of capture, the case may be carried direct to the international court.

ARTICLE 7.

If a question of law to be decided is covered by a treaty in force between the belligerent captor and a power which is itself or whose subject or citizen is a party to the proceedings, the court is governed by the provisions of the said treaty.

In the absence of such provisions, the court shall apply the rules of international law. If no generally recognized rule exists, the court shall give judgment in accordance with the general principles of justice and equity.

The above provisions apply equally to questions relating to the order and mode of proof.

If in accordance with article 3, No. 2c, the ground of appeal is the violation of an enactment issued by the belligerent captor, the court will enforce the enactment.

The court may disregard failure to comply with the procedure laid down in the enactments of the belligerent captor, when it is of opinion that the consequences of complying therewith are unjust and inequitable.

ARTICLE 8.

(See art. 2 of the additional protocol.)

If the court pronounces the capture of the vessel or cargo to be valid, they shall be disposed of in accordance with the laws of the belligerent captor.

If it pronounces the capture to be null, the court shall order restitution of the vesel or cargo, and shall fix, if there is occasion, the amount of the damages. If the vessel or cargo have been sold or destroyed, the court shall determine the compensation to be given to the owner on this account.

If the national court pronounced the capture to be null, the court can only be asked to decide as to the damages.

ARTICLE 9.

The contracting powers undertake to submit in good faith to the decisions of the International Prize Court and to carry them out with the least possible delay.

PART II—CONSTITUTION OF THE INTERNATIONAL PRIZE COURT.

ARTICLE 10.

The International Prize Court is composed of judges and deputy judges, who will be appointed by the contracting powers, and must all be jurists of known proficiency in questions of international maritime law, and of the highest moral reputation.

The appointment of these judges and deputy judges shall be made within six months after the ratification of the present convention.

ARTICLE 11.

The judges and deputy judges are appointed for a period of six years, reckoned from the date on which the notification of their appointment is received by the administrative council established by the convention for the pacific settlement of international disputes of the 29th July, 1899. Their appointments can be renewed.

Should one of the judges or deputy judges die or resign, the same procedure is followed for filling the vacancy as was followed for appointing him. In this case the appointment is made for a fresh period of six years.

ARTICLE 12.

The judges of the International Prize Court are all equal in rank and have precedence according to the date on which the notification of their appointment was received (art. 11, par. 1), and if they sit by rota (art. 15, par. 2), according to the date on which they entered upon their duties. When the date is the same the senior in age takes precedence.

The deputy judges when acting are assimilated to the judges. They rank, however, after them.

ARTICLE 13.

The judges enjoy diplomatic privileges and immunities in the performance of their duties and when outside their own country.

Before taking their seat the judges must swear, or make a solemn promise before the administrative council, to discharge their duties impartially and conscientiously.

ARTICLE 14.

The court is composed of 15 judges; 9 judges constitute a quorum.

A judge who is absent or prevented from sitting is replaced by the deputy judge.

ARTICLE 15.

(Reservation of this article was made by Chile, Cuba, Ecuador, Guatemala, Haiti, Persia, Salvador, Siam, Turkey, and Uruguay.)

The judges appointed by the following contracting powers, Germany, the United States of America, Austria-Hungary, France, Great Britain, Italy, Japan, and Russia, are always summoned to sit.

The judges and deputy judges appointed by the other contracting powers sit by rota as shown in the table annexed to the present convention; their duties may be performed successively by the same person. The same judge may be appointed by several of the said powers.

ARTICLE 16.

If a belligerent power has, according to the rota, no judge sitting in the court, it may ask that the judge appointed by it should take part in the settlement of all cases arising from the war. Lots shall then be drawn as to which of the judges entitled to sit according to the rota shall withdraw. This arrangement does not affect the judge appointed by the other belligerent.

ARTICLE 17.

No judge can sit who has been a party, in any way whatever, to the sentence pronounced by the national courts, or has taken part in the case as counsel or advocate for one of the parties.

No judge or deputy judge can, during his tenure of office, appear as agent or advocate before the International Prize Court nor act for one of the parties in any capacity whatever.

ARTICLE 18.

The belligerent captor is entitled to appoint a naval officer of high rank to sit as assessor, but with no voice in the decision. A neutral power, which is a party to the proceedings or whose subject or citizen is a party, has the same right of appointment; if as the result of this last provision more than one power is concerned, they must agree among themselves, if necessary by lot, on the officer to be appointed.

ARTICLE 19.

The court elects its president and vice president by an absolute majority of the votes cast. After two ballots, the election is made by a bare majority, and, in case the votes are equal, by lot.

ARTICLE 20.

The judges on the International Prize Court are entitled to traveling allowances in accordance with the regulations in force in their own country, and in addition receive, while the courts is setting or while they are carrying out duties conferred upon them by the court, a sum of 100 Netherland florins per diem.

These payments are included in the general expenses of the court dealt with in article 47, and are paid through the International Bureau established by the convention of the 29th July, 1899.

The judges may not receive from their own Government or from that of any other power any remuneration in their capacity of members of the court.

ARTICLE 21.

The seat of the International Prize Court is at The Hague, and it can not, except in the cases of force majeure, be transferred elsewhere without the consent of the belligerents.

ARTICLE 22.

The administrative council fulfills, with regard to the International Prize Court, the same functions as to the Permanent Court of Arbitration, but only representatives of contracting powers will be members of it.

ARTICLE 23.

The International Bureau acts as registry to the International Prize Court and must place its offices and staff at the disposal of the court. It has charge of the archives and carries out the administrative work.

The secretary general of the International Bureau acts as registrar.

The necessary secretaries to assist the registrar, translators, and shorthand writers are appointed and sworn in by the court.

ARTICLE 24.

The court determines which language it will itself use and what languages may be used before it.

In every case the official language of the national courts which have had cognizance of the case may be used before the court.

ARTICLE 25.

Powers which are concerned in a case may appoint special agents to act as intermediaries between themselves and the court. They may also engage counsel or advocates to defend their rights and interests.

ARTICLE 26.

A private person concerned in a case will be represented before the court by an attorney, who must be either an advocate qualified to plead before a court of appeal or a high court of one of the contracting States, or a lawyer practicing before a similar court, or, lastly, a professor of law at one of the higher teaching centers of those countries.

ARTICLE 27.

For all notices to be served, in particular on the parties, witnesses, or experts, the court may apply direct to the Government of the State on whose territory the service is to be carried out. The same rule applies in the case of steps being taken to procure evidence.

The requests for this purpose are to be executed so far as the means at the disposal of the power applied to under its municipal law allow. They can not be rejected unless the power in question considers them calculated to impair its sovereign rights or its safety. If the request is complied with, the fees charged must only comprise the expenses actually incurred.

The court is equally entitled to act through the power on whose territory it sits.

Notices to be given to parties in the place where the court sits may be served through the international bureau.

PART III.—PROCEDURE IN THE INTERNATIONAL PRIZE COURT.

ARTICLE 28.

(See art. 5 of the additional protocol.)

An appeal to the international prize court is entered by means of a written declaration made in the national court which has already dealt with the case or addressed to the international bureau; in the latter case the appeal can be entered by telegram.

The period within which the appeal must be entered is fixed at 120 days, counting from the day the decision is delivered or notified. (Art. 2, par. 2.)

ARTICLE 29.

(See art. 6 of the additional protocol.)

If the notice of appeal is entered in the national court, this court, without considering the question whether the appeal was entered in due time, will transmit within seven days the record of the case to the international bureau.

If the notice of the appeal is sent to the international bureau, the bureau will immediately inform the national court, when possible, by telegraph. The latter will transmit the record as provided in the preceding paragraph.

When the appeal is brought by a neutral individual the international bureau at once informs by telegraph the individual's Government, in order to enable it to enforce the rights it enjoys under article 4, paragraph 2.

ARTICLE 30.

In the case provided for in article 6, paragraph 2, the notice of appeal can be addressed to the international bureau only. It must be entered within 30 days of the expiration of the period of 2 years.

ARTICLE 31.

If the appellant does not enter his appeal within the period laid down in article 28 or 30, it shall be rejected without discussion.

Provided that he can show that he was prevented from so doing by force majeure and that the appeal was entered within 60 days after the circumstances which prevented him entering it before had ceased to operate, the court can, after hearing the respondent, grant relief from the effect of the above provision.

ARTICLE 32.

If the appeal is entered in time, a certified copy of the notice of appeal is forthwith officially transmitted by the court to the respondent.

ARTICLE 33.

If in addition to the parties who are before the court there are other parties concerned who are entitled to appeal, or if, in the case referred to in article 29, paragraph 3, the Government who has received notice of an appeal has not announced its decision, the court will await before dealing with the case the expiration of the period laid down in article 28 or 30.

ARTICLE 34.

The procedure before the international court includes two distinct parts, the written pleadings and oral discussions.

The written pleadings consist of the deposit and exchange of cases, countercases, and, if necessary, of replies, of which the order is fixed by the court, as also the periods within which they must be delivered. The parties annex thereto all papers and documents of which they intend to make use.

A certified copy of every document produced by one party must be communicated to the other party through the medium of the court.

ARTICLE 35.

After the close of the pleadings a public sitting is held on a day fixed by the court.

At this sitting the parties state their view of the case both as to the law and as to the facts.

The court may, at any stage of the proceedings, suspend speeches of counsel, either at the request of one of the parties or on their own initiative, in order that supplementary evidence may be obtained.

ARTICLE 36.

The international court may order the supplementary evidence to be taken either in the manner provided by article 27, or before itself, or one or more of the members of the court, provided that this can be done without resort to compulsion or the use of threats.

If steps are to be taken for the purpose of obtaining evidence by members of the court outside the territory where it is sitting, the consent of the foreign Government must be obtained.

ARTICLE 37.

The parties are summoned to take part in all stages of the proceedings and receive certified copies of the minutes.

ARTICLE 38.

The discussions are under the control of the president or vice president, or, in case they are absent or can not act, of the senior judge present.

The judge appointed by a belligerent party can not preside.

ARTICLE 39.

The discussions take place in public, subject to the right of a government who is a party to the case to demand that they be held in private.

Minutes are taken of these discussions and signed by the president and registrar, and these minutes alone have an authentic character.

ARTICLE 40.

If a party does not appear, despite the fact that he has been duly cited, or if a party fails to comply with some step within the period fixed by the court, the case proceeds without that party, and the court gives judgment in accordance with the material at its disposal.

ARTICLE 41.

The court officially notifies the parties of decrees or decisions made in their absence.

ARTICLE 42.

The court takes into consideration in arriving at its decisions all the facts, evidence, and oral statements.

ARTICLE 43.

The court considers its decision in private and the proceedings are secret.

All questions are decided by a majority of the judges present. If the number of judges is even and equally divided, the vote of the junior judge in the order of precedence laid down in article 12, paragraph 1, is not counted.

ARTICLE 44.

The judgment of the court must give the reasons on which it is based. It contains the names of the judges taking part in it, and also of the assessors, if any; it is signed by the president and registrar.

ARTICLE 45.

(See art. 7 of the additional protocol.)

The sentence is pronounced in public sitting, the parties concerned being present or duly summoned to attend; the sentence is officially communicated to the parties.

When this communication has been made the court transmits to the national prize court the record of the case, together with copies of the various decisions arrived at and of the minutes of the proceedings.

ARTICLE 46.

Each party pays its own costs.

The party against whom the court decides bears, in addition, the costs of the trial, and also pays 1 per cent of the value of the subject matter of the case as a contribution to the general expenses of the international court. The amount of these payments is fixed in the judgment of the court.

If the appeal is brought by an individual, he will furnish the international bureau with security to an amount fixed by the court, for the purpose of guaranteeing eventual fulfillment of the two obligations mentioned in the preceding paragraph. The court is entitled to postpone the opening of the proceedings until the security has been furnished.

ARTICLE 47.

The general expenses of the International Prize Court are borne by the contracting powers in proportion to their share in the composition of the court as laid down in article 15 and in the annexed table. (Post, p. 203.) The appointment of deputy judges does not involve any contribution.

The administrative council applies to the powers for the funds requisite for the working of the court.

ARTICLE 48.

When the court is not sitting the duties conferred upon it by article 32, article 34, paragraphs 2 and 3, article 35, paragraph 1, and article 46, paragraph 3, are discharged by a delegation of three judges appointed by the court. This delegation decides by a majority of votes.

ARTICLE 49.

The court itself draws up its own rules of procedure, which must be communicated to the contracting powers.

It will meet to elaborate these rules within a year of the ratification of the present convention.

ARTICLE 50.

The court may propose modifications in the provisions of the present convention concerning procedure. These proposals are communicated, through the medium of the Netherland Government, to the contracting powers, which will consider together as to the measures to be taken.

PART IV—FINAL PROVISIONS.

ARTICLE 51.

The present convention does not apply as of right except when the belligerent powers are all parties to the convention.

It is further fully understood that an appeal to the International Prize Court can only be brought by a contracting power or the subject or citizen of a contracting power.

In the cases mentioned in article 5 the appeal is only admitted when both the owner and the person entitled to represent him are equally contracting powers or the subjects or citizens of contracting powers.

ARTICLE 52.

The present convention shall be ratified and the ratifications shall be deposited at The Hague as soon as all the powers mentioned in article 15 and in the table annexed are in a position to do so.

The deposit of the ratifications shall take place, in any case, on the 30th June, 1909, if the powers which are ready to ratify furnish nine judges and nine deputy judges to the court, qualified to validly constitute a court. If not, the deposit shall be postponed until this condition is fulfilled.

A minute of the deposit of ratifications shall be drawn up, of which a certified copy shall be forwarded through the diplomatic channel, to each of the powers referred to in the first paragraph. (See art. 8 of the additional protocol, post, p. 207.)

ARTICLE 53.

The powers referred to in article 15 and in the table annexed are entitled to sign the present convention up to the deposit of the ratifications contemplated in paragraph 2 of the preceding article.

After this deposit they can at any time adhere to it, purely and simply. (See art. 9 of the additional protocol, post, p. 207.) A power wishing to adhere, notifies its intention in writing to the Netherlands Government, transmitting to it, at the same time, the act of adhesion, which shall be deposited in the archives of the said Government. The latter shall send, through the diplomatic channel, a certified copy of the notification and of the act of adhesion to all the powers referred to in the preceding paragraph, informing them of the date on which it has received the notification.

ARTICLE 54.

The present convention shall come into force six months from the deposit of the ratifications contemplated in article 52, paragraphs 1 and 2.

The adhesions shall take effect 60 days after notification of such adhesion has been received by the Netherlands Government or as soon as possible on the expiration of the period contemplated in the preceding paragraph.

The international court shall, however, have jurisdiction to deal with prize cases decided by the national courts at any time after the deposit of the ratifications or of the receipt of the notification of the adhesions. In such cases the period fixed in article 28, paragraph 2, shall only be reckoned from the date when the convention comes into force as regards a power which has ratified or adhered.

ARTICLE 55.

The present convention shall remain in force for 12 years from the time it comes into force, as determined by article 54, paragraph 1, even in the case of powers which adhere subsequently.

It shall be renewed tacitly from six years to six years unless denounced.

Denunciation must be notified in writing, at least one year before the expiration of each of the periods mentioned in the two preceding paragraphs, to the Netherlands Government, which will inform all the other contracting powers.

Denunciation shall only take effect in regard to the power which has notified it. The convention shall remain in force in the case of the other contracting powers, provided that their participation in the appointment of judges is sufficient to allow of the composition of the court with nine judges and nine deputy judges.

ARTICLE 56.

In case the present convention is not in operation as regards all the powers referred to in article 15 and the annexed table, the administrative council shall draw up a list on the lines of that article and table of the judges and deputy judges through whom the contracting powers will share in the composition of the court. The times allotted by the said table to judges who are summoned to sit in rota will be redistributed between the different years of the six-year period in such a way that, as far as possible, the number of the judges of the court in each year shall be the same. If the number of deputy judges is greater than that of the judges, the number of the latter can be completed by deputy judges chosen by lot among those powers which do not nominate a judge.

The list drawn up in this way by the administrative council shall be notified to the contracting powers. It shall be revised when the number of these powers is modified as the result of adhesions or denunciations.

The change resulting from an adhesion is not made until the first January after the date on which the adhesion takes effect, unless the adhering power is a belligerent power, in which case it can ask to be at once represented in the court, the provisions of article 16 being, moreover, applicable if necessary.

When the total number of judges is less than 11, 7 judges form a quorum.

ARTICLE 57.

Two years before the expiration of each period referred to in paragraphs 1 and 2 of article 55 any contracting power can demand a modification of the provisions of article 15 and of the annexed table, relative to its participation in the composition of the court. The demand shall be addressed to the administrative council, which will examine it and submit to all the powers proposals as to the measures to be adopted. The powers shall inform the administrative council of their decision with the least possible delay. The result shall be at once, and at least 1 year and 30 days before the expiration of the said period of 2 years, communicated to the power which made the demand.

When necessary, the modifications adopted by the powers shall come into force from the commencement of the fresh period.

SIGNATURES AND RESERVATIONS.

[The deposit of ratifications provided for in art. 52, par. 2, has not yet taken place.]

Both the 1907 convention and the 1910 additional protocol have been signed by the following powers:

Argentine Republic, Austria-Hungary, Belgium, Bolivia, Bulgaria, Chile, Colombia, Cuba, Denmark, Ecuador, France, Germany, Great Britain, Guatemala, Haiti, Italy, Japan, Mexico, Netherlands, Norway, Panama, Paraguay, Persia, Peru, Portugal, Salvador, Siam, Spain, Sweden, Switzerland, Turkey, United States, and Uruguay.

Reservations: Chile, Cuba, Ecuador, Guatemala, Haiti, Persia, Salvador, Siam, Turkey, and Uruguay signed the convention with reservation of article 15.

Mr. Speaker, in view of the much-discussed question of warships or auxiliaries in neutral waters, I herein insert the findings of The Hague conference on the "Rights and Duties of Neutral Powers in Naval War," as adopted October 18, 1907.

ARTICLE 1.

Belligerents are bound to respect the sovereign rights of neutral powers and to abstain, in neutral territory or neutral waters, from any act which would, if knowingly permitted by any power, constitute a violation of neutrality.

ARTICLE 2.

Any act of hostility, including capture and the exercise of the right of search, committed by belligerent warships in the territorial waters of a neutral power, constitutes a violation of neutrality and is strictly forbidden.

ARTICLE 3.

When a ship has been captured in the territorial waters of a neutral power this power must employ, if the prize is still within its jurisdiction, the means at its disposal to release the prize with its officers and crew and to intern the prize crew.

If the prize is not in the jurisdiction of the neutral power, the captor Government, on the demand of that power, must liberate the prize with its officers and crew.

ARTICLE 4.

A prize court can not be set up by a belligerent on neutral territory or on a vessel in neutral waters.

ARTICLE 5.

Belligerents are forbidden to use neutral ports and waters as a base of naval operations against their adversaries, and in particular to erect wireless telegraphy stations or any apparatus for the purpose of communicating with the belligerent forces on land or sea.

ARTICLE 6.

The supply, in any manner, directly or indirectly, by a neutral power to a belligerent power or warships, ammunition, or war material of any kind whatever is forbidden.

ARTICLE 7.

A neutral power is not bound to prevent the export or transit, for the use of either belligerent, of arms, ammunition, or, in general, of anything which could be of use to an army or fleet.

ARTICLE 8.

A neutral Government is bound to employ the means at its disposal to prevent the fitting out or arming of any vessel within its jurisdiction which it has reason to believe is intended to cruise or engage in hostile operations against a power with which that Government is at peace. It is also bound to display the same vigilance to prevent the departure from its jurisdiction of any vessel intended to cruise or engage in hostile operations which had been adapted entirely or partly within the said jurisdiction for use in war.

ARTICLE 9.

A neutral power must apply impartially to the two belligerents the conditions, restrictions, or prohibitions made by it in regard to the admission into its ports, roadsteads, or territorial waters of belligerent warships or of their prizes.

Nevertheless, a neutral power may forbid a belligerent vessel which has failed to conform to the orders and regulations made by it, or which has violated neutrality, to enter its ports or roadsteads.

ARTICLE 10.

(See the declarations of Turkey as to the Dardanelles and Bosphorus.)

The neutrality of a power is not affected by the mere passage through its territorial waters of warships or prizes belonging to belligerents.

ARTICLE 11.

(Germany made reservation of article 11.)

A neutral power may allow belligerent warships to employ its licensed pilots.

ARTICLE 12.

(The Dominican Republic, Germany, Persia, and Siam made reservation of article 12.)

In the absence of special provisions to the contrary in the legislation of a neutral power, belligerent warships are not permitted to remain in the ports, roadsteads, or territorial waters of the said power for more than 24 hours, except in the cases covered by the present convention.

ARTICLE 13.

(Germany made reservation of article 13.)

If a power which has been informed of the outbreak of hostilities learns that a belligerent warship is in one of its ports or roadsteads or in its territorial waters, it must notify the said ship to depart within 24 hours or within the time prescribed by local regulations.

ARTICLE 14.

A belligerent warship may not prolong its stay in a neutral port beyond the permissible time except on account of damage or stress of weather. It must depart as soon as the cause of the delay is at an end.

The regulations as to the question of the length of time which these vessels may remain in neutral ports, roadsteads, or waters do not apply to warships devoted exclusively to religious, scientific, or philanthropic purposes. (China may reservation of this paragraph.)

ARTICLE 15.

In the absence of special provisions to the contrary in the legislation of a neutral power, the maximum number of warships belonging to a belligerent which may be in one of the ports or roadsteads of that power simultaneously shall be three.

ARTICLE 16.

When warships belonging to both belligerents are present simultaneously in a neutral port or roadstead, a period of not less than 24 hours must elapse between the departure of the ship belonging to one belligerent and the departure of the ship belonging to the other.

The order of departure is determined by the order of arrival, unless the ship which arrived first is so circumstanced that an extension of its stay is permissible.

A belligerent warship may not leave a neutral port or roadstead until 24 hours after the departure of a merchant ship flying the flag of its adversary.

ARTICLE 17.

In neutral ports and roadsteads belligerent warships may only carry out such repairs as are absolutely necessary to render them seaworthy, and may not add in any manner whatsoever to their fighting force. The local authorities of the neutral power shall decide what repairs are necessary, and these must be carried out with the least possible delay.

ARTICLE 18.

Belligerent warships may not make use of neutral ports, roadsteads, or territorial waters for replenishing or increasing their supplies of war material or their armament or for completing their crews.

ARTICLE 19.

(China, Great Britain, Japan, Persia, and Siam made reservation of article 19.)

Belligerent warships may only revictual in neutral ports or roadsteads to bring up their supplies to the peace standard.

Similarly these vessels may only ship sufficient fuel to enable them to reach the nearest port in their own country. They may, on the other hand, fill up their bunkers, built to carry fuel, when in neutral countries which have adopted this method of determining the amount of fuel to be supplied.

If, in accordance with the law of the neutral power, the ships are not supplied with coal within 24 hours of their arrival, the permissible duration of their stay is extended by 24 hours.

ARTICLE 20.

(Germany made reservation of article 20.)

Belligerent warships which have shipped fuel in a port belonging to a neutral power may not within the succeeding three months replenish their supply in a port of the same power.

ARTICLE 21.

(Persia made reservation of article 21.)

A prize may only be brought into a neutral port on account of unseaworthiness, stress of weather, or want of fuel or provisions.

It must leave as soon as the circumstances which justified its entry are at an end. If it does not, the neutral power must order it to leave at once. Should it fail to obey, the neutral power must employ the means at its disposal to release it, with its officers and crew, and to intern the prize crew.

ARTICLE 22.

A neutral power must similarly release a prize brought into one of its ports under circumstances other than those referred to in article 21.

ARTICLE 23.

(Reservations as to this article were made by Great Britain, Japan, Siam, and the United States.)

A neutral power may allow prizes to enter its ports and roadsteads, whether under convoy or not, when they are brought there to be sequestrated pending the decision of a prize court. It may have the prize taken to another of its ports.

If the prize is convoyed by a warship, the prize crew may go on board the convoying ship.

If the prize is not under convoy, the prize crew are left at liberty.

ARTICLE 24.

If, notwithstanding the notification of the neutral power, a belligerent ship of war does not leave a port where it is not entitled to remain, the neutral power is entitled to take such measures as it considers necessary to render the ship incapable of taking the sea during the war, and the commanding officer of the ship must facilitate the execution of such measures.

When a belligerent ship is detained by a neutral power the officers and crew are likewise detained.

The officers and crew thus detained may be left in the ship or kept either on another vessel or on land, and may be subjected to the measures of restrictions which it may appear necessary to impose upon them. A sufficient number of men for looking after the vessel must, however, be always left on board.

The officers may be left at liberty on giving their word not to quit the neutral territory without permission.

ARTICLE 25.

A neutral power is bound to exercise such surveillance as the means at its disposal allow to prevent any violation of the provisions of the above articles occurring in its port or roadsteads or in its waters.

ARTICLE 26.

The exercise by a neutral power of the rights laid down in the present convention can under no circumstances be considered as an unfriendly act by one or other belligerent who has accepted the articles relating thereto.

ARTICLE 27.

(China made reservation of this article.)

The contracting powers shall communicate to each other in due course all laws, proclamations, and other enactments regulating in their respective countries the status of belligerent warships in their ports and waters, by means of a communication addressed to the Government of the Netherlands, and forwarded immediately by that Government to the other contracting powers.

ARTICLE 28.

The provisions of the present convention do not apply except between contracting powers, and then only if all the belligerents are parties to the convention.

ARTICLE 29.

The present convention shall be ratified as soon as possible.

The ratifications shall be deposited at The Hague.

The first deposit of ratification shall be recorded in a procès verbal signed by the representatives of the powers which take part therein and by the Netherland minister for foreign affairs.

The subsequent deposits of ratifications shall be made by means of a written notification addressed to the Netherland Government and accompanied by the instrument of ratification.

A duly certified copy of the procès verbal relative to the first deposit of ratifications, of the ratifications mentioned in the preceding paragraph, as well as of the instruments of ratification, shall be at once sent by the Netherland Government, through the diplomatic channel, to the powers invited to the Second Peace Conference, as well as to the other powers which have adhered to the convention. In the cases contemplated in the preceding paragraph, the said Government shall inform them at the same time of the date on which it received the notification.

ARTICLE 30.

Nonsignatory powers may adhere to the present convention.

The power which desires to adhere notifies in writing its intention to the Netherland Government, forwarding to it the act of adhesion, which shall be deposited in the archives of the said Government.

That Government shall at once transmit to all the other powers a duly certified copy of the notification as well as of the act of adhesion, mentioning the date on which it received the notification.

ARTICLE 31.

The present convention shall come into force, in the case of the powers which were a party to the first deposit of the ratifications, 60 days after the date of the procès verbal of that deposit, and in the case of the powers who ratify subsequently or who adhere, 60 days after the notification of their ratification or of their decision has been received by the Netherland Government.

ARTICLE 32.

In the event of one of the contracting powers wishing to denounce the present convention, the denunciation shall be notified in writing to the Netherland Government, who shall at once communicate a duly certified copy of the notification to all the other powers informing them of the date on which it was received.

The denunciation shall only have effect in regard to the notifying power, and one year after the notification has been made to the Netherland Government.

ARTICLE 33.

A register kept by the Netherland Ministry of Foreign Affairs shall give the date of the deposit of ratification made by article 29, paragraphs 3 and 4, as well as the date on which the notifications of adhesion (art. 30, par. 2) or of denunciation (art. 32, par. 1) have been received.

Each contracting power is entitled to have access to this register and to be supplied with duly certified extracts.

In faith whereof the plenipotentiaries have appended their signatures to the present convention.

Done at The Hague the 18th October, 1907, in a single copy, which shall remain deposited in the archives of the Netherland Government, and duly certified copies of which shall be sent, through the diplomatic channel, to the powers which have been invited to the Second Peace Conference.

[Here follow signatures.]

RATIFICATIONS.

The foregoing convention was ratified by the following signatory powers on the dates indicated:

Austria-Hungary, November 27, 1909.
Belgium, August 8, 1910.
Brazil, January 5, 1914.
Denmark, November 27, 1909.
France, October 7, 1910.
Germany, November 27, 1909.
Guatemala, March 15, 1911.
Haiti, February 2, 1910.
Japan, December 13, 1911.
Luxemburg, September 5, 1912.
Mexico, November 27, 1909.
Netherlands, November 27, 1909.
Norway, September 19, 1910.
Panama, September 11, 1911.
Portugal, April 13, 1911.
Roumania, March 1, 1912.
Russia, November 27, 1909.
Salvador, November 27, 1909.
Siam, March 12, 1910.
Sweden, November 27, 1909.
Switzerland, May 12, 1910.

Two years after The Hague conference upon the motion of Great Britain a conference of nations was held at London for the purpose of agreeing upon a code of rights upon the sea. The work of this famous conference is known as the declaration of London. While it is true that not all the countries ratified the work of the conference, the document is illuminating at this time. I here insert that portion which touches the rights upon the sea of both neutral and belligerent powers. Since the declaration had not been ratified by all the countries, including England, our Government soon after the outbreak of the war addressed a note simultaneously to the belligerents asking whether they would adopt the declaration of London as the rule for naval action toward neutrals:

(The Secretary of State to the American ambassador at London.)

Mr. Bryan instructs Mr. Page to inquire whether the British Government is willing to agree that the laws of naval warfare as laid down by the declaration of London of 1909 shall be applicable to naval warfare during the present conflict in Europe, provided that the Governments with whom Great Britain is or may be at war also agree to such application. Mr. Bryan further instructs Mr. Page to state that the Government of the United States believes that an acceptance of these laws by the belligerents would prevent grave misunderstandings which may arise as to the relations between neutral powers and the belligerents. Mr. Bryan adds that it is earnestly hoped that this inquiry may receive favorable consideration.

The note was addressed on the 6th of August, 1914.

On the 22d of August England replied as follows:

(The secretary of state for foreign affairs ad interim to the American ambassador.)

YOUR EXCELLENCY: On the 7th instant you were so good as to address to me a note inquiring, pursuant to instructions from the Secretary of State at Washington, whether His Majesty's Government were willing to agree that the laws of naval warfare, as laid down by the declaration of London, 1909, should be applicable to naval warfare during the present European conflict, provided that the Governments with whom Great Britain is at war, or with whom her relations are not normal, also agree to such application.

Your excellency added that it was the belief of your Government that the acceptance of these laws by the belligerents would prevent the possibility of grave misunderstandings as to the relations between belligerents and neutrals.

I have the honor to inform your excellency that His Majesty's Government, who attach great importance to the views expressed in your excellency's note and are animated by a keen desire to consult so far as possible the interests of neutral countries, have given this matter their most careful consideration, and have pleasure in stating that they have decided to adopt generally the rules of the declaration in question, subject to certain modifications and additions which they judge indispensable to the efficient conduct of their naval operations. A detailed explanation of these additions and modifications is contained in the inclosed memorandum.

The necessary steps to carry the above decision into effect have now been taken by the issue of an order in council, of which I have the honor to inclose copies herein for your excellency's information and for transmission to your Government.

I may add that His Majesty's Government, in deciding to adhere to the rules of the declaration of London, subject only to the aforesaid modifications and additions, have not waited to learn the intentions of the enemy Governments, but have been actuated by a desire to terminate at the earliest moment the condition of uncertainty which has been prejudicing the interests of neutral trade.

I have, etc.,

E. A. CROWE.

England having rejected the declaration of London, our Government sent the following note, withdrawing our suggestions:

(The Secretary of State ad interim to the American ambassador at London.)

Inasmuch as the British Government consider that the conditions of the present European conflict make it impossible for them to accept without modification the declaration of London, you are requested to inform His Majesty's Government that in the circumstances the Government of the United States feels obliged to withdraw its suggestion that the declaration of London be adopted as a temporary code of naval warfare to be observed by belligerents and neutrals during the present war; that, therefore, this Government will insist that the rights and duties of the United States and its citizens in the present war be defined by the existing rules of international law and the treaties of the United States irrespective of the provisions of the declaration of London; and that this Government reserves to itself the right to enter a protest or demand in each case in which those rights and duties so defined are violated or their free exercise interfered with by the authorities of His Britannic Majesty's Government.

LANSING.

It will be noted that a fixed list of articles as contraband was enumerated. Articles 22 and 23 specified what should be regarded as contraband and article 28 declared what should not be contraband.

CONTRABAND OF WAR.

Article 22.

The following articles may, without notice, be treated as contraband of war, under the name of absolute contraband:

(1) Arms of all kinds, including arms for sporting purposes, and their distinctive component parts.
(2) Projectiles, charges, and cartridges of all kinds, and their distinctive component parts.
(3) Powder and explosives especially prepared for use in war.
(4) Gun mountings, limber boxes, limbers, military wagons, field forges, and their distinctive component parts.
(5) Clothing and equipment of a distinctively military character.
(6) All kinds of harness of a distinctively military character.
(7) Saddle, draft, and pack animals suitable for use in war.
(8) Articles of camp equipment, and their distinctive component parts.
(9) Armor plates.
(10) Warships, including boats, and their distinctive component parts of such a nature that they can only be used on a vessel of war.
(11) Implements and apparatus designed exclusively for the manufacture of munitions of war, for the manufacture or repair of arms, or war material for use on land or sea.

Article 23.

Articles exclusively used for war may be added to the list of absolute contraband by a declaration, which must be notified.

Such notification must be addressed to the Governments of other powers or to their representatives accredited to the power making the declaration. A notification made after the outbreak of hostilities is addressed only to neutral powers.

Article 24.

The following articles, susceptible of use in war as well as for purposes of peace, may, without notice, be treated as contraband of war, under the name of conditional contraband:

(1) Foodstuffs.
(2) Forage and grain, suitable for feeding animals.
(3) Clothing, fabrics for clothing, and boots and shoes, suitable for use in war.
(4) Gold and silver in coin or bullion; paper money.
(5) Vehicles of all kinds available for use in war, and their component parts.
(6) Vessels, craft, and boats of all kinds; floating docks, parts of docks and their component parts.
(7) Railway material, both fixed and rolling stock, and material for telegraphs, wireless telegraphs, and telephone.
(8) Balloons and flying machines and their distinctive component parts, together with accessories and articles recognizable as intended for use in connection with balloons and flying machines.
(9) Fuel; lubricants.
(10) Powder and explosives not specially prepared for use in war.
(11) Barbed wire and implements for fixing and cutting the same.
(12) Horseshoes and shoeing materials.
(13) Harness and saddlery.
(14) Field glasses, telescopes, chronometers, and all kinds of nautical instruments.

Article 25.

Articles susceptible of use in war as well as for purposes of peace, other than those enumerated in articles 22 and 24, may be added to the list of conditional contraband by a declaration, which must be notified in the manner provided for in the second paragraph of article 23.

Article 26.

If a power waives, so far as it is concerned, the right to treat as contraband of war an article comprised in any of the classes enumerated in articles 22 and 24, such intention shall be announced by a declaration, which must be notified in the manner provided for in the second paragraph of article 23.

Article 27.

Articles which are not susceptible of use in war may not be declared contraband of war.

Article 28.

The following may not be declared contraband of war:

(1) Raw cotton, wool, silk, jute, flax, hemp, and other raw materials of the textile industries, and yarns of the same.
(2) Oil seeds and nuts; copra.
(3) Rubber, resins, gums, and laces; hops.
(4) Raw hides and horns, bones, and ivory.
(5) Natural and artificial manures, including nitrates and phosphates for agricultural purposes.
(6) Metallic ores.
(7) Earths, clays, lime, chalk, stone, including marble, bricks, slates, and tiles.
(8) Chinaware and glass.
(9) Paper and paper-making materials.

(10) Soap, paint, and colors, including articles exclusively used in their manufacture, and varnish.
(11) Bleaching powder, soda ash, caustic soda, salt cake, ammonia, sulphate of ammonia, and sulphate of copper.
(12) Agricultural, mining, textile, and printing machinery.
(13) Precious and semiprecious stones, pearls, mother-of-pearl, and coral.
(14) Clocks and watches other than chronometers.
(15) Fashion and fancy goods.
(16) Feathers of all kinds, hairs, and bristles.
(17) Articles of household furniture and decoration; office furniture and requisites.

Article 29.

Likewise the following may not be treated as contraband of war:
(1) Articles serving exclusively to aid the sick and wounded. They can, however, in case of urgent military necessity and subject to the payment of compensation, be requisitioned if their destination is that specified in article 30.
(2) Articles intended for the use of the vessel in which they are found, as well as those intended for the use of her crew and passengers during the voyage.

Article 30.

Absolute contraband is liable to capture if it is shown to be destined to territory belonging to or occupied by the enemy, or to the armed forces of the enemy. It is immaterial whether the carriage of the goods is direct or entails transshipment or a subsequent transport by land.

Article 31.

Proof of the destination specified in article 30 is complete in the following cases:
(1) When the goods are documented for discharge in an enemy port, or for delivery to the armed forces of the enemy.
(2) When the vessel is to call at enemy ports only, or when she is in touch at any enemy port or meet the armed forces of the enemy before reaching the neutral port for which the goods in question are documented.

Article 32.

When a vessel is carrying absolute contraband her papers are conclusive proof as to the voyage on which she is engaged, unless she is found clearly out of the course indicated by her papers and unable to give adequate reasons to justify such deviation.

Article 33.

Conditional contraband is liable to capture if it is shown to be destined for the use of the armed forces or of a Government department of the enemy State, unless in this latter case the circumstances show that the goods can not in fact be used for the purposes of war in progress. This latter exception does not apply to a consignment coming under article 24 (4).

Article 34.

The destination referred to in article 33 is presumed to exist if the goods are consigned to enemy authorities, or to a contractor established in the enemy country, who, as a matter of common knowledge, supplies articles of this kind to the enemy. A similar presumption arises if the goods are consigned to a fortified place belonging to the enemy, or other place serving as a base for the armed forces of the enemy. No such presumption, however, arises in the case of a merchant vessel bound for one of these places if it is sought to prove that she herself is contraband.
In cases where the above presumptions do not arise the destination is presumed to be innocent.
The presumptions set up by this article may be rebutted.

Article 35.

Conditional contraband is not liable to capture, except when found on board a vessel bound for territory belonging to or occupied by the enemy, or for the armed forces of the enemy, and when it is not to be discharged in an intervening neutral port.
The ship's papers are conclusive proof both as to the voyage on which the vessel is engaged and as to the port of discharge of the goods, unless she is found clearly out of the course indicated by her papers, and unable to give adequate reasons to justify such deviation.

Article 36.

Notwithstanding the provisions of article 35, conditional contraband, if shown to have the destination referred to in article 33, is liable to capture in cases where the enemy country has no seaboard.

Article 37.

A vessel carrying goods liable to capture as absolute or conditional contraband may be captured on the high seas or in the territorial waters of the belligerents throughout the whole of her voyage; even if she is to touch at a port of call before reaching the hostile destination.

Article 38.

A vessel may not be captured on the ground that she has carried contraband on a previous occasion if such carriage is in point of fact at an end.

Article 39.

Contraband goods are liable to condemnation.

Article 40.

A vessel carrying contraband may be condemned if the contraband reckoned either by value, weight, volume, or freight, forms more than half the cargo.

Article 41.

If a vessel carrying contraband is released, she may be condemned to pay the costs and expenses incurred by the captor in respect of the proceedings in the national prize court and the custody of the ship and cargo during the proceedings.

Article 42.

Goods which belong to the owner of the contraband and are on board the same vessel are liable to condemnation.

Article 43.

If a vessel is encountered at sea while unaware of the outbreak of hostilities or of the declaration of contraband which applies to her cargo, the contraband can not be condemned except on payment of compensation; the vessel herself and the remainder of the cargo are not liable to condemnation or to the costs and expenses referred to in article 41. The same rule applies if the master, after becoming aware of the outbreak of hostilities or of the declaration of contraband, has had no opportunity of discharging the contraband.

A vessel is deemed to be aware of the existence of a state of war or of a declaration of contraband, if she left a neutral port subsequently to the notification to the power to which such port belongs at the outbreak of hostilities or of the declaration of contraband, respectively, provided that such notification was made in sufficient time. A vessel is also deemed to be aware of the existence of a state of war if she left an enemy port after the outbreak of hostilities.

Article 44.

A vessel which has been stopped on the ground that she is carrying contraband, and which is not liable to condemnation on account of the proportion of contraband on board, may, when the circumstances permit, be allowed to continue her voyage if the master is willing to hand over the contraband to the belligerent warship.
The delivery of the contraband must be entered by the captor on the log book of the vessel stopped, and the master must give the captor duly certified copies of all relevant papers.
The captor is at liberty to destroy the contraband that has been handed over to him under these conditions.

10. Great Britain modifies her contraband lists:

British proclamation, October 29, 1914, revising the list of contraband of war.

Whereas on the 4th day of August, 1914, we did issue our royal proclamation specifying the articles which it was our intention to treat as contraband of war during the war between us and the German Emperor; and
Whereas on the 12th day of August, 1914, we did by our royal proclamation of that date extend our proclamation aforementioned to the war between us and the Emperor of Austria, King of Hungary; and
Whereas on the 21st day of September, 1914, we did by our royal proclamation of that date make certain additions to the list of articles to be treated as contraband of war; and
Whereas it is expedient to consolidate the said lists and to make certain additions thereto: Now, therefore,

We do hereby declare, by and with the advice of our privy council, that the list of contraband contained in the schedules to our royal proclamations of the 4th day of August and the 21st day of September aforementioned are hereby withdrawn and that in lieu thereof during the continuance of the war or until we do give further public notice the articles enumerated in Schedule I hereto will be treated as absolute contraband and the articles enumerated in Schedule II hereto will be treated conditional contraband.

SCHEDULE I.

1. Arms of all kinds, including arms for sporting purposes, and their distinctive component parts.
2. Projectiles, charges, and cartridges of all kinds, and their distinctive component parts.
3. Powder and explosives specially prepared for use in war.
4. Sulphuric acid.
5. Gun mountings, limber boxes, limbers, military wagons, field forges, and their distinctive component parts.
6. Range finders and their distinctive component parts.
7. Clothing and equipment of a distinctively military character.
8. Saddle, draft, and pack animals suitable for use in war.
9. All kinds of harness of a distinctively military character.
10. Articles of camp equipment and their distinctive component parts.
11. Armor plates.
12. Hematite iron ore and hematite pig iron.
13. Iron pyrites.
14. Nickel ore and nickel.
15. Ferrochrome and chrome ore.
16. Copper, unwrought.
17. Lead, pig, sheet, or pipe.
18. Aluminum.
19. Ferrosilica.
20. Barbed wire and implements for fixing and cutting the same.
21. Warships, including boats and their distinctive component parts of such a nature that they can only be used on a vessel of war.
22. Aeroplanes, airships, balloons, and aircraft of all kinds and their component parts, together with accessories and articles recognizable as intended for use in connection with balloons and aircraft.
23. Motor vehicles of all kinds and their component parts.
24. Motor tires; rubber.
25. Mineral oils and motor spirit, except lubricating oils.
26. Implements and apparatus designed exclusively for the manufacture of munitions of war, for the manufacture or repair of arms, or war material for use on land and sea.

SCHEDULE II.

1. Foodstuffs.
2. Forage and feedings stuff for animals.
3. Clothing, fabrics for clothing, and boots and shoes suitable for use in war.
4. Gold and silver in coin or bullion; paper money.
5. Vehicles of all kinds, other than motor vehicles, available for use in war, and their component parts.
6. Vessels, craft, and boats of all kinds; floating docks, parts of docks, and their component parts.
7. Railway materials, both fixed and rolling stock, and materials for telegraphs, wireless telegraphs, and telephones.
8. Fuel, other than mineral oils. Lubricants.
9. Powder and explosives not specially prepared for use in war.
10. Sulphur.
11. Glycerine.
12. Horseshoes and shoeing materials.
13. Harness and saddlery.
14. Hides of all kinds, dry or wet; pigskins, raw or dressed; leather, undressed or dressed, suitable for saddlery, harness, or military boots.
15. Field glasses, telescopes, chronometers, and all kinds of nautical instruments.

11. Modifying the declaration of London on the question of contraband.

British order in council, October 29, 1914, adopting the declaration of London, exclusive of the lists of contraband and noncontraband, and inclusive of certain other modifications:

Whereas by an order in council, dated the 20th day of August, 1914, His Majesty was pleased to declare that during the present hostilities the convention known as the Declaration of London should, subject to certain additions and modifications therein specified, be adopted and put in force by His Majesty's Government; and

Whereas the said additions and modifications were rendered necessary by the special conditions of the present war; and

Whereas it is desirable and possible now to reenact the said order in council with amendments in order to minimize, so far as possible, the interference with innocent neutral trade occasioned by the war: Now, therefore, His Majesty, by and with the advice of his privy council, is pleased to order, and it is hereby ordered, as follows:

1. During the present hostilities, the provisions of the convention known as the Declaration of London shall, subject to the exclusion of the lists of contraband and noncontraband, and to the modifications hereinafter set out, be adopted and put in force by His Majesty's Government.

The modifications are as follows:

(i) A neutral vessel, with papers indicating a neutral destination, which notwithstanding the destination shown on the papers proceeds to an enemy port, shall be liable to capture and condemnation if she is encountered before the end of her next voyage.

(ii) The destination referred to in article 33 of the said declaration shall (in addition to the presumptions laid down in article 34) be presumed to exist if the goods are consigned to or for an agent of the enemy State.

(iii) Notwithstanding the provisions of article 35 of the said declaration, conditional contraband shall be liable to capture on board a vessel bound to a neutral port if the goods are consigned "to order," or if the ship's papers do not show who is the consignee of the goods, or if they show a consignee of the goods in territory belonging to or occupied by the enemy.

(iv) In the cases covered by the preceding paragraph (iii) it shall lie upon the owners of the goods to prove that their destination was innocent.

2. Where it is shown to the satisfaction of one of His Majesty's principal secretaries of state that the enemy Government is drawing supplies for its armed forces from or through a neutral country, he may direct that in respect of ships bound for a port in that country, article 35 of the said declaration shall not apply. Such direction shall be notified in the London Gazette and shall operate until the same is withdrawn. So long as such direction is in force, a vessel which is carrying conditional contraband to a port in that country shall not be immune from capture.

3. The order in council of the 20th August, 1914, directing the adoption and enforcement during the present hostilities of the convention known as the Declaration of London, subject to the additions and modifications therein specified, is hereby repealed.

4. This order may be cited as "the Declaration of London order in council, No. 2, 1914."

And the lords commissioners of His Majesty's treasury, the lords commissioners of the admiralty, and each of His Majesty's principal secretaries of state, the president of the probate, divorce, and admiralty division of the high court of justice, all other judges of His Majesty's prize courts, and all governors, officers, and authorities whom it may concern, are to give the necessary directions herein as to them may respectively appertain.

12. Two months later, December 23, Britain again changed her list of contraband, as follows:

Whereas on the 4th day of August, 1914, we did issue our royal proclamation specifying the articles which it was our intention to treat as contraband of war during the war between us and the German Emperor; and

Whereas on the 12th day of August, 1914, we did by our royal proclamation of that date extend our proclamation aforementioned to the war between us and the Emperor of Austria, King of Hungary; and

Whereas on the 21st day of September, 1914, we did by our royal proclamation of that date make certain additions to the list of articles to be treated as contraband of war; and

Whereas on the 29th day of October, 1914, we did by our royal proclamation of that date withdraw the said lists of contraband and substitute therefor the lists contained in the schedules to the said proclamation; and

Whereas it is expedient to make certain alterations in and additions to the said lists:

Now, therefore, we do hereby declare, by and with the advice of our privy council, that the lists of contraband contained in the schedules to our royal proclamation of the 29th day of October aforementioned are hereby withdrawn, and that in lieu thereof during the continuance of the war or until we do give further public notice the articles enumerated in Schedule I hereto will be treated as absolute contraband, and the articles enumerated in Schedule II hereto will be treated as conditional contraband.

SCHEDULE I.

1. Arms of all kinds, including arms for sporting purposes, and their distinctive component parts.
2. Projectiles, charges, and cartridges of all kinds and their distinctive component parts.
3. Powder and explosives specially prepared for use in war.
4. Ingredients of explosives, viz, nitric acid, sulphuric acid, glycerine, acetone, calcium acetate and all other metallic acetates, sulphur, potassium nitrate, the fractions of the distillation products of coal tar between benzol and cresol, inclusive, aniline, methylaniline, dimethylaniline, ammonium perchlorate, sodium perchlorate, sodium chlorate, barium chlorate, ammonium nitrate, cyanamide, potassium chlorate, calcium nitrate, mercury.
5. Resinous products, camphor, and turpentine (oil and spirit).
6. Gun mountings, limber boxes, limbers, military wagons, field forges, and their distinctive component parts.
7. Range finders and their distinctive component parts.
8. Clothing and equipment of a distinctively military character.
9. Saddle, draft, and pack animals suitable for use in war.
10. All kinds of harness of a distinctive military character.
11. Articles of camp equipment and their distinctive component parts.
12. Armor plates.
13. Ferro alloys, including ferrotungsten, ferromolybdenum, ferromanganese, ferrovanadium, ferrochrome.
14. The following metals: Tungsten, molybdenum, vanadium, nickel, selenium, cobalt, hematite, pig iron, manganese.
15. The following ores: Wolframite, scheelite, molybdenite, manganese ore, nickel ore, chrome ore, hematite iron, zinc ore, lead ore, bauxite.
16. Aluminum, alumina, and salts of aluminum.
17. Antimony, together with the sulphides and oxides of antimony.
18. Copper, unwrought and part wrought, and copper wire.
19. Lead, pig, sheet, or pipe.
20. Barbed wire and implements for fixing and cutting the same.
21. Warships, including boats and their distinctive component parts of such a nature that they can only be used on a vessel of war.
22. Submarine sound-signaling apparatus.
23. Aeroplanes, airships, balloons, and aircrafts of all kinds, and their component parts, together with accessories and articles recognizable as intended for use in connection with balloons and aircraft.
24. Motor vehicles of all kinds and their component parts.
25. Tires for motor vehicles and for cycles, together with articles of materials especially adapted for use in the manufacture or repair of tires.
26. Rubber (including raw, waste, and reclaimed rubber) and goods made wholly of rubber.
27. Iron pyrites.
28. Mineral oils and motor spirit, except lubricating oils.
29. Implements and apparatus designed exclusively for the manufacture of munitions of war, for the manufacture or repair of arms, or war material for use on land and sea.

SCHEDULE II.

1. Foodstuffs.
2. Forage and feeding stuffs for animals.
3. Clothing, fabrics for clothing, and boots and shoes suitable for use in war.
4. Gold and silver in coin or bullion; paper money.
5. Vehicles of all kinds, other than motor vehicles, available for use in war, and their component parts.
6. Vessels, craft, and boats of all kinds; floating docks, parts of docks, and their component parts.
7. Railway materials, both fixed and rolling stock, and materials for telegraphs, wireless telegraphs, and telephones.
8. Fuel, other than mineral oils. Lubricants.
9. Power and explosives not specially prepared for use in war.
10. Horseshoes and shoeing materials.
11. Harness and saddlery.
12. Hides of all kinds, dry or wet; pigskins, raw or dressed; leather, underssed, or dressed, suitable for saddlery, harness, or military boots.
13. Field glasses, telescopes, chronometer, and all kinds of nautical instruments.

12. I here print the compilation of articles scheduled as contraband, both absolute and conditional, as compiled to November 5, 1915. It will be noted that 80 per cent of the articles are absolute. It shows the intention of elimination of the conditional class completely:

Contraband of war.

ABSOLUTE CONTRABAND.

[Articles printed in *italics* have been varied or withdrawn by later proclamations.]

A	B	C	D	E	F	G
Number of article in this list.	Article.	References and notes.	Date of the proclamation first declaring article absolute contraband.	Number of paragraph of Schedule I in proclamation in column D.	Date of proclamation under which article is now absolute contraband.	Number of paragraph of Schedule I in proclamation in column F.
1	Acetate, calcium, *and all other metallic acetates*	*Words in italics omitted May 27, 1915. See also No. 2.*	Dec. 23, 1914	4	Oct. 14, 1915	8
2	Acetates		Oct. 14, 1915	8	do	8
3	Acetic acid		do	8	do	8
4	Acetic ether		do	8	do	8
5	Acetone		Dec. 23, 1914	4	do	8
6	Acids:					
7	Acetic		Oct. 14, 1915	8	do	8
8	Carbolic (phenol) and its mixtures and derivatives	See No. 65	do	8	do	8
9	Fuming sulphuric (oleum)		do	8	do	9
10	Hydrochloric		do	9	do	8
11	Nitric		Dec. 23, 1914	4	do	
12	Sulphuric		Oct. 29, 1914	4	do	8
13	Aeroplanes and their component parts, etc	See No. 15	Aug. 4, 1914	11	do	25

Contraband of war—Continued.

ABSOLUTE CONTRABAND—continued.

18	Alcohol, methyl		do	8	do	8
19	Alumina		Dec. 23, 1914	16	do	35
20	Aluminum		Oct. 29, 1914	18	do	35
21	Aluminum, salts of		Dec. 23, 1914	16	do	35
22	Alundum (corundum, natural and artificial, in all forms)		Oct. 14, 1915	4	do	4
23	*Ammonia and its salts, whether simple or compound*	*Varied Oct. 14, 1915. See Nos. 24 and 27.*	*Mar. 11, 1915*		do	8
24	Ammonia liquor		Mar. 11, 1915		do	8
25	*Ammonium nitrate*	*Included in "Nitrates," Oct. 14, 1915.*	*Dec. 23, 1914*	*4*	do	8
26	*Ammonium perchlorate*	*Included in No. 27, Oct. 14, 1915.*	*Dec. 23, 1914*	*4*	do	8
27	Ammonium salts		Oct. 14, 1915	8	do	8
28	*Aniline*	*See Nos. 29 and 30*	*Dec. 23, 1914*	*4*	do	8
29	*Aniline and its compounds*	*See No. 30*	*Mar. 11, 1915*			
30	Aniline and its derivatives		Oct. 14, 1915	8	Oct. 14, 1915	8
31	*Animals, saddle, draft, and pack, suitable for use in war*	*See No. 32*	*Aug. 4, 1914*	7	do	15
32	Animals, saddle, draft, and pack, suitable, or which may become suitable, for use in war.		Oct. 14, 1915	15	do	15
33	Animal hair of all kinds, and tops, noils and yarns of animal hair	See "Wool"	do	19	do	19
34	Antimony, together with the sulphides and oxides of antimony		Dec. 23, 1914	17	do	36
35	Apparatus and implements designed exclusively for the manufacture of munitions of war, or for the manufacture or repair of arms or of war material for use on land or sea.	See also No. 151	Aug. 4, 1914	12	do	2
36	Apparatus, submarine sound-signaling		Dec. 23, 1914	22	do	23
37	Armor plates		Aug. 4, 1914	9	do	24
38	Arms of all kinds, including arms for sporting purposes, and their *distinctive* component parts.	*"Distinctive" omitted Oct. 14, 1915.*	do	1	do	1
39	Arms, implements and apparatus designed exclusively for the manufacture or repair of.	See No. 35	do	12	do	2
40	Arsenic and its compounds		Oct. 14, 1915	9	do	9
41	Arsenical ore		do	41	do	41
42	Asbestos		do	34	do	34
43	Balata, any preparations containing	See "Rubber"	do	30	do	30
44	Balloons and their component parts, etc	See No. 15	Aug. 4, 1914	11	do	25
45	Barbed wire, and the implements for fixing and cutting the same		Oct. 29, 1914	20	do	12
46	Barium chlorate		Dec. 23, 1914	4	do	8
47	Barium perchlorate		Oct. 14, 1915	8	do	8
48	Bauxite		Dec. 23, 1914	15	do	41
49	Belting, leather		Oct. 14, 1915	17	do	17
50	Benzine		do	28	do	28
51	*Benzol*	*See Nos. 52, 84*	*Dec. 23, 1914*	*4*	do	8
52	Benzol and its mixtures and derivatives	See No. 84	Oct. 14, 1915	8	do	8
53	Boats and their *distinctive* component parts of such a nature that they can only be used on a vessel of war.	See No. 283; *"Distinctive" omitted Oct. 14, 1915.*	Aug. 4, 1914	10	do	22
54	Borneo rubber	See "Rubber"	Oct. 14, 1915	30	do	30
55	Bromine		do	9	do	9
56	Buffaloes, hides of		Mar. 11, 1915		do	17
57	Calcium acetate *and all other metallic acetates*	*Words in italics omitted May 27, 1915; "acetates" inserted Oct. 14, 1915.*	Dec. 23, 1914	4	do	8
58	Calcium carbide		Oct. 14, 1915	8	do	8
59	Calcium nitrate		Dec. 23, 1914	4	do	8
60	Calves, skins of		Mar. 11, 1915		do	17
61	Camp equipment, articles of, and their *distinctive* component parts	*"Distinctive" omitted Oct. 14, 1915.*	Aug. 4, 1914	8	do	11
62	Camphor (oil and spirit)		Dec. 23, 1914	5	do	29
63	Caoutchouc, all substances containing	See "Rubber"	Oct. 14, 1915	30	do	30
64	Capsicum and peppers		do	10	do	10
65	Carbolic acid (phenol and its mixtures and derivatives)	Included in *"Coal tar products," Dec. 23, 1914.*	do	8	do	8
66	Carbon disulphide		do	9	do	9
67	Carbonyl chloride (phosgene)		do	9	do	9
68	Carborundum, in all forms		do	4	do	4
69	Cartridges of all kinds and their *distinctive* component parts	*"Distinctive" omitted Oct. 14, 1915.*	Aug. 4, 1914	2	do	5
70	*Castor oil*	*Included in "Lubricants," Oct. 14, 1915.*	*Mar. 11, 1915*		do	32
71	Cattle, hides of		Mar. 11, 1915		do	17
72	Caustic potash		Oct. 14, 1915	8	do	8
73	Caustic soda		do	8	do	8
74	Celluloid		do	8	do	8
75	Charges of all kinds and their *distinctive* component parts	*"Distinctive" omitted Oct. 14, 1915.*	Aug. 4, 1914	2	do	5
76	Chlorate, barium		Dec. 23, 1914	4	do	8
77	*Chlorate, potassium*	*Included in "Potassium salts," Oct. 14, 1915.*	*Dec. 23, 1914*	*4*	do	8
78	Chlorate, sodium		Dec. 23, 1914	4	do	8
79	Chloride, carbonyl (phosgene)		Oct. 14, 1915	9	do	9
80	Chloride of tin		Mar. 11, 1915		do	39
81	Chlorine		Oct. 14, 1915	9	do	9
82	Chrome ore		Oct. 29, 1914	15	do	41
83	Clothing of a distinctively military character		Aug. 4, 1914	5	do	14
84	*Coal tar, the fractions of the distillation products of, between benzol and cresol, inclusive.*	*See also No. 268. Varied Oct. 14, 1915, when certain of the products are specified, viz:* Benzol, toluol, xylol, solvent naphtha, phenol (carbolic acid), cresol, naphthalene, their mixtures and derivatives; aniline and its derivatives.	*Dec. 23, 1914*	*4*		

Contraband of war—Continued.

(Consul General Skinner to the Secretary of State.)

[Extract.]

No. 1140.] AMERICAN CONSULATE GENERAL,
London, February 1, 1916.

SIR: I have the honor to acknowledge the receipt of department's instruction. (Not printed.)

I am inclosing herewith a supplement of the London Gazette, No. 29452, issued January 27, 1916, containing the official text of the proclamation referred to in the foregoing.

I have, etc. ROBERT P. SKINNER.

12c. Another revision was published in April, 1916:

[Inclosure.]

LIST OF ARTICLES DECLARED TO BE CONTRABAND OF WAR—PRESENTED TO BOTH HOUSES OF PARLIAMENT BY COMMAND OF HIS MAJESTY, APRIL, 1916.

The articles declared to be contraband of war in the proclamations now in force have been arranged alphabetically in the accompanying list. It is hoped that this will be convenient to all parties concerned.

The list comprises the articles which have been declared to be absolute contraband as well as those which have been declared to be conditional contraband. The circumstances of the present war are so peculiar that His Majesty's Government consider that for practical purposes the distinction between the two classes of contraband has ceased to have any value. So large a proportion of the inhabitants of the enemy country are taking part, directly or indirectly, in the war that no real distinction can now be drawn between the armed forces and the civilian population. Similarly, the enemy Government has taken control, by a series of decrees and orders, of practically all the articles in the list of conditional contraband, so that they are now available for Government use. So long as these exceptional conditions continue our belligerent rights with respect to the two kinds of contraband are the same and our treatment of them must be identical.

FOREIGN OFFICE, *April 13, 1916.*

LIST OF ARTICLES.

Acetic acid and acetates.
Acetic ether.
Acetones, and raw and finished materials usable for their preparation.
Aircraft of all kinds, including aeroplanes, airships, balloons, and their component parts, together with accessories and articles suitable for use in connection with aircraft.
Aluminum, alumina, and salts of aluminum.
Ammonia liquor.
Ammonium salts.
Aniline and its derivatives.
Animals, saddle, draft, or pack, suitable or which may become suitable for use in war.
Antimony, together with the sulphides and oxides of antimony.
Apparatus designed exclusively for the manufacture of munitions of war or for the manufacture or repair of arms or of war material for use on land or sea.
Armor plates.
Arms of all kinds, including arms for sporting purposes, and their component parts.
Arsenic and its compounds.
Arsenical ore.
Articles especially adapted for use in the manufacture or repair of tires.
Asbestos.
Barbed wire.
Barium chlorate and perchlorate.

Bauxite.
Benzol and its mixtures and derivatives.
Bladders, guts, casings, and sausage skins.
Bones in any form, whole or crushed, and bone ash.
Boots and shoes suitable for use in war.
Borax, boric acid, and other boron compounds.
Bromine.
Calcium acetate, calcium nitrate, and calcium carbide.
Camp equipments, articles of, and their component parts.
Camphor.
Capsicum.
Carbon disulphide.
Carbon, halogen compounds of.
Carbonyl chloride.
Carborundum in all forms.
Casein.
Caustic potash and caustic soda.
Celluloid.
Charges and cartridges of all kinds and their component parts.
Chloriden, metallic (except chloride of sodium) and mettaloidic.
Chlorine.
Chrome ore.
Chronometers.
Clothing and fabrics for clothing suitable for use in war.
Clothing of a distinctively military character.
Cobalt.
Copper pyrites and other copper ores.
Copper unwrought and part wrought, copper wire, alloys and compounds of copper.
Cork, including cork dust.
Corundum, natural and artificial (alundum), in all forms.
Cotton (raw), linters, cotton waste, cotton yarns, cotton piece-goods, and other cotton products capable of being used in the manufacture of explosives.
Cresol and its mixtures and derivatives.
Cyanamide.
Docks, parts of.
Emery in all forms.
Equipment of a distinctively military character.
Ethyl alcohol.
Explosives, whether specially prepared for use in war or not.
Ferro alloys, including ferro-tungsten, ferro-molybdenum, ferro-manganese, ferro-vanadium, and ferro-chrome.
Field forges and their component parts.
Field glasses.
Flax.
Floating docks and their component parts.
Foodstuffs.
Forage and feeding stuffs for animals.
Formic ether.
Fuel, other than mineral oils.
Fuming sulphuric acid.
Furs utilizable for clothing suitable for use in war.
Glycerine.
Gold.
Gun mountings and their component parts.
Hair, animal, of all kinds, and tops, noils, and yarns of animal hair.
Harness and saddlery.
Harness of a distinctively military character, all kinds of.
Hemp.
Hides of cattle, buffaloes, and horses.
Horseshoes and shoeing material.
Hydrochloric acid.
Implements designed exclusively for the manufacture of munitions of war or for the manufacture or repair of arms or of war material for use on land or sea.
Implements for fixing and cutting barbed wire.
Iodine and its compounds.
Iron, electrolytic.
Iron, hæmatite and hæmatite iron ore.
Iron pyrites.
Kapok.
Lathes capable of being employed in the manufacture of munitions of war.
Lead and lead ore.
Leather belting, hydraulic leather, pump leather.
Leather, undressed or dressed, suitable for saddlery, harness, military boots, or military clothing.
Limbers and limber boxes and their component parts.
Lubricants.
Machines capable of being employed in the manufacture of munitions of war.
Manganese and manganese ore.
Manganese dioxide.
Maps and plans of any place within the territory of any belligerent, or within the area of military operations, on a scale of 4 miles to 1 inch or any larger scale, and reproductions on any scale, by photography or otherwise, of such maps or plans.
Materials especially adapted for use in the manufacture or repair of tires.
Materials used in the manufacture of explosives.
Mercury.
Methyl alcohol.
Military wagons and their component parts.
Mineral oils, including benzine and motor spirit.
Molybdenum and molybdenite.
Motor vehicles of all kinds and their component parts and accessories.
Naphthalene and its mixtures and derivatives.
Nautical instruments, all kinds of.
Negotiable instruments.
Nickel and nickel ore.
Nitric acid and nitrates of all kinds.
Oils and fats, animal, fish, and vegetable, other than those capable of use as lubricants, and not including essential oils.
Oleaginous seeds, nuts, and kernels.
Oleum.
Paper money.
Paraffin wax.
Peppers.
Phenol (carbolic acid) and its mixtures and derivatives.
Phosphorus and its compounds.
Phosgene.
Potassium salts.
Powders, whether specially prepared for use in war or not.
Projectiles of all kinds and their component parts.
Prussiate of soda.
Railway materials, both fixed and rolling stock.
Ramie.
Range finders and their component parts.
Rattans.
Realizable securities.
Resinous products.
Rubber (including raw, waste, and reclaimed rubber, solutions and jellies containing rubber, or any other preparations containing rubber, balata, and gutta-percha, and the following varieties of rubber, viz, Borneo, Guayule, Jelutong, Palembang, Pontianac, and all other substances containing caoutchouc) and goods made wholly or partly of rubber.
Sabadilla seeds and preparations therefrom.
Scheelite.
Searchlights and their component parts.
Selenium.
Silver.
Skins of calves, pigs, sheep, goats, and deer.
Skins utilizable for clothing suitable for use in war.
Soap.
Sodium.
Sodium chlorate and perchlorate.
Sodium cyanide.
Solvent naphtha and its mixtures and derivatives.
Starch.
Steel containing tungsten or molybdenum.
Submarine sound signalling apparatus.
Sulphur.
Sulphur dioxide.
Sulphuric acid.
Sulphuric ether.
Tanning substances of all kinds, including quebracho wood and extracts for use in tanning.
Telegraphs, materials for.
Telephones, materials for.
Telescopes.
Tin, chloride of tin, and tin ore.
Toluol and its mixtures and derivatives.
Tools capable of being employed in the manufacture of munitions of war.
Tungsten.
Turpentine (oil and spirit).
Tires for motor vehicles and for cycles.
Urea.
Vanadium.
Vegetable fibers and yarns made therefrom.
Vehicles of all kinds, other than motor vehicles, available for use in war, and their component parts.
Vessels, craft, and boats of all kinds.
Warships, including boats and their component parts of such a nature that they can only be used on a vessel of war.
Wireless telegraphs, materials for.
Wolframite.
Wood tar and wood-tar oil.
Wool, raw, combed, or carded; wool waste; wool tops and noils, woolen or worsted yarns.
Xylol and its mixtures and derivatives.
Zinc ore.

13. On the 2d of November Great Britain announced the North Sea a military area.

During the last week, the Germans have scattered mines indiscriminately in the open sea on the main trade route from America to Liverpool via the north of Ireland.

Peaceful merchant ships have already been blown up, with loss of life, by this agency.

The White Star liner *Olympic* escaped disaster by pure luck and but for warnings given by British cruisers other British and neutral merchant and passenger vessels would have been destroyed.

These mines can not have been laid by any German ship of war. They have been laid by some merchant vessel flying a neutral flag, which has come along the trade route as if for purpose of peaceful commerce, and, while profiting to the full by the immunity enjoyed by neutral merchant ships, has wantonly and recklessly endangered the lives of all who travel on the sea.

In these circumstances, having regard to the great interests intrusted to the British Navy, to the safety of peaceful commerce on the high seas, and to the maintenance within the limits of international law of trade between neutral countries, the Admiralty feels it necessary to adopt exceptional measures appropriate to the novel conditions under which this war is being waged.

It therefore gives notice that the whole of the North Sea must be considered a military area. Within this area merchant shipping of all kinds, traders of all countries, fishing craft and all other vessels will be exposed to the gravest dangers from mines it has been necessary to lay and from warships searching vigilantly by night and day for suspicious craft.

All merchant and fishing vessels of every description are hereby warned of the dangers they encounter by entering this area, except in strict accordance with Admiralty directions. Every effort will be made to convey this warning to neutral countries and to vessels on the sea, but from November 5 onward the Admiralty announces that all ships passing a line drawn from the northern point of the Hebrides through the Farne Islands to Iceland do so at their own peril.

Ships of all countries wishing to trade to and from Norway, the Baltic, Denmark, and Holland are advised to come, if inward bound, by the English Channel and the Strait of Dover. There they will be given sailing directions which will pass them safely, so far as Great Britain is concerned, up the east coast of England to the Farne Islands, whence a safe route will, if possible, be given to Lindesnas Lighthouse.

From this point they should turn north or south, according to their destination keeping as near the coast as possible. The converse applies to vessels outward bound.

By strict adherence to these routes the commerce of all countries will be able to reach its destination in safety so far as Great Britain is concerned, but any straying even for a few miles from the course thus indicated may be followed by fatal consequences. (The New York Tribune, Nov. 3, 1914.)

14. On December 26 our Government addressed her first lengthy note on England's violations of neutral rights. It was this note in which Secretary Bryan gave the great belligerent the handle of necessity in the following words:

The commerce between countries which are not belligerent should not be interfered with by those at war unless such interference is manifestly an imperative necessity to protect their national safety, and then only to the extent that it is a necessity.

The note is as follows:

American note, December 26, 1914, in reference to the seizure and detention of American cargoes destined for neutral European ports. (Delivered at London Dec. 28 and published three days later. See Nos. 12 and 17.)

(The Secretary of State to the American ambassador at London.)

The present condition of American foreign trade resulting from the frequent seizures and detentions of American cargoes destined to neutral European ports has become so serious as to require a candid statement of the views of this Government in order that the British Government may be fully informed as to the attitude of the United States toward the policy which has been pursued by the British authorities during the present war.

You will, therefore, communicate the following to His Majesty's principal secretary of state for foreign affairs, but in so doing you will assure him that it is done in the most friendly spirit and in the belief that frankness will better serve the continuance of cordial relations between the two countries than silence, which may be misconstrued into acquiescence in a course of conduct which this Government can not but consider to be an infringement upon the rights of American citizens.

The Government of the United States has viewed with growing concern the large number of vessels laden with American goods destined to neutral ports in Europe which have been seized on the high seas, taken into British ports, and detained sometimes for weeks by the British authorities. During the early days of the war this Government assumed that the policy adopted by the British Government was due to the unexpected outbreak of hostilities and the necessity of immediate action to prevent contraband from reaching the enemy. For this reason it was not disposed to judge this policy harshly or protest it vigorously, although it was manifestly very injurious to American trade with the neutral countries of Europe. This Government, relying confidently upon the high regard which Great Britain has so often exhibited in the past for the rights of other nations, confidently awaited amendment of a course of action which denied to neutral commerce the freedom to which it was entitled by the law of nations.

This expectation seemed to be rendered the more assured by the statement of the foreign office early in November that the British Government were satisfied with guaranties offered by the Norwegian, Swedish, and Danish Governments as to nonexportation of contraband goods when consigned to named persons in the territories of those Governments, and that orders had been given to the British Fleet and customs authorities to restrict interference with neutral vessels carrying such cargoes so consigned to verification of ship's papers and cargoes.

It is therefore a matter of deep regret that, though nearly five months have passed since the war began, the British Government have not materially changed their policy and do not treat less rigorously ships and cargoes passing between neutral ports in the peaceful pursuit of lawful commerce, which belligerents should protect rather than interrupt. The greater freedom from detention and seizure which was confidently expected to result from consigning shipments to definite consignees rather than "to order" is still awaited.

It is needless to point out to His Majesty's Government, usually the champion of the freedom of the seas and the rights of trade, that peace, not war, is the normal relation between nations and that the commerce between countries which are not belligerents should not be interfered with by those at war unless such interference is manifestly an imperative necessity to protect their national safety, and then only to the extent that it is a necessity. (Sec. 20.) It is with no lack of appreciation of the momentous nature of the present struggle in which Great Britain is engaged and with no selfish desire to gain undue commercial advantage that this Government is reluctantly forced to the conclusion that the present policy of His Majesty's Government toward neutral ships and cargoes exceeds the manifest necessity of a belligerent and constitutes restrictions upon the rights of American citizens on the high seas which are not justified by the rules of international law or required under the principle of self-preservation.

The Government of the United States does not intend at this time to discuss the propriety of including certain articles in the lists of absolute and conditional contraband which have been proclaimed by His Majesty. Open to objection as some of these seem to this Government, the chief ground of present complaint is the treatment of cargoes of both classes of articles when bound to neutral ports.

Articles listed as absolute contraband, shipped from the United States and consigned to neutral countries, have been seized and detained on the ground that the countries to which they were destined have not prohibited the exportation of such articles. Unwarranted as such detentions are, in the opinion of this Government, American exporters are further perplexed by the apparent indecision of the British authorities in applying their own rules to neutral cargoes. For example, a shipment of copper from this country to a specified consignee in Sweden was detained because, as was stated by Great Britain, Sweden had placed no embargo on copper. On the other hand, Italy not only prohibited the export of copper, but, as this Government is informed, put in force a decree that shipments to Italian consignees or "to order" which arrive in ports of Italy can not be exported or transshipped. The only exception Italy makes is of copper which passes through that country in transit to another country. In spite of these decrees, however, the British foreign office has thus far declined to affirm that copper shipments consigned to Italy will not be molested on the high seas. Seizures are so numerous and delays so prolonged that exporters are afraid to send their copper to Italy, steamship lines decline to accept it, and insurers refuse to issue policies upon it. In a word, a legitimate trade is being greatly impaired through uncertainty as to the treatment which it may expect at the hands of the British authorities.

We feel that we are abundantly justified in asking for information as to the manner in which the British Government propose to carry out the policy which they have adopted in order that we may determine the steps necessary to protect our citizens engaged in foreign trade in their rights and from the serious losses to which they are liable through ignorance of the hazards to which their cargoes are exposed.

In case of conditional contraband, the policy of Great Britain appears to this Government to be equally unjustified by the established rules of international conduct. As evidence of this attention is directed to the fact that a number of the American cargoes which have been seized consist of foodstuffs and other articles of common use in all countries which are admittedly relative contraband. In spite of the presumption of innocent use because destined to neutral territory, the British authorities made these seizures and detentions without, so far as we are informed, being in possession of facts which warranted a reasonable belief that the shipments had in reality a belligerent destination, as that term is used in international law. Mere suspicion is not evidence and doubts should be resolved in favor of neutral commerce, but against it. The effect upon trade in these articles between neutral nations resulting from interrupted voyages and detained cargoes is not entirely cured by reimbursement of the owners for the damages which they have suffered after investigation has failed to establish an enemy destination. The injury is to American commerce with neutral countries as a whole through the hazard of the enterprise and the repeated diversion of goods from established markets.

It also appears that cargoes of this character have been seized by the British authorities because of a belief that, though not originally so intended by the shippers, they will ultimately reach the territory of the enemies of Great Britain. Yet this belief is frequently reduced to a mere fear in view of the embargoes which have been decreed by the neutral countries to which they are destined on the articles composing the cargoes.

That a consignment "to order" of articles listed as conditional contraband and shipped to a neutral port raises a legal presumption of enemy destination appears to be directly contrary to the doctrines previously held by Great Britain and thus stated by Lord Salisbury during the South African war:

"Foodstuffs, though having a hostile destination, can be considered as contraband of war only if they are for the enemy's forces; it is not sufficient that they are capable of being so used, it must be shown that this was in fact their destination at the time of their seizure."

With this statement as to conditional contraband the views of this Government are in entire accord, and upon this historic doctrine, consistently maintained by Great Britain when a belligerent as well as a neutral, American shippers were entitled to rely.

The Government of the United States readily admits the full right of a belligerent to visit and search on the high seas the vessels of American citizens or other neutral vessels carrying American goods and to detain them when there is sufficient evidence to justify a belief that contraband articles are in their cargoes; but His Majesty's Government, judging by their own experience in the past, must realize that this Government can not without protest permit American ships or American cargoes to be taken into British ports and there detained for the purpose of searching generally for evidence of contraband or upon presumptions created by special municipal enactments which are clearly at variance with international law and practice.

This Government believes, and earnestly hopes, His Majesty's Government will come to the same belief; that a course of conduct more in conformity with the rules of international usage, which Great Britain has strongly sanctioned for many years, will in the end better serve the interests of belligerents as well as those of neutrals.

Not only is the situation a critical one to the commercial interests of the United States, but many of the great industries of this country are suffering because their products are denied long-established markets in European countries, which, though neutral, are contiguous to the nations at war. Producers and exporters, steamship and insurance companies are pressing, and not without reason, for relief from the menace to trans-Atlantic trade which is gradually but surely destroying their business and threatening them with financial disaster.

The Government of the United States, still relying upon the deep sense of justice of the British nation, which has been so often manifested in the intercourse between the two countries during so many years of uninterrupted friendship, expresses confidently the hope that His Majesty's Government will realize the obstacles and difficulties which their present policy has placed in the way of commerce between the United States and the neutral countries of Europe, and will instruct its officials to refrain from all unnecessary interference with the freedom of trade between nations which are sufferers, though not participants in the present conflict, and will in their treatment of neutral ships and cargoes conform more closely to those rules governing the maritime relations between belligerents and neutrals which have received the sanction of the civilized world, and which Great Britain has, in other wars, so strongly and successfully advocated.

In conclusion, it should be impressed upon His Majesty's Government that the present condition of American trade with the neutral European countries is such that, if it does not improve, it may arouse a feeling contrary to that which has so long existed between the American and British peoples. Already it is becoming more and more the subject of public criticism and complaint. There is an increasing belief, doubtless not entirely unjustified, that the present British policy toward American trade is responsible for the depression in certain industries which depend upon European markets. The attention of the British Government is called to this possible result of their present policy to show how widespread the effect is upon the industrial life of the United States and to emphasize the importance of removing the cause of complaint.

BRYAN.

14a. On January 7 a tentative reply was made by Great Britain, with a promise that a fuller reply would be made in time. In this reply Grey seized the handle of necessity extended by Bryan in the following words:

His Majesty's Government cordially agree in the principle enunciated by the Government of the United States, that a belligerent, in dealing with trade between neutrals, should not interfere unless such interference is necessary to protect the belligerent's national safety, and then only to the extent to which this is a necessity.

The tentative note is as follows:

(The secretary of state for foreign affairs to the American ambassador.)

YOUR EXCELLENCY: I have the honor to acknowledge receipt of your note of the 28th of December.

It is being carefully examined and the points raised in it are receiving consideration, as the result of which a reply shall be addressed to your excellency dealing in detail with the issues raised and the points to which the United States Government have drawn attention. This consideration and the preparation of the reply will necessarily require some time, and I therefore desire to send without further delay some preliminary observations which will, I trust, help to clear the ground and remove some misconceptions that seem to exist.

Let me say at once that we entirely recognize the most friendly spirit referred to by your excellency and that we desire to reply in the same spirit and in the belief that, as your excellency states, frankness will best serve the continuance of cordial relations between the two countries.

His Majesty's Government cordially concur in the principle enunciated by the Government of the United States that a belligerent, in dealing with trade between neutrals, should not interfere unless such interference is necessary to protect the belligerent's national safety, and then only to the extent to which this is necessary. We shall endeavor to keep our action within the limits of this principle on the understanding that it admits our right to interfere when such interference is, not with "bona fide" trade between the United States and another neutral country, but with trade in contraband destined for the enemy's country; and we are ready, whenever our action may unintentionally exceed this principle, to make redress.

We think that much misconception exists as to the extent to which we have, in practice, interfered with trade. Your excellency's note seems to hold His Majesty's Government responsible for the present condition of trade with neutral countries, and it is stated that, through the action of His Majesty's Government, the products of the great industries of the United States have been denied long-established markets in European countries which, though neutral, are contiguous to the seat of war. Such a result is far from being the intention of His Majesty's Government, and they would exceedingly regret that it should be due to their action. I have been unable to obtain complete or conclusive figures showing what the state of trade with these neutral countries has been recently, and I can therefore only ask that some further consideration should be given to the question whether United States trade with these neutral countries has been so seriously affected. The only figures as to the total volume of trade that I have seen are those for the exports from New York for the month of November, 1914, and they are as follows, compared with the month of November, 1913:

Exports from New York for November, 1913, [and] November, 1914, respectively.

Denmark	$558,000	$7,101,000
Sweden	377,000	2,858,000
Norway	477,000	2,318,000
Italy	2,971,000	4,781,000
Holland	4,389,000	3,960,000

It is true that there may have been a falling off in cotton exports, as to which New York figures would be no guide, but His Majesty's Government have been most careful not to interfere with cotton, and its place on the free list has been scrupulously maintained.

We do not wish to lay too much stress upon incomplete statistics; the figures above are not put forward as conclusive; and we are prepared to examine any further evidence with regard to the state of trade with these neutral countries, which may point to a different conclusion or show that it is the action of His Majesty's Government in particular, and not the existence of a state of war and consequent diminution of purchasing power and shrinkage of trade, which is responsible for adverse effects upon trade with the neutral countries.

That the existence of a state of war on such a scale has had a very adverse effect upon certain great industries, such as cotton, is obvious; but it is submitted that this is due to the general cause of diminished purchasing power of such countries as France, Germany, and the United Kingdom, rather than to interference with trade with neutral countries. In the matter of cotton, it may be recalled that the British Government gave special assistance through the Liverpool Cotton Exchange to the renewal of transactions in the cotton trade of not only the United Kingdom but of many neutral countries.

Your excellency's note refers in particular to the detention of copper. The figures taken from official returns for the export of copper from the United States for Italy for the months during which the war has been in progress up to the end of the first three weeks of December are as follows:

1913, 15,202,000 pounds; 1914, 36,285,000 pounds. Norway, Sweden, Denmark, and Switzerland are not shown separately for the whole period in the United States returns, but are included in the heading "Other Europe" (that is, Europe other than the United Kingdom, Russia, France, Belgium, Austria, Germany, Holland, and Italy). The corresponding figures under this heading are as follows:

1913, 7,271,000 pounds; 1914, 35,347,000 pounds.

With such figures the presumption is very strong that the bulk of copper consigned to these countries has recently been intended, not for their own use, but for that of a belligerent who can not import it direct. It is therefore an imperative necessity for the safety of this country while it is at war that His Majesty's Government should do all in their power to stop such part of this import of copper as is not genuinely destined for neutral countries.

Your excellency does not quote any particular shipment of copper to Sweden which has been detained. There are, however, four consignments to Sweden at the present time of copper and aluminum which, though definitely consigned to Sweden, are, according to positive evidence in the possession of His Majesty's Government, definitely destined for Germany.

I can not believe that with such figures before them and in such cases as those just mentioned the Government of the United States would question the propriety of the action of His Majesty's Government in taking suspected cargoes to a prize court, and we are convinced that it can not be in accord with the wish either of the Government or of the people of the United States to strain the international code in favor of private interests so as to prevent Great Britain from taking such legitimate means for this purpose as are in her power.

With regard to the seizure of foodstuffs to which your excellency refers, His Majesty's Government are prepared to admit that foodstuffs should not be detained and put into a prize court without presumption that they are intended for the armed forces of the enemy or the enemy Government. We believe that this rule has been adhered to in practice hitherto, but if the United States Government have instances to the contrary we are prepared to examine them, and it is our present intention to adhere to the rule, though we can not give an unlimited and unconditional undertaking in view of the departure by those against whom we are fighting from hitherto accepted rules of civilization and humanity and the uncertainty as to the extent to which such rules may be violated by them in future.

From the 4th of August last to the 3d of January the number of steamships proceeding from the United States for Holland, Denmark, Norway, Sweden, and Italy has been 773. Of these there are 45 which have had consignments or cargoes placed in the prize court, while of the ships themselves only 8 have been placed in the prize court, and 1 of these has since been released. It is, however, essential under modern conditions that where there is real ground for suspecting the presence of contraband the vessels should be brought into port for examination; in no other way can the right of search be exercised, and but for this practice it would have to be completely abandoned. Information was received by us that special instructions had been given to ship rubber from the United States under another designation to escape notice, and such cases have occurred in several instances. Only by search in a port can such cases, when suspected, be discovered and proved. The necessity for examination in a port may also be illustrated by a hypothetical instance, connected with cotton, which has not yet occurred. Cotton is not specifically mentioned in your excellency's note, but I have seen public statements made in the United States that the attitude of His Majesty's Government with regard to cotton has been ambiguous, and thereby responsible for depression in the cotton trade. There has never been any foundation for this allegation. His Majesty's Government have never put cotton on the list of contraband; they have throughout the war kept it on the free list; and on every occasion when questioned on the point they have stated their intention of adhering to this practice. But information has reached us that precisely because we have declared our intention of not interfering with cotton, ships carrying cotton will be specially selected to carry concealed contraband; and we have been warned that copper will be concealed in bales of cotton. Whatever suspicions we have entertained, we have not so far made these a ground for detaining any ship carrying cotton, but should we have information giving us real reason to believe in the case of a particular ship that the bales of cotton concealed copper or other contraband the only way to prove our case would be to examine and weigh the bales, a process that could be carried out only by bringing the vessel into a port. In such a case, or if examination justified the action of His Majesty's Government, the case shall be brought before a prize court and dealt with in the ordinary way.

That the decisions of British prize courts hitherto have not been unfavorable to neutrals is evidenced by the decision in the *Miramichi* case. This case, which was decided against the Crown, laid down that the American shipper was to be paid even when he had sold a cargo c. i. f. and when the risk of loss after the cargo had been shipped did not apply to him at all.

It has further been represented to His Majesty's Government, though this subject is not dealt with in your excellency's note, that our embargoes on the export of some articles, more especially rubber, have interfered with commercial interests in the United States. It is, of course, difficult for His Majesty's Government to permit the export of rubber from British Dominions to the United States at a time when rubber is essential to belligerent countries for carrying on the war, and when a new trade in exporting rubber from the United States in suspiciously large quantities to neutral countries has actually sprung up since the war. It would be impossible to permit the export of rubber from Great Britain unless the right of His Majesty's Government were admitted to submit to a prize court cargoes of rubber exported from the United States which they believe to be destined for an enemy country, and reasonable latitude of action for this purpose was conceded. But His Majesty's Government have now provisionally come to an arrangement with the rubber exporters in Great Britain which will permit of licenses being given under proper guaranties for the export of rubber to the United States.

We are confronted with the growing danger that neutral countries contiguous to the enemy will become on a scale hitherto unprecedented a base of supplies for the armed forces of our enemies and for materials for manufacturing armament. The trade figures of imports show how strong this tendency is, but we have no complaint to make of the attitude of the Governments of those countries, which, so far as we are aware, have not departed from proper rules of neutrality. We endeavor in the interest of our own national safety to prevent this danger by intercepting goods really destined for the enemy without interfering with those which are "bona fide" neutral.

Since the outbreak of the war the Government of the United States have changed their previous practice and have prohibited the publication of manifests till 30 days after the departure of vessels from the United States ports. We had no "locus standi" for complaining of this change, and did not complain. But the effect of it must be to increase the difficulty of ascertaining the presence of contraband and to render necessary in the interests of our national safety the examination and detention of more ships than would have been the case if the former practice had continued.

Pending a more detailed reply, I would conclude by saying that His Majesty's Government do not desire to contest the general principles of law on which they understand the note of the United States to be based, and desire to restrict their action solely to interferences with contraband destined for the enemy. His Majesty's Government are prepared, whenever a cargo coming from the United States is detained, to explain the case on which such detention has taken place, and would gladly enter into any arrangement by which mistakes can be avoided and reparation secured promptly when any injury to the neutral owners of a ship or cargo has been improperly caused, for they are most desirous in the interest both of the United States and of other neutral countries that British action should not interfere with the normal importation and use by the neutral countries of goods from the United States.

I have, etc. E. GREY.

16. On February 10, 1915, Britain made her promised detailed reply to our note of December 26, 1914.

British note, February 10, 1915, replying finally to the American note of December 26, 1914, in regard to the seizure and detention of American cargoes:

(The secretary of state for foreign affairs to the American ambassador.)

YOUR EXCELLENCY: Your excellency has already received the preliminary answer, which I handed to you on the 7th January, in reply to your note of the 28th December on the subject of the seizures and detentions of American cargoes destined for neutral European ports.

Since that date I have had further opportunity of examining into the trade statistics of the United States, as embodied in the customs returns, in order to see whether the belligerent action of Great Britain has been in any way the cause of the trade depression which your excellency describes as existing in the United States, and also whether the seizures of vessels or cargoes which have been made by the British Navy have inflicted any loss on American owners for which our existing machinery provides no means of redress. In setting out the results of my investigation I think it well to take the opportunity of giving a general review of the methods employed by His Majesty's Government to intercept contraband trade with the enemy, of their consistency with

the admitted right of a belligerent to intercept such trade, and also of the extent to which they have endeavored to meet the representations and complaints from time to time addressed to them on behalf of the United States Government.

Toward the close of your note of the 28th December your excellency describes the situation produced by the action of Great Britain as a pitiful one to the commercial interests of the United States and said that many of the great industries of the country were suffering because their products were denied long-established markets in neutral European countries continguous to the nations at war.

It is unfortunately true that in these days when trade and finance are cosmopolitan any war—particularly a war of any magnitude—must result in a grievous dislocation of commerce, including that of the nations which take no part in the war. Your excellency will realize that in this tremendous struggle, for the outbreak of which Great Britain is in no way responsible, it is impossible for the trade of any country to escape all injury and loss, but for such His Majesty's Government is not to blame.

I do not understand the paragraph which I have quoted from your excellency's note as referring to these indirect consequences of the state of war, but to the more proximate and direct effect of our belligerent action in dealing with neutral ships and cargoes on the high seas. Such action has been limited to vessels on their way to enemy ports or ports in neutral countries adjacent to the theater of war, because it is only through such ports that the enemy introduces the supplies which he requires for carrying on the war.

In my earlier note I set out the number of ships which had sailed from the United States for Holland, Denmark, Norway, Sweden, and Italy, and I there stated that only 8 of the 773 had been placed in the prize court, and that only 45 had been temporarily detained to enable particular consignments of cargo to be discharged for the purpose of prize-court proceedings. To measure the effect of such naval action it is necessary to take into consideration the general statistics of the export trade of the United States during the months preceding the outbreak of war and those since the outbreak.

Taking the figures in millions of dollars, the exports of merchandise from the United States for the seven months of January to July, 1914, inclusive, were 1,201, as compared with 1,327 in the corresponding months of 1913, a drop of $126,000,000.

For the months of August, September, October, and November—that is to say, for the four months of the war preceding the delivery of your excellency's note—the figures of the exports of merchandise were $667,000,000 as compared with $923,000,000 in the corresponding months of 1913, a drop of $256,000,000.

If, however, the single article of cotton be eliminated from the comparison, the figures show a very different result. Thus the exports of all articles of merchandise other than cotton from the United States during the first seven months of 1914 were $966,000,000 as against $1,127,000,000 in 1913, a drop of $161,000,000, or 14½ per cent. On the other hand, the exports of the same articles during the months August to November amounted to $608,000,000 as compared with $630,000,000 in 1913, a drop of only $22,000,000, or less than 4 per cent.

It is therefore clear that if cotton be excluded the effect of the war has been not to increase but practically to arrest the decline of American exports which was in progress earlier in the year. In fact, any decrease in American exports which is attributable to the war is essentially due to cotton. Cotton is an article which can not possibly have been affected by the exercise of our belligerent rights, for, as your excellency is aware, it has not been declared by His Majesty's Government to be contraband of war, and the rules under which we are at present conducting our belligerent operations gives us no power in the absence of a blockade to seize or interfere with it when on its way to a belligerent country in neutral ships. Consequently no cotton has been touched.

Into the cause of the decrease in the exports of cotton I do not feel that there is any need for me to enter, because whatever may have been the cause it is not to be found in the exercise of the belligerent rights of visit, search, and capture, or in our general right when at war to intercept the contraband trade of our enemy. Imports of cotton to the United Kingdom fell as heavily as those to other countries. No place felt the outbreak of war more acutely than the cotton districts of Lancashire, where for a time immense number of spindles were idle. Though this condition has now to a large extent passed away, the consumption of the raw material in Great Britain was temporarily much diminished. The same is no doubt true of France.

The general result is to show convincingly that the naval operations of Great Britain are not the cause of any diminution in the volume of American exports, and that if the commerce of the United States is in the unfavorable condition which your excellency describes the cause ought in fairness to be sought elsewhere than in the activities of His Majesty's naval forces.

I may add that the circular issued by the Department of Commerce at Washington on the 23d of January admits a marked improvement in the foreign trade of the United States, which we have noted with great satisfaction. The first paragraph of the circular is worth quoting verbatim:

"A marked improvement in our foreign trade is indicated by the latest reports issued by the Department of Commerce through its Bureau of Foreign and Domestic Commerce, sales of foodstuffs and certain lines of manufactures having been unusually large in November, the latest period for which detailed information is at hand. In that month exports aggregated $206,000,000, or double the total for August last, when, by reason of the outbreak of war, our foreign trade fell to the lowest level reached in many years. In December there was further improvement, the month's exports being valued at $246,000,000, compared with $233,000,000 in December, 1913, and within $4,000,000 of the high record established in December, 1912."

A better view of the situation is obtained by looking at the figures month by month. The exports of merchandise for the last five months have been (in millions of dollars):

August	110
September	156
October	194
November	205
December	246

The outbreak of war produced in the United States, as it did in all neutral countries, an acute but temporary disturbance of trade. Since that time there seems to have been a steady recovery, for to-day the exports from the United States stand at a higher figure than on the same date last year.

Before passing away from the statistics of trade, and in order to demonstrate still more clearly, if necessary, that the naval operations of Great Britain and her allies have had no detrimental effect on the volume of trade between the United States and neutral countries, it is worth while to analyze the figures of the exports to Europe since the outbreak of hostilities. For this purpose the European countries ought to be grouped under three heads: Great Britain and those fighting with her, neutral countries, and enemy countries. It is, however, impossible for me to group the countries in this way satisfactorily, as the figures relating to the export trade of the United States with each country have not yet been published. In the preliminary statement of the export trade of the United States with foreign countries only principal countries are shown, and various countries which are tabulated separately in the more detailed monthly summary of commerce and finance are omitted. Those omitted include not only the Scandinavian countries, the exports to which are of peculiar importance in dealing with this question, but also Austria.

So far as it is possible to distribute the figures under the headings which I have indicated above (all the figures being given in thousands of dollars), the results are as follows:

Total exports to Europe from the 1st of August to the 30th of November, 413,995, as against 597,342 in 1913. Of these, Great Britain and her allies took 288,312, as against 316,805 in 1913. Germany and Belgium took 1,881, as against 177,136 in 1913; whereas neutral countries (among which Austria-Hungary is unavoidably included) took 123,802, as against 103,401 in 1913.

The general complaint in your excellency's note was that the action of Great Britain was affecting adversely the trade of the United States with neutral countries. The naval operations of Great Britain certainly do not interfere with commerce from the United States on its way to the United Kingdom and the allied countries, and yet the exports to Great Britain and her allies during those four months diminished to the extent of over $28,000,000, whereas those to neutral countries and Austria increased by over $20,000,000.

The inference may fairly be drawn from these figures, all of which are taken from the official returns published by the United States Government, that not only has the trade of the United States with the neutral countries in Europe been maintained as compared with previous years, but also that a substantial part of this trade was, in fact, trade intended for the enemy countries going through neutral ports by routes to which it was previously unaccustomed.

One of the many inconveniences to which this great war is exposing the commerce of all neutral countries is undoubtedly the serious shortage in shipping available for ocean transport and the consequential result of excessive freights.

It can not fairly be said that this shortage is caused by Great Britain's interference with neutral ships. At the present time there are only seven neutral vessels awaiting adjudication in the prize courts in this country and three in those in the British dominions. As your excellency is aware, I have already instructed our ambassador at Washington to remind the parties who are interested in these vessels that it is open to them to apply to the court for the release of these ships on bail, and if an application of this sort is made by them it is not likely to be opposed by the Crown. There is therefore no reason why such an application should not be favorably entertained by the court, and if acceded to, all these vessels will again be available for the carriage of commerce. Only one neutral vessel is now detained in this country in addition to those awaiting adjudication in the prize court.

Every effort has been made in cases in which it has been found necessary to institute proceedings against portions of the cargo to secure the speedy discharge of the cargo and the release of the ship, so as to enable it to resume work. Great Britain is suffering from the shortage of shipping and the rise in freights as acutely as, if not more than, other nations, and His Majesty's Government have taken every step that they could consistently with their belligerent interests to increase the tonnage available for the transport of sea-borne commerce. The enemy ships which have been condemned in the prize courts in this country are being sold as rapidly as possible in order that they may become available for use; and those which have been condemned in the prize courts oversea are being brought to this country in order that they may be disposed of here and again placed in active employment.

The difficulties have been accentuated by the unforeseen consequences of the convention which was signed at The Hague in 1907 relative to the status of enemy merchant vessels at the outbreak of war. This convention was a well-intentioned effort to diminish the losses which war must impose upon innocent persons, and provided that enemy merchant ships seized by a belligerent in whose ports they lay at the outbreak of war should not be condemned, but should merely be detained for the period of the war, unless they were liberated in the days of grace. We could come to no arrangement with the German Government for the reciprocal grant of days of grace, and the German merchant vessels lying in British ports when the war broke out have therefore been sentenced to detention in lieu of condemnation. The normal result would have been still further to reduce the volume of shipping available for the commerce of the world. To ease the situation, however, His Majesty's Government are resorting to the power of requisitioning which is given by the convention, so that these ships may again be placed in active service.

Your excellency will see, therefore, that His Majesty's Government are doing all in their power to increase the volume of shipping available. I hope it will be realized that the detention of neutral ships by His Majesty's Government with a view to the capture of contraband trade on its way to the enemy has not contributed nearly so much to the shortage of shipping as has the destruction of neutral vessels by submarine mines indiscriminatey laid by the enemy on the high seas, many miles from the coast, in the track of merchant vessels. Up till now 25 neutral vessels have been reported as destroyed by mines on the high seas; quite apart from all questions of the breach of treaties and the destruction of life, there is far more reason for protest on the score of belligerent interference with innocent neutral trade through the mines scattered by the enemy than through the British exercise of the right of seizing contraband.

I trust that what I have said above will be sufficient to convince Your Excellency's Government that the complaints that the naval policy of Great Britain has interfered with the shipments of American products to long-established markets in neutral European countries is founded on a misconception.

In justice to the peoples of both countries, I feel that this opportunity should be taken to explain the lines on which His Majesty's Government has been acting hitherto, so as to show that the line they have followed is in no way inconsistent with the general fundamental principle of international law and to indicate the care with which they have endeavored to meet the representations which have been made by the United States Government from time to time during the war on these questions.

No one in these days will dispute the general proposition that a belligerent is entitled to capture contraband goods on their way to the enemy; that right has now become consecrated by long usage and general acquiescence. Though the right is ancient, the means of exercising it alter and develop with the changes in the methods and machinery of commerce. A century ago the difficulties of land transport rendered it impracticable for the belligerent to obtain supplies of sea-borne goods through a neighboring neutral country. Consequently the belligerent actions of his opponents neither required nor justified any interference with shipments on their way to a neutral port. This principle was recognized and acted on in the decisions in which Lord Stowell laid down the lines on which captures of such goods should be dealt with.

The advent of steam power has rendered it as easy for a belligerent to supply himself through the ports of a neutral contiguous country as through his own and has therefore rendered it impossible for his opponent to refrain from interfering with commerce intended for the enemy merely because it is on its way to a neutral port.

No better instance of the necessity of countering new devices for dispatching contraband goods to an enemy by new methods of applying the fundamental principle of the right to capture such contraband can be given than the steps which the Government of the United States found it necessary to take during the American Civil War. It was at that time that the doctrine of continuous voyage was first applied to the capture of contraband; that is to say, it was then for the first time that a belligerent found himself obliged to capture contraband goods on their way to the enemy, even though at the time of capture they were en route for a neutral port from which they were intended subsequently to continue their journey. The policy then followed by the United States Government was not inconsistent with the general principles already sanctioned by international law, and met with no protest from His Majesty's Government, though it was upon British cargoes and upon British ships that the losses and the inconvenience due to this new development of the application of the old rule of international law principally fell. The criticisms which have been directed against the steps then taken by the United States came, and come, from those who saw in the methods employed in Napoleonic times for the prevention of contraband a limitation upon the right itself, and failed to see that in Napoleonic times goods on their way to a neutral port were immune from capture not because the immediate destination conferred a privilege but because capture under such circumstances was unnecessary.

The facilities which the introduction of steamers and railways have given to a belligerent to introduce contraband goods through neutral ports have imposed upon his opponent the additional difficulty, when endeavoring to intercept such trade, of distinguishing between the goods which are really destined for the commerce of that neutral country and the goods which are on their way to the enemy. It is one of the many difficulties with which the United States Government found themselves confronted in the days of the Civil War, and I can not do better than quote the words which Mr. Seward, who was then Secretary of State, used in the course of diplomatic discussion arising out of the capture of some goods on their way to Matamoros which were believed to be for the insurgents:

"Neutrals engaged in honest trade with Matamoros must expect to experience inconvenience from the existing blockade of Brownsville and the adjacent coast of Texas. While this Government unfeignedly regrets this inconvenience, it can not relinquish any of its belligerent rights to favor contraband trade with insurgent territory by insisting upon those rights; however, it is sure that that necessity for their exercise at all, which must be deplored by every friendly commercial power, will the more speedily be terminated."

The opportunities now enjoyed by a belligerent for obtaining supplies through neutral ports are far greater than they were 50 years ago, and the geographical conditions of the present struggle lend additional assistance to the enemy in carrying out such importation. We are faced with the problem of intercepting such supplies when arranged with all the advantages that flow from elaborate organization and unstinted expenditure. If our belligerent rights are to be maintained, it is of the first importance for us to distinguish between what is really bona fide trade intended for the neutral country concerned and the trade intended for the enemy country. Every effort is made by organizers of this trade to conceal the true destination, and if the innocent neutral trade is to be distinguished from the enemy trade it is essential that His Majesty's Government should be entitled to make, and should make, careful inquiry with regard to the destination of particular shipments of goods even at the risk of some slight delay to the parties interested. If such inquiries were not made, either the exercise of our belligerent rights would have to be abandoned, tending to the prolongation of this war and the increase of the loss and suffering which it is entailing upon the whole world, or else it would be necessary to indulge in indiscriminate captures of neutral goods and their detention throughout all the period of the resulting prize-court proceedings. Under the system now adopted it has been found possible to release without delay, and consequently without appreciable loss to the parties interested, all the goods of which the destination is shown as the result of the inquiries to be innocent.

It may be well that the system of making such inquiries is to a certain extent a new introduction, in that it has been practiced to a far greater extent than in previous wars; but if it is correctly described as a new departure, it is a departure which is wholly to the advantage of neutrals, and which has been made for the purpose of relieving them, so far as possible, from loss and inconvenience.

There was a passage in a note which the State Department addressed to the British ambassador at Washington on the 7th November, to which I think it may be well to refer:

"In the opinion of this Government, the belligerent right of visit and search requires that the search should be made on the high seas at the time of the visit, and that the conclusion of the search should rest upon the evidence found on the ship under investigation, and not upon circumstances ascertained from external sources."

The principle here enunciated appears to me to be inconsistent with the practice in these matters of the United States Government, as well as of the British Government. It certainly was not the rule upon which the United States Government acted either during the Civil War or during the Spanish-American War, nor has it ever been the practice of the British Government, nor so far as I am aware, of any other Government which has had to carry on a great naval war; as a principle I think it is impossible in modern times. The necessity for giving the belligerent captor full liberty to establish by all the evidence at his disposal the enemy destination with which the goods were shipped was recognized in all the leading decisions in the prize courts of the United States during the Civil War.

No clearer instance could be given than the reporter's statement of the case of the *Bermuda* (3 Wallace, 514):

"The final destination of the cargo in this particular voyage was left so skillfully open . . . that it was not quite easy to prove, with that certainty which American courts require, the intention, which it seemed plain must have really existed. Thus to prove it required that truth should be collated from a variety of sources, darkened and disguised; from others opened as the cause advanced, and by accident only; from coincidences undesigned, and facts that were circumstantial. Collocations and comparisons, in short, brought largely their collective force in aid of evidence that was more direct."

It is not impossible that the course of the present struggle will show the necessity for belligerent action to be taken in various ways which may at first sight be regarded as a departure from old practice. In my note of the 7th January, I dealt at some length with the question of the necessity of taking vessels into port for the purposes of carrying out an effective search, where search was necessary; to that subject I feel that I need not again recur.

The growth in the size of steamships necessitates in many cases that the vessel should go into calm water, in order that even the right of visit, as apart from the right of search, should be exercised. In modern times a steamer is capable of pursuing her voyage irrespective of the conditions of the weather. Many of the neutral merchantmen which our naval officers are called upon to visit at sea are encountered by our cruisers in places and under conditions which render the launching of a boat impossible. The conditions during winter in the North Atlantic frequently render it impracticable for days together for a naval officer to board a vessel on her way to Scandinavian countries. If a belligerent is to be denied the right of taking a neutral merchantman, met with under such conditions, into calm water in order that the visiting officer may go aboard, the right of visit and of search would become a nullity.

The present conflict is not the first in which this necessity has arisen. As long ago as the Civil War the United States found it necessary to take vessels to United States ports in order to determine whether the circumstances justified their detention.

The same need arose during the Russo-Japanese War and also during the second Balkan War, when it sometimes happened that British vessels were made to deviate from their course and follow the cruisers to some spot where the right of visit and of search could be more conveniently carried out. In both cases this exercise of belligerent rights, although questioned at first by His Majesty's Government, was ultimately acquiesced in.

No power in these days can afford during a great war to forego the exercise of the right of visit and search. Vessels which are apparently harmless merchantmen can be used for carrying and laying mines and even fitted to discharge torpedoes. Supplies for submarines can without difficulty be concealed under other cargo. The only protection against these risks is to visit and search thoroughly every vessel appearing in the zone of operations, and if the circumstances are such as to render it impossible to carry it out at the spot where the vessel was met with the only practicable course is to take the ship to some more convenient locality for the purpose. To do so is not to be looked upon as a new belligerent right, but as an adaptation of the existing right to the modern conditions of commerce. Like all belligerent rights, it must be exercised with due regard for neutral interests, and it would be unreasonable to expect a neutral vessel to make long deviations from her course for this purpose. It is for this reason that we have done all we can to encourage neutral merchantmen on their way to ports contiguous to the enemy country to visit some British port lying on their line of route in order that the necessary examination of the ship's papers, and, if required, of the cargo, can be made under conditions of convenience to the ship herself. The alternative would be to keep a vessel which the naval officers desired to board waiting, it might be for days together, until the weather conditions enabled the visit to be carried out at sea.

No war has yet been waged in which neutral individuals have not occasionally suffered from unjustified belligerent action; no neutral nation has experienced this fact more frequently in the past than Great Britain. The only method by which it is possible to harmonize belligerent action with the rights of neutrals is for the belligerent nation to provide some adequate machinery by which in any such case the facts can be investigated and appropriate redress can be obtained by the neutral individual. In this country such machinery is provided by the powers which are given to the prize court to deal not only with captures, but also with claims for compensation. Order V, rule 2, of the British prize court rules, provides that where a ship has been captured as prize, but has been subsequently released by the captors, or has by loss, destruction, or otherwise ceased to be detained by them, without proceedings for condemnation having been taken, any person interested in the ship (which by Order I, rule 2, includes goods) wishing to make a claim for costs and damages in respect thereof, shall issue a writ as provided by Order II. A writ so issued will initiate a proceeding which will follow its ordinary course in the prize court.

This rule gives the prize court ample jurisdiction to deal with any claim for compensation by a neutral arising from the interference with a ship or goods by our naval forces. The best evidence that can be given of the discrimination and the moderation with which our naval officers have carried out their duties is to be found in the fact that up to this time no proceedings for the recovery of compensation have been initiated under the rule which I have quoted.

It is the common experience of every war that neutrals whose attempts to engage in suspicious trading are frustrated by a belligerent are wont to have recourse to their Government to urge that diplomatic remonstrances should be made on their behalf, and that redress should be obtained for them in this way. When an effective mode of redress is open to them in the courts of a civilized country by which they can obtain adequate satisfaction for any invasion of their rights which is contrary to the law of nations, the only course which is consistent with sound principle is that they should be referred to that mode of redress, and that no diplomatic action should be taken until their legal remedies have been exhausted, and they are in a position to show prima facie denial of justice.

The course adopted by His Majesty's Government during the American Civil War was in strict accordance with this principle. In spite of remonstrances from many quarters, they placed full reliance on the American prize courts to grant redress to the parties interested in cases of alleged wrongful capture by American ships of war, and

put forward no claims until the opportunities for redress in those courts had been exhausted. The same course was adopted in the Spanish-American War, when all British subjects who complained of captures or detentions of their ships were referred to the prize courts for relief.

Before leaving the subject may I remind your excellency of the fact that at your request you are now supplied immediately by this department with particulars of every ship under American colors which is detained, and of every shipment of cargo in which an American citizen appears to be the party interested. Not only is the fact of detention notified to your excellency, but so far as is practicable the grounds upon which the vessel or cargo has been detained are also communicated to you—a concession which enables any United States citizen to take steps at once to protect his interests.

His Majesty's Government have also done all that lies in their power to insure rapid action when ships are reported in British ports. They realize that the ship and cargo owners may reasonably expect an immediate decision to be taken as to whether the ship may be allowed to proceed, and whether her cargo or any part of it must be discharged and put into the prize court. Realizing that the ordinary methods of interdepartmental correspondence might cause delays which could be obviated by another method of procedure, they established several months ago a special committee, on which all the departments concerned are represented. This committee sits daily, and is provided with a special clerical staff. As soon as a ship reaches port full particulars are telegraphed to London, and the case is dealt with at the next meeting of the committee, immediate steps being taken to carry out the action decided upon. By the adoption of this procedure it has been found possible to reduce to a minimum the delays to which neutral shipping is exposed by the exercise of belligerent rights, and by the necessity, imposed by modern conditions, of examining with care the destination of contraband articles.

Particular attention is directed in your excellency's note to the policy we are pursuing with regard to conditional contraband, especially foodstuffs, and it is there stated that a number of American cargoes have been seized without, so far as your excellency's Government are informed, our being in possession of facts which warranted a reasonable belief that the shipments had in reality a belligerent destination, and in spite of the presumption of innocent use due to their being destined to neutral territory. The note does not specify any particular seizures as those which formed the basis of this complaint, and I am therefore not aware whether the passage refers to cargoes which were detained before or since the order in council of the 29th of October was issued.

Your excellency will no doubt remember that soon after the outbreak of war an order of His Majesty in council was issued under which no distinction was drawn in the application of the doctrine of continuous voyage between absolute contraband and conditional contraband, and which also imposed upon the neutral owner of contraband somewhat drastic conditions as to the burden of proof of the guilt or innocence of the shipment.

The principle that the burden of proof should always be imposed upon the captor has usually been admitted as a theory. In practice, however, it has almost always been otherwise, and any student of the prize courts' decisions of the past or even of modern wars will find that goods seldom escape condemnation unless their owner was in a position to prove that their destination was innocent. An attempt was made some few years ago, in the unratified declaration of London, to formulate some definite rules upon this subject, but time alone can show whether the rules there laid down will stand the test of modern warfare.

The rules which His Majesty's Government published in the order in council of the 20th August, 1914, were criticized by the United States Government as contrary to the generally recognized principles of international law, and as inflicting unnecessary hardship upon neutral commerce, and your excellency will remember the prolonged discussion which took place between us through the month of October with a view to finding some new formulæ which should enable us to restrict supplies to the enemy forces, and to prevent the supply to the enemy of materials essential for the making of munitions of war, while inflicting the minimum of injury and interference with neutral commerce. It was with this object that the order in council of the 29th October was issued, under the provisions of which a far greater measure of immunity is conferred upon neutral commerce. In that order the principle of noninterference with conditional contraband on its way to a neutral port is in large measure admitted; only in three cases is the right to seize maintained, and in all those cases the opportunity is given to the claimants of the goods to establish their innocence.

Two of those cases are where the ship's papers afford no information as to the person for whom the goods are intended. It is only reasonable that a belligerent should be entitled to regard as suspicious cases where the shippers of the goods do not choose to disclose the name of the individual who is to receive them. The third case is that of goods addressed to a person in the enemy territory. In the peculiar circumstances of the present struggle, where the forces of the enemy comprise so large a proportion of the population, and where there is so little evidence of shipments on private as distinguished from Government account, it is most reasonable that the burden of proof should rest upon the claimant.

The most difficult questions in connection with conditional contraband arise with reference to the shipment of foodstuffs. No country has maintained more stoutly than Great Britain in modern times the principle that a belligerent should abstain from interference with the foodstuffs intended for the civil population. The circumstances of the present struggle are causing His Majesty's Government some anxiety as to whether the existing rules with regard to conditional contraband, framed as they were with the object of protecting so far as possible the supplies which were intended for the civil population, are effective for the purpose or suitable to the conditions present. The principle which I have indicated above is one which His Majesty's Government have constantly had to uphold against the opposition of continental powers. In the absence of some certainty that the rule would be respected by both parties to this conflict, we feel great doubt whether it should be regarded as an established principle of international law.

Your excellency will, no doubt, remember that in 1885, at the time when His Majesty's Government were discussing with the French Government this question of the right to declare foodstuffs not intended for the military forces to be contraband, and when public attention had been drawn to the matter, the Kiel Chamber of Commerce applied to the German Government for a statement of the latter's views on the subject. Prince Bismarck's answer was as follows:

"In answer to their representation of the 1st instant, I reply to the chamber of commerce that any disadvantage our commercial and carrying interests may suffer by the treatment of rice as contraband of war does not justify our opposing a measure which it has been thought fit to take in carrying on a foreign war. Every war is a calamity, which entails evil consequences not only on the combatants but also on neutrals. These evils may easily be increased by the interference of a neutral power with the way in which a third carries on the war, to the disadvantage of the subjects of the interfering power, and by this means German commerce might be weighed with far heavier losses than a transitory prohibition of the rice trade in Chinese waters. The measure in question has for its object the shortening of the war by increasing the difficulties of the enemy and is a justifiable step in war if impartially enforced against all neutral ships."

His Majesty's Government are disposed to think that the same view is still maintained by the German Government.

Another circumstance which is now coming to light is that an elaborate machinery has been organized by the enemy for the supply of foodstuffs for the use of the German Army from overseas. Under these circumstances it would be absurd to give any definite pledge that in cases where the supplies can be proved to be for the use of the enemy forces they should be given complete immunity by the simple expedient of dispatching them to an agent in a neutral port.

The reason for drawing a distinction between foodstuffs intended for the civil population and those for the armed forces or enemy Government disappears when the distinction between the civil population and the armed forces itself disappears.

In any country in which there exists such a tremendous organization for war as now obtains in Germany there is no clear division between those whom the Government is responsible for feeding and those whom it is not. Experience shows that the power to requisition will be used to the fullest extent in order to make sure that the wants of the military are supplied, and however much goods may be imported for civil use it is by the military that they will be consumed if military exigencies require it, especially now that the German Government have taken control of all the foodstuffs in the country.

I do not wish to overburden this note with statistics, but in proof of my statement as to the unprecedented extent to which supplies are reaching neutral ports I should like to instance the figures of the exports of certain meat products to Denmark during the months of September and October. Denmark is a country which in normal times imports a certain quantity of such products, but exports still more. In 1913, during the above two months, the United States exports of lard to Denmark was nil, as compared with 22,652,598 pounds in the same two months of 1914. The corresponding figures with regard to bacon were: 1913, nil; 1914, 1,022,195 pounds; canned beef, 1913, nil; 1914, 151,200 pounds; pickled and cured beef, 1913, 42,901 pounds; 1914, 156,143 pounds; pickled pork, 1913, nil; 1914, 812,872 pounds.

In the same two months the United States exported to Denmark 280,176 gallons of mineral lubricating oil in 1914, as compared with 179,252 in 1913; to Norway, 335,468 gallons in 1914, as against 151,179 gallons in 1913; to Sweden, 896,193 gallons in 1914, as against 385,476 gallons in 1913.

I have already mentioned the framing of the order in council of the 20th October, and the transmission to your excellency of particulars of ships and cargoes seized as instances of the efforts which we have made throughout the course of this war to meet all reasonable complaints made on behalf of American citizens, and in my note of the 7th January I alluded to the decision of our prize court in the case of the *Miramichi* as evidencing the liberal principles adopted toward neutral commerce.

I should also like to refer to the steps which we took at the beginning of the war to insure the speedy release of cargo claimed by neutrals on board enemy ships which were captured or detained at the outbreak of war. Under our prize court rules release of such goods can be obtained without the necessity of entering a claim in the prize court if the documents of title are produced to the officer representing His Majesty's Government and the title to the goods is established to his satisfaction. It was shortly found, however, that this procedure did not provide for the case where the available evidence was so scanty that the officer representing the Crown was not justified in consenting to a release. In order, therefore, to ameliorate the situation we established a special committee, with full powers to authorize the release of goods without insisting on full evidence of title being produced. This committee dealt with the utmost expedition with a large number of claims. In the great majority of cases the goods claimed were released at once. In addition to the cases dealt with by this committee a very large amount of cargo was released at once by the procurator general on production of documents. Claimants therefore obtained their goods without the necessity of applying to the prize court and of incurring the expense involved in retaining lawyers and without the risk, which was in some cases a considerable one, of the goods being eventually held to be enemy property and condemned. We have reason to know that our action in this matter was highly appreciated by many American citizens.

Another instance of the efforts which His Majesty's Government have made to deal as leniently as possible with neutral interests may be found in the policy which we have followed with regard to the transfer to a neutral flag of enemy ships belonging to companies which were incorporated in the enemy country, but all of whose shareholders were neutral. The rules applied by the British and by the American prize courts have always treated the flag as conclusive in favor of the captors in spite of neutral proprietary interests. (See the case of the *Pedro*, 175 U. S., 354.) In several cases, however, we have consented to waive our belligerent rights to treat as enemy vessels ships belonging to companies incorporated in Germany which were subsidiary to and owned by American corporations. The only condition which we have imposed is that these vessels should take no further part in trade with the enemy country.

I have given these indications of the policy which we have followed, because I can not help feeling that if the facts were more fully known as to the efforts which we have made to avoid inflicting any avoidable injury on neutral interests many of the complaints which have been received by the administration in Washington, and which led to the protest which your excellency handed to me on the 29th December, would never have been made. My hope is that when the facts which I have set out above are realized, and when it is seen that our naval operations have not diminished American trade with neutral countries, and that the lines on which we have acted are consistent with the fundamental principles of international law, it will be apparent to the Government and people of the United States that His Majesty's Government have hitherto endeavored to exercise their belligerent rights with every possible consideration for the interests of neutrals.

It will still be our endeavor to avoid injury and loss to neutrals, but the announcement by the German Government of their intention to sink merchant vessels and their cargoes without verification of their nationality or character and without making any provision for

the safety of noncombatant crews or giving them a chance of saving their lives has made it necessary for His Majesty's Government to consider what measures they should adopt to protect their interests. It is impossible for one belligerent to depart from rules and precedents and for the other to remain bound by them.

I have the honor, etc.,

E. GREY.

17. Britain's change of lists of contraband so as to embrace most of the sea-borne commerce, and her insistence of the exercise of her prize-court proceedings encompassed almost the entire neutral trade as indicated by the following lists of vessels seized and detained by her order:

The first list includes the cases of 155 vessels brought into British ports or otherwise detained for examination. Of these, 40 were forced to discharge their cargoes, which were held for prize-court proceedings. Thirty more were subjected to protracted detention at great loss. One American vessel carrying oil to Copenhagen was run aground by the English prize crew aboard her off the coast of Scotland.

It will be noted that this list does not include cases like that of the *Wilhelmina*, which, when seized by the British, was bound for Hamburg with an innocent cargo, and the *Dacia*, which was seized by the French Navy under British instructions.

Nor does this list include the vessels, 273 in number, recorded by the Government of the United States in an appendix to its note of October 21 as having been detained in the port of Kirkwall alone between March 11 and June 17. The Government list is appended, bringing this merely illustrative record of ships detained up to a total of 428.

From March 11, 1915, to June 16, 1915, 271 vessels carrying American cargoes were compelled to stop at Kirkwall, England.

A PARTIAL LIST OF SHIPS DETAINED.

S. S. *Kumeric* (British): Sailed from Galveston July 17, 1914 (via Newport News July 24), for Bremen. Cargo, 49,000 bushels of grain. Taken to Queenstown August 2; detained at Liverpool August 19.

S. S. *Berwindmoor* (British): Sailed from New Orleans July 21, 1914, for Rotterdam. Cargo, 196,000 bushels of grain. Diverted to Falmouth August 5; at London August 21.

S. S. *Campanello* (British): Sailed from New York July 30, 1914, for Rotterdam. Sent to Cardiff August 12; detained.

S. S. *Spenser* (British): Sailed from New York July 31, 1914, for Rotterdam. Sent to Liverpool.

S. S. *Saint Helena* (British): Sailed from Galveston July 16, 1914 (via Norfolk, Va., July 24), for Bremen and Hamburg. Cargo, phosphate rock, wheat, and cotton. Diverted to Manchester. Cargo seized August 12. Phosphate rock released, as well as part of cotton. Large quantity of cotton and the wheat not released, including 50 bales of cotton shipped by Alexander Spunt & Co., of Houston, Tex., and Bremen; claimed belonging to neutral subjects and as such not subject to seizure; also on ground that contract of sale between American citizens dated May 8, 1914. These goods, including wheat, condemned in prize court.

S. S. *Penlover* (British): Sailed from Galveston July 18, 1914, for Rotterdam. Cargo, 264,000 bushels of grain. Diverted to Falmouth and ordered to London August 15.

S. S. *Kalomo* (British): Sailed from New Orleans July 24, 1914, for Rotterdam. Cargo, 64,000 bushels of grain. Detained at Falmouth; at London August 15.

S. S. *Andijk* (Dutch): Sailed from New Orleans July 30, 1914, for Rotterdam. Cargo, 136,000 bushels grain. Sent to Falmouth for orders; arrived at Rotterdam August 16.

S. S. *Noruega* (Norwegian): Sailed from Galveston July 30, 1914, for Christiania. Cargo, 40,000 bushels grain. Diverted to Falmouth; arrived at Christiania August 26.

S. S. *Orteric* (British): Sailed from Galveston July 27, 1914 (Newport News August 4). Detained at Queenstown August 17; arrived at Liverpool August 21. Cargo for Bremen and Hamburg seized.

S. S. *Nitonian* (British): Sailed from New Orleans July 31, 1914, for Antwerp. Cargo, 142,000 bushels grain. Diverted to Falmouth; arrived at London August 22, at Antwerp September 5.

S. S. *Glenfinlas* (British): Sailed from New Orleans August 1, 1914 (via Norfolk August 7), for Rotterdam. Cargo, 108,000 bushels grain. Diverted to Falmouth August 26; at London September 1.

S. S. *St. Dunstan* (British): Sailed from Galveston August 4, 1914, for Rotterdam. Cargo, 122,400 bushels grain. Diverted to Cork for orders; at Liverpool August 27; at Manchester September 5.

S. S. *Miramichi* (British): Sailed from New York July 3, 1914 (via Galveston July 23), for Rotterdam. Cargo, 16,000 bushels of wheat (part of cargo), shipped by Muir & Co., for Rotterdam, to be delivered to George Fries & Co. in Colmar, Germany, and Gebrueder Zimmern & Co., Mannheim, Germany. Vessel not permitted to proceed to Rotterdam. Taken to Eastham and cargo consigned to Germany seized. Prize court decided that goods seized were property of the American claimants and not subject to seizure. Ordered released to claimants December, 1914.

S. S. *Klosterfos* (Norwegian): Sailed from New York August 28, 1914, for Christiania. Cargo, flour in barrels. Vessel stopped and boarded by British officers off the north coast of Scotland and ordered to Aberdeen. Held several days until neutral ownership of cargo was established. Arrived at Christiania September 17.

S. S. *Vitalia* (Norwegian): Sailed from New York August 19, 1914, to Rotterdam. Cargo, meat. Detained at Falmouth September 7.

S. S. *Lorenzo* (American, New York and Porto Rico Line): Chartered on August 2, 1914, by Gans Steamship Line. Sailed from New York August 6, 1914, for Buenos Aires. Cargo, coal. Captured by British and taken to St. Lucia September 12. October 16, cargo condemned; October 30, vessel condemned.

S. S. *Heina* (Norwegian): Sailed from Philadelphia August 7, 1914, for St. Thomas. Cargo, coal. Seized September 13 off St. Thomas by French cruiser *Conde;* detained six months; released at Fort de France March 20, 1915; reached New York April 15, 1915.

S. S. *Vestfos* (Norwegian): Sailed from New York August 28, 1914, for Christiania. Cargo, flour in barrels. Stopped and boarded by British officers. Taken to Kirkwall; left September 14; arrived Christiania September 17.

S. S. *Ryndam* (Dutch, Holland-America Line): Sailed from New York September 8, 1914, for Rotterdam. Seized by British warship and brought into Cork Harbor September 17; released September 20 at Queenstown. Again held up and ordered by British cruiser (September 21) to enter Falmouth. Arrived at Rotterdam September 24.

S. S. *Amsteldyk* (Dutch, Holland-America Line): Sailed from Philadelphia September 10, 1914, for Rotterdam. Captured by British cruiser and taken to Queenstown September 25; released; arrived at Rotterdam October 12.

S. S. *Rotterdam* (Dutch): Sailed from New York September 15, 1914, for Rotterdam. Cargo, copper. Shippers, American Smelting & Refining Co., United Metals Selling Co., American Can Metal Co., L. Vogelstein & Co., and Norfolk Smelting & Refining Co. Seized September 26, en route while copper was made conditional contraband (absolute contraband only since October 29). Copper bought by Great Britain. Arrived Rotterdam October 12.

S. S. *Slolerdijk* (Dutch): Sailed from New York September 9, 1914, for Rotterdam. Cargo, copper. Shippers, American Metal Co. (Ltd.) and L. Vogelstein & Co. Seized September 26, en route while copper was made conditional contraband (absolute contraband only since October 29). Copper bought by British Government. Arrived Rotterdam October 6, 1914.

S. S. *Potsdam* (Dutch): Sailed from New York September 22, 1914, for Rotterdam. Cargo, copper. Shippers, American Smelting & Refining Co., United Metals Selling Co., American Metal Co. (Ltd.), and L. Vogelstein & Co. Seized October 9. Copper bought by British Government. Arrived Rotterdam October 15.

S. S. *Westerdyk* (Dutch): Sailed from Baltimore September 21, 1914, for Rotterdam. Cargo, copper. Shipper, American Smelting & Refining Co. Seized October 9. Copper bought by British Government. Arrived Rotterdam October 18.

S. S. *Beta* (Swedish): Sailed from Philadelphia September 23, 1914, for Helsingborg and Oscarshamn. Detained and taken to Kirkwall for examination October 12. Arrived at Helsingborg October 21.

S. S. *Aquila* (Norwegian): Sailed from New York September 23, 1914, for Christiansand, Korsoer, and Copenhagen. Detained at Kirkwall October 12 for examination. Arrived at Copenhagen October 24.

S. S. *Nicholas Cuneo* (Norwegian): Sailed from New York September 26, 1914, for Christiania. Detained and taken to Kirkwall for examination October 12. Arrived at Christiania October 19.

S. S. *Noordam* (Dutch, Holland-America Line): Sailed from New York October 6, 1914, for Rotterdam. Cargo of about 13,000 tons consigned to Dutch Government. Wheat, flour, foodstuffs diverted to Falmouth October 15.

S. S. *Leander* (Norwegian): Sailed from New York September 25, 1914, for Copenhagen. Cargo, grain. Arrived at Kirkwall October 16; detained for general inspection; left October 17.

S. S. *Brindilla* (under American flag): Sailed from Bayonne, N. J., on October 13, 1914. Cargo, kerosene for Alexandria, Egypt. Steamer bought by Standard Oil Co. from Riedermann Line and transferred from German to American registry under Underwood amendment to the Panama Canal act of 1914. Seized by British cruiser *Caronia* just outside 3-mile limit off Sandy Hook October 18 and taken to Halifax, Nova Scotia. Submitted to prize court. Released. Left Halifax October 30.

S. S. *Dania* (Danish Scandinavian-American Line): Sailed from Philadelphia September 26, 1914, for Copenhagen. Cargo, general. Detained about one week at Kirkwall.

S. S. *John D. Rockefeller* (American): Sailed from Philadelphia September 27, 1914, for Copenhagen, Denmark. Captured and taken to Orkney Islands. At Kirkwall October 17. Released upon protest by United States after considerable delay.

S. S. *Prinz der Nederlanden* (Dutch, Royal Dutch West India Mail): Sailed from New York September 4, 1914, for Havre and Amsterdam by way of West Indian and Venezuelan ports. Taken at Falmouth on October 21; arrived at Amsterdam October 26.

S. S. *San* (American oil tank; Sun Oil Co., Philadelphia): Sailed from Philadelphia October 8, 1914, for Amsterdam. Diverted to Falmouth and released on October 25 at request of American Government; arrived at Amsterdam October 29.

S. S. *Marengo* (British): Sailed October 10, 1914, for Sweden. Cargo, copper. Shipper, L. Vogelstein & Co. Held at Hull October 25.

S. S. *Ascot* (British): Sailed from New York October 10, 1914, for Genoa. Cargo, copper. Consigned to order, but intended for delivery to Brown, Borari & Co. in Baden, Switzerland.

Shippers:	Tons.
American Smelting & Refining Co	450
United Metals Selling Co	500
American Metal Co. (Ltd.)	300
L. Vogelstein & Co	50
Norfolk Smelting & Refining Co	40
Total	1,340

Held at Gibraltar October 26 and seized; to prize court.

S. S. *San Giovanni* (Italian): Sailed from New York October 14, 1914, for Naples. Cargo, copper. Shippers, American Smelting & Refining Co. Held at Gibraltar October 26. Cargo suspected to be intended for reexport to Germany. Arrived Naples November 5.

S. S. *Regina D'Italia* (Italian): Sailed from New York October 15, 1914, for Naples and Genoa. Cargo, copper; 200 tons consigned to order, but intended for delivery to U. Vedorelli, Milan, Italy. Seized on October 26 at Gibraltar and held for prize court. Cargo suspected to be intended for reexport to Germany. Arrived Genoa November 11.

S. S. *John D. Archbald* (American, tank steamer, Standard Oil Co.): Sailed from New York September 23, 1914, for Italy. Cargo, oil. Held up by French cruiser and convoyed to Antibes, France; detained two days pending decision as to whether cargo was contraband; finally released and allowed to proceed.

S. S. *Prosper III* (Norwegian): Sailed from New York October 3, 1914, for Copenhagen and Gothenburg. Cargo, copper; 1,343,895 pounds of copper, valued at $166,649, for Copenhagen; 246,361 pounds, valued at $30,559, for Gothenburg; also foodstuffs and crude rubber. Arrived at Leith October 27; detained at Scottish port and placed before the prize court, copper being suspected for reexport to Germany; arrived at Copenhagen November 12.

S. S. *Security* (American; Standard Oil Co., tug): On or about October 27, 1914, boarded and searched at St. John, New Brunswick, by Canadian soldiers, who detained three German members of the crew. Upon protest of captain men were released, but not allowed to leave Canada.

S. S. *Tyr* (Norwegian): Sailed from New York October 29, 1914, for Sweden. Cargo, copper. Shippers, United Metals Selling Co., L. Vogelstein & Co. Held at Glasgow November 2; arrived Gothenburg December 17.

S. S. *Francisco* (British): Sailed from New York October 17, 1914, for Sweden. Cargo, copper. Shippers, L. Vogelstein & Co. Held at Hull November 2.

S. S. *Uller* (Norwegian): Sailed from Savannah, Ga., October 26, 1914, for Gothenburg. Cargo, cotton. Detained for inspection at Kirkwall and allowed to proceed.

S. S. *Italia* (Italian): Sailed from New York October 24, 1914, for Italy. Cargo, copper. Shippers, American Smelting & Refining Co.,

United Metals Selling Co., Norfolk Smelting & Refining Co. Held at Gibraltar November 8.

S. S. *Verona* (Italian): Sailed from New York October 24, 1914, for Naples, Genoa, and Palermo. Cargo, copper. Shippers, American Smelting & Refining Co., United Metals Selling Co. Held at Gibraltar November 8.

S. S. *Palermo* (Italian): Sailed from Boston October 20, 1914, to Naples and Genoa. Cargo, copper. Shippers, American Metal Co. (Ltd.); 300 tons; 200 tons of copper consigned to order, but intended for Schweizer Metallwerke, Thonne, Switzerland. Held at Gibraltar November 2; to prize court; arrived November 7 at Naples.

S. S. *San Guglielmo* (Italian): Sailed from New York October 21, 1914, for Naples. Cargo, copper. Shippers, United Metals Selling Co. Held at Gibraltar November 8.

S. S. *Duca di Genoa* (Italian): Sailed from New York October 17, 1914, for Naples and Genoa. Cargo, copper. Shippers, American Smelting & Refining Co. Held at Gibraltar, November 8.

S. S. *Antares* (Norwegian): Sailed October 22, 1914, for Sweden. Cargo, copper. Shippers, United Metals Selling Co., L. Vogelstein & Co. Held at Liverpool; arrived at Ardrossan November 9, for Gothenburg.

S. S. *Kroonland* (American): Sailed from New York October 15, 1914, for Italy. Cargo, copper and rubber. Copper shippers, American Smelting & Refining Co., United Metals Selling Co. Held November 8 at Gibraltar; ordered before prize court; arrived Naples November 11.

S. S. *Platuria* (American; entered under American registry in October, 1914, Standard Oil Co.; belonged formerly to Deutsch Amerikanische Petroleum Gesellschaft, controlled by Standard Oil Co.): Sailed from New York October 5, 1914, for Aarhus, Denmark. Cargo illuminating oil. Seized and taken to Stornoway, Lewis Islands, Scotland.

S. S. *Kiruna* (Swedish; Scandinavian-American Line): Sailed from New York October 25 for Swedish ports. Cargo, general. Detained four days at Kirkwall.

S. S. *Europa* (Italian; La Veloce Line): Sailed from New York October 28, 1914, for Naples and Genoa. Cargo, copper. Shippers, American Smelting & Refining Co. Detained at Gibraltar November 9; alleged contraband; arrived at Naples November 13.

S. S. *Bjornetjerne Bjornson* (Norwegian; Gans Steamship Line): Sailed from New York October 28, 1914, for Copenhagen. Cargo, general. Taken into Kirkwall November 10; left Kirkwall November 15; ordered to Leith November 16; cargo discharged and seized December 21; steamer detained till May 25, 1915.

S. S. *Fridland* (Swedish): Sailed from New York October 28, 1914, for Copenhagen. Cargo, general, including meat. Taken into Kirkwall November 10; left Kirkwall November 27; ordered to Newcastle November 29; cargo discharged January 5, 1915; steamer detained till early in May, 1915.

S. S. *Idaho* (British): Sailed from New York October 24, 1914, for Sweden. Cargo, copper. Shippers, L. Vogelstein & Co. Held at Hull November 10; left Hull November 30 for New York.

S. S. *Perugia* (British): Sailed from New York November 8, 1914, for Italy. Cargo, copper. Shippers, United Metals Selling Co. Held at Gibraltar November 13.

S. S. *Fram* (Norwegian; Gans Steamship Line): Left Charleston, S. C., October 22, 1914, for Danish ports. Cargo, cotton. Taken into Aberdeen November 13; ordered to Hull; left Newcastle December 8; arrived at Nyborg December 18.

S. S. *Jos. W. Fordney* (American; American Exporters' Line): Sailed from New York November 7, 1914, for Copenhagen. Cargo, general. Taken into Falmouth and detained two days, then allowed to proceed.

S. S. *Taurus* (Norwegian): Sailed from New York November 1, 1914, for Italy. Cargo, copper. Shippers, United Metals Selling Co. Held at Glasgow November 13.

S. S. *Tabor* (Norwegian): Sailed from New York October 26, 1914, for Italy. Cargo, copper. Shippers, United Metals Selling Co. Norfolk Smelting & Refining Co. Held at Gibraltar November 13. To prize court. Left Gibraltar November 29.

S. S. *Alfred Nobel* (Norwegian, Gans Steamship Line): Sailed from New York October 20, 1914, for Copenhagen. Cargo, general, including meat. At Lerwick November 7. Left Lerwick November 14. Ordered to Liverpool; cargo discharged and seized November 17. Prize court. Released May 13, 1915.

S. S. *Toronto* (British): Sailed from New York October 31, 1914, for Sweden. Cargo, copper. Shippers: L. Vogelstein & Co. Held at Hull November 15.

S. S. *Sif* (Norwegian): Sailed from New York October 30, 1914, for Gothenburg. Cargo, copper. Four hundred tons sold and consigned to B. Ursells' successors, Stockholm, in order to meet objections to consignments "to order." Held at Glasgow November 18 for prize court. Arrived at Gothenburg December 17.

S. S. *Norheim* (Norwegian): Sailed October 17, 1914, for Italy. Cargo, copper. Shippers: United Metals Selling Co., L. Vogelstein Co. Held at Gibraltar November 18.

S. S. *Sigrun* (Norwegian): Left New York November 9, 1914, for Gothenburg and Malmoe. Seized November 26 and taken into Newport, England, December 2. Vessel detained pending search for suspected contraband. Cargo held for prize court included, for Gothenburg, 560,894 pounds of copper, valued at $70,047; 222 packages crude rubber, valued at $21,414; 1,596 barrels lubricating oil, valued at $8,778. For Malmoe; 1,009,532 pounds of copper, valued at $126,871; 600 barrels lubricating oil, valued at $3,300. For balance of cargo, consisting of oilcake, paraffine, corn oil, oats, cocoa, feed, tea, furs, engines and machinery, sewing machines, and oleo, reshipment allowed. Sailed for Gothenburg January 15, 1915. Arrived Gothenburg January 25. Arrived Malmoe February 16.

S. S. *Galileo* (British): Sailed from New York November 7, 1914, for Sweden. Cargo, copper. Shippers: L. Vogelstein & Co. Held at Hull November 26. Left Hull December 13 for New York.

S. S. *Kim* (Norwegian, Gans Steamship Line): Sailed from New York November 11, 1914, for Copenhagen. Cargo, general, including meat. Taken into Falmouth November 27; left December 4. Ordered to Newcastle December 8; cargo discharged and seized January 5, 1915. March 27 prize court ordered payment for cargo. Steamer detained until May 23, 1915.

S. S. *Tancred* (Norwegian, Gans Steamship Line): Left Port Arthur, Tex., November 13, 1914, for Danish ports. Cargo, cotton. Arrived at Falmouth; detained for inspection November 28. Left November 30. Arrived at Aarhus, Denmark, December 10, where cargo discharged.

S. S. *Strinda* (Norwegian, Gans Steamship Line): Sailed from New York November 14, 1914, for Copenhagen. Cargo, general. Taken into Falmouth November 29; after inspection allowed to proceed. Left December 8.

S. S. *Ran* (Norwegian): Sailed from New York November 13, 1914, for Liverpool and Sweden. Cargo, cottonseed products, copper, and leather; part for Liverpool, balance for Gothenburg and Malmoe. Taken into custody by British authorities November 29 and held as a prize; released December 26.

S. S. *Sandefjord* (Norwegian): Sailed from New York November 27, 1914, for Copenhagen. Cargo, cotton. Prize crew put on board outside of Sandy Hook. Arrived at Halifax November 30. Cargo partly discharged; suspected contraband. Arrived at Kirkwall January 15, 1915. Sailed January 16. Arrived at Copenhagen January 19.

S. S. *George Hawley* (American, American Exporters' Line; C. H. Sprague & Sons, Boston): Sailed from New York November 15 for Copenhagen. Cargo, general. Taken into Falmouth November 30; gave up ship's papers voluntarily for examination. Reason for detention: None given to master officially. Released January 2, 1915, and proceeded with full cargo to destination. Other circumstances: Master protested in writing on December 5, 1914. Master was verbally informed by customs officers that they would have to hold the vessel on account of the flour, wheat, and oil on board. Later master was simply informed verbally that trouble was because the consignee of the 550 barrels of oil was at that time under suspicion by the British Government. On January 1, 1915, master was told to proceed with his full cargo on board, and no excuse or reason given for the 33 days' detention at Falmouth. Damage for detention at charter rates, etc., amounted to $14,000.

S. S. *Canton* (Swedish): Sailed from New York November 17, 1914, for Stockholm and Gothenburg. Cargo, copper, 375 tons. Shipper: American Smelting & Refining Co. Held December 1, the Tyne.

S. S. *Edward Pierce* (American, American Exporters' Line; C. H. Sprague & Son, Boston): Sailed from New York November 24, 1914, for Gothenburg and Copenhagen. Cargo, general. Taken into Falmouth December 8. On December 13 proceeded with full cargo. Master was told verbally he was detained on account of flour and peas on board, although both were consigned direct to parties in Copenhagen. No other reason or reason given for delay. Master was shown a telegram to customs officers reading, "American S. S. *Edward Pierce* with suspected cargo from New York expected Falmouth about 6th instant. If she comes in, send her immediately into harbor. (Signed) F. C. December 3, 6 p. m." Detention premeditated days ahead on mere suspicion. Damage for detention at charter rates, etc., amounted to $7,000.

S. S. *Herm* (Norwegian, Gans Steamship Line): Sailed from New York November 12, 1914, for Balboa, Oporto, Lisbon, Genoa, and Barcelona. Cargo, general. Stopped outside Lisbon; ordered to Gibraltar December 8. Released and sailed December 14.

S. S. *Maracas* (American): Sailed from New York December 9, 1914, for Genoa via Gibraltar and Naples. Brought into Halifax, Nova Scotia, by prize crew from British warship December 12. No reason given for detention by officer in charge. Later allowed to proceed to destination upon assurance that cargo not destined to enemy ports. Arrived Genoa January 10, 1915.

S. S. *Brindilla* (American, Standard Oil Co.): Sailed from Alexandria, Egypt, on or about November 26, 1914. Arrived at St. Michaels, Azores, to take an oil cargo from a German steamer on December 12. Reported leaving St. Michaels December 20 for Copenhagen. Intercepted off the coast of Scotland and taken to Aberdeen. (Second seizure.)

S. S. *Tellus* (Norwegian): Sailed from New York November 18, 1914, for Genoa. Cargo, 200 tons of copper; sold and consigned to U. Vedorelli, Milan. Seized and held at Gibraltar. Arrived Genoa December 28.

S. S. *A. A. Raven* (American): Sailed from Wilmington, Del., December 5, 1915, for Rotterdam. Cargo, cotton. (First steamer since war to reach Dutch port with cotton for Germany.) Arrived at Rotterdam December 24, 1914. Held up by British warship in channel; delayed 24 hours for examination of papers.

S. S. *Mirjam* (Norwegian): Sailed from New York November 24, 1914, for Copenhagen. Detained at Kirkwall December 16. Released January 15, 1915.

S. S. *Soriand* (Norwegian): Sailed from New York November 27, 1914, for Gothenburg. Cargo, 600 tons copper. Arrived at Leith December 27. Detained. Arrived at Gothenburg January 22, 1915.

S. S. *New Sweden* (Swedish): Sailed from New York December 6, 1914, for Sweden. Cargo, copper. Shippers: American Smelting & Refining Co. Arrived at Kirkwall December 21. Held at Shields December 28. Sailed January 10, 1915. Arrived at Gothenburg January 13.

S. S. *Ramsdal* (Norwegian): Sailed from New York November 28, 1914, for Christiania. Taken to Kirkwall December 21. Arrived at Leith December 24 in charge of a prize crew. Arrived at Christiania February 8, 1915.

S. S. *Zamora* (Swedish): Sailed from New York December 8, 1914, for Copenhagen. Cargo, copper. Arrived at Kirkwall December 29. Arrived at Copenhagen January 11, 1915.

S. S. *Kentucky* (Danish): Sailed from Baltimore November 24, 1914, via New York for Copenhagen. Detained at Kirkwall December 16. Arrived at Leith December 29; 714 tons of meat consigned to Denmark thrown into prize court. Arrived at Copenhagen February 2, 1915.

S. S. *Virginia* (Danish): Sailed from Philadelphia December 3, 1914, for Copenhagen. At Kirkwall December 23. Arrived at Shields December 30, 1914.

S. S. *Greenbrier* (American, C. L. Dimon, New York): Sailed from New Orleans December 11, 1914 (via Norfolk December 17), for Bremen. Cargo, cotton; under certificate of British consul at New York. Stopped on December 30 by British cruiser; boarded and searched. British flag hoisted and taken to Kirkwall. Detained three days and then taken to Leith and allowed to proceed to Bremen. Arrived at Bremen January 9, 1915.

S. S. *Tula* (American; Crucible Steel Co.): Sailed from New York December 1, 1914, for Copenhagen. Cargo, grain and flour. Seized by the British and detained at Leith. Upon investigation as to ultimate destination of cargo permitted to proceed on December 31. Sailed January 7, 1915, and arrived at Copenhagen January 11.

S. S. *Helig Olav* (Danish; Scandinavian-American Line): Sailed from New York December 3, 1914, for Christiansand and Copenhagen. Boarded at Kirkwall by British marines and detained eight days pending investigation as to character of cargo. Arrived at Copenhagen December 23, 1913.

S. S. *Arkansas* (Danish; chartered by Gans Steamship Co.): Sailed from New York December 11, 1914, for Copenhagen. Cargo, meat. Arrived at Shields, in charge of a prize crew, January 2, 1915. Arrived at Copenhagen January 22.

S. S. *Augusta* (Swedish): Sailed from New York December 9, 1914, for Gothenburg and Malmoe. Taken to Kirkwall. Arrived at New-

castle January 4, 1915, in charge of a prize crew. At Hartlepool January 10. Arrived at Gothenburg February 1.

S. S. *Oneka* (British): Sailed from New York January 2, 1915, for Piraeus, Greece. Cargo, American oil (Standard Oil Co.), partly for Bulgaria and Greece. Detained at Malta, being suspected delivery to Turkey.

S. S. *Denver* (American: Mallory Steamship Co., New York): Sailed from Norfolk December 23, 1914, for Bremen. Cargo, cotton, loaded under supervision of British consul at Norfolk. Detained January 6, 1915, at Kirkwall. Released on representation.

S. S. *Governor* (American; Pacific Coast Co., New York): Detained by Canadian customs officials January 13, 1915, at Vancouver, British Columbia. Cargo, hides for San Francisco, Cal. Released after unloading hides.

S. S. *Oscar II* (Danish): Sailed from New York February 4, 1915, for Christiania and Copenhagen. Taken into Kirkwall and held for examination as to her cargo. Arrived at Copenhagen February 20.

S. S. *Vitalia* (Norwegian): Sailed from New York February 3, 1915, for Rotterdam. Cargo, packing products. Taken into Falmouth February 20. Released after cargo was consigned to Netherlands Oversea Trust.

S. S. *Antilla* (American; New York & Cuba Mail Steamship Co.): Sailed from New York February 9, 1915, for Malmoe and Copenhagen. Cargo, cattle food of various kinds. On February 24 stopped by British cruiser when in latitude 59–58 N., longitude 9–14 W. No reason given. British cruiser ordered vessel to proceed to Kirkwall with a prize crew on board, after four hours' detention while examining ship's papers. On March 9 was taken by British prize crew to Dundee. March 23 Admiralty discharged part of cargo in Dundee and reloaded the balance. On April 27 vessel was allowed to proceed with remainder of cargo. Alleged damage to vessel for detention, etc., amounted to $98,000. Certified to both by Danish and British consuls.

S. S. *Platuria* (American registry; controlled by Standard Oil Co.): Sailed from Philadelphia February 13, 1915, for Malmoe and Helsingborg. Detained at Kirkwall March 2.

S. S. *Pass of Balmha* (American): Sailed from New York January 30, 1915, for Bremen. Cargo, cotton. Detained at Kirkwall March 8. Released after inspection. Arrived at Bremen March 31.

S. S. *Vigilancia* (American: Walker, Armstrong & Co., Savannah): Sailed from Savannah, Ga., February 22, 1915, for Bremen. Cargo, cotton. Intercepted at sea by British cruiser; taken into Kirkwall. Arrived at Kirkwall March 8. Arrived at Bremen March 15.

S. S. *Grekland* (Swedish): Sailed from New York February 18, 1915, for Gothenburg. Cargo, American meat products. Held in Kirkwall from March 10 because destination of cargo suspected. Released and sailed April 1 for Gothenburg.

S. S. *A. A. Raven* (American): Sailed from New York February 13, 1915, for Rotterdam. Cargo, meat. Held at Deal March 12. Reconsigned to the Netherlands Oversea Trust. Arrived at Rotterdam April 2.

S. S. *Spyros Vallianos* (Greek): Sailed from Savannah, Ga., March 10, 1915, for Rotterdam. Cargo, cotton. Detained at Falmouth.

S. S. *Livonia* (Danish): Sailed from Galveston March 20, 1915, for Aalborg and Copenhagen. Held at Falmouth April 14; Bristol, May, 6, pending settlement of price of cotton cargo.

S. S. *Seguranca* (American): Sailed from New York on March 9 for Holland. Cargo, general. Consigned to consignees in Holland. Detained by the British in April. The Department of State protested against the detention of the *Seguranca*, stating that the shipper's manifest showed that the entire cargo was consigned to Dutch consignees and was accompanied by a certificate from the British consul general at New York, and that the loading of the vessel, moreover, had been supervised by the British consul general's inspector. The United States Government could not admit the right of the British Government to require that this cargo be reconsigned to the Netherlands Oversea Trust.

S. S. *Ogeechee* (American): Sailed from Bremen April 4, 1915, for New York. Arrived at Sharpness April 18. Cargo confiscated as being of German origin. Sailed for New York May 1. Arrived May 18.

S. S. *Southerner* (Danish): Sailed from Charleston, S. C., March 31, 1915, for Rotterdam. Cargo, cotton. Detained at Falmouth pending negotiations by Great Britain for the purchase of cotton on board. Arrived at Rotterdam April 28

S. S. *Giovannig* (Italian): Detained, but allowed to proceed on April 20, 1915, without discharging her cargo.

S. S. *Kelbergen* (Dutch): Sailed from New York April 26, 1915, for Rotterdam. Taken into Kirkwall. Innocence of cargo established and released.

S. S. *Marie* (Swedish): Sailed from Galveston, Tex., March 13, 1915, for Malmoe, Sweden. Arrived at Clyde in charge of prize crew. Was stopped on suspicion regarding destination of cargo.

S. S. *Athinal* (Greek): Sailed from New York May 16, 1915, for Palermo and Piraeus. Arrived and seized at Gibraltar May 29. Permitted to proceed after discharging 400 bales of cotton and 1,200 reels of barbed wire. Placed before prize court, charge being destination for Germany.

S. S. *Gargoyle* (American; Vacuum Oil Co.; changed from German to American registry): Sailed from New York May 10, 1915, for Alexandria. Cargo, bulk oil. Reported at Malta May 31. Seized by British authorities and prize-court writ issued.

S. S. *F. J. Lisman* (American): Sailed from New York May 23, 1915, for Rotterdam. General cargo, consigned to Netherlands Oversea Trust. Held at London June 8 and 1,000 barrels of phosphate removed for disposition by prize court.

S. S. *Portland* (American): Sailed from San Francisco April 25, 1915, for Stockholm (via New York). Cargo general. Detained at Kirkwall June 16. Taken to Blyth June 19, where 34 tons of dried fruit were sent to prize court. Arrived at Stockholm July 8.

S. S. *Varing* (Swedish): Sailed from Savannah, Ga., May 30, 1915, for Swedish ports. Cargo general. Detained at Kirkwall June 19.

S. S. *Bergensfjord* (Norwegian): Sailed from New York June 12, 1915, for Bergen. Cargo, general. Taken to Kirkwall June 21. Arrived at Bergen June 24.

S. S. *Nor* (Norwegian): Sailed from New York June 5, 1915, for Rotterdam. Held in the Downs for examination of cargo June 28.

S. S. *Muskogee* (American): Sailed from New Orleans June 7, 1915 (Newport News, June 14), for Gothenburg. Taken into Kirkwall July 5 and released July 7, for Gothenburg. Arrived July 9.

S. S. *Bratland* (Norwegian): Sailed from Baltimore June 15, 1915, for Aalborg, Denmark. Taken into Kirkwall July 6. Arrived at Aalborg July 12.

S. S. *Janna* (Norwegian): Sailed from San Francisco March 4, 1915, for Bergen, Norway. Cargo, grain. Taken into Kirkwall July 8. Arrived at Bergen July 19.

S. S. *Gurre* (Danish): Sailed from Baltimore July 1, 1915, for Aalborg, Denmark. Taken into Kirkwall July 19. Released July 23 and sailed for Aalborg and Randers.

S. S. *Hulda Maersk* (Danish): Sailed from Savannah, Ga., July 10, 1915 (Norfolk, July 13), for Malmoe. Cargo, cotton seed. Detained at Kirkwall. Arrived at Malmoe August 12.

S. S. *Neches* (American): Sailed from Rotterdam to the United States. Cargo, general. Detained at the Downs and brought to London, where cargo was discharged. The United States Government, July 15, 1915, made vigorous protest against the detention of the vessel and the unloading of the cargo, which was the property of American citizens, at London.

S. S. *Buffalo* (British): Sailed from New York August 18, 1915, for Christiania. Cargo, hacksaws. Arrived at Hull September 5. Thrown into prize court on the assertion that cargo was bound for Germany.

S. S. *Vitalia* (Norwegian): Sailed from New York August 19, 1915, for Rotterdam. Cargo, meat. Detained at Falmouth, September 7, and thrown into prize court, the British Government's contention being that there were fats and oils in the cargo not consigned to the Netherlands Oversea Trust.

S. S. *Corning* (American; Standard Oil Co.): Sailed from Baton Rouge, La., August 17, 1915, to Malmoe. Cargo, refined petroleum and naphtha. Detained at Kirkwall September 7. Standard Oil Co. placed the case in the hands of the American Government. Released. Arrived at Malmoe September 28.

S. S. *Oscar II* (Swedish): Sailed from New York September 9, 1915, for Christiansand. Taken to Kirkwall. Sailed September 21.

S. S. *Louisiana* (Danish): Sailed from New York September 15, 1915, for Copenhagen. Arrived at Kirkwall "prior to October 1, 1915," and sent to Aberdeen to discharge part of her cargo.

S. S. *United States* (Danish): Sailed from New York August 26, 1915, for Copenhagen. Cargo, general. Had unloaded at Copenhagen when British Government ordered her to reload and to take cargo back to England under penalty of seizure.

S. S. *Helsingborg* (Swedish): Sailed from Port Arthur, Tex., August 28, 1915, via Norfolk for Aarhus, Denmark. Cargo, cotton seed. Detained at Kirkwall September 28. Arrived at Blyth October 3.

S. S. *California* (Danish): Sailed from New York August 31, 1915, for Christiania. Cargo, general. Detained September 29 at Leith.

S. S. *Absalom* (Danish): Sailed from Philadelphia September 12, 1915, for Copenhagen. Detained at Kirkwall.

S. S. *Origin* (Norwegian): Sailed from New York September 14, 1915, for Kirkwall and Vallo. Detained at Kirkwall.

S. S. *Petrolite* (American; Standard Oil Co.): Sailed from Philadelphia September 15, 1915, for Copenhagen. Detained at Kirkwall September 29. Arrived at Copenhagen October 8. (Had been previously detained by British authorities and released August 17, 1915.)

S. S. *St. John* (Swedish): Sailed from Baltimore September 12, 1915, for Gothenburg. Detained at Kirkwall. Arrived at Gothenburg October 8.

S. S. *Ester* (Swedish): Sailed from Port Tampa, Fla., September 5, 1915, for Newport News and Malmoe. Detained at Kirkwall September 30.

S. S. *Frederick VIII* (Danish): Sailed from New York September 22, 1915, for Copenhagen. Cargo, bacon. Ordered to unload at Kirkwall September 30.

S. S. *Osman* (Swedish): Sailed from New Orleans September 11, 1915, via Norfolk, for Copenhagen. Arrived at Kirkwall October 6. Released. Arrived at Copenhagen October 12, 1915.

S. S. *Conrad Mohr* (Norwegian): Sailed from Baton Rouge, La., September 15, 1915, via Norfolk, for Bergen. Arrived at Kirkwall October 7. Released. Arrived at Bergen October 11.

S. S. *Fram* (Norwegian): Sailed from Baltimore September 18, 1915, for Vaksdal. Arrived at Kirkwall October 7. Released. Arrived at Bergen October 11, 1915. Second seizure.

S. S *Aladdin* (Norwegian): Sailed from New York September 21, 1915, for Stockholm. Brought to Kirkwall October 7. Released.

S. S. *Orion* (Swedish): Sailed from Philadelphia September 22, 1915, for Stockholm. Cargo, coal. Brought into Kirkwall October 10. Released October 14.

S. S. *Virginia* (Danish): Sailed from New York September 25, 1915, for Christiania and Copenhagen. Cargo, general. Taken to Kirkwall October 10. Taken to Grimsby October 19. To prize court.

S. S. *Mexicano* (Norwegian): Sailed from New Orleans September 24, 1915, for Christiania and Copenhagen. Cargo, general. Detained at Kirkwall. Sailed October 12, 1915, for Christiania.

S. S. *Hocking* (American; formerly Danish, purchased and transferred by American Transatlantic Steamship Co. to American registry July 31, 1915): Objected to by British alleging that she was purchased with German capital. Sailed from New York October 29, 1915, for Norfolk. Seized by British cruiser and taken to Halifax, N. S., October 31, in charge of prize crew convoyed by British warships. In charge of Admiralty Court.

S. S. *Hamborn* (Dutch; Munson Line): Sailed from New York October 27, 1915, for Cuba. Cargo, general. Halted 85 miles from New York by British cruiser. Taken to Halifax, N. S., October 31, by prize crew, convoyed by British warships. In charge of Admiralty Court.

S. S. *Llama* (American; Standard Oil Co.; formerly German, transferred to American registry): Sailed from New York October 14, 1915, for Copenhagen. Cargo, oil. Seized by British prize crew and afterwards run aground (October 31) on Skae Skerries, Westray Firth, Scotland.

S. S. *Athamas* (Greek): Sailed from Galveston October 15, 1915 (Norfolk Oct. 24), for Rotterdam. Seized and taken into British port November 18.

Andrew Welch (American bark; George W. McNear, San Francisco): Sailed from San Francisco August 19, 1915, for Halstad, Sweden. Cargo, beans. Boarded by British crew off the Shetland Islands and ordered into Lerwick. On account of storms carried toward Norway and towed into Christiansand by S. S. *Russland* November 17.

S. S. *Zealandia* (American): Sailed from Tampa September 15, 1915, for Sweden. Cargo, rosin, hides, rubber. Arrived at Pensacola September 27; left for Tampico October 3; arrived at Progreso October 25 bound for Malmoe, Sweden. Boarded and searched by British crew, according to captain, within 3-mile limit. Steamer still remains at Progreso on account of fear of capture.

S. S. *Kristianiafjord* (Norwegian): Sailed from New York November 6, 1915, for Bergen and Christiania. Cargo, general. Detained at Kirkwall; arrived at Bergen November 21. Compelled to return to England 6,000 cases of American pork, 1,800 bags of coffee, the ultimate destination of which having been questioned by British authorities.

S. S. *Genesee* (American; owned by American Transatlantic Co., New York): Sailed from New York October 11, 1915. Left Norfolk October

14 with cargo of coal for Montevideo. Seized and boarded by British prize crew. Ordered to St. Lucia November 20.

Statement of Secretary Lansing regarding vessels detained by British authorities:

SEPTEMBER 10, 1915.

(1) Vessels whose cargoes and papers have been of such a character as to require but brief time for examination have been held in British ports, according to this Government's information, for prolonged periods, in some instances for more than a month, and then released without the institution of prize court proceedings.

The steamer *Chester*, which sailed from Baton Rouge for Rotterdam with a cargo of illuminating oil, was taken into Falmouth, September 21, 1914, and held until November 4 of that year.

The steamer *Ocean*, carrying the same kind of a cargo, from New York to Rotterdam, was taken into Plymouth September 23, 1914, and similarly released November 5.

The steamer *Charlois* and the steamer *New York*, carrying similar cargoes, were taken into British ports on September 30 and October 12, 1914, respectively, and similarly released on October 27.

The steamers *American* and *Rotterdam*, carrying cargoes of oil to Rotterdam, were also detained under conditions similar to those of the vessels just mentioned in the fall of 1914.

The steamer *Christian Knudsen*, carrying a cargo of oil in bulk, consigned to a Danish corporation in Copenhagen, was brought into the port of Kirkwall, detained for 11 days, and then released.

Vessels carrying oil from the United States to long-established markets in Scandinavian countries have repeatedly been detained without being sent to the prize court for adjudication. Among them may be mentioned the *Brindilla*, the *Platuria*, the *Wico*, the *Polarine*, the *Pioneer*, the *Llama*, the *Muskogee*, and the *John D. Rockefeller*.

The steamer *Denver*, which carried a full cargo of cotton from Norfolk to Bremen and which had been loaded under the supervision of a British consular officer, was taken into Kirkwall in January last, as the department was informed by the British Government, just to examine her papers and to verify her cargo.

The *George W. Hawley* was held for a month because she refused to comply with a requirement of the British authorities to discharge a single shipment, the illegal destination of which does not appear to have been disclosed by any evidence. The vessel carried a mixed cargo, including a shipment of oil. The British authorities insisted that the vessel should discharge the oil, which, the shipper represented, was consigned to one of its long-established agents in Sweden. Finally, it was announced that the vessel would be released as an act of grace.

The steamer *Wico* was held by the British authorities last March. This Government was advised that the British minister at Stockholm had informed the Swedish foreign office that the vessel had arrived in a British port with a full cargo of oil for a concern in Stockholm, and that, in view of the recent seizure by a German man-of-war of the steamship *Bryssel* and her cargo, the British Government required complete assurances from the Swedish Government before the *Wico* could be allowed to proceed to destination that she would not share the fate of the *Bryssel*.

Subsequently this Government was informed that the vessel had been allowed to proceed, but that the British Government felt that, in the event of further cargoes going to Stockholm being seized by German ships, the whole question of permitting oil cargoes to proceed to that destination would have to be seriously reconsidered.

The steamer *Llama*, carrying a cargo of oil to a Scandinavian port, was taken into Kirkwall and subsequently released on June 5 last. After departing from Kirkwall the ship was again arrested on June 6, and although the officer of the war vessel which seized the *Llama* apparently was shown the ship's release papers, he placed a prize crew on board and ordered the vessel to Aberdeen and thence to Leith, where she was finally released on June 12, although she could not proceed until June 15, owing to a shortage of coal.

(2) Vessels have been held until they have reconsigned their cargoes to a consignee in a neutral country designated by the British Government.

The steamer *Seguranca*, which carried a general cargo from New York to the Netherlands, was detained at a great loss to the owners of the vessel and to the shippers in a British port for the greater part of last April, in order that her cargo might be reconsigned to the Netherlands Oversea Trust. The manifest showed that the entire cargo was consigned to named consignees in the Netherlands and was accompanied by a certificate of the British consul general in New York, stating that the loading was supervised by his inspector and that the vessel contained no cargo other than that specified in the manifest. A large part of the cargo, consisting of fresh fruit stored in the hold of the vessel, was subject to decay with great rapidity.

A similar requirement was imposed on the steamer *F. J. Lisman*, which during last June was detained at London. It appears that, after a prolonged detention of the ship of over a month, representatives of the shippers were compelled to discharge both contraband and noncontraband articles, and that the captain and the shippers finding their efforts to comply with the requirements of the British authorities hopeless, abandoned the voyage.

The steamers *A. A. Raven* and *Vitalia*, carrying articles listed as conditional contraband, were detained in a British port in March last until the goods shipped to specified consignees in Holland could be consigned to the Netherlands Oversea Trust.

The steamer *Neches* was detained last May for about two weeks in order that a shipment of cotton destined for Rotterdam might be consigned to the Netherlands Oversea Trust.

The steamer *Zzandjik* was detained last June, as the department was informed, while the British minister at The Hague made inquiries as to whether the Netherlands Oversea Trust had accepted the consignment of the cargo.

(3) Detentions have been made without evidence amounting to probable cause.

The steamer *Annam*, which was detained at Kirkwall last April, carried a cargo of food products from the United States to Swedish ports. She was detained owing to a "suspicion," as the British Government stated, that a part of its cargo was destined for Germany.

The steamer *Dronning Olga* was detained at Kirkwall in April last and the cargo, which consisted of cotton and food products, was placed in the prize court on the ground, as the department was informed by the British Government, that it was "believed" that it was ultimately destined for Germany.

The steamer *Hilding*, which sailed from New York for Copenhagen with a general cargo consisting largely of food products, was seized and taken into Leith last April, and this Government was informed that the cargo had been seized as contraband with the expectation of holding it under the order in council of March 11, 1915, if the charge that the goods were contraband should fail.

Numerous similar instances might be cited.

The steamers *Christian Knudsen* and *Platuria*, carrying oil from New York to Denmark, were detained by the British authorities last fall, taken into British ports, and held until the British Government, as they stated, could make an investigation as to the destination of the cargoes. Furthermore, this Government was informed that the vessels had been detained pending the receipt of guaranties from Denmark against the exportation of the cargoes and that the orders were given for the release of the vessels on the receipt of satisfactory guaranties.

The steamer *Brindilla*, which sailed from New York October 13 last, with a cargo of oil for Alexandria, was taken into port at Halifax and later released, as the department was informed, when the British authorities received information that the ship's cargo was expected at Alexandria.

The steamer *Ambra* was taken into a British port in July last, and this Government was informed that this vessel was held pending inquiries that had been instituted concerning destination of certain items of her cargo. About a week later the vessel was allowed to proceed.

In July last this Government was informed by the British Government that the prolonged detention of the oil steamers *Polarine*, *Platuria*, and *Pioneer* was due to the fact that His Majesty's Government's attention had latterly been drawn to the very large quantities of oil which had been shipped to Scandinavian countries during the last few months; that there had been every reason to suspect that some of the oil was destined for enemy countries; and that the arrival of the steamers in quick succession necessitated the institution of inquiries as to the ultimate destination of the oil.

The owners of these vessels and their cargoes complained to the Government of the United States against their detention, stating that the vessels carried the usual cargoes consigned in good faith to long-established subsidiaries in neutral countries, and further representing that, since supplies from Russia and Roumania had been prevented from entering Scandinavian ports, a large increase of business with them had been expected, but it had been found that during the first five months of the year 1915 total shipments of all petroleum products to these countries were less than for the same period last year, although business in previous years had steadily increased.

(4) Vessels have been held, according to statements of the British Government, because of the manner in which shipments have been consigned.

The steamer *Einerjarl* was brought into Kirkwall last May and its cargo of cottonseed cake, shipped from Newport News to Denmark, which the shippers represented was to be used exclusively for consumption in Denmark, was seized. This Government was informed that the cargo was discharged because it was consigned "to order."

The steamers *Alfred Nobel*, *Bjorstjerne Bjornsen*, and *Friedland* were seized last autumn because their cargoes were consigned "to order."

The shipments on the steamers *America* and *Artemis* have been placed in prize court under the order in council of March 11, 1915, because, the goods being consigned by the shippers to themselves, there was no guaranty of their ultimate destination.

(5) Goods have been seized by the British Government on the ground, as this Government has been informed, that the country to which they were shipped had not prohibited their export.

In the fall of the year 1914 copper shipped from the United States to Sweden on the steamers *Francisco*, *Antares*, *Idaho*, *Tyr*, and *Toronto* was seized by the British authorities because, as the British Government stated, the Swedish Government had not yet prohibited the reexportation of copper from Sweden.

A consignment of rubber on the Swedish ship *Zamore* had been placed in prize court last January, because, as the British Government stated, of the absence of a comprehensive prohibition on the exportation of rubber in all its forms from Denmark.

(6) The British authorities have repeatedly seized articles classified as contraband articles classified as conditional contraband, as well as noncontraband goods, shipped to Scandinavian countries, to the Netherlands, and to Italy, then neutral, although the reexportation of such commodities from these countries had been forbidden.

In December last the steamer *Tellus* was ordered to discharge a shipment of copper shipped from New York directly to a consignee in Milan, Italy, although by an Italian decree of November 13, 1914, the exportation of goods shipped in this manner was forbidden.

The steamer *Joseph W. Fordney* was seized 4 miles off the coast of Norway, and in charge of a prize crew brought into Kirkwall April 8 last. The ship's manifest showed that the cargo consisted entirely of cattle fodder consigned to a person in Malmo, Sweden. It appeared from information presented to this Government that an affidavit regarding the character and destination of the cargo, made by the shipper of the entire cargo, was attached to the bill of lading, and that this affidavit contained a certification by the British consul general and the Swedish consul, and also a statement by the latter to the effect that the exportation from Sweden of the goods of which the cargo consisted was prohibited. The vessel was brought into a British port and her cargo discharged. This Government was informed by the British Government that, apart from the uncertainty of the address of the consignee of the cargo of this vessel, His Majesty's Government had evidence that the cargo was not destined for bona fide Swedish consumption, but was intended for Germany.

Numerous other similar instances might be cited, including those of the detention of vessels carrying oil to Scandinavian ports which have been mentioned.

(7) Detentions have been made pending assurances that embargoed goods would be allowed to pass through a neutral country to Great Britain's allies.

The steamer *Leelanaw*, which carried a cargo of cotton from Galveston to Gothenburg for transshipment to Moscow, was detained in a British port early in June last. Relative to the detention of this vessel the British Foreign Office said:

"In view of the fact that cotton has now been placed on the Swedish prohibition of export list, His Majesty's Government have not considered it advisable to allow this large cargo to go on to Gothenburg until they are assured that there is a fair chance of it reaching its declared ultimate destination."

After nearly a month's detention the vessel was released on the understanding that she should proceed directly to Archangel.

The steamers *Jentland* and *Syrius* appear to have been recently detained under circumstances similar to those of the steamer *Leelanaw*.

(8) From time to time this Government has been informed of the seizure of cargoes on the ground that consignees have been known to trade with the enemy or because they were suspected of doing so.

In January last this Government was advised by the British Government that the British Government had been compelled to place in prize court a consignment of rubber on board the Swedish vessel *Zamora*, the consignee of these goods being regarded with grave suspicion, and there being reason to believe that the ultimate destination of the rubber was the enemy forces.

(9) Vessels have been seized and brought into port and have been required by the British authorities to pay pilotage, harbor, unloading, warehouse, storage, or other dues, costs and expenses in advance of a judicial determination of the validity of the seizure of vessel or cargo.

Instances of such treatment of vessels may be found in the cases of the detention of the steamer *Neches* last May, the *Ogeechee*, which was seized last April, and the *Antilla*, which was seized in February last and subjected to a prolonged detention. In the case of the last-mentioned ship it appears, however, that the cost of discharging was borne by the British Government.

(10) Detention of vessels proceeding from European ports.

The steamer *Ogeechee*, which left Bremen April 3 last for the United States was detained at Sharpness and compelled to discharge its entire cargo, which consisted of approximately 200 shipments of goods urgently needed by American citizens. In most, if not all, cases it appears that ownership of these goods at the time of the seizure had passed to American consignees. In many instances American citizens had contracted for the sale of the goods consigned to them and were prevented from carrying out their contracts.

The release of shipments on the vessel has been allowed on the production of proofs of American ownership of the goods prior to March 11, 1915. American consignees in order to avoid loss have endeavored to comply with the requirements in the presentation of proofs.

The steamer *Neches*, which sailed from Rotterdam to the United States, was brought to London and compelled, in June last, to discharge cargo, on the ground, apparently, that the goods originated partly in Belgium. The vessel was detained about a month, and after having been damaged to the extent of approximately £1,500 as a result of a collision with another vessel while under the control of the British Admiralty, and after having been involved in litigation growing out of such collision was allowed to proceed.

The following is a list of the vessels detained prior to March 11 last, among which are some regarding the detention of which details have been briefly stated in this memorandum:

Platuria, Brindilla, John D. Rockefeller, Kroonland, Noordam, Rotterdam, Sandefjord, Thomas J. Fordney, Fram, Edward Pierce, Ellen, Tellus, Sif, Kim, Canton, Ogeechee, Friedland, Gallileo, Uller, Verona, Zuiderdijk, Greenbrier, Herm, Arkansas, Ascot, Carolyn, Breiford, Bergensfjord, Bjornstjerne Bjornsen, Ida Cuneo, Kentucky, General Minetonka, General Caloric, Denver.

18. It will be noted how the various orders in council were modifying the rules of international law by gradually eliminating almost all the conditional contraband by declaring it absolute.

This question came up for a test in the case of the *Wilhelmina*, a vessel loaded with foodstuffs, consigned to an American citizen for distribution to the noncombatants in Germany:

American note, February 15, 1915, regarding the *Wilhelmina*.

(The Secretary of State to the American ambassador at London.)

The department notes that you have been informed by the British Government that the cargo of the American steamer *Wilhelmina* has been sent to prize court, but is not yet unloaded. The Government of the United States, of course, has no intention of interfering with the proper course of judicial procedure in the British prize courts, but it deems it proper to bring to the attention of the British Government information which has been received in relation to the character and destination of the cargo and to point out certain considerations prompting the supposition that the seizure may not be justified.

This Government is informed that the W. L. Green Commission Co., an American corporation organized in 1891, which in the past has made extensive shipments of goods to Germany, is the sole owner of the cargo which consists entirely of foodstuffs consigned to the W. L. Green Commission Co., Hamburg, and that the company's manager, now in Europe, has instructions to sell the cargo solely to the civilian population of Hamburg. A copy of the ship's manifest has been submitted to this Government, accompanied by a sworn statement from the company's manager in which he represents that he was instructed to proceed to Germany to dispose of the cargo to private purchasers in that country, and not to any belligerent government nor armed forces of such government, nor to any agent of a belligerent government or of its armed forces.

According to well-established practice among nations, admitted, as this Government understands by the Government of Great Britain, the articles of which the *Wilhelmina's* cargo is said to consist, are subject to seizure as contraband only in case they are destined for the use of a belligerent government or its armed forces. The Government of the United States understands that the British authorities consider the seizure of the cargo justified on the ground that a recent order of the Federal Council of Germany, promulgated after the vessel sailed, required the delivery of imported articles to the German Government. The owners of the cargo have represented to this Government that such a position is untenable. They point out that, by a provision of the order in question as originally announced, the regulations in relation to the seizure of food products are made inapplicable to such products imported after January 31, 1915. They further represent that the only articles shipped on the *Wilhelmina* which are embraced within the terms of these regulations are wheat and bran, which constitute about 15 per cent of the cargo as compared with 85 per cent consisting of meats, vegetables, and fruits. The owners also assert that the regulations contemplate the disposition of foodstuffs to individuals through municipalities; that municipalities are not agents of the Government, and that the purpose of the regulations is to conserve the supply of food products and to prevent speculation and inflation of prices to noncombatants.

The German Government has addressed a formal communication to the Government of the United States in relation to the effect of the decree issued by the German Federal Council, and this Government deems it pertinent to call to the attention of the British Government a material portion of this communication, which is as follows:

"1. The federal council's decision concerning the seizure of food products, which England alleges to be the cause of food products shipped to Germany being treated as contraband, bears exclusively on wheat, rye, both unmixed and mixed with other products, and also wheat, rye, oats, and barley flour.

"2. The federal council makes an express exception in section 45 of the order. Section 45 provides as follows: The stipulations of this regulation do not apply to grain or flour imported from abroad after January 31.

"3. Conjunctively with that saving clause the federal council's order contains a provision under which imported cereals and flours would be sold exclusively to the municipalities or certain specially designated organizations by the importers. Although that provision had for its object simply to throw imported grain and flours into such channels as supply the private consumption of civilians and, in consequence of that provision, the intent and purpose of the federal council's order which was to protect the civilian population from speculators and engrossers were fully met, it was nevertheless rescinded so as to leave no room for doubt.

"4. My Government is amenable to any proposition looking to control by a special American organization under the supervision of the American consular officers and, if necessary, will itself make a proposition in that direction.

"5. The German Government further calls attention to the fact that municipalities do not form part of or belong to the Government, but are self-administrative bodies, which are elected by the inhabitants of the commune in accordance with fixed rules and therefore exclusively represent the private part of the population and act as it directs. Although those principles are generally known and obtain in the United States as well as in England itself, the German Government desired to point out the fact so as to avoid any further unnecessary delay.

"6. Hence it is absolutely assured that imported food products will be consumed by the civilian population in Germany exclusively."

It will be observed that it is stated in this communication, which appears to confirm the contentions of the cargo owners, that a part of the order of the German Federal Council relating to imported food products has now been rescinded.

This Government has received another communication from the German Government giving formal assurance to the Government of the United States that all goods imported into Germany from the United States, directly or indirectly, which belong to the class of States in the sea area defined in the German declaration, since such practice would greatly endanger the vessels of a friendly power navigating those waters and would even seem to impose upon the Government of Great Britain a measure of responsibility for the loss of American lives and vessels in case of an attack by a German naval force.

Please present a note to Sir Edward Grey in the sense of the foregoing and impress him with the grave concern which this Government feels in the circumstances in regard to the safety of American vessels and lives in the war zone declared by the German Admiralty.

You may add that this Government is making earnest representations to the German Government in regard to the danger to American vessels and citizens if the declaration of the German Admiralty is put into effect.

BRYAN.

19. On the 19th of February, nine days after our note was dispatched, Great Britain replied as follows:

British memorandum, February 19, 1915, regarding the *Wilhelmina*.

(The secretary of state for foreign affairs to the American ambassador.)

The communication made by the United States ambassador in his note to Sir Edward Grey, of the 16th instant, has been carefully considered, and the following observations are offered in reply:

2. At the time when His Majesty's Government gave directions for the seizure of the cargo of the steamship *Wilhelmina* as contraband they had before them the text of the decree made by the German Federal Council on the 25th of January, under article 45 of which all grain and flour imported into Germany after the 31st of January was declared deliverable only to certain organizations under direct government control or to municipal authorities. The vessel was bound for Hamburg, one of the free cities of the German Empire, the government of which is vested in the municipality. This was one of the reasons actuating His Majesty's Government in deciding to bring the cargo of the *Wilhelmina* before the prize court.

3. Information has only now reached them that by a subsequent decree, dated the 6th of February, the above provision in article 45 of the previous decree was repealed, it would appear for the express purpose of rendering difficult the anticipated proceedings against the *Wilhelmina*. The repeal was not known to His Majesty's Government at the time of detention of the cargo, or, indeed, until now.

4. How far the ostensible exception of imported supplies from the general Government monopoly of all grain and flour set up by the German Government may affect the question of the contraband nature of the shipment seized is a matter which will most suitably be investigated by the prize court.

5. It is, however, necessary to state that the German decree is not the only ground on which the submission of the cargo of the *Wilhelmina* to a prize court is justified. The German Government have in public announcements claimed to treat practically every town or port on the English east coast as a fortified place and base of operations. On the strength of this contention they have subjected to bombardment the open towns of Yarmouth, Scarborough, and Whitby, among others. On the same ground a number of neutral vessels sailing for English ports on the east coast with cargoes of goods on the German list of conditional contraband have been seized by German cruisers and brought before the German prize court. Again, the Dutch vessel *Maria*, having sailed from California with a cargo of grain consigned to Dublin and Belfast, was sunk in September last by the German cruiser *Karlsruhe*. This could only have been justified if, among other things, the cargo could have been proved to be destined for the British Government or armed forces, and if a presumption to this effect had been established owing to Dublin or Belfast being considered a fortified place or a base for the armed forces.

6. The German Government can not have it both ways. If they consider themselves justified in destroying by bombardment the lives and property of peaceful civil inhabitants of English open towns and watering places and in seizing and sinking ships and cargoes of conditional contraband on the way thither on the ground that they were consigned to a fortified place or base, "a fortiori," His Majesty's Government must be at liberty to treat Hamburg, which is in part protected by the fortifications at the mouth of the Elbe, as a fortified town and a base of operations and supply for the purposes of article 34 of the declaration of London. If the owners of the cargo of the *Wilhelmina* desire to question the validity in international law of the

action taken by order of His Majesty's Government, they will have every opportunity of establishing their case in due course before the prize court, and His Majesty's Government would in this connection recall the attention of the United States Government to the considerations put forward in Sir Edward Grey's note to Mr. Page of the 10th instant as to the propriety of awaiting the result of prize-court proceedings before diplomatic action is initiated. It will be remembered that they have from the outset given a definite assurance that the owners of the *Wilhelmina*, as well as the owners of her cargo, if found not to be contraband, would be equitably indemnified.

7. There is one further observation to which His Majesty's Government think it right and appropriate in the present connection to give expression. They have not so far declared foodstuffs to be absolute contraband. They have not interfered with any neutral vessels on account of their carrying foodstuffs, except on the basis of such foodstuffs being liable to capture if destined for the enemy forces or Governments. In so acting they have been guided by the general principle, of late universally upheld by civilized nations and observed in practice, that the civil populations of countries at war are not to be exposed to the treatment rightly reserved for combatants. This distinction has to all intents and purposes been swept away by the novel doctrines proclaimed and acted upon by the German Government.

8. It is unnecessary here to dwell upon the treatment that has been meted out to the civil population of Belgium and those parts of France which are in German occupation. When Germany, long before any mines had been laid by British authorities, proceeded to sow mines upon the high seas, and by this means sunk a considerable number not only of British but also of neutral merchantmen, with their unoffending crews, it was, so His Majesty's Government held, open to them to take retaliatory measures, even if such measures were of a kind to involve pressure of the civil population—not, indeed, of neutral States, but of their enemies. They refrained from doing so.

9. When subsequently English towns and defenseless British subjects, including women and children, were deliberately and systematically fired upon and killed by ships flying the flag of the Imperial German Navy, when quiet country towns and villages void of defenses and possessing no military or naval importance were bombarded by German airships, His Majesty's Government still abstained from drawing the logical consequences from this form of attack on defenseless citizens. Further steps in the same direction are now announced, and, in fact, have already been taken by Germany. British merchant vessels have been torpedoed at sight, without any attempt being made to give warning to the crew or any opportunity being given to save their lives; a torpedo has been fired against a British hospital ship in daylight, and similar treatment is threatened to all British merchant vessels in future, as well as to any neutral ships that may happen to be found in the neighborhood of the British Isles.

10. Faced with this situation, His Majesty's Government consider it would be altogether unreasonable that Great Britain and her allies should be expected to remain indefinitely bound, to their grave detriment, by rules and principles of which they recognize the justice if impartially observed as between belligerents, but which are at the present moment openly set at defiance by their enemy.

11. If, therefore, His Majesty's Government should hereafter feel constrained to declare foodstuffs absolute contraband or to take other measures for interfering with German trade by way of reprisals, they confidently expect that such action will not be challenged on the part of neutral States by appeals to laws and usages of war whose validity rests on their forming an integral part of that system of international doctrine which as a whole their enemy frankly boasts the liberty and intention to disregard, so long as such neutral States can not compel the German Government to abandon methods of warfare which have not in recent history been regarded as having the sanction of either law or humanity. (Dip. Corr., 82–83.)

19a. A month and a half later, April 8, Britain submitted the following memorandum:

British memorandum, April 8, 1915, in reference to the *Wilhelmina*.

(The prime minister to the American ambassador.)

His Majesty's Government share the desire of the United States Government for an immediate settlement of the case of the *Wilhelmina*. This American ship, laden with foodstuffs, left New York for Hamburg on January 22. She called at Falmouth of her own accord on February 9, and her cargo was detained as prize on February 11. The writ instituting prize-court proceedings was issued on February 27, and claimed that the cargo should be condemned as contraband of war. No proceedings were taken or even threatened against the ship herself, and in the ordinary course the cargo would have been unloaded when seized, so that the ship would be free to leave. The owners of the cargo, however, have throughout objected to the discharge of her cargo, and it is because of this objection that the ship is still at Falmouth with the cargo on board.

His Majesty's Government have formally undertaken that, even should the condemnation of the cargo as contraband be secured in the prize court, they would none the less compensate the owners for any loss sustained in consequence of the ship having been stopped and proceedings taken against the cargo.

It was understood at the time that the proceedings in the prize court would be in the nature of a test case, the decision in which would govern the treatment of any subsequent shipments of food supplies to Germany in similar circumstances. Since then the situation has, however, materially changed by the issue of the order in council of March 11, 1915, and the measures taken thereunder which prevent further supplies being sent from America to Germany, whether contraband or not.

In these circumstances there is no longer an object in continuing the judicial proceedings in the case of the *Wilhelmina*, for it can no longer serve as a test case, and it is really agreed that the owners of the cargo, even if proved to have no claim, are to be treated as if their claim was good. Nothing therefore remains but to settle the claim on proper and just conditions, and this would, in the opinion of His Majesty's Government, be secured most expeditiously and with the least inconvenience to all parties by an agreement between the Crown and the claimants for the disposal of the whole matter. His Majesty's Government accordingly propose that such an agreement be arrived at on the following terms: "His Majesty's Government having undertaken to compensate the claimants by paying for the cargo seized on the basis of the loss of the profit the claimants would have made if the ship had proceeded in due course to Hamburg, and by indemnifying them for the delay caused to the ship so far as this delay has been due to the action of the British authorities, all proceedings in the prize court shall be stayed on the understanding that His Majesty's Government buy the cargo from the claimants on the above terms. The cargo shall be discharged and delivered to the proper office of the Crown forthwith. The sum to be paid shall be assessed by a single American and His Majesty's principal secretary of state for foreign affairs, who shall certify the total amount after making such inquiries as he may think fit, but without formal hearing or arbitration." His Majesty's Government would be grateful if the United States ambassador would inform the claimants of the above proposal at his early convenience and obtain their acceptance.

20. In the meantime the United States undertook to protect the use of the American flag from belligerent vessels.

On the 10th of February, 1915, the following note was addressed to Great Britain:

American memorandum, February 10, 1915, concerning the use of the American flag by British vessels. (See No. 24.)

(The Secretary of State to the American ambassador at London.)

The department has been advised of the declaration of the German Admiralty on February 4, indicating that the British Government had on January 31 explicitly authorized the use of neutral flags on British merchant vessels presumably for the purpose of avoiding recognition by German naval forces. The department's attention has also been directed to reports in the press that the captain of the *Lusitania*, acting upon orders or information received from the British authorities, raised the American flag as his vessel approached the British coasts, in order to escape anticipated attacks by German submarines. To-day's press reports also contain an alleged official statement of the foreign office defending the use of the flag of a neutral country by a belligerent vessel in order to escape capture or attack by an enemy.

Assuming that the foregoing reports are true, the Government of the United States, reserving for future consideration the legality and propriety of the deceptive use of the flag of a neutral power in any case for the purpose of avoiding capture, desires very respectfully to point out to His Britannic Majesty's Government the serious consequences which may result to American vessels and American citizens if this practice is continued.

The occasional use of the flag of a neutral or an enemy under the stress of immediate pursuit and to deceive an approaching enemy, which appears by the press reports to be represented as the precedent and justification used to support this action, seems to this Government a very different thing from an explicit sanction by a belligerent government for its merchant ships generally to fly the flag of a neutral power within certain portions of the high seas which are presumed to be frequented with hostile warships. The formal declaration of such a policy of general misuse of a neutral's flag jeopardizes the vessels of the neutral visiting those waters in a peculiar degree by raising the presumption that they are of belligerent nationality regardless of the flag which they may carry.

In view of the announced purpose of the German Admiralty to engage in active naval operations in certain delimited sea areas adjacent to the coasts of Great Britain and Ireland, the Government of the United States would view with anxious solicitude any general use of the flag of the United States by British vessels traversing those waters. A policy such as the one which His Majesty's Government is said to intend to adopt, would, if the declaration of the German Admiralty is put in force, it seems clear, afford no protection to British vessels, while it would be a serious and constant menace to the lives and vessels of American citizens.

The Government of the United States, therefore, trusts that His Majesty's Government will do all in their power to restrain vessels of British nationality from the deceptive use of the flag of the United States in the sea area defined in the German declaration, since such practice would greatly endanger the vessels of a friendly power navigating those waters and would even seem to impose upon the Government of Great Britain a measure of responsibility for the loss of American lives and vessels in case of an attack by a German naval force.

Please present a note to Sir Edward Grey in the sense of the foregoing and impress him with the grave concern which this Government feels in the circumstances in regard to the safety of American vessels and lives in the war zone declared by the German Admiralty.

You may add that this Government is making earnest representations to the German Government in regard to the danger to American vessels and citizens if the declaration of the German Admiralty is put into effect.

BRYAN.

21. On the 19th, or just nine days later, Britain sent the following reply:

British memorandum, February 19, 1915, concerning the use of the American flag by British vessels. (See No. 19.)

(The secretary of state for foreign affairs to the American ambassador.)

The memorandum communicated on the 11th of February calls attention in courteous and friendly terms to the action of the captain of the British S. S. *Lusitania* in raising the flag of the United States of America when approaching British waters and says that the Government of the United States feel a certain anxiety in considering the possibility of any general use of the flag of the United States by British vessels traversing those waters since the effect of such a policy might be to bring about a menace to the lives and vessels of United States citizens.

It was understood that the German Government had announced their intention of sinking British merchant vessels at sight by torpedoes without giving any opportunity of making any provision for saving the lives of noncombatant crews and passengers. It was in consequence of this threat that the *Lusitania* raised the United States flag on her inward voyage and on her subsequent outward voyage. A request was made by the United States passengers who were embarking on board her that the United States flag should be hoisted presumably to insure their safety. Meanwhile the memorandum from your excellency had been received. His Majesty's Government did not give any advice to the company as to how to meet this request, and it is understood that the *Lusitania* left Liverpool under the British flag.

It seems unnecessary to say more as regards the *Lusitania* in particular regard to the use of foreign flags by merchant vessels. The British merchant shipping act makes it clear that the use of the British flag by foreign merchant vessels is permitted in time of war for the purpose of escaping capture. It is believed that in the case of some other nations there is a similar recognition of the same practice with regard to their flags and that none have forbidden it. It would therefore be unreasonable to expect His Majesty's Government to pass legis-

lation forbidding the use of foreign flags by British merchant vessels to avoid capture by the enemy. Now that the German Government have announced their intention to sink merchant vessels at sight with their noncombatant crews, cargoes, and papers, a proceeding hitherto regarded by the opinion of the world not as war, but as piracy, it is felt that the United States Government could not fairly ask the British Government to order British merchant vessels to forego the means—always hitherto permitted—of escaping not only capture, but the much worse fate of sinking and destruction. Great Britain has always when neutral accorded to the vessels of other States at war liberty to use the British flag as a means of protection against capture, and instances are on record when United States vessels availed themselves of this facility during the American Civil War. It would be contrary to fair expectation if now, when the conditions are reversed, the United States and neutral nations were to grudge to British ships liberty to take similar action The British Government have no intention of advising their merchant shipping to use foreign flags as general practice or to resort to them otherwise than for escaping capture or destruction.

The obligation upon a belligerent warship to ascertain definitely for itself the nationality and character of a merchant vessel before capturing it and a fortiori before sinking and destroying it has been universally recognized. If that obligation is fulfilled, hoisting a neutral flag on board a British vessel can not possibly endanger neutral shipping, and the British Government hold that if loss to neutrals is caused by disregard of this obligation it is upon the enemy vessel disregarding it and upon the government giving orders that it should be disregarded that the sole responsibility for injury to neutrals ought to rest. (Dip. Corr. 59.)

22. On the following day, February 20, our Government addressed simultaneous notes to both Great Britain and Germany proposing mutual concessions on the sea:

[American note, Feb. 20, 1915, proposing mutual concessions in the conduct of naval warfare.]

THE SECRETARY OF STATE TO THE AMERICAN AMBASSADOR AT LONDON—SAME TO THE AMERICAN AMBASSADOR AT BERLIN.

You will please deliver to Sir Edward Grey the following identic note, which we are sending England and Germany:

In view of the correspondence which has passed between this Government and Great Britain and Germany, respectively, relative to the declaration of a war zone by the German Admiralty and the use of neutral flags by British merchant vessels, this Government ventures to express the hope that the two belligerent Governments may, through reciprocal concessions, find a basis for agreement which will relieve neutral ships engaged in peaceful commerce from the great dangers which they will incur in the high seas adjacent to the coasts of the belligerents.

The Government of the United States respectfully suggests that an agreement in terms like the following might be entered into. This suggestion is not to be regarded as in any sense a proposal made by this Government, for it, of course, fully recognizes that it is not its privilege to propose terms of agreement between Great Britain and Germany, even though the matter be one in which it and the people of the United States are directly and deeply interested. It is merely venturing to take the liberty which it hopes may be accorded a sincere friend desirous of embarrassing neither nation involved and of serving, if it may, the common interests of humanity. The course outlined is offered in the hope that it may draw forth the views and elicit the suggestions of the British and German Governments on a matter of capital interest to the whole world.

Germany and Great Britain to agree:

1. That neither will sow any floating mines, whether upon the high seas or in territorial waters; that neither will plant on the high seas anchored mines except within cannon range of harbors for defensive purposes only; and that all mines shall bear the stamp of the Government planting them and be so constructed as to become harmless if separated from their moorings.

2. That neither will use submarines to attack merchant vessels of any nationality except to enforce the right of visit and search.

3. That each will require their respective merchant vessels not to use neutral flags for the purpose of disguise or ruse de guerre.

Germany to agree:

That all importations of food or foodstuffs from the United States (and from such other neutral countries as may ask it) into Germany shall be consigned to agencies to be designated by the United States Government; that these American agencies shall have entire charge and control without interference on the part of the German Government, of the receipt and distribution of such importations, and shall distribute them solely to retail dealers bearing licenses from the German Government entitling them to receive and furnish such food and foodstuffs to noncombatants only; that any violation of the terms of the retailers' licenses shall work a forfeiture of their rights to receive such food and foodstuffs for this purpose; and that such food and foodstuffs will not be requisitioned by the German Government for any purpose whatsoever or be diverted to the use of the armed forces of Germany.

Great Britain to agree:

That food and foodstuffs will not be placed upon the absolute contraband list and that shipments of such commodities will not be interfered with or detained by British authorities if consigned to agencies designated by the United States Government in Germany for the receipt and distribution of such cargoes to licensed German retailers for distribution solely to the noncombatant population.

In submitting this proposed basis of agreement this Government does not wish to be understood as admitting or denying any belligerent or neutral right established by the principles of international law, but would consider the agreement, if acceptable to the interested powers, a modus vivendi based upon expediency rather than legal right and as not binding upon the United States either in its present form or in a modified form until accepted by this Government.

BRYAN.

23. Eight days later Germany agreed to concede. This reply is printed in the submarine controversy and will not here be reprinted. On the 13th of March, or three weeks later, the British reply was received:

British memorandum, March 13, 1915, rejecting the American proposal of February 20 (No. 26).

(The secretary of state for foreign affairs to the American ambassador.)

On the 22d of February last I received a communication from your excellency of the identic note addressed to His Majesty's Government and to Germany, respecting an agreement on certain points as to the conduct of the war at sea. The reply of the German Government to this note has been published, and it is not understood from the reply that the German Government are prepared to abandon the practice of sinking British merchant vessels by submarines, and it is evident from their reply that they will not abandon the use of mines for offensive purposes on the high seas as contrasted with the use of mines for defensive purposes only within cannon range of their own harbors, as suggested by the Government of the United States. This being so, it might appear unnecessary for the British Government to make any further reply than to take note of the German answer. We desire, however, to take the opportunity of making a fuller statement of the whole position and of our feeling with regard to it. We recognize with sympathy the desire of the Government of the United States to see the European war conducted in accordance with the previously recognized rules of international law and the dictates of humanity. It is thus that the British forces have conducted the war, and we are not aware that these forces, either naval or military, can have laid to their charge any improper proceedings either in the conduct of hostilities or in the treatment of prisoners or wounded. On the German side it has been very different.

1. The treatment of civilian inhabitants in Belgium and the north of France has been made public by the Belgian and French Governments and by those who have had experience of it at first hand. Modern history affords no precedent for the sufferings that have been inflicted on the defenseless and noncombatant population in the territory that has been in German military occupation. Even the food of the population was confiscated until in Belgium an international commission, largely influenced by American generosity and conducted under American auspices, came to the relief of the population and secured from the German Government a promise to spare what food was still left in the country, though the Germans still continue to make levies in money upon the defenseless population for the support of the Germany Army.

2. We have from time to time received most terrible accounts of the barbarous treatment to which British officers and soldiers have been exposed after they have been taken prisoner while being conveyed to German prison camps; one or two instances have already been given to the United States Government, founded upon authentic and first-hand evidence which is beyond doubt. Some evidence has been received of the hardships to which British prisoners of war are subjected in the prison camps, contrasting, we believe, most unfavorably with the treatment of German prisoners in this country. We have proposed, with the consent of the United States Government, that a commision of United States officers should be permitted in each country to inspect the treatment of prisoners of war. The United States Government have been unable to obtain any reply from the German Government to this proposal, and we remain in continuing anxiety and apprehension as to the treatment of British prisoners of war in Germany.

3. At the very outset of the war a German mine layer was discovered laying a mine field on the high seas. Further mine fields have been laid from time to time without warning, and, so far as we know, are still being laid on the high seas, and many neutral as well as British vessels have been sunk by them.

4. At various times during the war German submarines have stopped and sunk British merchant vessels, thus making the sinking of merchant vessels a general practice, though it was admitted previously, if at all, only as an exception, the general rule to which the British Government has adhered being that merchant vessels, if captured, must be taken before a prize court. In one case already quoted in a note to the United States Government a neutral vessel carrying foodstuffs to an unfortified town in Great Britain has been sunk. Another case is now reported in which a German armed cruiser has sunk an American vessel, the *William P. Frye*, carrying a cargo of wheat from Seattle to Queenstown. In both cases the cargoes were presumably destined for the civil population. Even the cargoes in such circumstances should not have been condemned without the decision of a prize court, much less should the vessels have been sunk. It is to be noted that both these cases occurred before the detention by the British authorities of the *Wilhelmina* and her cargo of foodstuffs which the German Government allege is the justification for their own action. The Germans have announced their intention of sinking British merchant vessels by torpedo without notice and without any provision for the safety of the crew. They have already carried out this intention in the case of neutral as well as of British vessels, and a number of noncombatant and innocent lives on British vessels, unarmed and defenseless, have been destroyed in this way.

5. Unfortified, open, and defenseless towns, such as Scarborough, Yarmouth, and Whitby, have been deliberately and wantonly bombarded by German ships of war, causing in some cases considerable loss of civilian life, including women and children.

6. German aircraft have dropped bombs on the east coast of England where there were no military or strategic points to be attacked. On the other hand, I am aware of but two criticisms that have been made on British action in all these respects: (1) It is said that the British naval authorities also have laid some anchored mines on the high seas. They have done so, but the mines were anchored and so constructed that they would be harmless if they went adrift, and no mines whatever were laid by the British naval authorities till many weeks after the Germans had made a regular practice of laying mines on the high seas. (2) It is said that the British Government has departed from the view of international law which they had previously maintained that foodstuffs destined for the civil population should never be interfered with, this charge being founded on the submission to a prize court of the cargo of the *Wilhelmina*. The special considerations affecting this cargo have already been presented in a memorandum to the United States Government, and I need not repeat them here. Inasmuch as the stoppage of all foodstuffs is an admitted consequence of blockade, it is obvious that there can be no universal rule based on considerations of morality and humanity which is contrary to this practice. The right to stop foodstuffs destined for the civil population must therefore in any case be admitted if an effective "cordon" controlling intercourse with the enemy is drawn, announced, and maintained. Moreover, independently of rights arising from belligerent action in the nature of blockade, some other nations, differing from the opinion of the Governments of the United States and Great Britain, have held that to stop the food of the civil population is a natural and legitimate method of bringing pressure to bear on an enemy country, as it is upon the defense of a besieged town. It is also upheld on the authority of both Prince Bismarck and Count Caprivi, and therefore presumably is not repugnant to German morality. The following are the quotations from Prince Bismarck and Count Caprivi on this point. Prince Bismarck, in answering, in 1885, an application from the Kiel Chamber of Commerce for a statement of the view of the German Government on the question of the right to declare as contraband foodstuffs that were not intended

for military forces, said: "I reply to the chamber of commerce that any disadvantage our commercial and carrying interests may suffer by the treatment of rice as contraband of war does not justify our opposing a measure which it has been thought fit to take in carrying on a foreign war. Every war is a calamity which entails evil consequences not only on the combatants but also on neutrals. These evils may easily be increased by the interference of a neutral power with the way in which a third carries on the war to the disadvantage of the subjects of the interfering power, and by this means German commerce might be weighted with far heavier losses than a transitory prohibition of the rice trade in Chinese waters. The measure in question has for its object the shortening of the war by increasing the difficulties of the enemy and is a justifiable step in war if impartially enforced against all neutral ships." Count Caprivi, during a discussion in the German Reichstag on the 4th of March, 1892, on the subject of the importance of international protection for private property at sea, made the following statements: "A country may be dependent for her food or for her raw products upon her trade. In fact, it may be absolutely necessary to destroy the enemy's trade." * * * "The private introduction of provisions into Paris was prohibited during the siege, and in the same way a nation would be justified in preventing the import of food and raw produce." The Government of Great Britain have frankly declared in concert with the Government of France their intention to meet the German attempt to stop all supplies of every kind from leaving or entering British or French ports by themselves effectively controlling by cruiser "cordon" all passage to and from Germany by sea. The difference between the two policies is, however, that while our object is the same as that of Germany, we propose to attain it without sacrificing neutral ships or noncombatant lives or inflicting upon neutrals the damage that must be entailed when a vessel and its cargo are sunk without notice, examination, or trial. I must emphasize again that this measure is a natural and necessary consequence of the unprecedented methods, repugnant to all law and morality, which have been described above, which Germany began to adopt at the very outset of the war, and the effects of which have been constantly accumulating. (Dip. Corr., 64–65.)

24. On the 1st of March, 1915, the British prime minister read a statement to Parliament on the restraint of commerce on the seas:

British and French delclaration, March 1, 1915, in restraint of seaborne commerce with Germany. (Statement read by the British prime minister in the House of Commons and communicated to the neutral powers.)

(The British ambassador at Washington to the Secretary of State.)

Germany has declared that the English Channel, the north and west coasts of France, and the waters around the British Isles are a war area and has officially notified that all enemy ships found in that area will be destroyed and that neutral vessels may be exposed to danger. This is in effect a claim to torpedo at sight, without regard to the safety of the crew or passengers, any merchant vessel under any flag. As it is not in the power of the German admiralty to maintain any surface craft in these waters, this attack can only be delivered by submarine agency.

The law and custom of nations in regard to attacks on commerce have always presumed that the first duty of the captor of a merchant vessel is to bring it before a prize court where it may be tried, where the regularity of the capture may be challenged, and where neutrals may recover their cargoes. The sinking of prizes is in itself a questionable act, to be resorted to only in extraordinary circumstances and after provision has been made for the safety of all the crew or passengers, if there are passengers on board. The responsibility for discriminating between neutral and enemy vessels and between neutral and enemy cargo, obviously rests with the attacking ship, whose duty it is to verify the status and character of the vessel and cargo and to preserve all papers before sinking or even capturing it. So also is the humane duty of providing for the safety of the crews of merchant vessels, whether neutral or enemy, an obligation upon every belligerent.

It is upon this basis that all previous discussions of the law for regulating warfare at sea have proceeded. A German submarine, however, fulfills none of these obligations; she enjoys no local command of the waters in which she operates; she does not take her captures within the jurisdiction of a prize court; she carries no prize crew which she can put on board a prize; she uses no effective means of discriminating between a neutral and an enemy vessel; she does not receive on board for safety the crew and passengers of the vessel she sinks; her methods of warfare are therefore entirely outside the scope of any of the international instruments regulating operations against commerce in time of war. The German declaration substitutes indiscriminate destruction for regulated capture. Germany is adapting these methods against peaceful traders and noncombatant crews with the avowed object of preventing commodities of all kinds, including food for the civil population, from reaching or leaving the British Isles or northern France.

Her opponents are therefore driven to frame retaliatory measures in order in their turn to prevent commodities of any kind from reaching or leaving Germany. These measures will, however, be enforced by the British and French Governments without risk to neutral ships or to neutral or noncombatant life and in strict observance of the dictates of humanity. The British and French Governments will therefore hold themselves free to detain and take into port ships carrying goods of presumed enemy destination, ownership, or origin. It is not intended to confiscate such vessels or cargoes unless they would otherwise be liable to condemnation. The treatment of vessels and cargoes which have sailed before this date will not be affected.

CECIL SPRING RICE.

25. Three days later, March 4, Congress passed the following resolution:

Resolution of Congress, March 4, 1915, safeguarding the neutrality of American waters.

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That from and after the passage of this resolution, and during the existence of a war to which the United States is not a party, and in order to prevent the neutrality of the United States from being violated by the use of its territory, its ports, or its territorial waters, as the base of operations for the armed forces of a belligerent, contrary to the obligations imposed by the law of nations, the treaties to which the United States is a party, or contrary to the statutes of the United States, the President be, and he is hereby, authorized and empowered to direct the collectors of customs under the jurisdiction of the United States to withhold clearance from any vessel of American or foreign registry or license which he has reasonable cause to believe to be about to carry fuel, arms, ammunition, men, or supplies to any warship, or tender, or supply ships of a belligerent nation in violation of the obligations of the United States as a neutral nation.

In case any such vessel of American register or license shall depart or attempt to depart from the jurisdiction of the United States without clearance for any of the purposes, the owner or master or person or persons having charge or command of such vessel shall severally be liable to a fine of not less than $2,000 nor more than $10,000, or to imprisonment not to exceed two years, or both; and in addition such vessels shall be forfeited to the United States.

That the President of the United States be, and he is hereby, authorized and empowered to employ such part of the land or naval forces of the United States as shall be necessary to carry out the purposes of this resolution.

That the provisions of this resolution shall be deemed to extend to all lands and water, continental or insular, within the jurisdiction of the United States. (New York Times, Mar. 4, 1915.)

The next day, March 5, inquiry was directed to Great Britain on the proposed restraint of sea-borne commerce:

American note, March 5, 1915, inquiring how the restraint upon seaborne commerce with Germany is to be effected.

(The Secretary of State to the American ambassador at London.)

In regard to the recent communications received from the British and French Governments concerning restraints upon commerce with Germany, please communicate with the British foreign office in the sense following:

The difficulty of determining action upon the British and French declarations of intended retaliation upon commerce with Germany lies in the nature of the proposed measures in their relation to commerce by neutrals.

While it appears that the intention is to interfere with and take into custody all ships both outgoing and incoming, trading with Germany, which is in effect a blockade of German ports, the rule of blockade, that a ship attempting to enter or leave a German port regardless of the character of its cargo may be condemned, is not asserted.

The language of the declaration is: "The British and French Governments will therefore hold themselves free to detain and take into port ships carrying goods of presumed enemy destination, ownership, or origin. It is not intended to confiscate such vessels or cargoes unless they would otherwise be liable to condemnation."

The first sentence claims a right pertaining only to a state of blockade. The last sentence proposes a treatment of ships and cargoes as if no blockade existed. The two together present a proposed course of action previously unknown to international law.

As a consequence neutrals have no standard by which to measure their rights or to avoid danger to their ships and cargoes. The paradoxical situation thus created should be changed and the declaring powers ought to assert whether they rely upon the rules governing a blockade or the rules applicable when no blockade exists.

The declaration presents other perplexities.

The last sentence quoted indicates that the rules of contraband are to be applied to cargoes detained. The rule covering noncontraband articles carried in neutral bottoms is that the cargoes shall be released and the ships allowed to proceed. This rule can not, under the first sentence quoted, be applied as to destination. What then is to be done with a cargo of noncontraband goods detained under the declaration? The same question may be asked as to conditional contraband cargoes.

The foregoing comments apply to cargoes destined for Germany. Cargoes coming out of German ports present another problem under the terms of the declaration. Under the rules governing enemy exports only goods owned by enemy subjects in enemy bottoms are subject to seizure and condemnation. Yet by the declaration it is purposed to seize and take into port all goods of enemy "ownership and origin." The word "origin" is particularly significant. The origin of goods destined to neutral territory on neutral ships is not and never has been a ground for forfeiture except in case a blockade is declared and maintained. What then would the seizure amount to in the present case except to delay the delivery of the goods? The declaration does not indicate what disposition would be made of such cargoes if owned by a neutral or if owned by an enemy subject. Would a different rule be applied according to ownership? If so, upon what principles of international law would it rest? And upon what rule if no blockade is declared and maintained could the cargo of a neutral ship sailing out of a German port be condemned? If it is not condemned, what other legal course is there but to release it?

While this Government is fully alive to the possibility that the methods of modern naval warfare, particularly in the use of the submarine for both defensive and offensive operations, may make the former means of maintaining a blockade a physical impossibility, it feels that it can be urged with great force that there should be also some limit to "the radius of activtiy," and especially so if this action by the belligerents can be construed to be a blockade. It would certainly create a serious state of affairs if, for example, an American vessel laden with a cargo of German origin should escape the British patrol in European waters only to be held up by a cruiser off New York and taken into Halifax.

Similar cablegram sent to Paris.

BRYAN.

26. Ten days later—March 15—the British reply, as follows, was received:

British note, March 15, 1915, replying to the American inquiry about the restraint on sea-borne commerce with Germany.

(The secretary of state for foreign affairs to the American ambassador.)

1. His Majesty's Government have had under careful consideration the inquiries which, under instructions from your Government, your excellency addressed to me on the 8th instant regarding the scope and mode of application of the measures, foreshadowed in the British and French declarations of the 1st of March, for restricting the trade of Germany. Your excellency explained and illustrated by reference to certain contingencies the difficulty of the United States Government in adopting a definite attitude toward these measures by reason of uncertainty regarding their bearing upon the commerce of neutral countries.

2. I can at once assure your excellency that, subject to the paramount necessity of restricting German trade, His Majesty's Government have made it their first aim to minimize inconvenience to neutral commerce. From the accompanying copy of the order in council, which is to be published to-day, you will observe that a wide discretion is afforded to

the prize court in dealing with the trade of neutrals in such manner as may in the circumstances be deemed just and that full provision is made to facilitate claims by persons interested in any goods placed in the custody of the marshal of the prize court under the order, I apprehend that the perplexities to which your excellency refers will for the most part be dissipated by the perusal of this document and that it is only necessary for me to add certain explanatory observations.

3. The effect of the order in council is to confer certain powers upon the executive officers of His Majesty's Government. The extent to which those powers will be actually exercised and the degree of severity with which the measures of blockade authorized will be put into operation are matters which will depend on the administrative orders issued by the Government and the decisions of the authorities specially charged with the duty of dealing with individual ships and cargoes, according to the merits of each case. The United States Government may rest assured that the instructions to be issued by His Majesty's Government to the fleet and to the customs officials and executive committees concerned will impress upon them the duty of acting with the utmost dispatch consistent with the object in view and of showing in every case such consideration for neutrals as may be compatible with that object, which is, succinctly stated, to establish a blockade to prevent vessels from carrying goods for or coming from Germany.

4. His Majesty's Government have felt most reluctant at the moment of initiating a policy of blockade to exact from neutral ships all the penalties attaching to a breach of blockade. In their desire to alleviate the burden which the existence of a state of war at sea must inevitably impose on neutral sea-borne commerce, they declare their intention to refrain altogether from the exercise of the right to confiscate ships or cargoes which belligerents have always claimed in respect of breaches of blockade. They restrict their claim to the stopping of cargoes destined for or coming from the enemy's territory.

5. As regards cotton, full particulars of the arrangements contemplated have already been explained. It will be admitted that every possible regard has been had to the legitimate interests of the American cotton trade.

6. Finally, in reply to the penultimate paragraph of your excellency's note, I have the honor to state that it is not intended to interfere with neutral vessels carrying enemy cargo of noncontraband nature outside European waters, including the Mediterranean.

27. On the same day the order in council in restraint of sea-borne trade was issued:

British order in council, March 15, 1915, in restraint of sea-borne commerce with Germany.

Whereas the German Government has issued certain orders which, in violation of the usages of war, purport to declare the waters surrounding the United Kingdom a military area, in which all British and allied merchant vessels will be destroyed, irrespective of the safety of the lives of passengers and crew, and in which neutral shipping will be exposed to similar danger in view of the uncertainties of naval warfare; and

Whereas in a memorandum accompanying the said orders neutrals are warned against entrusting crews, passengers, or goods to British or allied ships; and

Whereas such attempts on the part of the enemy give to His Majesty an unquestionable right of retaliation; and

Whereas His Majesty has therefore decided to adopt further measures in order to prevent commodities of any kind from reaching or leaving Germany, though such measures will be enforced without risk to neutral ships or to neutral or noncombatant life and in strict observance of the dictates of humanity; and

Whereas the allies of His Majesty are associated with him in the steps now to be announced for restricting further the commerce of Germany:

His Majesty is therefore pleased, by and with the advice of his privy council, to order and it is hereby ordered as follows:

1. No merchant vessel (sic) which sailed from her port of departure after the 1st of March, 1915, shall be allowed to proceed on her voyage to any German port.

Unless the vessel receives a pass enabling her to proceed to some neutral or allied port to be named in the pass, goods on board any such vessel must be discharged in a British port and placed in the custody of the marshal of the prize court. Goods so discharged, not being contraband of war, shall, if not requisitioned for the use of His Majesty, be restored by order of the court, upon such terms as the court may in the circumstances deem to be just, to the person entitled thereto.

2. No merchant vessel which sailed from any German port after the 1st of March, 1915, shall be allowed to proceed on her voyage with any goods on board laden at such port.

All goods laden at such port must be discharged in a British or allied port. Goods so discharged in a British port shall be placed in the custody of the marshal of the prize court, and if not requisitioned for the use of His Majesty shall be detained or sold under the direction of the prize court. The proceeds of goods so sold shall be paid into court and dealt with in such manner as the court may in the circumstances deem to be just.

Provided, That no proceeds of the sale of such goods shall be paid out of court until the conclusion of peace, except on the application of the proper officer of the Crown, unless it be shown that the goods had become neutral property before the issue of this order.

Provided also, That nothing herein shall prevent the relase of neutral property laden at such enemy port on the application of the proper officer of the Crown.

3. Every merchant vessel which sailed from her port of departure after the 1st of March, 1915, on her way to a port other than a German port, carrying goods with an enemy destination or which are enemy property, may be required to discharge such goods in British or allied port. Any goods so discharged in a British port shall be placed in the custody of the marshal of the prize court, and, unless they are contraband of war, shall, if not requisitioned for the use of His Majesty, be restored by order of the court upon such terms as the court may in the circumstances deem to be just to the person entitled thereto.

Provided, That this article shall not apply in any case falling within articles 2 or 4 of this order.

4. Every merchant vessel which sailed from a port other than a German port after the 1st of March, 1915, having on board goods which are of enemy origin or are enemy property may be required to discharge such goods in a British or allied port. Goods so discharged in a British port shall be placed in the custody of the marshal of the prize court, and if not requisitioned for the use of His Majesty shall be detained or sold under the direction of the prize court. The proceeds of goods so sold shall be paid into court and dealt with in such manner as the court may in the circumstances deem to be just.

Provided, That no proceeds of sale of such goods shall be paid out of court until the conclusion of peace, except on the application of the proper officer of the Crown, unless it be shown that the goods had become neutral property before the issue of this order.

Provided also, That nothing herein shall prevent the release of neutral property of enemy origin on the application of the proper officer of the Crown.

5. Any person claiming to be interested in, or to have any claim in respect of, any goods (not being contraband of war) placed in the custody of the marshal of the prize court under this order, or in the proceeds of such goods, may forthwith issue a writ in the prize court against the proper officer of the Crown and apply for an order that the goods should be restored to him, or that their proceeds should be paid to him, or for such other order as the circumstances of the case may require.

The practice and procedure of the prize court shall, so far as applicable, be followed mutatis mutandis in any proceedings consequential upon this order.

6. A merchant vessel which has cleared for a neutral port from a British or allied port, or which has been allowed to pass, having an ostensible destination to a neutral port, and proceeds to an enemy port, shall, if captured on any subsequent voyage, be liable to condemnation.

7. Nothing in this order shall be deemed to affect the liability of any vessel or goods to capture or condemnation independently of this order.

8. Nothing in this order shall prevent the relaxation of the provisions of this order in respect of the merchant vessels of any country which declares that no commerce intended for or originating in Germany or belonging to Germany (sic) subjects shall enjoy the protection of its flag.

28. Eight days later, on March 23, the order in council authorizing the requisition of neutral ships was published:

British order in council, March 23, 1915, authorizing the requisition of neutral ships. (Presented by the solicitor of the Crown in an argument in favor of requisitioning the cargo of foodstuffs on the *Wilhelmina*.

Whereas by section 3 of the prize courts act, 1894, His Majesty in council is authorized to make rules of court for regulating, subject to the provisions of the naval prize act, 1864, and the said act, the procedure and practice of prize courts within the meaning of the naval prize act, 1864, and the duties and conduct of the officers of the courts and of the practitioners therein, and for regulating the fees to be taken by the officers thereof, and the costs, charges, and expenses to be allowed to the practitioners therein; and

Whereas in pursuance of the prize courts act, 1894, certain rules were made by the order of His Majesty in council, dated the 5th day of August, 1914, and amended by the orders of His Majesty in council of the 30th day of September, 1914, and the 28th day of November, 1914, respectively, which said rules and amended rules were by the said orders in council directed to take effect provisionally in accordance with the provisions of section 2 of the rules publication act, 1893, from the dates of the said orders in council, respectively; and

Whereas the provisions of section 1 of the rules publication act, 1893, were duly complied with in respect of the said rules and amended rules, and the same were finally made by the orders of His Majesty in council, dated, respectively, the 17th day of September, 1914, the 28th day of November, 1914, and the 3d day of February, 1915; and

Whereas it is expedient that the said rules and amended rules should be further amended; and

Whereas on account of urgency this order should come into immediate operation:

Now, therefore, His Majesty, by virtue of the powers in this behalf by the said act or otherwise in him vested, is pleased, by and with the advice of his privy council, to order, and it is hereby ordered, as follows:

1. That in order 9 (discovery, inspection, and admission of documents and facts) of the said rules:

In rule 1, the words "upon filing an affidavit" shall be omitted.

In rule 1, instead of the words "any other party" there shall be substituted the words "any party other than the proper officer of the Crown."

2. That in order 11 (sale, appraisement, safe custody, and inspection of prize) of the said rules, in rule 1, the following words shall be omitted: "On account of the condition of a ship, or on application of a claimant, and on or after condemnation."

3. That in order 15 (evidence and hearing) of the said rules the following rule shall be added:

"21. Notwithstanding anything contained in these rules the proper officer of the Crown may apply to the judge for leave to administer interrogatories for the examination of any person whether a party to the cause or not."

4. That order 29 (requisition by Admiralty) of the said rules, as amended by His Majesty's order in council dated the 28th day of November, 1914, shall be, and the same is hereby, revoked, and in lieu thereof the following order shall have effect:

"ORDER 29.—REQUISITION.

"1. Where it is made to appear to the judge on the application of the proper officer of the Crown that it is desired to requisition on behalf of His Majesty a ship in respect of which no final decree of condemnation has been made, he shall order that the ship shall be appraised, and that upon an undertaking being given in accordance with rule 5 of this order, the ship shall be released and delivered to the Crown.

"2. Where a decree for the detention of a ship has been made in accordance with order 28, the proper officer of the Crown may file a notice (Appendix A, Form No. 55) that the Crown desires to requisition the same, and thereupon a commission (Appendix A, Form No. 56) to the marshal directing him to appraise the ship shall issue. Upon an undertaking being given in accordance with rule 5 of this order the ship shall be released and delivered to the Crown. Service of this notice shall not be required before filing, but copies thereof shall be served upon the parties by the proper officer of the Crown as soon thereafter as possible.

"3. Where in any case of requisition under this order it is made to appear to the judge on behalf of the Crown that the ship is required for the service of His Majesty forthwith, the judge may order the same to be forthwith released and delivered to the Crown without appraisement.

"4. In any case where a ship has been requisitioned under the provisions of this order, and whether or not an appraisement has been made, the court may, on the application of any party, fix the amount to be paid by the Crown in respect of the value of the ship.

"5. In every case of requisition under this order an undertaking in writing shall be filed by the proper officer of the Crown for payment into court on behalf of the Crown of the appraised value of the ship, or of the amount fixed under rule 4 of this order, as the case may be, at such time or times as the court shall declare by order that the same or any part thereof is required for the purpose of payment out of court.

"6. Where in any case of requisition under this order it is made to appear to the judge on behalf of the Crown that the Crown desires to requisition the ship temporarily, the court may, in lieu of an order of release, make an order for the temporary delivery of the ship to the Crown, and, subject as aforesaid, the provisions of this order shall apply to such a requisition; provided that, in the event of the return of the ship to the custody of the court, the court may make such order as it thinks fit for the release of the undertaking given on behalf of the Crown or the reduction of the amount undertaken to be paid thereby, as the case may be; and provided also that, where the ship so requisitioned is subject to the provisions of order 28, rule 1, relating to detention, the amount for which the Crown shall be considered liable in respect of such requisition shall be the amount of the damage, if any, which the ship has suffered by reason of such temporary delivery as aforesaid.

"7. The proceedings in respect of a ship requisitioned under this order shall continue notwithstanding the requisition.

"8. In any case of requisition of a ship in respect of which no cause has been instituted, any person interested in such ship may, without issuing a writ, provided he does not intend to make a claim for restitution or damages, apply by summons for an order that the amount to be paid in respect of such ship be fixed by the court, and the judge may, on the hearing of such summons, order the ship to be appraised or to be valued, or give such other directions for fixing the amount as he may think fit."

5. That in form 4 in appendix A to the said rules there shall be omitted the words "commander of our ship of war" and the words "taken and seized as prize by our said ship of war."

6. This order shall take effect provisionally in accordance with the provisions of section 2 of the rules-publication act, 1893, from the date hereof. (Dip. Corr., 72–73.)

29. Three days later, March 30, 1915, our Government addressed a note on the British violation of neutral rights:

American note, March 30, 1915, regarding British violation of neutral rights.

(The Secretary of State to the American ambassador at London.)

You are instructed to deliver the following to His Majesty's Government in reply to your Nos. 1795 and 1798 of March 15:

The Government of the United States has given careful consideration to the subjects treated in the British notes of March 13 and March 15, and to the British order in council of the latter date.

These communications contain matters of grave importance to neutral nations. They appear to menace their rights of trade and intercourse not only with belligerents but also with one another. They call for frank comment in order that misunderstandings may be avoided. The Government of the United States deems it its duty, therefore, speaking in the sincerest spirit of friendship, to make its own view and position with regard to them unmistakably clear.

The order in council of the 15th of March would constitute, were its provisions to be actually carried into effect as they stand, a practical assertion of unlimited belligerent rights over neutral commerce within the whole European area, and an almost unqualified denial of the sovereign rights of the nations now at peace.

This Government takes it for granted that there can be no question what those rights are. A nation's sovereignty over its own ships and citizens under its own flag on the high seas in time of peace is, of course, unlimited; and that sovereignty suffers no diminution in time of war, except in so far as the practice and consent of civilized nations has limited it by the recognition of certain now clearly determined rights, which it is conceded may be exercised by nations which are at war.

A belligerent nation has been conceded the right of visit and search, and the right of capture and condemnation if, upon examination, a neutral vessel is found to be engaged in unneutral service or to be carrying contraband of war intended for the enemy's government or armed forces. It has been conceded the right to establish and maintain a blockade of an enemy's ports and coasts and to capture and condemn any vessel taken in trying to break the blockade. It is even conceded the right to detain and take to its own ports for judicial examination all vessels which it suspects for substantial reasons to be engaged in unneutral or contraband service, and to condemn them if the suspicion is sustained. But such rights, long clearly defined both in doctrine and practice, have hitherto been held to be the only permissible exceptions to the principle of universal equality of sovereignty on the high seas as between belligerents and nations not engaged in war.

It is confidently assumed that His Majesty's Government will not deny that it is a rule sanctioned by general practice that, even though a blockade should exist and the doctrine of contraband as to unblockaded territory be rigidly enforced, innocent shipments may be freely transported to and from the United States through neutral countries to belligerent territory without being subject to the penalties of contraband traffic or breach of blockade, much less to detention, requisition, or confiscation.

Moreover the rules of the Declaration of Paris of 1856—among them that free ships make free goods—will hardly at this day be disputed by the signatories of that solemn agreement.

His Majesty's Government, like the Government of the United States, have often and explicitly held that these rights represent the best usage of warfare in the dealings of belligerents with neutrals at sea. In this connection I desire to direct attention to the opinion of the Chief Justice of the United States in the case of the *Peterhof*, which arose out of the Civil War, and to the fact that that opinion was unanimously sustained in the award of the arbitration commission of 1871, to which the case was presented at the request of Great Britain. From that time to the declaration of London of 1909, adopted with modifications by the order in council of the 23d of October last, these rights have not been seriously questioned by the British Government. And no claim on the part of Great Britain of any justification for interfering with these clear rights of the United States and its citizens as neutrals could be admitted. To admit it would be to assume an attitude of unneutrality toward the present enemies of Great Britain which would be obviously inconsistent with the solemn obligations of this Government in the present circumstances; and for Great Britain to make such a claim would be for her to abandon and set at naught the principles for which she has consistently and earnestly contended in other times and circumstances.

The note of His Majesty's principal secretary of state for foreign affairs which accompanies the order in council, and which bears the same date, notifies the Government of the United States of the establishment of a blockade which is, if defined by the terms of the order in council, to include all the coasts and ports of Germany and every port of possible access to enemy territory. But the novel and quite unprecedented feature of that blockade, if we are to assume it to be properly so defined, is that it embraces many neutral ports and coasts, bars access to them, and subjects all neutral ships seeking to approach them to the same suspicion that would attach to them were they bound for the ports of the enemies of Great Britain, and to unusual risks and penalties.

It is manifest that such limitations, risks, and liabilities placed upon the ships of a neutral power on the high seas, beyond the right of visit and search and the right to prevent the shipment of contraband already referred to, are a distinct invasion of the sovereign rights of the nation whose ships, trade, or commerce is interfered with.

The Government of the United States is, of course, not oblivious to the great changes which have occurred in the conditions and means of naval warfare since the rules hitherto governing legal blockade were formulated. It might be ready to admit that the old form of "close" blockade with its cordon of ships in the immediate offing of the blockaded ports is no longer practicable in face of an enemy possessing the means and opportunity to make an effective defense by the use of submarines, mines, and aircraft; but it can hardly be maintained that, whatever form of effective blockade may be made use of, it is impossible to conform at least to the spirit and principles of the established rules of war. If the necessities of the case should seem to render it imperative that the cordon of blockading vessels be extended across the approaches to any neighboring neutral port or country, it would seem clear that it would still be easily practicable to comply with the well-recognized and reasonable prohibition of international law against the blockading of neutral ports by according free admission and exit to all lawful traffic with neutral ports through the blockading cordon. This traffic would of course include all outward-bound traffic from the neutral country and all inward-bound traffic to the neutral country except contraband in transit to the enemy. Such procedure need not conflict in any respect with the rights of the belligerent maintaining the blockade since the right would remain with the blockading vessels to visit and search all ships either entering or leaving the neutral territory which they were in fact but not of right investing.

The Government of the United States notes that in the order in council His Majesty's Government give as their reason for entering upon a course of action, which they are aware is without precedent in modern warfare, the necessity they conceive themselves to have been placed under to retaliate upon their enemies for measures of a similar nature which the latter have announced in their intention to adopt and which they have to some extent adopted; but the Government of the United States, recalling the principles upon which His Majesty's Government have hitherto been scrupulous to act, interprets this as merely a reason for certain extraordinary activities on the part of His Majesty's naval forces and not as an excuse for or prelude to any unlawful action. If the course pursued by the present enemies of Great Britain should prove to be in fact tainted by illegality and disregard of the principles of war sanctioned by enlightened nations, it can not be supposed, and this Government does not for a moment suppose, that His Majesty's Government would wish the same taint to attach to their own actions or would cite such illegal acts as in any sense or degree a justification for similar practices on their part in so far as they affect neutral rights.

It is thus that the Government of the United States interprets the language of the note of His Majesty's principal secretary of state for foreign affairs which accompanies the copy of the order in council which was handed to the ambassador of the United States near the Government in London and by him transmitted to Washington.

This Government notes with gratification that "wide discretion is afforded to the prize court in dealing with the trade of neutrals in such manner as may in the circumstances be deemed just, and that full provision is made to facilitate claims by persons interested in any goods placed in the custody of the marshal of the prize court under the order"; that "the effect of the order in council is to confer certain powers upon the executive officers of His Majesty's Government"; and that "the extent to which these powers will be actually exercised and the degree of severity with which the measures of blockade authorized will be put into operation are matters which will depend on the administrative orders issued by the Government and the decisions of the authorities especially charged with the duty of dealing with individual ships and cargoes according to the merits of each case." This Government further notes with equal satisfaction the declaration of the British Government that "the instructions to be issued by His Majesty's Government to the fleet and to the customs officials and executive committees concerned will impress upon them the duty of acting with the usual dispatch consistent with the object in view, and of showing in every case such consideration for neutrals as may be compatible with that object, which is, succinctly stated, to establish a blockade to prevent vessels from carrying goods for or coming from Germany."

In view of these assurances formally given to this Government it is confidently expected that the extensive powers conferred by the order in council on the executive officers of the Crown will be restricted by "orders issued by the Government" directing the exercise of their discretionary powers in such a manner as to modify in practical application those provisions of the order in council which, if strictly enforced, would violate neutral rights and interrupt legitimate trade. Relying on the faithful performance of these voluntary assurances by His Majesty's Government the United States takes it for granted that the approach of American merchantmen to neutral ports situated upon the long line of coast affected by the order in council will not be interfered with when it is known that they do not carry goods which are contraband of war or goods destined to or proceeding from ports within the belligerent territory affected.

The Government of the United States assumes with the greater confidence that His Majesty's Government will thus adjust their practice to the recognized rules of international law, because it is manifest that the British Government have adopted an extraordinary method of "stopping cargoes destined for or coming from the enemy's territory," which, owing to the existence of unusual conditions in modern warfare at sea, it will be difficult to restrict to the limits which have been here-

tofore required by the law of nations. Though the area of operations is confined to "European waters, including the Mediterranean," so great an area of the high seas is covered and the cordon of ships is so distant from the territory affected that neutral vessels must necessarily pass through the blockading force in order to reach important neutral ports which Great Britain, as a belligerent, has not the legal right to blockade, and which, therefore, it is presumed she has no intention of claiming to blockade. The Scandinavian and Danish ports, for example, are open to American trade. They are also free, so far as the actual enforcement of the order in council is concerned, to carry on trade with German Baltic ports, although it is an essential element of blockade that it bear with equal severity upon all neutrals.

This Government, therefore, infers that the commanders of His Majesty's ships of war engaged in maintaining the so-called blockade will be instructed to avoid an enforcement of the proposed measures of nonintercourse in such a way as to impose restrictions upon neutral trade more burdensome than those which have been regarded as inevitable when the ports of a belligerent are actually blockaded by the ships of its enemy.

The possibility of serious interruption of American trade under the order in council are so many and the methods proposed are so unusual, and seem liable to constitute so great an impediment and embarrassment to neutral commerce, that the Government of the United States, if the order in council is strictly enforced, apprehends many interferences with its legitimate trade which will impose upon His Majesty's Government heavy responsibilities for acts of the British authorities clearly subversive of the rights of neutral nations on the high seas. It is therefore expected that His Majesty's Government, having considered these possibilities, will take the steps necessary to avoid them, and, in the event that they should unhappily occur, will be prepared to make full reparation for every act which under the rules of international law constitutes a violation of neutral rights.

As stated in its communication of October 22, 1914, "this Government will insist that the rights and duties of the United States and its citizens in the present war be defined by the existing rules of international law and the treaties of the United States, irrespective of the provisions of the declaration of London, and that this Government reserves to itself the right to enter a protest or demand in each case in which those rights and duties so defined are violated or their free exercise interfered with by the authorities of the British Government.

In conclusiion, you will reiterate to His Majesty's Government that this statement of the views of the Government of the United States is made in the most friendly spirit, and in accordance with the uniform candor which has characterized the relations of the two Governments in the past, and which has been in large measure the foundation of the peace and amity existing between the two nations without interruption for a century.

BRYAN.

30. Four months later, July 23, Britain made reply to our note on neutral rights:

[The New York Times, July 24, 1915.]

British note, July 23, 1915, replying to the American note of March 30, in regard to British violation of neutral rights (No. 36).

The secretary of state for foreign affairs to the American ambassador:

1. On the 2d of April your excellency handed to me a copy of a communication containing the criticisms of the United States Government on the measures we have been constrained to take on account of the menace to peaceful commerce resulting from the German submarine policy. This communication has received the most careful consideration of His Majesty's Government.

2. I fully appreciate the friendly spirit and the candor which are shown in the communication, and, replying in the same spirit, I trust that I may be able to convince your excellency, and also the administration at Washington, that the measures we have announced are not only reasonable and necessary in themselves but constitute no more than an adaptation of the old principles of blockade to the peculiar circumstances with which we are confronted.

3. I need scarcely dwell on the obligation incumbent upon the allies to take every step in their power to overcome their common enemy, in view of the shocking violation of the recognized rules and principles of civilized warfare of which he has been guilty during the present struggle. Your excellency's attention has already been drawn to some of these proceedings in the memorandum which I handed to you on the 19th February. Since that time Lord Bryce's report, based on evidence carefully sifted by legal experts, describing the atrocities committed in Belgium; the poisoning of wells in German Southwest Africa; the use of poisonous gases against the troops in Flanders; and, finally, the sinking of the *Lusitania* without any opportunity to passengers and noncombatants to save their lives, have shown how indispensable it is that we should leave unused no justifiable method of defending ourselves.

4. Your excellency will remember that in my notes of the 13th and 15th March I explained that the allied Governments intended to meet the German attempt to stop all supplies of every kind from leaving or entering British or French ports by themselves intercepting goods going to or from Germany. I read the communication from your excellency's Government, not as questioning the necessity for our taking all the steps open to us to cripple the enemy's trade, but as directed solely to the question of the legitimacy of the particular measures adopted.

5. In the various notes which I have received from your excellency the right of a belligerent to establish a blockade of the enemy ports is admitted, a right which has obviously no value save in so far as it gives power to a belligerent to cut off the sea-borne exports and imports of his enemy. The contention which I understand the United States Government now puts forward is that if a belligerent is so circumstanced that his commerce can pass through adjacent neutral ports as easily as through ports in his own territory, his opponent has no right to interfere, and must restrict his measures of blockade in such a manner as to leave such avenues of commerce still open to his adversary.

This is a contention which His Majesty's Government feels unable to accept and which seems to them unsustainable, either in point of law or upon principles of international equity. They are unable to admit that a belligerent violates any fundamental principle of international law by applying a blockade in such a way as to cut off the enemy's commerce with foreign countries through neutral ports if the circumstances render such an application of the principles of blockade the only means of making it effective. The Government of the United States, indeed, intimates its readiness to take into account "the great changes which have occurred in the conditions and means of naval warfare since the rules hitherto governing legal blockade were formulated," and recognizes that "the form of close blockade, with its cordon of ships in the immediate offing of the blockaded ports, is no longer practicable in the face of an enemy possessing the means and opportunity to make an effective defense by the use of submarines, mines, and aircraft."

6. The only question, then, which can arise in regard to the measures resorted to for the purpose of carrying out a blockade upon these extended lines is whether, to use your excellency's words, they "conform to the spirit and principles of the essence of the rules of war"; and we shall be content to apply this test to the action which we have taken, in so far as it has necessitated interference with neutral commerce.

7. It may be noted in this connection that at the time of the Civil War the United States found themselves under the necessity of declaring a blockade of some 3,000 miles of coast line, a military operation for which the number of vessels available was at first very small. It was vital to the cause of the United States in that great struggle that they should be able to cut off the trade of the Southern States. The Confederate armies were dependent on supplies from overseas, and those supplies could not be obtained without exporting the cotton wherewith to pay for them.

To cut off this trade the United States could only rely upon a blockade. The difficulties confronting the Federal Government were in part due to the fact that neighboring neutral territory afforded convenient centers from which contraband could be introduced into the territory of their enemies and from which blockade running could be facilitated. Your excellency will no doubt remember how, in order to meet this new difficulty, the old principles relating to contraband and blockade were developed, and the doctrine of continuous voyage was applied and enforced, under which goods destined for the enemy territory were intercepted before they reached the neutral ports from which they were to be reexported.

8. The difficulties which imposed upon the United States the necessity of reshaping some of the old rules are somewhat akin to those with which the allies are now faced in dealing with the trade of their enemy. Adjacent to Germany are various neutral countries which afford her convenient opportunities for carrying on her trade with foreign countries. Her own territories are covered with a net work of railways and waterways, which enable her commerce to pass as conveniently through ports in such neutral countries as through her own. A blockade limited to enemy ports would leave open routes by which every kind of German commerce could pass almost as easily as through the ports in her own territory. Rotterdam is, indeed, the nearest outlet for some of the industrial districts of Germany.

9. As a counterpoise to the freedom with which one belligerent may send his commerce across a neutral country without compromising its neutrality, the other belligerent may fairly claim to intercept such commerce befort it has reached, or after it has left, the neutral State, provided, of course, that he can establish that the commerce with which he interferes is the commerce of his enemy and not commerce which is bona fide destined for or proceeding from the neutral State. It seems, accordingly, that if it be recognized that a blockade is in certain cases the appropriate method of intercepting the trade of an enemy country, and if the glockade can only become effective by extending it to enemy commerce passing through neutral ports, such an extension is defensible and in accordance with principles which have met with general acceptance.

10. To the contention that such action is not directly supported by written authority, it may be replied that it is the business of writers on international law to formulate existing rules rather than to offer suggestions for their adaptation to altered circumstances, and your excellency will remember the unmeasured terms in which a group of prominent international lawyers of all nations condemned the doctrine which had been laid down by the Supreme Court of the United States in the case of the *Springbok*, a doctrine upheld by the Claims Commission at Washington in 1873. But the United States and the British Government took a broader view and looked below the surface at the underlying purpose, and the Government of this country, whose nationals were the sufferers by the extension and development of the old methods of blockade made by the United States during the Civil War, abstained from all protest against the decisions by which the ships and their cargoes were condemned.

11. What is really important in the general interest is that adaptations of the old rules should not be made unless they are consistent with the general principles upon which an admitted belligerent right is based. It is also essential that all unnecessary injury to neutrals should be avoided. With these conditions, it may be safely affirmed that the steps we are taking to intercept commodities on their way to and from Germany fully comply. We are interfering with no goods with which we should not be entitltd to interfere by blockade if the geographical position and the conditions of Germany at present were such that her commerce passed through her own ports. We are taking the utmost possible care not to interfere with commerce genuinely destined for or proceeding from neutral countries. Furthermore, we have tempered the severity with which our measures might press upon neutrals by not applying the rule, which was invariable in the old form of blockade, that ships and goods on their way to or from the blockaded area are liable to condemnation.

12. The communication made by the United States Embassy on April 2 describes as a novel and quite unprecedented feature of the blockade that it embraces many neutral ports and coasts and has the effect of barring access to them. It does not appear that our measures can be properly so described. If we are successful in the efforts we are making to distinguish between the commerce of neutral and enemy countries, there will be no substantial interference with the trade of neutral ports, except in so far as they constitute ports of access to and exit from the enemy territory. There are at this moment many neutral ports which it would be mere affectation to regard as offering facilities only for the commerce of the neutral country in which they are situated, and the only commerce with which we propose to interfere is that of the enemy who seeks to make use of such ports for the purposes of transit to or from its own country.

13. One of the earlier passages in your excellency's memorandum was to the effect that the sovereignty of neutral nations in time of war suffers no diminution, except in so far as the practice and consent of civilized nations have limited it "by the recognition of certain now clearly determined rights" which it is considered may be exercised by nations at war, and these it defines as the right of capture and condemnation for unneutral service, for the carriage of contraband, and for breach of blockade. I may, however, be permitted to point out that the practice of nations on each of the three subjects mentioned has not

at any time been uniform or clearly determined, nor has the practice of any maritime nation always been consistent.

14. There are various particulars in which the exact method of carrying a blockade into effect has from time to time varied. The need of a public notification, the requisite standard of effectiveness, the locality of the blockading squadrons, the right of the individual ship to a preliminary warning that the blockade is in force, and the penalty to be inflicted on a captured blockade runner, are all subjects on which different views have prevailed in different countries and in which the practice of particular countries has been altered from time to time. The one principle which is fundamental and has obtained universal recognition is that by means of blockade a belligerent is entitled to cut off, by effective means, the sea-borne commerce of his enemy.

15. It is the same with contraband. The underlying principle is well established, but as to the details there has been a wide variety of views. As for unneutral service—the very term is of such recent introduction that many writers of repute on international law do not mention it—it is possible, in the view of His Majesty's Government in these circumstances, to maintain that the right of a belligerent to intercept the commerce of his enemy is limited in the way suggested in your excellency's communication.

16. There are certain subsidiary matters dealt with in your excellency's communication to which I think it well to refer. Among these may be mentioned your citation of the declaration of Paris, due, no doubt, to the words which occur in the memorandum sent by me to your excellency on the 1st of March, wherein it was stated that the allied Governments would hold themselves free to detain and take into port ships carrying goods of presumed enemy destination, ownership, or origin, and to our announcement that vessels might be required to discharge goods of enemy ownership as well as those of enemy origin or destination.

17. It is not necessary to discuss the extent to which the second rule of the declaration of Paris is affected by these measures or whether it could be held to apply at all as between Great Britain and the United States. In actual practice, however, we are not detaining goods on the sole ground that they are the property of an enemy. The purpose of the measures we are taking is to intercept commerce on its way from and to the enemy country. There are many cases in which proof that the goods were enemy property would afford strong evidence that they were of enemy origin or enemy destination, and it is only in such cases that we are detaining them. Where proof of enemy ownership would afford no evidence of such origin or destination we are not in practice detaining the goods.

18. His Majesty's Government have been gratified to observe that the measures which they are enforcing have had no detrimental effect on the commerce of the United States. Figures of recent months show that the increased opportunities afforded by the war for American commerce have more than compensated for the loss of the German and Austrian markets.

19. I trust that in the light of the above explanations it will be realized that the measures to which we have resorted have been not only justified by the exigencies of the case, but can be defended as in accordance with general principles which have commended themselves to the Governments of both countries. I am glad to be able to assure your excellency that we shall continue to apply these measures with every desire to occasion the least possible amount of inconvenience to persons engaged in legitimate commerce.

I have, etc.,

E. GREY.

(The New York Times, Aug. 4, 1915.)

31. On May 20, 1915, the British submitted a memorandum touching upon interference with neutral rights:

British memorandum, May 20, 1915, in reference to the detention of American ships and cargoes. (The memorandum has a paragraph attached comparing the exports of the United States to belligerent and neutral countries in January and February, 1914, with those in the same months of 1915. An additional table shows an increase in the American exportation of bacon and lard to neutral countries in March, 1915.)

First. There are at the present moment three American ships detained in this country. Two of them are cotton ships, which are dealt with below. The third is the steamer *Joseph W. Fordney*. This vessel, with a cargo of foodstuffs consigned to E. Klingener at Malmo (Sweden), was brought into Kirkwall on April 8. She had been sighted by His Majesty's ships about 10 miles from the Norwegian coast, and had thereupon endeavored, with the evident desire to evade search, to escape rapidly into Norwegian territorial waters, but without success.

On the vessel's arrival in Kirkwall inquiries were at once addressed to His Majesty's minister at Stockholm with regard to the consignee of the cargo, and a reply was received to the effect that no person of that name could be identified at Malmo, though there was a person of that name who resided at Gothenburg, and was manager of the Gothenburg branch of Hugo Hartvig, and who had stated that the consignments addressed to him on board the *Joseph W. Fordney* were intended for storage in Malmo.

Second. The suspicious conduct of the vessel in endeavoring to elude His Majesty's patrols and the known connections of the consignee of her cargo have tended to confirm other evidence which has come to the knowledge of His Majesty's Government that the foodstuffs were in reality destined for Germany. It was accordingly decided that the cargo must be placed in the prize court, and the vessel is at present discharging at Portishead, England, on the completion of which operation she will be released.

His Majesty's Government feel satisfied that in the circumstances of this case undue interference with American interests can not with reason be imputed to them.

Third. The number of neutral vessels carrying American cargoes and at present held up is 36. Of these, 23 carry cargoes of American cotton. The United States Government are aware that since the enforcement of the blockade measures announced in the supplement to the London Gazette of the 12th of March last His Majesty's Government have acted as regards shipments of American cotton in accordance with the provisions of an arrangement arrived at in collaboration with representatives of the American cotton interests. The terms of the arrangement are as follows:

A. All cotton for which contracts, sale, and freight engagements already have been made before March 2 is to be allowed free transit or bought at the contract price if stopped, provided the ship sails not later than the 31st of March.

B. Similar treatment is to be accorded all cotton insured before the 2d of March, provided it is put aboard not later than the 16th of March.

C. All shipments of cotton claiming the above protection are to be declared before sailing and documents produced and certificates obtained from consular officers or other authorities fixed by the Government.

Fourth. In accepting this scheme, which, it may be noted, applies to shipments of cotton for a neutral destination only, the principal representatives of the American cotton interests described it to His Majesty's ambassador at Washington as conceding all that the American interests could properly ask. It was never suggested that vessels or cargoes with an enemy destination should be allowed to proceed. His Majesty's Government were, moreover, given to understand that the provisions of the arrangement were acceptable to the United States Government.

Fifth. It is intended shortly to furnish a statement showing precisely what cargoes or portions of cargoes His Majesty's Government have dealt with under the above arrangement, and as regards those which they have decided to purchase at the contract price under the terms of paragraph A of the arrangement direct discussions have already been opened with the special representatives of the American parties interested in London.

Sixth. A considerable portion of the cotton has already been sold, and arrangements are being made for handing over the proceeds to the parties entitled to receive the total value as a first installment of the completed transaction. It is obvious that all these arrangements require some time for adjustment. Meanwhile it is not believed that the original owners can, as appears to be apprehended, be suffering acutely by the delay of full payment. It is to be presumed that in accordance with the customs of trade the owners drew bills to the value of their goods before or at the time of shipment; and, if such bills have been negotiated in the usual way, it is difficult to understand why the drawers should be put to inconvenience on this account, at least before the date when the bills fall due.

Seventh. On an impartial review of the facts it will, His Majesty's Government feel sure, be admitted that no arbitrary interference with American interests has, in regard to these cargoes, occurred, seeing that His Majesty's Government has acted throughout in conformity with the terms of an arrangement agreeable to the interests concerned and that United States citizens will suffer no pecuniary loss.

Eighth. As regards other American cargoes or portions of cargoes which have been placed in the prize court, His Majesty's Government resort to this measure in cases where either the goods concerned are contraband or there is evidence that although ostensibly consigned to a person in neutral countries they are in reality destined to the enemy in contravention of the rules of blockade. The right to submit such cases to the public investigation of a judicial tribunal is one which His Majesty's Government can not forego, and they feel convinced that the enlightened opinion in the United States can not adversely criticize their course of action in this respect.

Ninth. It is true that a number of these cases have been pending in the prize court for some time. This is notably the case in regard to certain vessels carrying large shipments of meat and lard ostensibly consigned to Scandinavian ports. The United States Government are, however, no doubt aware that much of the delay involved in these instances is due to the fact that the negotiations have been carried on for many weeks with a representative of the principal American meat packers, for an arrangement designated to limit importation into neutral countries adjacent to Germany, to quantities actually required in those countries for bona fide home consumption. The American meat packers have demanded as a part of the settlement to be agreed upon that His Majesty's Government should buy the cargoes of several ships now held up in the prize court. Hence the delay in bringing these cases to adjudication.

The negotiations for an amicable settlement have, unfortunately, come to a standstill owing to the exorbitant terms insisted upon by the representative of the American packers. This stage having now been reached, His Majesty's Government have decided to go on with the prize-court proceedings in these cases, and it is not expected that a decision will be much longer delayed.

Tenth. It may finally be pointed out that repeated complaint, as to injury suffered generally by American trade in consequence of interference due to British naval measures, derives little substance from the published American trade returns. A table of figures taken from these returns and showing the amount of recent American trade with Germany and with neutral countries supplying Germany is annexed hereto. It certainly tends to disprove any contention that American trade with neutral countries has recently suffered. It will be seen that whereas American exports to Germany and Austria in February, 1915, fell by $21,500,000, as compared with the same month in 1914, American exports to Scandinavia, Holland, and Italy rose by the enormous figure of $61,100,000.

Eleventh. Similar figures for the month of March have not yet reached His Majesty's Government, but they have received statistics for that month of the value of exports and imports through New York, as issued by the collector of the port, and while pointing out a large increase in the value of exports in 1915, compared with those of 1914, as shown in the tables annexed, they desire especially to call attention to a separate statement indicating the increase in the amount of the export to Scandinavian and Dutch ports of two commodities only—bacon and lard. These figures show that as against 1,253 boxes of bacon and 9,816 tierces of lard exported to the ports noted in the above countries in March, 1914, there were exported in March, 1915, 32,222 boxes of bacon and 95,676 tierces of lard.

Twelfth. His Majesty's Government consider that the abnormal increase in supplies imported by neutral countries, as shown in these statistics, alone justifies their assumption as to the ultimate destination of many items in cargoes consigned to one or the other of the countries in question in the vessels which they have detained, but they would call attention to the fact that it is only when they have believed themselves to be in possession of conclusive evidence of the enemy destination of a cargo that they have seized such a cargo, and that American interests, as for instance in the case of cotton, have received especially sympathetic consideration. (The New York Times, May 21, 1915.)

The Secretary of State, on May 21, made the following statement touching an error in the foregoing:

The foreign-trade advisers' attention has been called to the statement of the foreign office of Great Britain, published in this morning's papers, an extract from which follows:

"Fourth. In accepting this scheme, which, it may be noted, applies to shipments of cotton for a neutral destination only, the principal representatives of the American interests described it to His Majesty's ambassador at Washington as conceding all that the American interests could properly ask. It was never suggested that vessels or cargoes with an enemy destination should be allowed to proceed. His Majesty's

Government were, moreover, given to understand that the provisions of the arrangements were acceptable to the United States Government."

The plan referred to is the one which was entered into between the cotton shippers of this country and the British embassy, a portion of which is quoted in the statement of the British foreign office.

Without discussing at this time the statement that "it was never suggested that vessels or cargoes with an enemy destination should be allowed to proceed," the foreign-trade advisers, who informally and unofficially represented the cotton shippers in the negotiations which led to the so-called cotton arrangement, state that it was distinctly understood between Sir Arthur Cecil Spring-Rice, the British ambassador, and Robert F. Rose, the foreign-trade adviser conducting this discussion on behalf of the American cotton exporters, that nothing done by the foreign-trade advisers should be regarded as official, and that everything done was to be considered as informal and unofficial, and in no way binding the United States Government to any arrangement reached, or be construed as a recognition of the order in council to be issued or the declaration of March 1 which has been issued. This statement was made to the British ambassador on March 3 when the first conference in the matter was held, was repeated at each subsequent conference, and each time the absolute assurance from the British ambassador was received that, in acting for the cotton shippers in any way, the foreign-trade advisers were to be regarded as not representing the United States Government in any manner. (The New York Times, May 22, 1915.)

No. 49. Statement of the British Embassy, May 21, 1915, correcting the error in No. 47.

The terms of the arrangement quoted in the British statement as telegraphed were arrived at in London between a private representative of the American cotton interests in London and British officials in London. The reference to the British ambassador in paragraph 4 is, therefore, an error.

The arrangement in question formed the subject of conversations between the ambassador and representatives of the cotton interests in this country. There never was any question of a formal and official understanding between the United States Government and the British Embassy. (The New York Times, May 22, 1915.)

A further statement of England upon the treatment of neutral rights on the sea, June 17, 1915:

(Dip. Corr.—leaflet.)

British memorandum, June 17, 1915, in reference to the treatment of American commerce. (According to the letter of the American ambassador, transmitting the memorandum, "it is not an answer to the principles set forth in the note * * * of March 30, but merely an explanation of concrete cases and the regulations under which they are dealt with."

(The secretary of state for foreign affairs ad interim to the American ambassador.)

1. His Majesty's Government have on various occasions, and notably in the communication which was addressed to the United States ambassador on March 15 last, given assurances to the United States Government that they would make it their first aim to minimize the inconvenience which must inevitably be caused to neutral commerce from the existence of a state of war at sea, and in particular from the measures taken by the allied Governments for the restriction of the enemies' over-sea trade. In view of the representation and complaints made to this department by the ambassador from time to time as to the peculiar hardships alleged to have been wrongly inflicted on American trade and shipping by the operation of those measures, His Majesty's Government desire to offer the following observations respecting the manner in which they have consistently endeavored to give practical effect to those assurances.

2. It will be recalled that at the moment when His Majesty's Government announced their measures against enemy commerce, they declared their intention to refrain altogether from the exercise of the right to confiscate ships or cargoes which belligerents had always previously claimed in respect to breaches of blockade; that, under article 1 of the the enactment of March 11 it was expressly provided that any person claiming to be interested in goods placed in the prize court in pursuance of the provision of that enactment, might forthwith issue a writ against the proper officers of the Crown, the object being to confer upon claimants the right to institute proceedings without waiting for the writ of the procurator general, and thus to remove all possible cause of legitimate grievance on account of delay; and that, finally, a pacific assurance was given to the United States Government that the instructions to be issued by His Majesty's Government to the fleet and to the customs officials and executive officials concerned, would impress upon them the duty of acting with the utmost dispatch consistent with the object in view and of showing in every case such consideration for neutrals as might be compatible with that object, namely, to prevent vessels carrying goods for or coming from the enemy's territory.

3. The above measures were all designed to alleviate the burdens imposed upon neutral sea-borne commerce in general. Various special concessions, over and above those enumerated, have, moreover, been made in favor of United States citizens.

4. Thus His Majesty's Government have acted as regards shipments of American cotton in accordance with the provisions of an arrangement arrived at in direct collaboration with representatives of the American cotton interests. In accepting this scheme the principal representative of those interests described it as conceding all that American interests could properly ask. The provisions of the arrangement were, as the United States ambassador is aware, as follows:

"1. All cotton for which contracts of sale and freight engagements have already been made before the 2d of March is to be allowed free (or bought at contract price is stopped), provided the ship sails not later than the 31st of March.

"2. Similar treatment is to be accorded to all cotton insured before the 2d of March, provided it is put on board not later than the 16th of March.

"3. All shipments of cotton claiming the above protection are to be declared before sailing and the documents produced to and certificates obtained from consular officers or other authority fixed by the Government.

5. Considerable shipments of cotton have already been dealt with under this arrangement, and in certain cases the dates specified have been extended in favor of American shippers. The board of trade have already paid a sum exceeding £450,000 to various American claimants, and all claims are being and will continue to be paid as rapidly as they are presented and the proofs of title can be checked. If in some cases progress has been delayed, this has been due to the fact, which has seriously embarrassed His Majesty's Government, that a number of consignments, for which the American shippers had specifically invoked the protection of the arrangement, are now claimed by Swedish and Dutch firms, whose title of ownership, notwithstanding the action of the American shippers, appears in some cases to be valid, and in others has led to the issue of writs in the prize court.

6. It has been explicitly acknowledged by the special representatives of the American claimants, who have been in constant and direct communication with the board of trade, that all the claims so far submitted under the cotton arrangement have been settled with the utmost promptitude, so soon as the production of the necessary documents by the claimants allowed of this being done. There is at the present moment no claim before His Majesty's Government that has not been paid, and the sums so paid over are already considerably in excess of the amounts realized by the sale of the goods.

7. As regards the more general allegation of delay in dealing with cases of detained cargoes, the following facts and figures may be quoted:

The total number of vessels which, having cleared from United States ports since the initiation of the retaliatory measures against German trade, are still detained in United Kingdom ports is 27; of this number 8 are discharging cotton which His Majesty's Government has agreed to purchase under the above arrangement. Of the remaining 19 vessels, 7 are free to depart as soon as the items of their cargo placed in the prize court have been discharged. The other 12, of which 3 only are American ships, are detained pending inquiries as to suspicious consignments, and particulars as to the dates and approximate causes of detention are furnished in the accompanying list. It will be observed that 8 have been detained for a period of less than a week and 3 for a period of less than a fortnight, while the detention of 1 is due to the difficulties in regard to transit across Sweden and Russia.

8. His Majesty's Government remain convinced that, on an impartial review of the facts, it will be admitted that no arbitrary interference with American interests has, in regard to cotton cargoes, occurred; while, if due regard be paid to the enormous volume of American and neutral shipping which is continually engaged in the trans-Atlantic trade, the figures and dates quoted in the preceding paragraph will emphasize the restricted nature of any interference which has taken place and the close attention with which the officials concerned have adhered to their instructions to act in all cases with expedition and with every possible consideration for neutrals.

9. Since His Majesty's Government have been compelled to adopt their present measures against German commerce, they have given special consideration to the question of avoiding as far as possible unnecessary damage to the interests of neutrals in regard to the export of goods of German origin, and here, again, liberal concessions have been made to United States citizens. Under the rules enacted on the 11th of March provision is made for the investigation of all neutral claims respecting such goods in the prize court, and it is obvious that these claims can receive due and equitable consideration most properly before a judicial tribunal. Nevertheless, in deference to the express desire of the United States Government, arrangements were made toward the end of March whereby United States citizens, who might desire to import goods of German origin via a neutral port, were enabled to produce proof of payment to His Majesty's Embassy at Washington. If such proof were deemed satisfactory, His Majesty's Government gave an undertaking that the goods concerned should not be interfered with in transit, and the American importer was freed from the necessity of submitting his claim to the prize court in London for adjudication. A few days later His Majesty's Government further agreed to recognize the neutral ownership of goods of enemy origin even if not paid for before the 1st March, provided they were the subject of a f. o. b. contract of earlier date, and had arrived at a neutral port before the 15th March.

10. Special treatment has also been accorded to cargoes of particular produce destined for the United States and stated to be indispensable for the industries of the country, and in notes addressed to the United States ambassador in April and May, undertakings were given not to interfere during transit with certain cargoes of dyestuffs, potash, and German beet seed.

11. When it became apparent that large quantities of enemy goods were still passing out through neutral countries His Majesty's Government felt it necessary to fix a definite date after which such shipments must cease to enjoy the special immunity, theretofore granted, from liability to being placed in the prize court. It had been observed that a large increase had taken place in the number of vessels sailing from neutral countries to America, and one of the principal lines of steamships advertised a daily in place of a weekly service. In such circumstances it appeared scarcely possible that goods of enemy origin bought and paid for prior to the 1st March should not have already been shipped to their destination. First June was accordingly fixed as the date after which the privilege allowed in the case of such shipments should cease; but once more a special favor was granted by extending the date in exceptional cases to the 15th June.

12. Importers in the United States having now had three months in which to clear off their purchases in enemy territory, His Majesty's Government trust that, in presence of the circumstances enumerated, the United States Government will acknowledge the great consideration which has been shown to American interests.

13. Nevertheless a fresh appeal has now been made to His Majesty's Government that shipments of American-owned goods of enemy origin, if paid for before the beginning of March, should be allowed to be shipped without molestation after the 15th June. The appeal is based principally upon the contentions, (a) that insufficient time has already elapsed; (b) that no mention of a time limit is made in the enactment of the 11th March; (c) that the proofs of ownership required by His Majesty's Government are of an exacting nature and involve much time for preparation.

14. The first contention (a) has already been dealt with. As regards (b) and (c) it is true that the enactment of the 11th March contains no mention of a time limit. But it seems to be overlooked that the time limit had been fixed only for the special immunity granted as an exception from that enactment. It was as a friendly concession to American interests that His Majesty's Government agreed to an investigation of claims outside the prize court. As for the exacting nature of the proofs required by His Majesty's Government, experience has shown that such proofs were necessary.

15. In deference, however, to the renewed representations of the United States Ambassador, His Majesty's Government have given further directions that in all such cases, as may have been specially submitted through the British Embassy at Washington or to His Majesty's Government direct on or before June 15 and passed, the goods shall be allowed to proceed without interference, if shipped from a neutral port on the conditions already laid down, notwithstanding the fact that shipment may not have been made before June 15.

16. His Majesty's Government will also be prepared hereafter to give special consideration to cases presented to them and involving particular hardships, if the goods concerned are required for neutral Governments or municipalities, or in respect of works or public utility, and where payment can be shown to have been made before March 1, 1915.

17. With the above exceptions, His Majesty's Government regret they can not continue to deal through the diplomatic channel with individual cases, but they would again point out that special provision is made for the consideration of such cases in the prize court.

18. Complaints have not infrequently been made that undue delay occurs in dealing with American cargoes in the prize court. An interesting comment on this subject was made by the president of the prize court in the case of the cargo ex-steamship *Ogeechee* on the 14th instant. His lordship, according to the transcript from the official shorthand writer's notes, made the following observations:

"It is a very extraordinary thing that, when the Crown are ready to go on the claimants come here and say, 'We can not proceed for six weeks.' Some day toward the end of the last term I had a row of eminent counsel in front pressing me to fix a case at once. I fixed it very nearly at once—that is to say, the second day of the following term. They all came and said, 'We want an adjournment for six weeks.'"

19. The solicitor general hereupon remarked: "If I might say so on that, one of the reasons I applied to-day on behalf of the Crown that the matter should be dealt with as soon as possible is for that very reason. There has been such a strong desire on the part of America and American citizens that there should be no delay, but one finds, in fact, the delay comes from there."

20. The President then stated: "I know that. I do not know what the explanation is, but I am anxious that there should be no delay."

21. It is true that a number of cases, principally relating to cargoes which, though ostensibly consigned to a person in a neutral country, are in reality believed to be destined for the enemy, have been pending in the prize court for some time. The United States Government is aware that most of these cargoes consist of meat and lard, and that much of the delay in bringing these cargoes to adjudication was due to the fact that negotiations were being carried on for many weeks with a representative of the principal American meat packers for an amicable settlement out of court. When at length, owing to the failure of the negotiations, His Majesty's Government decided that they would continue the prize-court proceedings and had at the request of the claimants fixed the earliest possible date for the hearing, counsel for the latter asked for an adjournment in their interests, despite the fact that the Crown was, by his own admission, ready to proceed.

22. His Majesty's Government are earnestly desirous of removing all causes of avoidable delay in dealing with American cargoes and vessels which may be detained, and any specific inquiries or representations which may be made by the United States Government in regard to particular cases will always receive the most careful consideration, and all information which can be afforded without prejudice to prize-court proceedings will be readily communicated, but they can scarcely admit that on the basis of actual facts any substantial grievance on the part of American citizens is justified or can be sustained, and they therefore confidently appeal to the opinion of the United States Government as enlightened by this memorandum. (The New York Times, June 25, 1915.)

34. On July 14, 1915, our Government addressed a note declaring its intention to insist upon respect for international law in time of war:

Summary of American "caveat," July 14, 1915, against British prize-court procedure.

(The Secretary of State to the American ambassador at London.)

In view of differences which are understood to exist between the two Governments as to the principles of law applicable in prize-court proceedings in cases involving American interests, and in order to avoid any misunderstanding as to the attitude of the United States in regard to such proceedings, you are instructed to inform the British Government that, in so far as the interests of American citizens are concerned, the Government of the United States will insist upon their rights under the principles and rules of international law, as hitherto established, governing neutral trade in time of war, without limitation or impairment by orders in council or other municipal legislation by the British Government, and will not recognize the validity of prize-court proceedings taken under restraints imposed by British municipal law in derogation of the rights of American citizens under international law. (The New York Times, Aug. 4, 1915.)

The case of the seizure of the *Neches* called forth the following:

Paraphrase of American note, July 15, 1915, protesting against the seizure of the cargo of the *Neches*.

(The Secretary of State to the American amdassador at London.)

Ambassador Page is informed that it has been brought to the attention of the department that the steamship *Neches*, of American register, sailing from Rotterdam for the United States, carrying a general cargo, after being detained at the Downs, was brought to London, where it was required by the British authorities to discharge cargo, the property of American citizens.

It appears that the ground advanced to sustain this action is that the goods originated, in part at least, in Belgium, and fall, therefore, within the provisions of paragraph 4 of the order in council of March 11, which stipulates that every merchant vessel sailing from a port other than a German port, carrying goods of enemy origin, may be required to discharge such goods in a British or allied port.

Ambassador Page is instructed in this case to reiterate the position of the Government of the United States as set forth in the department's instruction of March 30, 1915, with respect to the order in council mentioned, the international invalidity of which the Government of the United States regards as plainly illustrated by the present instance of the seizure of American-owned goods passing from the neutral port of Rotterdam to a neutral port of the United States, merely because the goods came originally from territory in the possession of an enemy of Great Britain.

Mr. Page is also instructed to inform the foreign office that the legality of this seizure can not be admitted and that, in the view of the Government of the United States, it violates the right of the citizens of one neutral to trade with those of another, as well as with those of belligerents, except in contraband or in violation of a legal blockade of an enemy seaport; and that the right of American owners of goods to bring them out of Holland, in due course, in neutral ships must be insisted upon by the United States, even though such goods may have come originally from the territories of enemies of Great Britain. He is directed further to insist upon the desire of this Government that goods taken from the *Neches*, which are the property of American citizens, should be expeditiously released to be forwarded to their destination, and to request that he be advised of the British Government's intended course in this matter at the earliest moment convenient to that Government. (The New York Times, Aug. 4, 1915.)

On July 31 the British Government replied to our protest against the seizure of the *Neches:*

(The New York Times, Aug. 4, 1915.)

(The secretary of state for foreign affairs to the American ambassador.)

The note which your excellency addressed to me on the 17th instant respecting the detention of the cargo of the steamship *Neches* has, I need hardly say, received the careful attention of His Majesty's Government.

The note which I had the honor to send to your excellency on the 23d instant has already explained the view of His Majesty's Government on the legal aspect of the question, though it was prepared before your excellency's communication of the 17th had been received, and, pending consideration by the Government of the United States of the views and arguments set forth in the British note of the 23d, it is unnecessary for me to say more on the question of right or of law.

There is, however, one general observation that seems relevant to the note from your excellency respecting the cargo of the *Neches*.

It is the practice of the German Government, in the waters through which the *Neches* was passing, to sink neutrals as well as British merchant vessels, irrespective of the destination of the vessel or origin of the cargo, and without proper regard or provision for the safety of passengers or crews, many of whom have lost their lives in consequence. There can be no question that this action is contrary to the recognized and settled rules of international law, as well as to the principles of humanity.

His Majesty's Government, on the other hand, have adhered to the rule of visit and search, and have observed the obligation to bring into port and submit to a prize court any ships or cargoes with regard to which they think they have a good case for detention or for condemnation as contraband.

His Majesty's Government are not aware, except from the published correspondence between the United States and Germany, to what extent reparation has been claimed from Germany by neutrals for loss of ships, lives, and cargoes, nor how far these acts have been the subject even of protest by the neutral Governments concerned.

While those acts of the German Government continue, it seems neither reasonable nor just that His Majesty's Government should be pressed to abandon the rights claimed in the British note of the 23d and to allow goods from Germany to pass freely through waters effectively patroled by British ships of war.

If, however, it be alleged that, in particular cases and special circumstances, hardships may be inflicted on citizens of neutral countries, His Majesty's Government are ready in such cases to examine the facts in a spirit of consideration for the interest of neutrals, and in this spirit they are prepared to deal with the cargo of the *Neches*, to which your excellency has called attention, if it is held that the particular circumstances of this case fall within this category.

[I have, etc., E. GREY.]

35. On the last day of July the British made reply to the "caveat" of July 14:

(The New York Times, Aug. 5, 1915.)

(The secretary of state for foreign affairs to the American ambassador.)

YOUR EXCELLENCY: (1) I have the honor to acknowledge the receipt of the note dated 16th instant, in which you were good enough to communicate to me for the information of His Majesty's Government the opinion held by the Government of the United States that, in view of differences which they understand to exist between the two countries as to the principles of law applicable in cases before the prize court, they could not recognize the validity of proceedings taken in His Majesty's prize court in derogation of the rights of citizens of the United States.

(2) I do not understand to what divergence of views as to the principles of law applicable in cases before the prize court the Government of the United States refers, for I am not aware of any differences existing between the two countries as to the principles of law applicable in cases before such courts.

(3) British prize courts, according to the ancient form of commission under which they sit, are to determine cases which come before them according to the course of admiralty and the law of nations and the statutes of rules and regulations for the time being in force in that behalf.

As to the principles applied by the American prize courts, I note that in the case of the *Amy Warwick* (2 Sprague, 123) it was held that prize courts are subject to the instructions of their own sovereign. In the absence of such instructions their jurisdiction and rules of decision are to be ascertained by reference to the known powers of such tribunals and the principles by which they are governed under the public law and the practice of nations. It would appear, therefore, that the principles applied by the prize courts of the two countries are identical.

(4) As illustrating further the attitude adopted by the judges of British prize courts toward these two sources of law, the municipal legislation of its sovereign on the one hand and the principles of international law on the other, I should like to refer your excellency to a classical passage in the judgment of Lord Stowell, in the case of the *Fox*, in which that famous judge observed in the course of the discussion:

"A question has been stated: What would be the duty of the court under orders in council that were repugnant to the law of nations? It has been contended on one side that the court would, at all events, be bound to enforce the orders in council, on the other that the court would be bound to apply the rule of the law of nations adapted to the particular case, in disregard of the orders in council.

"This court is bound to administer the law of nations to the subjects of other countries in the different relations in which they may be placed toward this country and its Government. That is what others have a right to demand for their subjects, and to complain if they receive it not. This is its unwritten law, evidenced in the course of its decisions and collected from the common usage of civilized States. At the same time it is strictly true that by the constitution of this country the King in council possesses legislative rights over this court and has power to issue orders and instructions which it is bound to obey and enforce; and these constitute the written law of this court.

"These two propositions, that the court is bound to administer the law of nations and that it is bound to enforce the King's orders in council, are not at all inconsistent with each other, because these orders and instructions are presumed to conform themselves, under the given circumstances, to the principles of its unwritten law. They are either directory applications of those principles to the cases indicated in them—cases which, with all the facts and circumstances belonging to them and which constitute their legal character, could be but imperfectly known to the court itself; or they are positive regulations, consistent with these principles, applying to matters which require more exact and definite rules than those general principles are capable of furnishing.

"The constitution of this court, relatively to the legislative power of the King in council, is analogous to that of the courts of common law relatively to that of the Parliament of this Kingdom. These courts have their unwritten law, the approved reasons, principles of natural reason and justice; they have likewise the written or statute law in acts of Parliament, which are directory applications of the same principles to particular subjects or positive regulations consistent with them upon matters which would remain too much at large if they were left to the imperfect information which the courts could extract from mere general speculations.

"What would be the duty of the individuals who preside in these courts if required to enforce an act of Parliament which contradicted those principles is a question which, I presume, they would not entertain a priori because they will not entertain a priori the supposition that any such will arise. In like manner this court will not let itself loose into speculations as to what would be its duty under such an emergency; because it can not, without extreme indecency, presume that any such emergency will happen. And it is the less disposed to entertain them because its own observation and experience attest the general conformity of such orders and instructions to its principles of unwritten law."

(5) The above passage has recently been quoted and adopted by the president of the prize court in the case of the *Zamora*, in which Sir S. Evans said: "I make bold to express the hope and belief that the nations of the world need not be apprehensive that orders in council will emanate from the Government of this country in such violation of the acknowledged laws of nations that it is conceivable that our prize tribunals, holding the law of nations in reverence, would be called upon to disregard and refuse obedience to the provisions of such orders."

(6) In the note which I handed to your excellency on the 23d of July, I endeavored to convince the Government of the United States, and I trust with success, that the measures that we have felt ourselves compelled to adopt, in consequence of the numerous acts committed by our enemies in violation of the laws of war and the dictates of humanity, are consistent with the principles of international law. The legality of these measures has not yet formed the subject of a decision of the prize court; but I wish to take this opportunity of reminding your excellency that it is open to any United States citizen whose claim is before the prize court to contend that any order in council which may affect his claim is inconsistent with the principles of international law, and is, therefore, not binding upon the court. If the prize court declines to accept his contentions, and if, after such a decision has been upheld on appeal by the judicial committee of His Majesty's privy council the Government of the United States of America consider that there is serious ground for holding that the decision is incorrect and infringes the rights of their citizens, it is open to them to claim that it should be subjected to review by an international tribunal.

(7) This principle, that the decisions of the national prize courts may properly be subjected to international review, was conceded by Great Britain in article 7 of the Jay treaty of 1793 and by the United States of America under the treaty of Washington of 1871. Your excellency will no doubt remember that certain cases (collectively known as the "Matamoros cases") were submitted to the commission established under articles 12–17 of the treaty of Washington. In each of these cases proceedings in prize had been instituted in the prize courts of the United States, and in each case the judgment of the Supreme Court, the court of last resort in cases of prizes, had been obtained. The United States filed a demurrer in these cases, alleging that, as they had been heard by the prize courts of the United States of original and appellate jurisdiction, the decision of the appellate court was final, and no claim based upon it could be made before the commission. The demurrer was unanimously overruled and the cases heard, and the agent of the United States, in his reports of the proceedings of the commission, stated that he, personally, maintained no doubt of the jurisdiction of the commission as an international tribunal to review the decisions of the prize courts of the United States where the parties alleging themselves aggrieved had prosecuted their claims by appeals to the court of last resort; as this jurisdiction, however, had been sometimes questioned, he deemed it desirable that a formal adjudication by the commission should be held upon this question.

(8) The same principle was accepted both by the United States Government and His Majesty's Government in 1907 in connection with the proposed establishment of an international prize court, although certain constitutional difficulties have led the United States Government to propose that the right of recourse to the international prize court in connection with a decision of the Supreme Court of the United States should take the form of a direct claim for compensation.

(9) It is clear, therefore, that both the United States Government and His Majesty's Government have adopted the principle that the decisions of a national prize court may be open to review if it is held in the prize court and in the judicial committee of the privy council, on appeal, that the orders and instructions issued by His Majesty's Government in matters relating to prize are in harmony with the principles of international law; and, should the Government of the United States unfortunately feel compelled to maintain a contrary view, His Majesty's Government will be prepared to concert with the United States Government in order to decide upon the best way of applying the above principle to the situation which would then have arisen. I trust, however, that the defense of our action, which I have already communicated to your excellency, and the willingness of His Majesty's Government (which has been shown in so many instances) to make reasonable concessions to American interests, will prevent the necessity for such action arising.

(10) In any case I trust that the explanations given above will remove the misapprehension under which I can not but feel the Government of the United States are laboring as to the principles applied by British prize courts in dealing with the cases which come before them.

I have, etc.,

E. GREY.

On the 18th of August England, after frequent declarations against declaring cotton contraband, included it in the list by the following proclamation:

(The New York Times, Aug. 18, 1915.)

British proclamation, August 21, 1915, declaring cotton contraband of war:

Now, therefore, we do hereby declare, by and with the advice of our privy council, that during the continuance of the war, or until we do give further public notice, the following articles will be treated as absolutely contraband, in addition to those set out in our royal proclamation aforementioned: Raw cotton, cotton linters, cotton waste, and cotton yarn.

And we do hereby further declare that this our royal proclamation shall take effect from the date of its publication in the London Gazette. (The New York Times, Aug. 22, 1915.)

The following communication was to clear up an alleged misunderstanding over the *Neches:*

NOTE VERBALE FROM THE BRITISH EMBASSY.

BRITISH EMBASSY,
Washington, August 6, 1915.

Comments have reached His Majesty's Government from various quarters that a misapprehension seems to have arisen with regard to the British note of July 31 concerning the steamer *Neches*, which it was asserted had been interpreted as stating that the cargo of the vessel had been seized as a reprisal measure against Germany's submarine policy.

Sir Edward Grey has requested me to explain that the misunderstanding arises no doubt from the brevity of the note. The note admits no illegality of procedure. The seizure was not meant in the nature of a reprisal but was based solely on the British contention of the absolute legality of the Orders in Council as explained in the note of July 23, to which the *Neches* note refers.

It is also explained that in stating that the British Government does not yet know what steps neutrals have taken against German submarine policy, no reference was intended to the action of the United States Government but to other neutrals, who have lost more ships than the United States but of whose action nothing is known by the British Government.

It should be further explained that in making reference to the German submarine policy the British Government only desired to point out that from its standpoint it was hardly just or reasonable that it should be asked by neutrals to abandon any of its legal rights while Germany commits illegalities both on Great Britain and on neutrals, though it is admitted and regretted that interference with German trade however legal may be inconvenient to neutrals.

39. One of the stock claims of the British right to blockade neutral ports was the increased exportation as proof of reexport to Germany. The following communication is pertinent:

[Memorandum.]

AMERICAN EMBASSY,
London, June 3, 1915.

The American ambassador presents his compliments to His Majesty's secretary of state for foreign affairs and has the honor to acquaint him that he is in receipt of a communication from the consul general in London, in which he requests that he may be informed regarding the amount of raw cocoa and preparations of cocoa exported from Great Britain to Holland, Denmark, Sweden, Norway, and Italy during the four months ending April 30, 1915, as compared with the same perior of 1914 and 1913. Mr. Page ventures to hope that should no inconvenience be found in so doing, Sir Edward Grey may be so good as to cause him to be furnished with the desired information in this connection.

THE BRITISH SECRETARY OF STATE FOR FOREIGN AFFAIRS TO AMBASSADOR PAGE.

FOREIGN OFFICE, *August 13, 1915.*

YOUR EXCELLENCY: I have the honor to refer to the memorandum which you were good enough to communicate on the 3d June last, in which you informed me of the desire of the United States consul general in London to be furnished with figures showing the amount of raw cocoa and preparations of cocoa exported from Great Britain to Holland, Denmark, Sweden, Norway, and Italy during the four months ending April 30, 1915, as compared with the same period in 1914 and 1913. Your excellency will remember that I had the honor to communicate to you tabular statement of these figures on the 16th ultimo.

His Majesty's ambassador at Washington reported on the 22d July that the acting counselor of the State Department had referred in conversation to the unfavorable impression created at Washington by reports as to the increase in British exports to northern European neutral ports since the outbreak of war received from Mr. Consul General Skinner, these reports having given figures showing increases in the British exports of some commodities to those countries. I am therefore communicating to Sir C. Spring-Rice statistics showing what the exports of the United Kingdom were in comparison with those of the United States during the first five months of this year, in order that this impression may be removed as soon as possible; but as I hear that statements, no doubt inspired by German agents, are being circulated in America to the effect that His Majesty's Government are trying to stop the legitimate trade of the United States with neutral countries in order to capture the trade for the British Empire, and are therefore allowing goods to be exported from the United Kingdom which they have not allowed to be imported into the same countries from the United States, I think it well to inform your excellency immediately of the true state of the case, and with this view to invite attention to the following data and figures:

The increased reexport of cotton from the United Kingdom to Norway, Sweden, Denmark, and the Netherlands during the months of January to May, 1915, as compared with the same period in 1914, amounted to 503,995 centals of 100 pounds. The United States exported to the four countries mentioned during this period in 1915 as much as 3,353,638 centals, as compared with 204.177 centals during January to May, 1914, an increase of 3,149,461 centals, or six times the increase in the export of cotton from the United Kingdom.

The above figures for the United Kingdom are taken from the official customs returns; those for the United States have been carefully compiled by the war trade department from the manifests of those ves-

sels which actually arrived with cargo from the United States in Scandinavian and Dutch ports during the five months, February to June, 1915, as compared with five-twelfths of the total recorded exports from the United States to those countries in the year ended June 30, 1914. It has been necessary to adopt this method, as the Monthly Summary of Foreign Commerce, issued by the United States Government, gives very few details with regard to American trade with those countries. It is evident that some shipments must have taken place from the United States to Scandinavia and the Netherlands which could not come within the scope of even the most circumstantial compilation of statistics drawn up from the manifests of examined ships alone, and I would therefore lay particular stress on the fact that the figures thus obtained by the war trade department are necessarily understatements of the total amounts actually shipped. But even from the figures thus obtained it is possible to show conclusively how much greater the increases in the American exports to Scandinavian countries and the Netherlands have been than those of Great Britain during the first five months of this year, not only in the case of cotton but in that of almost every other important commodity.

Reexports of rubber from the United Kingdom to Scandinavia and the Netherlands declined from 17,727 centals of 100 pounds in January–May, 1914, to 16,693 centals in January–May, 1915; on the other hand, exports of rubber from the United States to the same destinations increased from 1,579 centals to 5,040 centals. Larger reexports of rubber to the United States from this country have indeed taken place, but all other reexports of rubber have declined during this period, as the following figures show:

United Kingdom—Reexports of rubber.

	Centals of 100 pounds.		
	January–May, 1914.	January–May, 1915.	Increase in 1915 over 1914.
To all destinations	553,864	667,509	[1]113,645
Of which to United States	248,435	418,619	[2]170,184

[1] Or 20.5 per cent. [2] Or 68.6 per cent.

It will, therefore, be seen that this country has actually been supplying more rubber to the United States at the expense of other neutrals, while American exporters have taken advantage of this to ship increased quantities of rubber to Scandinavia and the Netherlands.

In the case of lubricating oils, the increase of United Kingdom exports to Scandinavia and Holland was 703,370 gallons; the increase of the United States exports during the same five months was 3,857,593 gallons, being five times as great as the British increase.

The increase in the reexports of unmanufactured tobacco from the United Kingdom to the same countries and over the same period was 2,937,244 pounds; the corresponding United States increase was 6,081,848 pounds. The British increase is mainly due to the diversion of tobacco grown in the British Dominions from continental to United Kingdom ports. The reexports of manufactured tobacco from the United Kingdom have actually declined, while exports of this commodity from the United States to Scandinavia and the Netherlands have hitherto been relatively insignificant. It is therefore altogether improbable that the United States can have lost trade in tobacco in consequence of the measures taken by His Majesty's Government.

United Kingdom reexports of cocoa have risen from 2,976,143 pounds in January–May, 1914, to 14,504,013 pounds in January–May, 1915, an increase, in round numbers, of 11,500,000. Exports from the United States for the same months have risen from 12,300 pounds in 1914 to 16,016,000 pounds in 1915, an increase of 16,000,000. These figures speak for themselves.

In the first five months of 1914 the United Kingdom reexports of coffee to the same countries amounted to 80,407 hundredweight, and the exports from the United States to 7,376 hundredweight. In the corresponding five months of 1915 the United Kingdom reexports were 263,488 hundredweight, while the imports from the United States were 285,760 hundredweight, showing that the United States exports, which were formerly much less, are now greater than those of the United Kingdom.

In the case of rice, the increased reexport from the United Kingdom, which amounted to 193,458 hundredweight for the period under review, was entirely due to the diversion to the United Kingdom ports of the large trade in Indian rice formerly carried on through Hamburg and other continental ports. The exports from the United States have increased from 262 hundredweight in January–May, 1914, to 27,800 hundredweight in January–May, 1915, an increase of 27,538 hundredweight.

The United Kingdom increase in the export of wheat flour to Scandinavia and the Netherlands during January–May, 1915, compared with 1914, was 47,045 hundredweight; the United States increase was 2,555,593 hundredweight for the same period.

For the same period the United Kingdom increase in the export of barley to Scandinavia and the Netherlands was 249,512 hundredweight; the United States increase, 2,016,892 hundredweight.

I could point to many other instances of similar proportionate increases in the exports of the United States to Scandinavia and the Netherlands as compared with exports to the same countries from the United Kingdom during the last five months. In respect to the great majority of articles for which figures of United States trade can be given the increases in this trade are greater, and in some cases very considerably greater, than the increases in the United Kingdom trade.

In many cases increases in United Kingdom reexports are due to the fact that the products of British Indian and colonial products which formerly went direct to continental ports, such as Hamburg, Rotterdam, or Copenhagen, are now sent to the United Kingdom and thence distributed to old customers in Scandinavia and the Netherlands. Among such may be mentioned pepper, cinnamon, and other spices (largely the product of the British East Indies), Indian tea, palm kernels (mainly from British West Africa), and copra (mainly from the Straits Settlements and Australia). The direct trade of British overseas Dominions with the port of Hamburg alone is very great in normal times.

In many other instances our reexport trade for the first five months of this year shows a large decline. The following statement gives a few examples of such decreases in reexports from the United Kingdom to all destinations:

		1915 (5 months).	1914 (5 months).
Tallow, unrefined	hundredweight	190,179	378,925
Quicksilver	pounds	258,075	784,650
Machinery:			
Agricultural	tons	163	8,396
Sewing machines	No.	853	6,681
Cotton waste	pounds	205,960	469,235
Carpet and carpet rugs	square yards	58,161	181,105
Silk, thrown	pounds	656	15,582
Beef, chilled	hundredweight	3,262	274,151
Meat, preserved	do	19,531	61,009
Butter	do	19,253	66,340
Bananas	bunches	127,217	258,319
Hemp	tons	19,399	25,674
Palm oil	hundredweight	177,529	382,513
Gas oil	gallons	9,809	241,724
Fuel oil	do	169,884	515,170

Everything in the statistics I have quoted tends to show that the mercantile community of the United States has made profits proportionately equal to or greater than those of the mercantile community of Great Britain in respect to all those demands which have inevitably arisen in Scandinavia and the Netherlands as a consequence of the closing of German ports. The total volume of the trade of the United States with these countries has increased 300 per cent, as Your Excellency will see from the accompanying table, taken from the United States official Monthly Summary of Foreign Commerce, which shows the comparative value of the total exports of the United States to Scandinavian countries and the Netherlands during the first five months of 1914 and 1915. The value of the total increase in those exports during this period amounted to $145,658,000.

I have, etc.,

E. GREY.

Value of United States exports.

To—	In January–May, 1914.	In January–May, 1915.	Increase in 1915 over 1914.
Norway	$3,679,000	$22,478,000	$18,799,000
Sweden	5,875,000	52,217,000	46,342,000
Denmark	6,421,000	41,321,000	34,900,000
Netherlands	44,114,000	89,731,000	45,617,000
Total	60,089,000	205,747,000	145,658,000

The same question was the subject of a British memorandum covering the items of seizure of cargoes of meats consigned to Copenhagen sent from Chicago:

[Memorandum from the British Embassy (received at the Department of State Oct. 12, 1915).]

BRITISH EMBASSY, *Washington.*

It has been frequently suggested and sometimes actually asserted that the seizure of the cargoes consigned by the meat packers of Chicago to Copenhagen and other Scandinavian ports in the four ships which were the subject of the recent proceedings in the prize court and in the other ships in regard to which these negotiations have taken place, was a seizure effected under orders in council the validity of which is disputed by the Government of the United States, the implication being that in some way these cargoes were seized under the order in council of March 11, 1915. It seems hardly necessary to point out that this was not so. The cargoes were seized for the greater part long before March, 1915, and the ground for the seizure was that they were conditional contraband destined from the first by the packers who shipped them largely for the use of the armies, navies, and government departments of Germany and Austria, and only sent to neutral ports with the object of concealing their true destination. This is a ground for seizure which has been asserted and upheld by none more strongly than American courts and the leading American authorities on international law for over 50 years. That foodstuffs on a ship bound for enemy territory may be seized and condemned if there can be shown to be (in the words of Lord Stowell) a "highly probable" destination for military or naval use has long been a universally recognized and admitted principle of international law, and it was the American courts which first insisted upon the further principle that if that destination is shown it does not matter that the goods were found upon a ship sailing to a neutral port. In the application of this doctrine—the doctrine of continuous voyage—the British Government had acquiesced at the time of the American Civil War, and the circumstances of modern warfare, the development of international trade, and the increase in the rapidity of and the facilities for transport both by land and sea have made the doctrine the more reasonable and indeed essential if a belligerent is to be allowed to exercise at all his undoubted right of interrupting the supply of foodstuffs to his enemy's military and naval forces.

At the outbreak of the present war and up to the time when the German methods of warfare had by their reckless disregard of all the principles of law hitherto recognized and all the dictates of ordinary humanity made it necessary to adopt by way of retaliation measures calculated to cut off all German trade it was open to neutrals to continue to supply the civil population of that country openly by consignments to named merchants and dealers in Germany, and if that course had been adopted the case would have assumed a very different complexion, and it would then have been no doubt for the British Government to establish that the consignees in fact were known to be engaged in supplying the German Government. This, however, was not the course adopted by the Chicago packers. Vast quantities of lard, meat, bacon, and oils, far in excess of any possible requirements of the Scandinavian countries, were shipped to Copenhagen in part to named consignees but for the greater part to the packers' own agents or their order, and it was from the first claimed that all these consignments were shipped on or with a view to bona fide sales to neutrals. From the evidence, how-

ever, of cablegrams and letters in the possession of the British Government, which were ultimately produced in court, it was clear that the packers' agents in these neutral countries and also several of the consignees, who purported to be genuine neutral buyers, were merely persons engaged by the packers on commission or sent by the packers from their German branches for the purpose of insuring the immediate transit of these consignments to Germany. The whole scheme was disclosed in a series of letters from a Hamburg correspondent of Messrs. Cudahy, who was obviously in touch with the representatives in Hamburg and Rotterdam of practically all the packers. Agents and managers were sent from Germany to Copenhagen, where they established themselves in hotels. Two of these agents formed themselves into a Danish importing company, who had an enormous trade; the importance was emphasized of using the names of persons already in the provision trade; neutrals were induced for a consideration to lend their names as pretended consignees; careful instructions were given as to the names to be inserted in the bills of lading and other documents; and these agents kept the packers informed from time to time as to the prohibitions against export in the various neutral countries and as to the ports (including Genoa) to which it was most desirable to ship the goods. Some agents were found, on special instructions, to be moving about from place to place in Europe; and in one case the name of a German agent was in the cables changed to the innocent name of "Davis" when it was discovered that the original name was regarded as suspicious by the British censorship. The telegram showed orders given from Rotterdam for delivery to Copenhagen and Scandinavian ports, from Copenhagen for delivery to Swedish and Norwegian ports, and from Rotterdam and Copenhagen for delivery to Genoa; so that it obviously mattered little what the port of delivery was so long as it was conveniently situated for transit to Germany. Offers were, on special instructions, made in German currency for the convenience, obviously, of German buyers. There were clear indications of consultation with the packers' German houses as to the ports to which goods should be sent. A special cable code was invented, as to which, however, nothing more was disclosed than that "Arnhem" meant "ship to Copenhagen." Special and hastily devised arrangements were made for payment by the establishing of large credits in Scandinavian banks, arrangements which from the urgency of the cables connected with them were obviously no part of the ordinary course of the packers' business, and in some cases there were payments which clearly came directly or indirectly from Germany and from the Deutsche Bank. Indeed, it was stated to Messrs. Cudahy by their Hamburg correspondent that German bankers had evidently accumulated large balances in New York, Rotterdam, and Copenhagen; and as to the object of this there could be no doubt. There were indications sometimes of insurance of the goods in Germany, sometimes of precautions taken to insure in other than German companies; but, with a few unimportant exceptions, no insurance policies were produced. The Holland-America Line was seen to be refusing the packers' shipments, for it required a guarantee against reexport to Germany, which they could not give; and at an early stage the line was approached with a proposal that it should for the convenience and greater safety of the packers transfer some of its vessels to the American flag, a proposal to which it declined to accede. The consequence was that a special line was formed to engage in this trade. In spite of all this the pretense was stoutly kept up to the end that the whole business was bona fide neutral trade and that the packers had no interest beyond that of selling and consigning to neutral buyers, and it was not till the actual trial that the admission was made on behalf of some of them that a large part of the goods was probably intended to go through to Germany. And there were strong indications that it was not merely a civilian German destination which was contemplated. The German ports to which the goods were going, Hamburg, Lubeck, and Stettin, were all military or naval depots and headquarters of troops; the fat bacon, besides being of value for army rations, was, as the British Government were informed, in such demand in Germany as being the raw material of glycerine, which is the most important constituent of explosives. The meat was packed suitably for army use, and, indeed, the case of the smoked bacon and Armour's tinned boiled beef was of the kind supplied or offered to the British Army, and on the case put forward by the packers it was necessary to imagine that while engaged in supplying the armies of Great Britain, France, and Russia they had by some explicable oversight omitted to turn their attention to the opportunities for enormous profits offered by Germany and Austria. Messrs. Cudahy's Hamburg correspondent expressly stated with regard to the cargo on the four ships whose cases were tried that this information was that most of the goods had long ago been sold to Germany. He reported that Messrs. Morris's German agent was skeptical about the release of the *Alfred Nobel* cargo, as it was "too open-faced a case of the lard being intended for Germany," and that apparently this same German agent had suggested that the packers should make "a big noise" in the American press, and that the picture drawn in these frank communications was one of German agents eagerly awaiting the release of their goods and calculating the prospects of their being promptly passed through Danish and Scandinavian ports to Germany. Yet, in spite of all this, the claim was put forward and firmly maintained to the end that everything that had been done was perfectly bona fide trade, but documents which could easily have been produced had this been true were never forthcoming.

With perhaps a few minor exceptions, the packers produced no contracts, no invoices, no insurance policies, and no checks or other proof of sale or payments; their affidavits were in the most general terms and were put in at the very last moment, some of them even after the trial had begun, and no attempt was made by any written or other evidence to explain away the damning evidence of the telegrams and letters disclosed by the Crown. The inference was clear and irresistible that no such attempt could be made, and that any written evidence there was would have merely confirmed the strong suspicion, amounting to a practical certainty, that the whole of the operations of shipment to Copenhagen and other neutral ports were a mere mask to cover a determined effort to transmit vast quantities of supplies through to the German and Austrian Armies. It is claimed, therefore, that the seizure of all the cargoes was amply justified by the facts known at the time, the facts subsequently discovered and disclosed, and the conduct of the packers throughout, and that the British Government required to call in aid nothing but the long-recognized and elementary principles of international law.

41. Frequently the question has been asked whether our country has ever declared officially that the British blockade was illegal. The Lansing note of October 21, 1915, so declared. In paragraph 33 of this document the strongest possible words are employed—"that the blockade upon which such methods are partly founded is ineffective, illegal, and indefensible."

The entire note is here inserted:

THE SECRETARY OF STATE TO AMBASSADOR W. H. PAGE.

DEPARTMENT OF STATE,
Washington, October 21, 1915.

SIR: I desire that you present a note to Sir Edward Grey in the sense of the following:

(1) The Government of the United States has given careful consideration to your excellency's notes of January 7, February 10, June 22, July 23, July 31 (2), August 13, and to a note verbale of the British Embassy of August 6, relating to restrictions upon American commerce by certain measures adopted by the British Government during the present war. This Government has delayed answering the earlier of these notes in the hope that the announced purpose of His Majesty's Government "to exercise their belligerent rights with every possible consideration for the interest of neutrals" and their intention of "removing all causes of avoidable delay in dealing with American cargoes" and of causing "the least possible amount of inconvenience to persons engaged in legitimate trade," as well as their "assurances to the United States Government that they would make it their first aim to minimize the inconveniences" resulting from the "measures taken by the allied Governments," would in practice not unjustifiably infringe upon the neutral rights of American citizens engaged in trade and commerce. It is therefore a matter of regret that this hope has not been realized but that, on the contrary, interferences with American ships and cargoes destined in good faith to neutral ports and lawfully entitled to proceed have become increasingly vexatious, causing American shipowners and American merchants to complain to this Government of the failure to take steps to prevent an exercise of belligerent power in contravention of their just rights. As the measures complained of proceed directly from orders issued by the British Government, are executed by British authorities, and arouse a reasonable apprehension that if not resisted they may be carried to an extent even more injurious to American interests, this Government directs the attention of His Majesty's Government to the following considerations:

(2) Without commenting upon the statistics presented by His Majesty's Government to show that the export trade of the United States has increased in volume since the war began further than to point out that the comparative values fail to take into account the increased price of commodities resulting from a state of war or to make any allowance for the diminution in the volume of trade which the neutral countries in Europe previously had with the nations at war, a diminution which compelled them to buy in other markets, I will pass directly to the matters which constitute the specific complaints of this Government.

(3) First. The detentions of American vessels and cargoes which have taken place since the opening of hostilities have, it is presumed, been pursuant to the enforcement of the orders in council, which were issued on August 20 and October 29, 1914, and March 11, 1915, and relate to contraband traffic and to the interception of trade to and from Germany and Austria-Hungary. In practice these detentions have not been uniformly based on proofs obtained at the time of seizure, but many vessels have been detained while search was made for evidence of the contraband character of cargoes or of an intention to evade the noninter-course measures of Great Britain. The question, consequently, has been one of evidence to support a belief of—in many cases a bare suspicion of—enemy destination, or occasionally of enemy origin of the goods involved. Whether this evidence should be obtained by search at sea before the vessel or cargo is taken into port, and what the character of the evidence should be, which is necessary to justify the detention, are the points to which I direct your excellency's attention.

(4) In regard to search at sea an examination of the instructions issued to naval commanders of the United States, Great Britain, Russia, Japan, Spain, Germany, and France from 1888 to the beginning of the present war shows that search in port was not contemplated by the Government of any of these countries. On the contrary, the context of the respective instructions shows that search at sea was the procedure expected to be followed by the commanders. All of these instructions impress upon the naval officers the necessity of acting with the utmost moderation—and in some cases commanders are specifically instructed—in exercising the right of visit and search, to avoid undue deviation of the vessel from her course.

(5) An examination of the opinions of the most eminent text writers on the laws of nations shows that they give practically no consideration to the question of search in port, outside of examination in the course of regular prize-court proceedings.

(6) The assertion by His Majesty's Government that the position of the United States in relation to search at sea is inconsistent with its practice during the American Civil War is based upon a misconception. Irregularities there may have been at the beginning of that war, but a careful search of the records of this Government as to the practice of its commanders shows conclusively that there were no instances when vessels were brought into port for search prior to instituting prize court proceedings, or that captures were made upon other grounds than in the words of the American note of November 7, 1914, "evidence found on the ship under investigation and not upon circumstances ascertained from external sources." A copy of the instruction issued to American naval officers on August 18, 1862, for their guidance during the Civil War is appended.

(7) The British contention that "modern conditions" justify bringing vessels into port for search is based upon the size and seaworthiness of modern carriers of commerce and the difficulty of uncovering the real transaction in the intricate trade operations of the present day. It is believed that commercial transactions of the present time, hampered as they are by censorship of telegraph and postal communication on the part of belligerents, are essentially no more complex and disguised than in the wars of recent years, during which the practice of obtaining evi- vessels were brought into port for search prior to instituting prize-proceedings was not adopted. The effect of the size and seaworthiness of merchant vessels upon their search at sea has been submitted to a board of naval experts, which reports that—

"At no period in history has it been considered necessary to remove every package of a ship's cargo to establish the character and nature of her trade or the service on which she is bound, nor is such removal necessary. * * *

"The facilities for boarding and inspection of modern ships are in fact greater than in former times, and no difference, so far as the necessities of the case are concerned, can be seen between the search of a ship of 1,000 tons and one of 20,000 tons—except possibly a difference in time—for the purpose of establishing fully the character of her cargo and the nature of her service and destination. * * *

This method would be a direct aid to the belligerents concerned in that it would release a belligerent vessel overhauling the neutral from its duty of search and set it free for further belligerent operations."

(8) Turning to the character and sufficiency of the evidence of the contraband nature of shipments to warrant the detention of a suspected vessel or cargo for prize proceedings, it will be recalled that when a vessel is brought in for adjudication courts of prize have heretofore been bound by well-established and long-settled practice to consider at the first hearing only the ship's papers and documents, and the goods found on board, together with the written replies of the officers and seamen to standing interrogatories taken under oath, alone and separately, as soon as possible and without communication with or instruction by counsel, in order to avoid possibility of corruption and fraud.

(9) Additional evidence was not allowed to be introduced except upon an order of the court for "further proof," and then only after the cause had been fully heard upon the facts already in evidence or when this evidence furnished a ground for prosecuting the injury further. This was the practice of the United States courts during the War of 1812, the American Civil War, and the Spanish-American War, as is evidenced by the reported decisions of those courts, and has been the practice of the British prize courts for over a century. This practice has been changed by the British prize court rules adopted for the present war by the order in council of August 5. Under these new rules there is no longer a "first hearing" on the evidence derived from the ship, and the prize court is no longer precluded from receiving extrinsic evidence for which a suggestion has not been laid in the preparatory evidence. The result is, as pointed out above, that innocent vessels or cargoes are now seized and detained on mere suspicion while efforts are made to obtain evidence from extraneous sources to justify the detention and the commencement of prize proceedings. The effect of this new procedure is to subject traders to risk of loss, delay, and expense so great and so burdensome as practically to destroy much of the export trade of the United States to neutral countries of Europe.

(10) In order to place the responsibility for the delays of vessels and cargoes upon American claimants, the order in council of October 29, 1914, as pointed out in the British note of February 10, seeks to place the burden of proof as to the noncontraband character of the goods upon the claimant in cases where the goods are consigned "to order" or the consignee is not named or the consignee is within enemy territory. Without admitting that the onus probandi can rightfully be made to rest upon the claimant in these cases, it is sufficient for the purposes of this note to point out that the three classes of cases indicated in the order in council of October 29 apply to only a few of the many seizures or detentions which have actually been made by British authorities.

(11) The British contention that in the American Civil War the captor was allowed to establish enemy destination by "all the evidence at his disposal," citing the *Bermuda* case (3 Wall., 515), is not borne out by the facts of that case. The case of the *Bermuda* was one of "further proof," a proceeding not to determine whether the vessel should be detained and placed in a prize court, but whether the vessel, having been placed in prize court, should be restored or condemned. The same ruling was made in the case of the *Sir William Peel* (5 Wall., 517). These cases, therefore, can not be properly cited as supporting the course of a British captor in taking a vessel into port, there to obtain extrinsic evidence to justify him in detaining the vessel for prize proceedings.

(12) The further contention that the greatly increased imports of neutral countries adjoining Great Britain's enemies raise a presumption that certain commodities, such as cotton, rubber, and others more or less useful for military purposes, though destined for those countries, are intended for reexportation to the belligerents, who can not import them directly, and that this fact justifies the detention for the purpose of examination of all vessels bound for the ports of those neutral countries, notwithstanding the fact that most of the articles of trade have been placed on the embargo lists of those countries, can not be accepted as laying down a just or legal rule of evidence. Such a presumption is too remote from the facts and offers too great opportunity for abuse by the belligerent, who could, if the rule were adopted, entirely ignore neutral rights on the high seas and prey with impunity upon neutral commerce. To such a rule of legal presumption this Government can not accede, as it is opposed to those fundamental principles of justice which are the foundation of the jurisprudence of the United States and Great Britain.

(13) Before passing from the discussion of this contention as to the presumption raised by increased importations to neutral countries, this Government directs attention to the fact that His Majesty's Government admit that the British exports to those countries have also materially increased since the present war began. Thus Great Britain concededly shares in creating a condition which is relied upon as a sufficient ground to justify the interception of American goods destined to neutral European ports. If British exports to those ports should be still further increased, it is obvious that, under the rule of evidence contended for by the British Government, the presumption of enemy destination could be applied to a greater number of American cargoes, and American trade would suffer to the extent that British trade benefited by the increase. Great Britain can not expect the United States to submit to such manifest injustice or to permit the rights of its citizens to be so seriously impaired.

(14) When goods are clearly intended to become incorporated in the mass of merchandise for sale in a neutral country, it is an unwarranted and inquisitorial proceeding to detain shipments for examination as to whether those goods are ultimately destined for the enemy's country or use. Whatever may be the conjectural conclusions to be drawn from trade statistics, which, when stated by value, are of uncertain evidence as to quantity, the United States maintains the right to sell goods into the general stock of a neutral country, and denounces as illegal and unjustifiable any attempt of a belligerent to interfere with that right on the ground that it suspects that the previous supply of such goods in the neutral country, which the imports renew or replace, has been sold to an enemy. That is a matter with which the neutral vendor has no concern and which can in no way affect his rights of trade. Moreover, even if goods listed as conditional contraband are destined to an enemy country through a neutral country, that fact is not in itself sufficient to justify their seizure.

(15) In view of these considerations, the United States, reiterating its position in this matter, has no other course but to contest seizures of vessels at sea upon conjectural suspicion, and the practice of bringing them into port for the purpose, by search or otherwise, of obtaining evidence, for the purpose of justifying prize proceedings, of the carriage of contraband, or of breaches of the order in council of March 11. Relying upon the regard of the British Government for the principles of justice so frequently and uniformly manifested prior to the present war, this Government anticipates that the British Government will instruct their officers to refrain from these vexatious and illegal practices.

(16) Second. The Government of the United States further desires to direct particular attention to the so-called "blockade" measures imposed by the order in council of March 11. The British note of July 23, 1915, appears to confirm the intention indicated in the note of March 15, 1915, to establish a blockade so extensive as to prohibit trade with Germany or Austria-Hungary, even through the ports of neutral countries adjacent to them. Great Britain, however, admits that it should not, and gives assurances that it will not, interfere with trade with the countries contiguous to the territories of the enemies of Great Britain. Nevertheless, after over six months' application of the "blockade" order, the experience of American citizens has convinced the Government of the United States that Great Britain has been unsuccessful in her efforts to distinguish between enemy and neutral trade. Arrangements have been made to create in these neutral countries special consignees, or consignment corporations, with power to refuse shipments and to determine when the state of the country's resources requires the importation of new commodities. American commercial interests are hampered by the intricacies of these arrangements, and many American citizens justly complain that their bona fide trade with neutral countries is greatly reduced as a consequence, while others assert that their neutral trade, which amounted annually to a large sum, has been entirely interrupted.

(17) It makes this practice even more harrassing to neutral traders that the British authorities require a consignor to prove that his shipments are not bound to an enemy of Great Britain, even when the articles are on the embargo list of the neutral country to which they are destined, and that notwithstanding the assertion in the last British note that interference with such trade by a belligerent can only take place "proveded, of course, that he (the belligerent) can establish" that the commerce is with the enemy.

(18) While the United States Government was at first inclined to view with leniency the British measures which were termed in the correspondence but not in the order in council of March 11 a "blockade," because of the assurances of the British Government that inconvenience to neutral trade would be minimized by the discretion left to the courts in the application of the order in council and by the instructions which it was said would be issued to the administrative and other authorities having to do with the execution of the so-called "blockade" measures, this Government is now forced to the realization that its expectations, which were fully set forth in its note of March 30, were based on a misconception of the intentions of the British Government. Desiring to avoid controversy and in the expectation that the administration of the order in council would conform to the established rules of international law, this Government has until now reserved the question of the actual validity of the order in council of March 11, in so far as it is considered by the Government of Great Britain to establish a blockade within the meaning of that term as understood in the law and the practice of nations; but in the circumstances now developed it feels that it can no longer permit the validity of the alleged blockade to remain unchallenged.

(19) The declaration of Paris in 1856, which has been universally recognized as correctly stating the rule of international law as to blockade, expressly declares that "blockades, in order to be binding, must be effective; that is to say, maintained by force sufficient really to prevent access to the coast of the enemy." The effectiveness of a blockade is manifestly a question of fact. It is common knowledge that the German coasts are open to trade with the Scandinavian countries and that German naval vessels cruise both in the North Sea and the Baltic and seize and bring into German ports neutral vessels bound for Scandinavian and Danish ports. Furthermore, from the recent placing of cotton on the British list of contraband of war, it appears that the British Government have themselves been forced to the conclusion that the blockade is ineffecive to prevent shipments of cotton from reaching their enemies, or else that they are doubtful as to the legality of the form of blockade which they have sought to maintain.

(20) Moreover, it is an essential principle which has been universally accepted that a blockade must apply impartially to the ships of all nations. This was set forth in the declaration of London, is found in the prize rules of Germany, France, and Japan, and has long been admitted as a basic principle of the law of blockade. This principle, however, is not applied in the present British "blockade," for, as above indicated, German ports are notoriously open to traffic with the ports of Denmark, Norway, and Sweden. So strictly has this principle been enforced in the past that in the Crimean War the judicial committee of the privy council on appeal laid down that if belligerents themselves trade with blockaded ports they can not be regarded as effectively blockaded. (*The Franciska*, Moore P. C., 56.) This decision has special significance at the present time, since it is a matter of common knowledge that Great Britain exports and reexports large quantities of merchandise to Norway, Sweden, Denmark, and Holland, whose ports, so far as American commerce is concerned, she regards as blockaded. In fact, the British note of August 13 itself indicates that the British exports of many articles, such as cotton, lubricating oil, tobacco, cocoa, coffee, rice, wheat flour, barley, spices, tea, copra, etc., to these countries have greatly exceeded the British exports of the same articles for the corresponding period of 1914. The note also shows that there has been an important British trade with these countries in many other articles, such as machinery, beef, butter, cotton waste, etc.

(21) Finally, there is no better settled principle of the law of nations than that which forbids the blockade of neutral ports in time of war. The declaration of London, though not regarded as binding upon the signatories because not ratified by them, has been expressly adopted by the British Government without modification as to blockade in the British order in council of October 29, 1914. Article 18 of the declaration declares specifically that "the blockading forces must not bar access to neutral ports or coasts." This is, in the opinion of this Government, a correct statement of the universally accepted law as it exists to-day and as it existed prior to the declaration of London. The meaning of this statement is elucidated by Mr. Renault in the report of the drafting committee upon the convention, in which he states:

"This rule has been thought necessary the better to protect the commercial interests of neutral countries; it completes article 1, according to which a blockade must not extend beyond the ports and coasts of the enemy, which implies that as it is an operation of war it must not be directed against a neutral port, in spite of the importance to a belligerent of the part played by that port in supplying his adversary."

As the conference assembled at London upon the invitation of the British Government, it is important to recall the instruction of Sir Edward Grey to the British delegates, "setting out the views of His

Majesty's Government, founded on the decisions of the British courts," in which he says:

"A blockade must be confined to the ports and coast of the enemy, but it may be instituted of one port or of several ports or of the whole of the seaboard of the enemy. It may be instituted to prevent the ingress only or egress only, or both."

He added:

"Where the ship does not intend to proceed to the blockaded port the fact that goods on board are to be sent on by sea or by inland transport is no ground for condemnation."

In support of this announcement Sir Edward Grey referred to several decisions of British prize courts, among which an early one of 1801 held that goods shipped from London to Emden, thence inland or by canal to Amsterdam, then blockaded by sea, were not subject to condemnation for breach of blockade. (*Jonge Pieter*, 4 C. R., 79.) This has been the rule for a century, so that it is scarcely necessary to recall that the *Matamoras* cases, well known to the British Government, support the same rule, that neutral ports may not be blockaded, though "trade with unrestricted inland commerce between such a port and the enemy's territory impairs undoubtedly, and very seriously impairs, the value of a blockade of the enemy's coast."

(22) Without mentioning the other customary elements of a regularly imposed blockade, such as notification of the particular coast line invested, the imposition of the penalty of confiscation, etc., which are lacking in the present British "blockade" policy, it need only be pointed out that, measured by the three universally conceded tests above set forth, the present British measures can not be regarded as constituting a blockade in law, in practice, or in effect.

(23) It is incumbent upon the United States Government, therefore, to give the British Government notice that the blockade, which they claim to have instituted under the order in council of March 11, can not be recognized as a legal blockade by the United States.

(24) Since the Government of Great Britain has laid much emphasis on the ruling of the Supreme Court of the United States in the *Springbok* case, that goods of contraband character seized while going to the neutral port of Nassau, though actually bound for the blockaded ports of the South, were subject to condemnation, it is not inappropriate to direct attention to the British view of this case in England prior to the present war, as expressed by Sir Edward Grey in his instructions to the British delegates to the London Conference in 1908:

"It is exceedingly doubtful whether the decision of the Supreme Court was in reality meant to cover a case of blockade running in which no question of contraband arose. Certainly if such was the intention the decision would pro tanto be in conflict with the practice of the British courts. His Majesty's Government sees no reason for departing from that practice, and you should endeavor to obtain general recognition of its correctness."

It may be pointed out also that the circumstances surrounding the *Springbok* case were essentially different from those of the present day, to which the rule laid down in that case is sought to be applied. When the *Springbok* case arose the ports of the Confederate States were effectively blockaded by the naval forces of the United States, though no neutral ports were closed, and a continuous voyage through a neutral port required an all-sea voyage terminating in an attempt to pass the blockading squadron.

(25) Third. It appears to be the position of Great Britain that if, as the United States alleges, American citizens or American interests are directly and adversely affected by the British policies of contraband and nonintercourse, resulting in interference with ships and cargoes, they should seek redress in the prize courts which the British Government have established, and that, pending the exhaustion of such legal remedies with the result of a denial of justice, the British Government "can not continue to deal through the diplomatic channels with the individual cases."

(26) It is declared that this was the course followed by the United States during the American Civil War and the Spanish War, and that both countries have supported the practice by allowing their prize-court decisions, when shown to be unjust or inadequate, to be reviewed by an international tribunal, as was done under the treaties of 1794 and 1871. The ground upon which this contention is put forth, and the results which would follow, if the course of procedure suggested were accepted, give the impression that His Majesty's Government do not rely upon its soundness or strength. Nevertheless, since it has been advanced, I can not refrain from presenting certain considerations which will show that the proposed course embodies the form rather than the substance of redress. The cases which the British Government would have claimants present to their prize courts are essentially different from cases arising wholly within the jurisdiction of a foreign country. They result from acts committed by the British naval authorities upon the high seas, where the jurisdiction over neutral vessels is acquired solely by international law. Vessels of foreign nationality, flying a neutral flag and finding their protection in the country of that flag, are seized without facts warranting a reasonable suspicion that they are destined to blockaded ports of the enemy or that their cargoes are contraband, although the possession of such facts is by international law essential to render a seizure legal. The officers appear to find their justification in the orders in council and regulations of the British Government, in spite of the fact that in many of the present cases the orders in council and the regulations for their enforcement are themselves complained of by claimants as contrary to international law. Yet the very courts which, it is said, are to dispense justice to dissatisfied claimants, are bound by orders in council. This is unmistakably indicated to be the case in the British note of July 31, which states that—

"British prize courts 'according to the ancient form of commission under which they sit are to determine cases according to the course of admiralty and the law of nations and the statutes, rules, and regulations for the time being in force in that behalf.'"

This principle, the note adds, has recently been announced and adhered to by the British prize court in the case of the *Zamora*. It is manifest, therefore, that if prize courts are bound by the laws and regulations under which seizures and detentions are made, and which claimants allege are in contravention of the law of nations, those courts are powerless to pass upon the real ground of complaint or to give redress for wrongs of this nature. Nevertheless, it is seriously suggested that claimants are free to request the prize court to rule upon a claim of conflict between an order in council and a rule of international law. How can a tribunal, fetered in its jurisdiction and procedure by municipal enactments, declare itself emancipated from their restrictions and at liberty to apply the rules of international law with freedom? The very laws and regulations which bind the court are now matters of dispute between the Government of the United States and that of His Britannic Majesty. If Great Britain followed, as she declares that she did, the course of first referring claimants to local remedies in cases arising out of American wars, it is presumed that she did so because of her knowledge or understanding that the United States had not sought to limit the jurisdiction of its courts of prize by instructions and regulations violative of the law and practice of nations or open to such objection.

(27) The British note of February 10 states that the British Government of the American Civil War, "in spite or remonstrances from many quarters, placed full reliance on the American prize courts to grant redress to the parties interested in cases of alleged wrongful capture by American ships of war and put forward no claim until the opportunity for redress in those courts had been exhausted."

The Government of the United States recalls that during the progress of that war Great Britain, in several instances, demanded through diplomatic channels damages for seizures and detentions of British ships alleged to have been made without legal justification. Among these may be mentioned the cases of the *Magicienne*, the *Don Jose*, the *Labuan*, and the *Saxon*. Two of these cases were, at the time the demands were made, before American prize courts for adjudication. It is understood also that during the Boer War, when British authorities seized the German vessels, the *Hertzog*, the *General*, and the *Bundesrath*, and released them without prize proceedings, compensation for damages suffered was arranged through diplomatic channels.

(28) There is, furthermore, a real and far-reaching injury for which prize courts offer no means of reparation. It is the disastrous effect of the methods of the allied Governments upon the general right of the United States to enjoy its international trade free from unusual and arbitrary limitations imposed by belligerent nations. Unwarranted delay and expense in bringing vessels into port for search and investigation upon mere suspicion has a deterrent effect upon trade ventures, however lawful they may be, which can not be adequately measured in damages. The menace of interference with legal commerce causes vessels to be withdrawn from their usual trade routes and insurance on vessels and cargoes to be refused, while exporters for the same reason are unable or unwilling to send their goods to foreign markets, and importers dare not buy commodities abroad because of fear of their illegal seizure or because they are unable to procure transportation. For such injuries there can be no remedy through the medium of courts established to adjust claims for goods detained or condemned. For specific injuries suffered by private interests prize courts, if they are free to apply the law of nations, might mete out an adequate indemnity, but for the injury to the trade of a nation by the menace of unwarranted interference with its lawful and established pursuit there can manifestly be found no remedy in the prize courts of Great Britain, to which United States citizens are referred for redress.

(29) There is another ground why American citizens can not submit their wrongs arising out of undue detentions and seizures to British prize courts for reparation which I can not pass over unnoticed. It is the manner in which British courts obtain jurisdiction of such cases. The jurisdiction over merchant vessels on the high seas is that of the nation whose flag it rightfully flies. This is a principle of the law and practice of nations fundamental to the freedom of the high seas. Municipal enactments of a belligerent power can not confer jurisdiction over or establish rules of evidence governing the legality of seizures of vessels of neutral nationality on the high seas. International law alone controls the exercise of the belligerent right to seize and detain such vessels. Municipal laws and regulations in violation of the international rights of another nation can not be extended to the vessels of the latter on the high seas so as to justify a belligerent nation bringing them into its ports, and, having illegally brought them within its territorial jurisdiction, compelling them to submit to the domestic laws and regulations of that nation. Jurisdiction obtained in such a manner is contrary to those principles of justice and equity which all nations should respect. Such practice should invalidate any disposition by a municipal court of property thus brought before it. The Government of the United States has, therefore, viewed with surprise and concern the attempt of His Majesty's Government to confer upon the British prize courts jurisdiction by this illegal exercise of force in order that these courts may apply to vessels and cargoes of neutral nationalities, seized on the high seas, municipal laws and orders which can only rightfully be enforceable within the territorial waters of Great Britain or against vessels of British nationality when on the high seas.

(30) In these circumstances the United States Government feels that it can not reasonably be expected to advise its citizens to seek redress before tribunals which are, in its opinion, unauthorized by the unrestricted application of international law to grant reparation, nor to refrain from presenting their claims directly to the British Government through diplomatic channels.

(31) This Government is advised that vessels and cargoes brought in for examination prior to prize proceedings are released only upon condition that costs and expenses incurred in the course of such unwarranted procedure, such as pilotage, wharfage, demurrage, harbor dues, warehousage, unlading costs, etc., be paid by the claimants or on condition that they sign a waiver of right to bring subsequent claims against the British Government for these exactions. This Government is loath to believe that such ungenerous treatment will continue to be accorded American citizens by the Government of His Britannic Majesty; but in order that the position of the United States Government may be clearly understood, I take this opportunity to inform your excellency that this Government denies that the charges incident to such detentions are rightfully imposed upon innocent trade or that any waiver of indemnity exacted from American citizens under such conditions of duress can preclude them from obtaining redress through diplomatic channels or by whatever other means may be open to them.

(32) Before closing this note, in which frequent reference is made to contraband traffic and contraband articles, it is necessary, in order to avoid possible misconstruction, that it should be clearly understood by His Majesty's Government that there is no intention in this discussion to commit the Government of the United States to a policy of waiving any objections which it may entertain as to the propriety and right of the British Government to include in their list of contraband of war certain articles which have been so included. The United States Government reserves the right to make this matter the subject of a communication to His Majesty's Government at a later day.

(33) I believe it has been conclusively shown that the methods sought to be employed by Great Britain to obtain and use evidence of enemy destination of cargoes bound for neutral ports and to impose a contraband character upon such cargoes are without justification; that the blockade, upon which such methods are partly founded, is ineffective, illegal, and indefensible; that the judicial procedure offered as a means of reparation for an international injury is inherently defective for the purpose; and that in many cases jurisdiction is asserted in violation of the law of nations. The United States, therefore, can

not submit to the curtailment of its neutral rights by these measures, which are admittedly retaliatory, and therefore illegal, in conception and in nature, and intended to punish the enemies of Great Britain for alleged illegalities on their part. The United States might not be in a position to object to them if its interests and the interests of all neutrals were unaffected by them, but, being affected, it can not with complacence suffer further subordination of its rights and interests to the plea that the exceptional geographic position of the enemies of Great Britain require or justify oppressive and illegal practices.

(34) The Government of the United States desires, therefore, to impress most earnestly upon His Majesty's Government that it must insist that the relations between it and His Majesty's Government be governed, not by a policy of expediency but by those established rules of international conduct upon which Great Britain in the past has held the United States to account when the latter nation was a belligerent engaged in a struggle for national existence. It is of the highest importance to neutrals not only of the present day but of the future that the principles of international right be maintained unimpaired.

(35) This task of championing the integrity of neutral rights, which have received the sanction of the civilized world against the lawless conduct of belligerents arising out of the bitterness of the great conflict which is now wasting the countries of Europe, the United States unhesitatingly assumes, and to the accomplishment of that task it will devote its energies, exercising always that impartiality which from the outbreak of the war it has sought to exercise in its relations with the warring nations.

I inclose as supplements to this instruction the United States Navy order of August 18, 1862, and a statement regarding vessels detained by British authorities. These two documents should be transmitted as inclosures in your note to Sir Edward Grey.

I am, etc.,

ROBERT LANSING.

The reference in the note to our instructions to our naval authorities in the Civil War is that of August 18, 1862, which is as follows:

INSTRUCTIONS OF THE SECRETARY OF THE NAVY TO FLAG OFFICERS COMMANDING SQUADRONS AND OFFICERS COMMANDING CRUISERS RELATIVE TO THE RIGHT OF SEARCH.

NAVY DEPARTMENT, *August 18, 1862.*

SIR: Some recent occurrences in the capture of vessels, and matters pertaining to the blockade, render it necessary that there should be a recapitulation of the instructions heretofore from time to time given, and also of the restrictions and precautions to be observed by our squadrons and cruisers.

It is essential, in the remarkable contest now waging, that we should exercise great forbearance, with great firmness, and manifest to the world that it is the intention of our Government, while asserting and maintaining our own rights, to respect and scrupulously regard the rights of others. It is in this view that the following instructions are explicitly given:

First. That you will exercise constant vigilance to prevent supplies of arms, munitions, and contraband of war from being conveyed to the insurgents, but that under no circumstances will you seize any vessel within the waters of a friendly nation.

Second. That, while diligently exercising the right of visitation on all suspected vessels, you are in no case authorized to chase and fire at a foreign vessel without showing your colors and giving her the customary preliminary notice of a desire to speak and visit her.

Third. That when that visit is made, the vessel is not then to be seized without a search carefully made, so far as to render it reasonable to believe that she is engaged in carrying contraband of war for or to the insurgents, and to their ports directly or indirectly by transshipment, or otherwise violating the blockade; and that if, after visitation and search, it shall appear to your satisfaction that she is in good faith and without contraband, actually bound and passing from one friendly or so-called neutral port to another, and not bound or proceeding to or from a port in the possession of the insurgents, then she can not be lawfully seized.

Fourth. That, to avoid difficulty and error in relation to papers which strictly belong to the captured vessel, and mails that are carried, or parcels under official seals, you will, in the words of the law, "preserve all the papers and writings found on board and transmit the whole of the originals unmutilated to the judge of the district to which such prize is ordered to proceed"; but official seals, or locks, or fastenings of foreign authorities are in no case, nor on any pretext, to be broken, or parcels covered by them read by any naval authorities, but all bags or other things covering such parcels, and duly sealed and fastened by foreign authorities, will be, in the discretion of the United States officer to whom they may come delivered to the consul, commanding naval officer, or legation of the foreign Government, to be opened, upon the understanding that whatever is contraband or important as evidence concerning the character of a captured vessel will be remitted to the prize court, or to the Secretary of State at Washington, or such sealed bag or parcels may be at once forwarded to this department, to the end that the proper authorities of the foreign Government may receive the same without delay.

You are specially informed that the fact that a suspicious vessel has been indicated to you as cruising in any limit which has been prescribed by this department does not in any way authorize you to depart from the practice of the rules of visitation, search, and capture prescribed by the law of nations.

Very respectfully,

GIDEON WELLES,
Secretary of the Navy.

The famous *Zamora* case referred to in the October 21 note, which virtually declared orders in council in contravention of international law as invalid and which virtually conceded our position as held from the beginning, is printed in the April number of the American Journal of International Law, and is too long to insert here. All students of this controversy should study that decision.

October 28, just seven days after our famous note, the British Government announced another order in council, known as the "Declaration of London Order in Council."

AMBASSADOR W. H. PAGE TO THE SECRETARY OF STATE.

[Telegram.]

AMERICAN EMBASSY,
London, October 28, 1915.

Following is text of order in council, dated October 20, 1915:

"Whereas by the Declaration of London Order in Council No. 2, 1914, His Majesty was pleased to declare that during the present hostilities the provisions of the said Declaration of London should, subject to certain exceptions and modifications therein specified, be adopted and put in force by His Majesty's Government; and

"Whereas by article 57 of the said declaration it is provided that the neutral or enemy character of a vessel is determined by the flag which she is entitled to fly; and

"Whereas it is no longer expedient to adopt the said article:

"Now, therefore, His Majesty, by and with the advice of his privy council, is pleased to order, and it is hereby ordered, that from and after this date article 57 of the Declaration of London shall cease to be adopted and put in force.

"In lieu of the said article, British prize courts shall apply the rules and principles formerly observed in such courts.

"This order may be cited as 'The Declaration of London Order in Council, 1915.'

"And the lords commissioners of His Majesty's Treasury, the lords commissioners of the Admiralty, and each of His Majesty's principal secretaries of state, the president of the probate, divorce, and admiralty division of the high court of justice, all other judges of His Majesty's prize courts, and all governors, officers, and authorities whom it may concern, are to give the necessary directions herein as to them may respectively appertain."

PAGE.

Further requisition orders were issued on November 9, 1915, touching the carriage of foodstuffs:

[Inclosure.]

[Extract from the second supplement to the London Gazette of Tuesday, November 9, 1915.]

REQUISITION OF SHIPS (CARRIAGE OF FOODSTUFFS)—ORDER IN COUNCIL, 1915.

At the Court at Buckingham Palace, the 10th day of November, 1915.

Present: The King's most excellent majesty in council.

Whereas a state of war exists between His Majesty and the German Emperor, the Emperor of Austria King of Hungary, the Sultan of Turkey, and the King of the Bulgarians;

And whereas His Majesty holds it to be his prerogative duty as well as his prerogative right to take all steps necessary for the defense and protection of the realm;

And whereas it has been made to appear to His Majesty that it is essential to the defense and protection of the realm that all British ships registered in the United Kingdom should be made liable to requisition in manner hereinafter appearing for the carriage of foodstuffs and of any other articles of commerce:

Now, therefore, His Majesty is pleased, by and with the advice of his Privy Council, and in exercise of his prerogatives as aforesaid and of all other powers him thereunto enabling, to order, and it is hereby ordered, that any British ship registered in the United Kingdom may until further order be requisitioned by and on behalf of His Majesty for the carriage of foodstuffs and of any other articles of commerce, and such requisition is to take effect upon notice of requisition being served as hereinafter provided on the owner of any such ship;

And His Majesty is further pleased, by and with the advice aforesaid, to authorize and direct the president of the board of trade to give effect to this order by causing notice of requisition to be served on the owner of any such ship;

And His Majesty is further pleased, by and with the advice aforesaid, to declare that service of notice of requisition on an owner shall be deemed sufficient and effective if served in the case of an individual owner by being addressed to such individual owner and left at his last-known place of business or abode, and in the case of joint owners by being addressed to such joint owners and left at the last-known business addresses or places of abode of such joint owners, and in the case of a company or corporation by being addressed to such company or corporation and left at the registered or other address of such company or corporation, or in any of the aforesaid cases by being addressed to the managing owner, ship's husband, or other the person to whom the management of the ship is by law intrusted by or on behalf of the owners, and left at the registered or other last-known address or place of abode of such managing owner, ship's husband, or other such person, as the case may be.

And His Majesty is further pleased, by and with the advice aforesaid, to declare that any notice of requisition which the president of the board of trade may cause to be served hereunder may be signed by any person or persons from time to time authorized for such purpose, either generally or specially by the president of the board of trade.

And the president of the board of trade is to give instructions and directions accordingly.

ALMERIC FITZROY.

—

[Inclosure 2.]

[Extract from the second supplement to the London Gazette of Tuesday, Nov. 9, 1915.]

CARRIAGE OF CARGOES ON BRITISH VESSELS BETWEEN FOREIGN PORTS—ORDER IN COUNCIL.

At the court at Buckingham Palace, the 10th day of November, 1915.

Present: The King's most excellent majesty in council.

Whereas a state of war exists between His Majesty and the German Emperor, the Emperor of Austria, King of Hungary, the Sultan of Turkey, and the King of the Bulgarians; and

Whereas His Majesty holds it to be his prerogative duty as well as his prerogative right to take all steps necessary for the defense and protection of the realm; and

Whereas it has been made to appear to His Majesty that it is essential to the defense and protection of the realm that, in the exercise of his prerogatives as aforesaid, he should prohibit, as from and after the 1st day of December, 1915, the carrying of cargo from any foreign port to any other foreign port by any British steamship registered in the United Kingdom exceeding 500 tons gross tonnage—and whether or not such ship while carrying such cargo calls at any intermediate port within His Majesty's dominions—unless the owner or charterer of such steamship has been granted exemption by license as hereinafter provided: Now, therefore,

His Majesty is pleased, by and with the advice of his Privy Council, and in exercise of his prerogatives as aforesaid, and of all other powers him thereunto enabling, to order, and it is hereby ordered, that from and after the 1st day of December, 1915, no British steamship registered in the United Kingdom exceeding 500 tons gross tonnage shall carry any cargo from any foreign port to any other foreign port—and whether or not such ship while carrying such cargo calls at any intermediate port within His Majesty's dominions—unless the owner or charterer of such steamship has been granted exemption by license as hereinafter provided.

And His Majesty doth hereby declare that the expression "foreign port" herein used shall mean and include any port outside His Majesty's dominions.

And His Majesty, by and with the advice aforesaid, and in exercise of his prerogatives and powers as aforesaid, is further pleased to authorize and direct the president of the board of trade to appoint a committee of persons to carry out and give effect to the provisions hereof, and that the said committee shall have power to grant licenses of exemption therefrom to or in favor of owners or charterers of such steamships as aforesaid, which licenses may be general in reference to classes of ships or their voyages or special.

And His Majesty is further pleased to authorize the president of the board of trade from time to time to add other persons as members of such committee, and to substitute as members thereof other persons for such members as may from time to time die, resign, or be or become incapable of acting thereon.

And the president of the board of trade is to act and to give instructions and directions accordingly.

ALMERIC FITZROY.

In the beginning of the year 1916 Great Britain extended her restrictions of commerce on the sea by a proposed black list, called "The enemy trading act."

AMBASSADOR W. H. PAGE TO THE SECRETARY OF STATE.

[Telegram.]

AMERICAN EMBASSY,
London, January 19, 1916.

Trading with the enemy (extension of powers) act, 1915: An act is provide for the extension of the restrictions relating to trading with the enemy to persons to whom, though not residents or carrying on business in enemy territory, it is by reason of their enemy nationality or enemy associations expedient to extend such restrictions (23d December, 1915). Be it enacted by the King's Most Excellent Majesty, by and with the advice and consent of the Lords spiritual and temporal and Commons in this present Parliament assembled, and by the authority of the same, as follows:

1. (1) His Majesty may by proclamation prohibit all persons or bodies of persons, incorporated or unincorporated, resident, carrying on business, or being in the United Kingdom, from trading with any persons or bodies of persons not resident or carrying on business in enemy territory or in territory in the occupation of the enemy (other than persons or bodies of persons, incorporated or unincorporated, residing or carrying on business solely within His Majesty's dominions), wherever by reason of the enemy nationality or enemy association of such persons or bodies of persons, incorporated or unincorporated, it appears to His Majesty expedient so to do; and if any person acts in contravention of any such proclamation he shall be guilty of a misdemeanor, triable and punishable in like manner as the offense of trading with the enemy; (2) any list of persons and bodies of persons, incorporated or unincorporated, with whom such trading is prohibited by a proclamation under this act, may be varied or added to by an order made by the Lords of the Council on the recommendation of a secretary of state; (3) the provisions of the trading with the enemy acts, 1914 and 1915, and of the customs (war powers) (No. 2) act, 1915, and all other enactments relating to trading with the enemy shall, subject to such exceptions and adaptations as may be prescribed by order in council, apply in respect of such persons and bodies of persons as aforesaid, as if for references therein to trading with the enemy there were substituted references to trading with such persons and bodies of persons as aforesaid, and for references to enemies there were substituted references to such persons and bodies of persons as aforesaid, and for references to offences under the trading with the enemy acts, 1914 and 1915, or any of those acts there were substituted references to offences under this act; (4) for the purpose of this act a person shall be deemed to have traded with a person or body of persons to whom a proclamation issued under this act applies if he enters into any transaction or does any act with, to, on behalf of, or for the benefit of such a person or body of persons, which, if entered into or done with, to, on behalf of, or for the benefit of an enemy, would be trading with the enemy.

2. This act may be cited as the trading with the enemy (extension of powers) act, 1915.

PAGE.

Six days later, January 25, our Government warned against acts "pregnant with possibilities of undue interference with American trade," and reserved the right to make protest:

THE SECRETARY OF STATE TO AMBASSADOR W. H. PAGE.

[Telegram.]

DEPARTMENT OF STATE,
Washington, January 25, 1916.

Your 3601 and 3602, January 19.

Department has given consideration to enemy trading act approved December 23 last, the apparent object of which is to prevent any person doing business in the United Kingdom from trading with the enemies of Great Britain or persons having enemy association in any other part of the world, and the department has reached the conclusion that this act is pregnant with possibilities of undue interference with American trade, if in fact such interference is not now being practiced. As it is an opinion generally held in this country, in which this Government shares, that the act has been framed without a proper regard for the right of persons domiciled in the United States, whether they be American citizens or subjects of countries at war with Great Britain, to carry on trade with persons in belligerent countries, and that the exercise of this right may be subject to denial or abridgment in the course of the enforcement of the act, the Government of the United States is constrained to express to His Majesty's Government the grave apprehensions which are entertained on this subject by this Government, by the Congress, and by traders domiciled in the United States. It is, therefore, necessary to bring these views to the attention of Sir Edward Grey and to present to him a formal reservation on the part of this Government, of the right to protest against the application of this act, in so far as it affects the trade of the United States, and to contest the legality or rightfulness of imposing restrictions upon the freedom of American trade in this manner.

LANSING.

Three weeks later—February 16, 1916—the British Government made reply, in which it declared its intention to consider the rights of neutrals not inconsistent with the claims of a controlling belligerent. It reaffirmed the enemy trading act:

AMBASSADOR W. H. PAGE TO THE SECRETARY OF STATE.

No. 3092.] AMERICAN EMBASSY,
London, February 19, 1916.

SIR: With reference to the department's cablegram No. 2774, of January 25, and my telegraphic reply No. 3913, of the 18th instant, relative to the possible effects of the trading with the enemy (extension of powers) act, 1915, on the commerce of the United States, I have the honor to transmit herewith, for the information of the department, a copy of the note dated the 16th instant, which has been addressed to the embassy by the foreign trade department of the foreign office in this connection.

I have, etc., WALTER HINES PAGE.

[Inclosure.]

THE BRITISH SECRETARY OF STATE FOR FOREIGN AFFAIRS TO AMBASSADOR W. H. PAGE.

No. 15404/45.] FOREIGN OFFICE,
FOREIGN TRADE DEPARTMENT,
LANCASTER HOUSE, ST. JAMES, S. W.,
February 16, 1916.

YOUR EXCELLENCY: I have the honor to acknowledge the receipt of your excellency's note of the 26th ultimo relative to the possible effects of the trading with the enemy (extension of powers) act, 1915, on United Sates commerce.

The act was framed with the object of bringing British trading with the enemy regulations into greater harmony with those adopted by the French Government since the commencement of the war by applying in some degree the test of nationality in the determination of enemy character in addition to the old test of domicile, which experience has shown can not provide a sufficient basis under modern commercial conditions for measures intended to deprive the enemy of all assistance, direct or indirect, from national resources.

His Majesty's Government realized, however, that the application of this principle to its fullest extent, while entirely legitimate and in accordance with the practice of other countries, might, if applied at the present time to commercial activities as widespread as those of British subjects, involve avoidable inconvenience and loss to innocent traders.

They were careful, therefore, in devising the necessary legislation not only to avoid any definition which would impose enemy status upon all persons of enemy nationality and associations, but also to take powers of discrimination which would enable them to apply the purely commercial restrictions contemplated only in regard to those persons from whom it was necessary in British interests to withhold the facilities afforded by British resources.

His Majesty's Government have therefore abstained from a course of action admittedly within their rights as belligerents, which is not only the existing practice of the French Government but in strict accordance with the doctrine openly avowed by many other States to be the basis upon which their trading with the enemy regulations would be founded in the event of war, and have confined themselves to passing a piece of purely domestic legislation empowering them to restrict the activities and trade of persons under British jurisdiction in such a manner and to such an extent as may seem to them to be necessary in the national interest.

His Majesty's Government readily admit the right of persons of any nationality resident in the United States to engage in legitimate commercial transactions with any other persons. They can not admit, however, that this right can in any way limit the right of other Governments to restrict the commercial activities of their nationals in any manner which may seem desirable to them by the imposition of prohibitions and penalties which are operative solely upon persons under their jurisdiction.

In claiming this right, which appears to them to be inherent in sovereignty and national independence, His Majesty's Government desire to assure the United States Government that they will exercise it with every possible care to avoid injury to neutral commerce, and they venture to think that the voluntary limitation of their powers by the terms of the trading with the enemy (extension of powers) act, 1915, is evidence of their desire and intention to act with the greatest possible consideration for neutral interests.

I have, etc.,

L. WORTHINGTON EVANS,
For the Secretary of State.

Three days later, February 19, Ambassador Page communicated the following report on the detention of American goods by the authorities of prize courts.

Following this report is a statement of James Flett, consular agent at Kirkwall, detailing procedure there by the authority of the admiralty touching vessels diverted to that port:

AMBASSADOR W. H. PAGE TO THE SECRETARY OF STATE.

No. 3093.] AMERICAN EMBASSY,
London, February 19, 1916.

SIR: I have the honor to report to the department the following facts which have presented themselves with reference to goods belonging to American citizens which have been detained by the British Government authorities and placed in the prize court.

The foreign office has undertaken to inform the embassy of the seizure of any vessel carrying American goods and also of the items of these goods which have been detained and placed in the prize court. Upon the receipt of such information as to the vessel or a list of the goods detained and held for prize-court proceedings, the embassy is in the practice of immediately cabling it to the department.

The Department of State, it is understood, informs the American shipper that the embassy has cabled that the goods have been placed in the prize court. In a great many instances the shipper telegraphs or writes direct to the embassy requesting it to arrange for the release of their goods.

The embassy understands that, inasmuch as prize-court proceedings are to take place, no diplomatic representations will be received by the British Government in connection with these goods, unless such representations are pursuant to special instructions of the Government at Washington.

In almost all cases where such representations are made to the foreign office under instructions from the department, the foreign office replies that the procurator general finds that it is impossible to comply with the request for release, and that the claimants must communicate with the procurator general's office, where, if satisfactory proof is produced the goods will be released; or, if the proofs appear to be unsatisfactory, the goods will be held until the sitting of the prize court, which will then pass its judgment on the goods.

As the procurator general's office will receive no official communication from the embassy in matters of this kind, the shipper must either transmit his evidence direct or employ his agents or a solicitor in London.

The larger American shippers usually have an office or an agent in London who understands prize-court proceedings, and is capable of appearing at the procurator general's office in support of the claim for the release of the goods. The smaller shippers who have no office in London are in this way placed at a disadvantage.

In view of the fact that the consul general is in the practice of communicating directly with the procurator general's office in regard to all claims of American citizens, I respectfully suggest that the department advise the shipper to send the necessary papers to him direct, unless the department wishes further diplomatic representations to be made.

In all cases where the shipper writes direct to the embassy, and it is found that communication with the foreign office would be of no avail, I shall advise the shipper to address himself directly to the consul general, and shall send him a list of the documents which he should transmit with his letter.

I also feel that the American exporter should be informed as to the exact status of prize courts in international relations, and of the position of goods actually in the prize court, and that the British Government will receive no diplomatic representations in these cases except under instructions from the Government in view of special circumstances involved.

The procurator general's office has advised me informally that the documents which should be submitted to it in support of claims for the release of goods are as follows: The originals of—

1. Bills of ladings.
2. Invoices.
3. All previous correspondence with firms in the country to which the goods are shipped.
4. Contracts.
5. Insurance policies.
6. An affidavit setting forth all facts of the case.

I feel sure that this procedure will be the quickest and easiest way of disposing to the satisfaction of the shipper such cases as the British Government will not release from the prize court on diplomatic representations, or where goods are in the prize court and no diplomatic representations are in order.

I have, etc.,

WALTER HINES PAGE.

CONSUL GENERAL SKINNER TO THE SECRETARY OF STATE.

No. 1248] AMERICAN CONSULATE GENERAL,
London, February 24, 1916.

SIR: I have the honor to inclose herewith copy of a letter received from the American consular agent at Kirkwall setting forth the routine practice of the British authorities on the arrival of vessels diverted to that port by the Admiralty.

I have, etc.,

R. P. SKINNER.

[Inclosure.]

CONSULAR AGENT FLETT TO CONSUL LATHAM.

KIRKWALL, *February 14, 1916.*

SIR: I find I have to acknowledge receipt of your letter of the 7th instant:

So soon as a vessel from an American or other port arrives here she is boarded by an Admiralty officer, who examines the ship's papers and also the crew. She is also boarded by the customs officials, who examine the ship's papers and search the ship in the ordinary way. The whole ship's papers are removed by the customs officials and brought ashore with them and retained in the customs office here. The papers are then examined by the indoor staff of the customs here and all particulars relating to ship and cargo are telegraphed to London. The papers are retained by the customs until they receive instructions whether the vessel is to be allowed to proceed or whether the whole cargo or part thereof is to be placed in the prize court. If the vessel is allowed to proceed, the ship's papers are then handed over by the customs to the Admiralty port officer, and he either hands them over to the captain personally or sends them on board the vessel. In the event of part or the whole of the cargo being placed into the prize court, the ship's papers are handed by the Admiralty port officer to the prize officer, who is sent on board that vessel to whichever port she might be ordered to discharge.

If the vessel is cleared the customs authorities give the master of the vessel a clearance card to that effect. It is very seldom that a vessel ever breaks bulk here. I have known of a small quantity of cargo that has been prize courted being taken out of a vessel here, so as to allow the vessel to proceed and avoid unnecessary delay and expense in sending her to another port to discharge. It is, however, very seldom that this happens. If I have not made myself sufficiently clear, I shall be very pleased on hearing from you to give you further information on any points that you may wish further information.

I am, etc.,

JAMES FLETT, *Consular Agent.*

THE ACTING SECRETARY OF STATE TO AMBASSADOR W. H. PAGE.

No. 3374.] DEPARTMENT OF STATE,
Washington, March 16, 1916.

SIR: The department is in receipt of your No. 3093, of February 19, 1916, reporting facts which have presented themselves with reference to goods belonging to American citizens which have been detained by the British authorities and placed in the prize court.

In this relation there is inclosed herewith for your information a copy of the letter sent by the department to the William Amer Co. under date of March 9, 1916.

With a view to having the consul general render such assistance as may be possible and proper in an endeavor to bring about the release of goods which have been seized by the British authorities, the department has addressed similar communications to other American shippers who have complained respecting the seizure of goods shipped by them to European ports.

I am, etc.,

FRANK L. POLK.

On the 16th of March our Government communicated with the American ambassador at London on the matter of detention of goods, and inclosed a communication of the Secretary of State to the William Amer Co. of a week before.

The communication follows:

[Inclosure.]

THE SECRETARY OF STATE TO THE WILLIAM AMER CO.

DEPARTMENT OF STATE,
Washington, March 9, 1916.

GENTLEMEN: The department has received your letter of March 1, 1916, in regard to the seizure by the British authorities of a quantity of glazed kid shipped by you to Sweden on the steamship *Alexandria.*

The department incloses for your information a print containing an order in council issued by the British Government March 11, 1915, regarding the stopping of goods shipped to or from Germany. This order, which is at present the subject of diplomatic discussion between the Government of the United States and the Government of Great Britain, shows the action which the British Government declare their intention to take in the matter of stopping goods which they desire to have taken by interested persons to obtain the restoration of their goods or payment therefor.

The American consul general has informed the department that if shippers will communicate with him directly regarding shipments which have been detained under this order in council he will ascertain the status of the goods, and, when possible, endeavor to effect their release. The consul general states that, even though goods may be classified as contraband, the procurator general will consider evidence indicating innocent ultimate destination of such goods, and has advised him (the consul general) to obtain, wherever possible, original correspondence with buyers or consignors. The consul general further states that when claims for goods are submitted through the consulate general there is always hope that the release of the property will follow without formal proceedings or expense, and that if such release is not brought about the papers in any given case in which prize-court proceedings may be instituted may be turned over to British solicitors. The consul general points out that in all cases it is futile to forward requests for release of goods unsupported by documentary history showing the ownership and destination of the consignment which it is sought to have released. The procurator general has suggested that the papers which should be presented are the originals of invoices, contracts, insurance policies, bills of lading, all correspondence with concerns in the country to which the goods are shipped, and an affidavit setting forth the facts in a given case.

As has just been stated, the order in council regarding the stopping of goods shipped to or from Germany is at present the subject of diplomatic discussion between the Government of the United States and the Government of Great Britain. And neither anything contained in this letter nor any action of the consul general in connection with his efforts to bring about the release of goods which have been detained should be construed as an admission on the part of the Government of the United States of the legality of the action taken by the British Government under this order.

It is suggested that you might deem it advisable to communicate directly with the consul general regarding the shipment referred to in your letter. On the other hand, if these goods have been sent to the prize court, it may be well for you to take prompt steps to establish your rights before the court. The department can not undertake to assist private persons in the conduct of proceedings before the court.

Should you desire to consult private counsel in England regarding this matter, the American counsel general at London will doubtless be able to furnish you on your request with the names of a number of reputable attorneys, one of whom may be employed in the matter. It should be stated in this connection, however, that obviously neither the consul general nor the department can be responsible for the integrity or ability of any lawyer who may be employed as a result of the information furnished by the consul general.

I am, etc.,

ALVEY A. ADEE,
For the Secretary of State.

Six months after our "ineffectual, illegal, and indefensible" blockade note the British Government replied as follows. Our note was of date October 21:

THE BRITISH AMBASSADOR TO THE SECRETARY OF STATE.

No. 107.] BRITISH EMBASSY,
Washington, April 24, 1916.

SIR: I have the honor, in obedience to instructions received from Sir Edward Grey, His Majesty's principal secretary of state for foreign affairs, to transmit to you herewith a memorandum embodying the reply to the representations of your Government in regard to restrictions on trade, which were communicated to Sir Edward Grey in Mr. Page's note of November 5 last, in pursuance to your instructions dated October 21.

I have, etc.,

CECIL SPRING-RICE.

[Inclosure.]

MEMORANDUM.

The communication addressed by the United States ambassador in London to Sir E. Grey on the 5th of November, 1915, has received the careful attention of His Majesty's Government, in consultation with their allies, the French Government, and His Majesty's Government have now the honor to make the following reply:

2. The first section (pars. 3–15) of the United States note relates to cargoes detained by the British authorities in order to prevent them from reaching an enemy destination, and the complaint of the United States Government is summarized in paragraph 33 to the effect that the methods sought to be employed by Great Britain to obtain and use

evidence of enemy destination of cargoes bound for neutral ports and to impose a contraband character upon such cargoes are without justification.

3. The wording of this summary suggests that the basis of the complaint of the United States Government is not so much that the shipments intercepted by the naval forces were really intended for use in the neutral countries to which they were dispatched, as that the dispatch of goods to the enemy countries has been frustrated by methods which have not been employed by belligerent nations in the past. It would seem to be a fair reply to such a contention that new devices for dispatching goods to the enemy must be met by new methods of applying the fundamental and acknowledged principle of the right to intercept such trade.

4. The question whether the exercise of the right of search can be restricted to search at sea was dealt with in Sir E. Grey's note of the 7th of January, 1915, and His Majesty's Government would again draw attention to the facts that information has constantly reached them of attempts to conceal contraband intended for the enemy in innocent packages, and that these attempts can only be frustrated by examination of the ship and cargo in port. Similarly, in Sir E. Grey's note of the 10th of February, 1915, it was pointed out that the size of modern steamships, and their capacity to navigate the waters where the allied patrols have to operate, whatever the conditions of the weather, frequently render it a matter of extreme danger, if not of impossibility, even to board the vessels unless they are taken into calm water for the purpose. It is unnecessary to repeat what was said in that note. There is nothing that His Majesty's Government could withdraw or that the experience of the officers of the allied fleets has tended to show was inaccurate.

5. When visit and search at sea are possible, and when a search can be made there which is sufficient to secure belligerent rights, it may be admitted that it would be an unreasonable hardship on merchant vessels to compel them to come into port, and it may well be believed that maritime nations have hesitated to modify the instructions to their naval officers that it is at sea that these operations should be carried out, and that undue deviation of the vessel from her course must be avoided. That, however, does not affect the fact that it would be impossible under the conditions of modern warfare to confine the rights of visit and search to an examination of the ship at the place where she is encountered without surrendering a fundamental belligerent right.

6. The effect of the size and seaworthiness of merchant vessels upon their search at sea is essentially a technical question, and accordingly His Majesty's Government have thought it well to submit the report of the board of naval experts, quoted by the United States ambassador in paragraph 7 of this note, to Admiral Sir John Jellicoe for his observations. The unique experience which this officer has gained as the result of more than 18 months in command of the grand fleet renders his opinion of peculiar value. His report is as follows:

"It is undoubtedly the case that the size of modern vessels is one of the factors which renders search at sea far more difficult than in the days of smaller vessels. So far as I know, it has never been contended that it is necessary to remove every package of a ship's cargo to establish the character and nature of her trade, etc.; but it must be obvious that the larger the vessel and the greater the amount of cargo the more difficult does examination at sea become, because more packages must be removed.

"This difficulty is much enhanced by the practice of concealing contraband in bales of hay and passengers' luggage, casks, etc., and this procedure, which has undoubtedly been carried out, necessitates the actual removal of a good deal of cargo for examination in suspected cases. This removal can not be carried out at sea except in the very finest weather.

"Further, in a large ship the greater bulk of the cargo renders it easier to conceal contraband, especially such valuable metals as nickel, quantities of which can easily be stowed in places other than the holds of a large ship.

"I entirely dispute the contention, therefore, advanced in the American note that there is no difference between the search of a ship of 1,000 tons and one of 20,000 tons. I am sure that the fallacy of the statement must be apparent to anyone who has ever carried out such a search at sea.

"There are other facts, however, which render it necessary to bring vessels into port for search. The most important is the manner in which those in command of German submarines, in entire disregard of international law and of their own prize regulations, attack, and sink merchant vessels on the high seas, neutral as well as British, without visiting the ship, and therefore without any examination of the cargo. This procedure renders it unsafe for a neutral vessel which is being examined by officers of a British ship to remain stopped on the high seas, and it is therefore in the interests of the neutrals themselves that the examiantion should be conducted in port.

"The German practice of misusing United States passports in order to procure a safe conduct for military persons and agents of enemy nationality makes it necessary to examine closely all suspect persons, and to do this effectively necessitates bringing the ship into harbor."

7. Sir John Jellicoe goes on to say:

"The difference between the British and the German procedure is that we have acted in the way which causes the least discomfort to neutrals. Instead of sinking neutral ships engaged in trade with the enemy, as the Germans have done in so many cases in direct contravention of article 113 of their own Naval Prize Regulations, 1909, in which it is laid down that the commander is only justified in destroying a neutral ship which has been captured if—

(*a*) "She is liable to condemnation, and

(*b*) "The bringing in might expose the warship to danger or imperil the success of the operations in which she is engaged at the time—

we examine them, giving as little inconvenience as modern naval conditions will allow, sending them into port only where this becomes necessary.

"It must be remembered, however, that it is not the allies alone who send a percentage of neutral vessels into port for examination, for it is common knowledge that German naval vessels, as stated in paragraph 19 of the American note, 'seize and bring into German ports neutral vessels bound for Scandinavian and Danish ports.'

"As cases in point, the interception by the Germans of the American oil tankers *Llama* and *Platuria* in August last may be mentioned. Both were bound to America from Sweden and were taken into Swinemünde for examination."

8. The French Ministry of Marine shares the views expressed by Sir J. Jellicoe on the question of search at sea, and has added the following statement:

"UNAUTHORIZED TRANSLATION OF PARAGRAPH 8 OF THE BRITISH MEMORANDUM.

"Naval practice, as it formerly existed, consisting in searching ships on the high seas, a method handed down to us by the old navy, is no longer adaptable to the conditions of navigation at the present day. Americans have anticipated its insufficiency and have foreseen the necessity of substituting some more effective method. In the instructions issued by the American Navy Department, under date of June 20, 1898, to the cruisers of the United States, the following order is found (clause 13):

"'If the latter (the ship's papers) show contraband of war, the ship should be seized; if not, she should be set free, unless by reason of strong grounds for suspicion a further search should seem to be requisite.'

"Every method must be modified having regard to the modifications of material which men have at their disposal, on condition that the method remains humane and civilized.

"The French Admiralty considers that to-day a ship, in order to be searched, should be brought to a port whenever the state of the sea, the nature, weight, volume, and stowage of the suspect cargo, as well as the obscuiity and lack of precision of the ship's papers, render search at sea practically impossible or dangerous for the ship searched.

"On the other hand, when the contrary circumstances exist, the search should be made at sea.

"Bringing the ship into port is also necessary and justified when the neutral vessel having entered the zone or vicinity of hostilities, (1) it is a question, in the interests of the neutral ship herself, of avoiding for the latter a series of stoppages and successive visits and of establishing once for all her innocent character and of permitting her thus to continue her voyage freely and without being molested; and (2) the belligerent, within his rights of legitimate defense, is entitled to exercise special vigilance over unknown ships which circulate in these waters."

9. The question of the locality of the search is, however, one of secondary importance. In view of His Majesty's Government the right of a belligerent to intercept contraband on its way to his enemy is fundamental and incontestable, and ought not to be restricted to intercepting contraband which happens to be accompanied on board the ship by proof sufficient to condemn it. What is essential is to determine whether or not the goods were on their way to the enemy. If they were, a belligerent is entitled to detain them, and having regard to the nature of the struggle in which the allies are engaged they are compelled to take the most effectual steps to exercise that right.

10. The United States note then passes to the subject of the procedure in the prize courts, and maintains that courts of prize have hitherto been bound, by well-established and long-settled practice, to consider at the first hearing only the ship's papers and documents and the answers to the standing interrogatories, and to exclude all other evidence unless and until an order has been made for "further proof." Attention is drawn to the fact that the above practice, which had been followed by the British prize courts for over a century, and also by the prize courts of the United States, was changed by the prize-court rules issued by His Majesty's Government at the outbreak of the present war. Upon this matter His Majesty's Government have to point out that they recognized some years ago that modern conditions had rendered the old rules obsolete, and new rules had been prepared under the guidance and supervision of the late Lord Gorell, whose experience as president of the admiralty division of the high court of justice rendered him well qualified to deal with the subject. Twenty months' experience of the working of the new rules in the prize court has served to show the utility of the changes.

11. It may further be pointed out that the practice and procedure adopted in prize courts are not settled or regulated by international law, but they are determined by each nation for itself. The procedure described in the United States note was gradually evolved in the British courts, and though it was adopted by the United States it has never been followed in the prize courts of France or of any other continental nation, nor does the fact that the United States followed the British practice prevent Great Britain or any other of the allied nations from introducing such changes in the procedure as modern circumstances may call for. International law only requires that the practice in prize courts of the belligerent nation should afford a fair hearing to all claims put forward by neutrals, and should enable the court to arrive at a just conclusion upon the evidence. Subject to that condition, each nation may regulate the practice to be followed in its prize courts. As an instance, the recent Italian decree of May 30, 1915, may be quoted in article 6 of which it is enacted that the prize court "will draw up rules of procedure for its future guidance." The division of prize-court proceedings into two distinct phases, the first hearing and the hearing on further proof, under the early British and American practice, was merely a rule of procedure. Similarly the exclusion of extraneous evidence until the making of an order for further proof was only a rule of procedure. His Majesty's Government were, therefore, not only at liberty but felt bound to alter these rules so soon as they were advised that the rules were obsolete and might work injustice.

12. The old practice and procedure had become archaic in form and belonged to days long before the modern improvements in legal procedure were developed, days when, for instance, the parties interested were prevented from giving any evidence as witnesses in actions which affected their rights. The alterations in the prize-court practice and rules were conceived and made in the spirit of those improvements. The objects with which the old practice was abolished were to prevent delay, to eliminate technicalities, and to enable the parties to prove all the true and material facts, and to place their respective cases fully before the court.

13. Moreover, it must be remembered that the conditions under which goods are conveyed by sea from one country to another have completely changed. In the days when the old rules were developed the ship's papers were a safe and satisfactory guide as to the nature and destination of the cargo. If the ship's papers had not indicated the true object and purpose of the consignment, the consignee would have been uncertain what to do with the goods when they arrived and the commercial transaction would have been hampered, for there were in those days no fast mails or telegraph cables by which supplementary information could be conveyed. If there were no ship's papers, or if they obviously were not genuine, it was a ground for condemnation. When there was no reason to doubt them, the court could safely take the papers as indicating the real transaction. Nowadays the conditions have changed; the papers may outwardly be perfectly genuine and complete, yet they may have been prepared with the express purpose of concealing the real nature of the transaction. These misleading papers would not, however, occasion any difficulty in dealing with

the goods on their arrival, because the necessary instructions to the consignee can be conveyed by other means. Consequently the old rule that the papers on board the ship must alone be taken into consideration, and evidence from other sources excluded, is no longer practicable; indeed, the system of attributing to the ship's papers the character of final and conclusive proof upheld in the United States note would encourage shippers of contraband to falsify the papers, as they would thereby insure obsolete immunity from capture. It is in the same way due to change of circumstances that the evidence of the master and members of the crew has ceased to be of much importance in the majority of prize cases; they usually now know nothing of the real destination of the cargo they are transporting, and the more skillfully the dispatch of goods with an enemy destination is contrived the more effectually will it be concealed from those on board.

14. It may be doubted whether any belligerent Government would be ready to forego the right of capture of goods on their way to an enemy in every case where such destination was not disclosed in the ship's papers or the evidence of those on board the ship. The difficulty which United States naval officers found even as early as 1862 in complying with the old rule is illustrated by the quotation from Lord Lyons's note of April 22, 1863, in connection with the case of the *Magicienne*, one of the cases which is dealt with in the appendix to this note, in which he drew attention to the habit of the United States cruisers of seizing vessels on the chance that something might possibly be discovered ex post facto which would prevent the captors from being condemned to pay damages.

15. The contention advanced by the United States Government in paragraph 9 of their note, that the effect of this new procedure is to subject traders to risk of loss, delay, and expense so great and so burdensome as practically to destroy much of the export trade of the United States to neutral countries in Europe, is not borne out by the official statistics published in the United States, nor by the reports of the Department of Commerce. The first nine months of 1915 may be taken as a period when the war conditions must have been known to all those engaged in commerce in the United States of America, and when any injurious effects of the prize-court procedure would have been recognized. During that period the exports from the United States of America to the three Scandinavian countries and Holland, the group of neutral countries whose imports have been most affected by the naval operations of the allies and by the procedure adopted in their prize courts, amounted to $274,037,000 as compared with $126,763,000 in the corresponding period of 1913. It is useless to take into account the corresponding figures of 1914 because of the dislocation of trade caused by the outbreak of the war, but taking the prewar months of 1914, the figures for 1913, 1914, and 1915 were as follows:

1913	$97,480,000
1914	88,132,000
1915	234,960,000

16. In the face of such figures it seems impossible to accept the contention that the new prize-court procedure in Great Britain has practically destroyed much of the export trade of the United States to neutral countries in Europe, and the inference is suggested that if complaints have been made to the administration of Washington by would-be exporters, they emanated not from persons who desired to engage in genuine commerce with the neutral countries, but from those who desired to dispatch goods to the enemy under cover of a neutral destination, and who found it more difficult to conceal the real facts from the prize courts under the new procedure.

17. At this point it would have been opportune to introduce a reply to the contention that appears at first sight to be advanced in paragraph 13 of the United States note that Great Britain, while interfering with foreign trade, has increased her own with neutral countries adjacent to Germany, but this is rendered unnecessary by the explanation given by Mr. Page at the time that he presented the note, and since confirmed by a statement given out to the press at Washington, that no such meaning is to be attributed to the paragraph. Moreover, the subject has been dealt with in the note which Sir E. Grey sent to Mr. Page on the 13th August, last, and again in the note given to the State Department by the British ambassador at Washington on the 27th December.

18. The next passage in the United States note (par. 14) relates to the principle of noninterference with goods intended to become incorporated in the mass of merchandise for sale in a neutral country, or, as it is more commonly known, with goods intended to be incorporated in the "common stock" of the country. The United States Government urge with some force that trade statistics are not by themselves conclusive in establishing an enemy destination, and that such statistics require careful scrutiny. On the other hand, the mere fact that goods, no matter of what description or in what quantities, are ostensibly destined to form part of the common stock of a neutral country, can not be regarded as sufficient evidence to prove their innocence or to justify the assertion that any attempt to raise questions as to their ulterior destination is unwarranted and inquisitorial. It is a matter of common knowledge that large quantities of supplies have, since the war broke out, passed to our enemy through neutral ports. It was pointed out in Sir E. Grey's note of the 17th July, 1915, that it would be mere affectation to regard some of those ports as offering facilities only for the commerce of the neutral country in which they are situated. They have, in fact, been the main avenues through which supplies have reached the enemy from all parts of the world. In the case of goods consigned to these ports, the ships' papers convey no suggestion as to their ultimate destination, and every device which ingenuity can suggest, or which can be contrived by able and unscrupulous agents, is resorted to for the purpose of giving to carefully organized arrangements for supplying the enemy the appearance of genuine transactions with a neutral country. His Majesty's Government can not bring themselves to believe that it is the desire of the United States Government that traffic of this kind should be allowed to proceed without hindrance.

19. The question whether goods dispatched to a neutral port were intended to become part of the mass of merchandise for sale in that country is one of fact. Quite apart from the conclusions suggested by the figures, there is a considerable body of evidence that many of the goods which have been shipped to neutral ports during the war were never intended to become part of the common stock of that country, but were earmarked from the beginning for reexport to the enemy countries. If they had been intended to form part of the common stock, they would have been available for use in that country; yet at one time in the early days of the allies' efforts to intercept all the commerce of the enemy, when they found it necessary to hold up certain cargoes of cotton on their way to Sweden, it transpired that though the quays and the warehouses of Gothenburg were congested with cotton, there was none available for the use of the spinners in Sweden.

20. Confirmation of the fact that many of the shipments to neutral ports were never intended to become part of the common stock of the country is also to be found in some of the contracts which have come to light since the policy of intercepting all commodities on their way to or from the enemy country was introduced. One of those which has been disclosed is a contract with a firm in Germany for the sale of no less than 50,000 bales of cotton linters at a price which was about double that which linters were fetching in any other country than Germany. The whole quantity was to be shipped to neutral ports. Various shipments made under this contract have been held up, and in all cases the goods were shipped with papers and under conditions which concealed the enemy destination altogether. Sweden is not in normal times a large importer of cotton linters, and it certainly would not be reasonable to maintain that, because the ship's papers did not disclose this contract of sale or the enemy destination, shipments of linters under this contract should be regarded as intended to become part of the mass of merchandise for sale in Sweden.

21. However sound the principle that goods intended for incorporation in the common stock of a neutral country should not be treated as contraband may be in theory, it is one that can have but little application to the present imports of the Scandinavian countries. The circumstances of a large number of these shipments negative any conclusion that they are bona fide shipments for the importing countries. Many of them are made to persons who are apparently nominees of enemy agents, and who never figured before as importers of such articles. Consignments of meat products are addressed to lightermen and dock laborers. Several thousands of tons of such goods have been found documented for a neutral port and addressed to firms which do not exist there. Large consignments of similar goods were addressed to a baker, to the keeper of a small private hotel, or to a maker of musical instruments. Will it be contended that such imports ought to be regarded as bona fide shipments intended to become part of the common stock of the country?

22. Similarly several of the shipments which the allied naval forces are now obliged to intercept consist of goods for which there is in normal circumstances no sale in the importing country, and it has already been pointed out in a recent decision in the British prize court that the rule about incorporation in the common stock of a neutral country can not apply to such goods. The same line was taken in some of the decisions in the United States prize courts during the Civil War.

23. In the presence of facts such as those indicated above, the United States Government will, it is believed, agree with His Majesty's Government that no belligerent could in modern times submit to be bound by a rule that no goods could be seized unless they were accompanied by papers which established their destination to an enemy country, and that all detentions of ships and goods must uniformly be based on proofs obtained at the time of seizure. To press any such theory is tantamount to asking that all trade between neutral ports shall be free, and would thus render nugatory the exercise of sea power and destroy the pressure which the command of the sea enables the allies to impose upon their enemy.

24. It is, of course, inevitable that the exercise of belligerent rights at sea, however reasonably exercised, must inconvenience neutral trade, and great pressure is being put upon the United States Government to urge the technical theory that there should be no interference at all with goods passing between neutral ports, and thus to frustrate the measures which the allies have taken to intercept commerce on its way to or from the enemy. It may not be out of place to recall that the position is somewhat similar to that which arose in the United States in the war between the North and the South. All students of international law and of military history are aware that the blockade of the Southern States was the most important engine of pressure possessed by the North, and that it was on the point of being rendered ineffective through the use by blockade runners of neutral ports of access. It is well known that the United States Government took immediate steps to stop such trade, and that the United States Supreme Court extended the doctrine of continuous voyage so as to cover all cases where there was an intention to break the blockade by whatever means, direct or indirect.

25. The configuration of the European coast is such as to render neutral ports the most convenient for the passage of German commerce, and just as it was essential to the United States in the Civil War to prevent their blockade from being nullified by the use of neutral ports of access, so it is essential to the allied powers to-day to see that the measures which they are taking to intercept enemy commerce shall not be rendered illusory by the use of similar ports. The instructions issued by Mr. Seward during the Civil War show that he regarded the continuance of the blockade against the Southern States as absolutely vital, and he repeatedly instructed American representatives abroad to assure foreign Governments that, while he was fully alive to the great inconveniences caused by the cutting off of the supplies of cotton from Europe, yet he could not, as American Secretary of State, "sacrifice the Union for cotton." The American representatives in Europe in their published reports again and again expressed the opinion that, whatever might be the policy of the Government, the peoples of Europe would never consent to side with the power that upheld slavery against the power which represented freedom. Their opinion was entirely justified by the result, and in fact neither the French nor the English Governments took and decided steps toward breaking the blockade, in spite of the tremendous pressure which was brought to bear upon them and the terrible suffering of the cotton operatives of this country. Indeed, President Lincoln himself acknowledged, in a message to the laboring classes of Manchester, his high sense of the spirit of self-sacrifice which they had exhibited in their policy toward America. His Majesty's Government have, of course, no desire to enter upon any examination of the issues involved in that historic conflict, but no one will question the respect which is due to the determination then shown by the French and British peoples not to range themselves on what they believed to be the side of slavery or consent to action which they held might be fatal to the democratic principle of government, however great the pressure exerted by commercial interests might be.

26. His Majesty's Government desire to assure the United States Government that every effort is being made to distinguish between bona fide neutral commerce and that which is really intended for the enemy.

The task is one of exceptional difficulty, and the statistics show that a great volume of imports intended for the enemy must have passed through adjacent neutral countries during the war. As an instance, the imports of lard into Sweden during the year 1915 may be taken. In that year the total import of lard into Sweden from all sources was 9,318 tons, of which no less than 9,029 tons came from the United

States. In the three years before the war, 1911–13, the annual average import of the same article was only 888, of which 638 tons came from the United States. It is difficult to believe that the requirements of Sweden in respect of lard, even when every allowance is made for possible diversions of trade due to the war, could suddenly have increased more than tenfold in 1915. The inference, indeed, is irresistible that the greater part of these imports must have had another and an enemy destination.

27. It may readily be conceded that the efforts to intercept enemy commerce passing through neutral countries can not fail to produce some soreness and dissatisfaction. His Majesty's Government have therefore spared no pains in their endeavor to mitigate the inconvenience which must inevitably be occasioned to neutral traders. In pursuance of this object they are resorting to the policy of ascertaining the total requirements of the country concerned, and intercepting such imports as may be presumed, because they are in excess of those requirements, to form no part of the normal trade of the country, and therefore to be destined for the enemy.

28. The total net imports of a particular commodity by any country in normal times gives a satisfactory index to its requirements, and where these are provided for on a generous scale, suitable allowance being made for the commercial dislocation inseparable from a state of war, it is not unfair, after 18 months of war and in the light of the experience which has now been gained, to invite the prize court to regard with suspicion further consignments of any kind of goods of which the imports have already exceeded a figure ample to satisfy the country's requirements.

29. It ought not to be difficult to arrive at a satisfactory understanding with all parties on the subject, as the official statistics afford information not only as to the quantities of particular commodities required by neutral countries, but also of the sources from which they are usually obtained. Arrangements of this nature will be of great service in removing the friction and misunderstanding which now arise, as it will help the commercal classes in the neutral countries to form an idea of the limits within which their trading operations are not likely to encounter difficulty.

30. The adoption of such a system, although not unattended by difficulty, has been greatly facilitated by agreements made with the organizations which control imports in the neutral countries, as well as by arrangements with some of the shipping lines, and with several of the interests concerned in the import of particular commodities from neutral countries. His Majesty's Government intend to avail themselves of every opportunity which may present itself in order to bring about a more extended adoption of this equitable system.

31. Moreover, the fact that a neutral country adjacent to the enemy territory is importing an abnormal quantity of supplies or commodities, of which her usual imports are relatively small, of which the enemy stands in need, and which are known to pass from that neutral country to the enemy, is by itself an element of proof on which the prize court would be justified in acting, unless it is rebutted by evidence to the contrary. Hostile destination being a question of fact, the court should take all the relevant circumstances into consideration in arriving at its decision, and there seems to be no reason in principle for limiting the facts at which the court is entitled to look in a case of this kind.

32. The second section of the United States note (paragraphs 16–24) deals with the validity of the measures against enemy commerce which were embodied in the British Order in Council of March 11, 1915, and in the French decree of March 13, and maintains that these measures are invalid because they do not comply with the rules which have been gradually evolved in the past for regulating a blockade of enemy ports, and which were summarized in concrete form in articles 1–21 of the Declaration of London.

33. These rules can only be applied to their full extent to a blockade in the sense of the term as used in the Declaration of London. His Majesty's Government have already pointed out that a blockade which was limited to the direct traffic with enemy ports would in this case have but little, if any, effect on enemy commerce, Germany being so placed geographically that her imports and exports can pass through neutral ports of access as easily as through her own. However, with the spirit of the rules His Majesty's Government and their allies have loyally complied in the measures they have taken to intercept German imports and exports. Due notice has been given by the allies of the measures they have taken, and goods which were shipped or contracted for before the announcement of the intention of the allies to detain all commerce on its way to or from the enemy countries have been treated with great liberality. The objects with which the usual declaration and notification of blockade are issued have therefore been fully achieved. Again, the effectiveness of the work of the allied fleets under the orders referred to is shown by the small number of vessels which escape the allied patrols. It is doubtful whether there has ever been a blockade where the ships which slipped through bore so small a proportion to those which were intercepted.

34. The measures taken by the allies are aimed at preventing commodities of any kind from reaching or leaving Germany, and not merely at preventing ships from reaching or leaving German ports. His Majesty's Government do not feel, therefore, that the rules set out in the United States note need be discussed in detail. The basis and the justification of the measures which the allies have taken were dealt with at length in Sir E. Grey's note of July 23, and there is no need to repeat what was there said. It need only be added that the rules applicable to a blockade of enemy ports are strictly followed by the allies in cases where they apply, as, for instance, in the blockades which have been declared of the Turkish coast of Asia Minor or of the coast line of German East Africa.

35. Some further comment is perhaps necessary upon the statements made in paragraph 19 of the United States note, where it is said that because German coasts are open to trade with Scandinavian countries the measures of the allies fail to comply with the rule that a blockade must be effective. It is no doubt true that commerce from Sweden and Norway reaches German ports in the Baltic in the same way that commerce still passes to and from Germany across the land frontiers of adjacent States, but this fact does not render the measures which France and Great Britain are taking against German trade the less justifiable. Even if these measures were judged with strict reference to the rules applicable to blockades, a standard by which, in their view, the measures of the allies ought not to be judged, it must be remembered that the passage of commerce to a blockaded area across a land frontier or across an inland sea has never been held to interfere with the effectiveness of the blockade. If the right to intercept commerce on its way to or from a belligerent country, even though it may enter that country through a neutral port, be granted, it is difficult to see why the interposition of a few miles of sea as well should make any difference. If the doctrine of continuous voyage may rightly be applied to goods going to Germany through Rotterdam, on what ground can it be contended that it is not equally applicable to goods with a similar destination passing through some Swedish port and across the Baltic or even through neutral waters only? In any case, it must be remembered that the number of ships reaching a blockaded area is not the only test as to whether it is maintained effectively. The best proof of the thoroughness of a blockade is to be found in its results. This is the test which Mr. Seward, in 1863, when Secretary of State, maintained should be applied to the blockade of the Confederate States. Writing to Mr. Dayton, the United States minister in Paris, on the 8th of March, he said: "But the true test of the efficiency of the blockade will be found in its results. Cotton commands a price in Manchester and in Rouen and Lowell four times greater than in New Orleans. * * * Judged by this test of results, I am satisfied that there never was a more effective blockade." Similar language was used in the dispatch to Mr. Adams in London. The great rise in price in Germany of many articles most necessary to the enemy in the prosecution of the present war must be well known to the United States Government.

36. Attention is drawn in the same paragraph to the fact that cotton has since the measures announced on the 11th of March been declared to be contraband, and this is quoted as an admission that the blockade is ineffective to prevent shipments of cotton from reaching the enemy countries. The reason for which cotton was declared to be contraband is quite simple. Goods with an enemy destination are not, under the order in council, subject to condemnation; they are restored to the owner. Evidence accumulated that it was only for military purposes that cotton was being employed in Germany. All cotton was laid under embargo, and its use in the textile factories was prohibited except in very special cases or by military permission. In these circumstances it was right and proper that cotton with an enemy destination should be subjected to condemnation and not merely prevented from passing, and it was for this reason that it was declared to be contraband. The amount of cotton reaching the enemy country has probably not been affected in the least by its being made contraband on the 20th of August, as supplies from overseas had been cut off effectually before that date. Even the Konfektionär, a German technical paper, dealing with the textile industry, admitted in its issue of the 1st of July that not a gram of cotton had found its way into Germany for the preceding four weeks.

37. Before leaving the question of the validity of the measures which France and Great Britain have taken against enemy commerce, reference must be made to the statement made in the thirty-third paragraph of the United States note that "the curtailment of neutral rights by these measures, which are admittedly retaliatory, and therefore illegal, can not be admitted. His Majesty's Government are quite unable to admit the principle that to the extent that these measures are retaliatory they are illegal. It is true that these measures were occasioned and necessitated by the illegal and unjustifiable proclamation issued by the German Government on the 4th of February, 1915, constituting the waters surrounding Great Britain, including the whole English Channel, a "war zone," into which neutral vessels would penetrate at their peril, and in which they were liable to be sunk at sight. This proclamation was accompanied by a memorandum alleging that the violation of international law by Great Britain justified the retaliatory measures of the German Government owing to the acquiescence of neutrals in the action of this country. The legitimacy of the use of retaliatory measures was thus admitted by the Germans, although His Majesty's Government and their allies strongly deny the facts upon which their arguments were based. But although these measures may have been provoked by the illegal conduct of the enemy, they do not in reality conflict with any general principle of international law, of humanity, or civilization; they are enforced with consideration against neutral countries, and are therefore juridically sound and valid.

38. The more abstract question of the legitimacy of measures of retaliation adopted by one belligerent against his opponent, but affecting neutrals also, is one of which His Majesty's Government think the discussion might well be deferred. It is a subject of considerable difficulty and complexity, but His Majesty's Government are surprised to notice that the Government of the States seem to regard all such measures of retaliation in war as illegal if they should incidentally inflict injury upon neutrals. The advantage which any such principle would give to the determined lawbreaker would be so great that His Majesty's Government can not conceive that it would commend itself to the conscience of mankind. To take a simple instance, suppose that one belligerent scatters mines on the trade routes so as to impede or destroy the commerce of his enemy—an action which is illegitimate and calculated to inflict injury upon neutrals as well as upon the other belligerents—what is that belligerent to do? Is he precluded from meeting in any way this lawless attack upon him by his enemy? His Majesty's Government can not think that he is not entitled by way of retaliation to scatter mines in his turn, even though in so doing he also interferes with neutral rights. Or take an even more extreme case: Suppose that a neutral failed to prevent his territory being made use of by one of the belligerents for warlike purposes, could he object to the other belligerent acting in the same way? It would seem that the true view must be that each belligerent is entitled to insist on being allowed to meet his enemy on terms of equal liberty of action. If one of them is allowed to make an attack upon the other regardless of neutral rights, his opponent must be allowed similar latitude in prosecuting the struggle, nor should he in that case be limited to the adoption of measures precisely identical with those of his opponent.

39. The third section of the United States note deals with the question of the means of redress which are open to United States citizens for any injury or loss which they suffer as the consequence of an unjustifiable exercise of the belligerent rights of the allies. The contention put forward in these paragraphs appears to be that there is no obligation on neutral individuals who maintain that they have been damnified by the naval operations of the belligerents to appeal to the prize courts for redress, because the prize courts are fettered by municipal enactments which are binding upon them, whereas the very question which those individuals wish to raise is the validity of such enactments when tested by the canons of international law.

40. These arguments seem to be founded on a misunderstanding of the situation and to overlook all that was said in Sir E. Gray's note of the 23d of July on this subject. The extract there quoted from the decisions given by Lord Stowell shows that in Great Britain the prize court has jurisdiction to pronounce a decision on the very point which the United States note indicates, viz: Whether an order or instruction to the naval forces issued by His Majesty's Government is inconsistent with those principles of international law which the court is bound to apply in deciding cases between captors and claimants and is entitled, if satisfied that the order is not consistent with those principles, to decline to enforce it. The jurisdiction of the prize court in Great Britain therefore affords every facility to a United States citizen whose goods are detained and dealt with under the order in council of

the 11th of March to take his case to the prize court and there claim that the order under which the naval authorities have acted is invalid and that its enforcement entities him to redress and compensation.

41. In some matters, it is true, that the prize court is bound by the municipal enactments of its own country. It is the territorial sovereign who sets up the court and who therefore determines the matters which are incidental to its establishment. His Majesty's Government have already pointed out that each country determines for itself the procedure which its prize courts shall adopt; but certainly under the British system—and His Majesty's Government were under the impression that in this matter the United States had taken the same course—the substantive law which the court applies as between captor and claimant consists of the rules and principles of international law, and not the municipal legislation of the country. If reference is made to the case of the Recovery (6 C. Rob., 341), it will be seen that Lord Stowall refused to enforce in the prize court against a neutral the British navigation laws.

42. Sir E. Grey's note of the 23d of July was intended to make this point clear, and so far from having intended to "give the impression that His Majesty's Government do not rely upon its soundness or strength," His Majesty's Government wish to lay stress on the fact that the principle that no encroachment should be made upon the jurisdiction and the competence of the price court is one which they regard as vital.

43. Apart from the cases where a question may arise as to the validity of orders or instructions on which naval action was based, circumstances frequently give rise to claims for compensation on behalf of individuals who consider they have suffered unjustly from the exercise of rights jure belli, as, for instance, from the delay in releasing their ships, or so forth. His Majesty's Government desire therefore to repeat what was said in Sir E. Grey's note of the 10th of February, that the British prize court rules give the court ample jurisdiction to deal with any claims for compensation by a neutral arising from the interference with a ship or goods by the naval forces.

44. His Majesty's Government attach the utmost importance to the maintenance of the rule that when an effective mode of redress is open to individuals in the courts of a civilized country by which they can obtain adequate satisfaction for any invasion of their rights recourse must be had to the mode of redress so provided before there is any scope for diplomatic action. This is the course which His Majesty's Government have always themselves endeavored to follow in previous wars in which Great Britain has been neutral, and they have done so because it is the only principle which is correct in theory and which operates with justice and impartiality between the more powerful and the weaker nations. To that principle His Majesty's Government proposes to adhere now that they are themselves the belligerent and that it is against them that the claims are advanced.

45. Inquiry has been made into the four cases of the *Magicienne*, the *Don José*, the *Labuan*, and the *Saxon*, mentioned in the United States note (paragraph 27) as instances during the American Civil War where His Majesty's Government put forward, through the diplomatic channel, claims for damages for seizure and detention of British ships alleged to have been made without legal justification. In two of these instances it is said at the time the demands were made the cases were before the American prize courts for adjudication. The results of the inquiry are contained in an appendix to this note. The cases have there been dealt with in some detail because they are cited as indicating that it was the practice of Her Majesty's Government during the American Civil War to claim, through the diplomatic channel, damages for seizures of British ships alleged to have been made without legal justification. The cases do, in fact, establish the very proposition for which his Majesty's Government are now contending, viz: That in the cases where the prize court has power to grant relief there is no ground for putting forward claims through the diplomatic channel. In two of the cases the United States Government themselves discontinued the prize court proceedings and admitted the right to compensation, and in the others they maintained the jurisdiction of the prize court, and His Majesty's Government acquiesced.

46. The statements contained in paragraph 31 of the United States note have led to a careful review of the practice which is now followed in the British courts with regard to vessels and cargoes which are released. It has been ascertained that in the case of vessels brought in for examination and allowed to proceed without discharging any part of their cargo no dues are charged. Where part of the cargo is discharged and passes into the jurisdiction of the prize court, the terms of the release are, of course, subject to the control of the court, and His Majesty's Government are therefore hardly in a position to give any definite undertaking with regard to the incidence of the expenses and charges which may have been incurred. In general, however, they realize that, in cases where goods are released and it transpires that there were no sufficient grounds for their seizure, no dues or charges should fall upon the owner. The statement that waivers of the right to put forward claims for compensation are exacted as a condition of release is scarcely accurate, but they are prepared to concede that such waivers would be a hardship to the owners of the goods released. In these circumstances His Majesty's Government will abstain from exacting any such undertakings in future, and will not enforce those which have already been given.

47. Attached to the United States note are voluminous appendices containing lists of various vessels of all nationalities whose cargoes have been examined by the naval forces of the allies. These lists are a strong testimony to the vigor and effectiveness with which the naval forces are carrying out the measures which the allies have deemed it necessary to take against the commerce of their enemies. Perhaps the most striking conclusion which can be drawn from these lists is the rapidity with which the vessels are released and the very small amount of loss and inconvenience to which they are, as a rule, exposed.

48. Into the facts of each particular case His Majesty's Government feel sure the Government of the United States will agree that there is no need for them to enter, for the lists comprise only ships dealt with by the British authorities; no corresponding lists are given of those dealt with by the French forces, and a detailed examination of these cases would be of no assistance in explaining the general principles which are being followed and which are common to both the allies. Furthermore, any discussion of the cases in this note might prejudice the chances of the claimants of recovering compensation through the prize court in cases where they consider that they are entitled to redress.

49. Finally His Majesty's Government desire to assure the United States Government that they will continue their efforts to make the exercise of what they conceive to be their belligerent rights as little burdensome to neutrals as possible. Some suggestions have already been referred to in this note which, it is believed, would have that effect, and they are quite ready to consider others. For instance, they have already appointed an impartial and influential commission to examine whether any further steps could be taken to minimize the delays involved in the present methods of dealing with neutral vessels. Again, it has been suggested that it would be a great commercial convenience if neutral shippers knew, before they made arrangements for ship space and for financing their consignments, whether they would be held up by belligerent patrols. A scheme is already in operation which ought to succeed in accomplishing this object. Other suggestions of a like nature might perhaps be made, and the allied Governments would be prepared to give favorable consideration to any proposal for the alleviation of the position of neutrals, provided that the substantial effectiveness of the measures now in force against enemy commerce would not be thereby impaired.

50. His Majesty's Government are of opinion that it is to such mitigations that the allies and the neutrals concerned should look for the removal of the difficulties now encountered rather than to abrupt changes either in the theory or application of a policy based upon admitted principles of international law carefully adjusted to the altered conditions of modern warfare. Some of the changes which have been advocated would, indeed, if adopted in their entirety, render it impossible for the allies to persist with effect in their endeavors to deprive the enemy of the resources upon which he depends for the prosecution of operations carried on both by land and sea with complete disregard of the claims of humanity; for instance, the practice of visiting exclusively at sea, instead of in port, vessels reasonably suspected of carrying supplies to the enemy, or, again, the adoption of the principle that goods notoriously destined for the enemy may not be intercepted if they happen to be carried by a neutral vessel and addressed to a neutral consignee could not fail to have this result.

51. His Majesty's Government have noted with sincere satisfaction the intimation contained in the concluding passages of the United States note of the intention of the United States to undertake the task of championing the integrity of neutral rights. The first act of this war was the unprovoked invasion by the enemy of neutral territory—that of Belgium—which he was solemnly pledged by treaty to protect. The occupation of this territory was accompanied by abominable acts of cruelty and oppression in violation of all the accepted rules of war, atrocities the record of which is available in published documents; the disregard of neutral rights has since been extended to naval warfare by the wanton destruction of neutral merchant ships on the high seas, regardless of the lives of those on board. In every theater and in each phase of the war has been visible the same shocking disregard by the enemy of the rights of innocent persons and neutral peoples. His Majesty's Government would welcome any combination of neutral nations, under the lead of the United States, which would exert an effective influence to prevent the violation of neutral rights, and they can not believe that they are their allies have much to fear from any combination for the protection of those rights which takes an impartial and comprehensive view of the conduct of this war and judges it by a reasonable interpretation of the generally accepted provisions of international law and by the rules of humanity that have hitherto been approved by the civilized world.

APPENDIX.

CASES OF THE "MAGICIENNE," THE "DON JOSÉ," THE "LABUAN," AND THE "SAXON."

1. The *Magicienne* was captured on the 27th of January, 1863, about 400 miles from the Cape Verde Islands, while on a voyage to Matamoras. She was taken to Key West and relesed on March 2, the distric attorney of the United States stating that he could see nothing in the depositions, invoices, and other papers on which to base a demand for condemnation or even for a certificate of probable cause of seizure. On April 3 Lord Lyons was instructed to ask for compensation, and did so in a note to Mr. Seward, dated April 22. In reply, Mr. Seward admitted that compensation ought to be made. The course of procedure suggested by Mr. Seward was adopted, and ultimately the compensation was fixed at $8,645. No suggestion was made that any other mode of redress was open to the injured party or that it was not a case where compensation should be asked for through the diplomatic channel. On the contrary, the admission that the seizure was illegal was made by the United States, and Mr. Seward himself admitted that compensation should be made.

2. The *Don José* was a small British schooner of 35 tons, which was captured on July 2, 1863, off Cuba, when on a voyage to Habana. She was released on July 15 because the district attorney was unable, on examination of the ship's papers and of the depositions of the witnesses, to find any grounds on which to file a libel against the vessel. On January 2, 1864, Lord Lyons wrote a note to Mr. Seward, pointing out that the seizure appeared to have been one of a very unjustifiable character, and saying that he hoped that the United States Government would have no difficulty in admitting that compensation was due. Mr. Seward, in his reply, admitted that the case seemed to be a strong one. On May 18 Lord Lyons again pressed for compensation, and based his claim upon the ground that the United States law officer could find no ground for bringing the case before the prize court, and that it must be presumed that the court, if the case had come before it, would, in the execution of its duty, have awarded costs and damages. Mr. Seward promised to give the matter attentive consideration. He does not appear to have suggested that the claimant could himself have applied to the prize court for compensation, or to have challenged the point urged by Lord Lyons that it was the failure of the United States authorities to bring the case before the prize court which deprived the court of the opportunity of awarding redress.

3. The case of the *Labuan* gave rise to a voluminous diplomatic correspondence. She was a British steamer which was seized by the United States steamer *Portsmouth* on February 1, 1862, when lying off the mouth of the Rio Grande within the limits of the port of Matamoros and probably therefore within the territorial waters of Mexico. She had landed a cargo of British goods and was loading a cargo of cotton and other articles. Copies of the reports which Lord Lyons had received as to this case were given to Mr. Seward privately with a suggestion that the United States Government might perhaps think it advisable to release the vessel and give her compensation without subjecting the vessel to judicial proceedings. In another unofficial communication Mr. Seward admitted that a perusal of the information in the Navy Department had not satisfied him that the capture was legal, but preferred that nothing should be done until a judicial decision had been given. The official correspondence that ensued dealt mainly in its earlier stages with the contention urged by Her Majesty's Government that unless the United States Government were going to

maintain that the capture was justifiable and valid, it was unreasonable to expose the parties interested to the delay and the expense of judicial proceedings. The United States Government, however, insisted that the cast must take its course in the prize court, and in the circumstances Her Majesty's Government could only acquiesce. The trial took place on May 20 in the district court at New York, when the immediate release of vessel and cargo was ordered, and the question of damages against the captors reserved for consideration. The subsequent official correspondence was occupied chiefly with the delays in getting the damages assessed. As early as April 9, 1863, Mr. Seward wrote to Lord Lyons a note reviewing the whole correspondence, in which he said, "I freely admit that I believe the claimants entitled to damages and cost," but he maintained that it was regular and legal to wait for the court to decree them, and that the court would decide the question with more exact justice than could the executive Government. The period which elapsed before the prize court dealt with the damages payable certainly justified the complaints which Lord Lyons was instructed to make, for the decree awarding $141,902 was not issued until March, 1868, more than six years after the capture, nor was the sum paid until a further period of over two years had elapsed.

4. The case of the *Saxon* also gave rise to a voluminous diplomatic correspondence, but I am at a loss to know what ground there can be for citing the action of Her Majesty's Government in this case as a precedent for maintaining the right of a Government to ignore the prize court and to claim compensation through the diplomatic channel. The *Saxon* was seized on October 29, 1863, by the U. S. S. *Vanderbilt* while lying at anchor off Penguin Island, on the coast of South Africa. Some confusion occurred at the time of capture, and the mate of the *Saxon* was shot dead by an officer of the *Vanderbilt*. The vessel was sent to New York, and arrived there on December 22. Some doubt seems to have arisen as to why the vessel had been captured, and Lord Lyons was instructed by Lord Russel early in 1864 to ask the United States Government either to direct the immediate release of the *Saxon*, with proper compensation to the owners, or at least to explain the ground on which her seizure and detention were supposed to be justified. Meanwhile further information had come into the possession of Her Majesty's Government, and on February 15 Lord Lyons was instructed on the advice of the law officers of the Crown, that Her Majesty's Government saw no ground for seeking to withdraw the case from the jurisdiction of the prize court. On March 7 Judge Bettes, in the district court at New York, decreed the restitution of the vessel and cargo free of all costs, charges, and expenses, reserving for future consideration the question of probable cause of seizure. Lord Lyons was subsequently informed that Her Majesty's Government saw no reason to complain of this sentence. They understood the question of damages still to be open, but they were not prepared to say that, if these should be refused, they would, in the peculiar circumstances of the case, be any necessity for an official complaint on their part. The only suggestion which Her Majesty's Government made through the diplomatic channel as to payment of compensation was a request that some relief might be granted to the widow of the mate of the *Saxon* who was shot by an officer of the *Vanderbilt*, but the request was refused with asperity.

On the 10th of May our Government addressed a communication to England to inquire whether it had decided "to repudiate their promise respecting the treatment of these vessels which in good faith has been relied on by this Government."

THE SECRETARY OF STATE TO THE BRITISH AMBASSADOR.

DEPARTMENT OF STATE,
Washington, May 10, 1916.

EXCELLENCY: I have the honor to acknowledge the receipt of your excellency's note of April 22, 1916, in which you refer to the fact that your Government, in December last, promised not to detain certain vessels belonging to the American Transatlantic Co. unless they should carry contraband pending the decision of the British prize court in the cases of the steamer *Hocking* and the steamer *Genesee*, which also belong to this company, and in which you state that Sir Edward Grey has instructed you to inform me that the vessels which have not been seized can no longer enjoy immunity from seizure unless certain assurances respecting their use are given by the company.

These vessels are owned by an American corporation organized under laws which presumably are similar to British laws respecting incorporation. In the name of this corporation these vessels were registered under the American flag, in accordance with laws which, it is understood by this Government, are similar to British laws governing registration of vessels under the British flag. Under the laws of the United States the American Transatlantic Co. is regarded as a citizen of the United States and must doubtless be so regarded in accordance with the custom of nations.

British prize court decisions in relation to the ownership of different kinds of property, including vessels, appear to make it clear that a British corporation is British in character regardless of what the political nationality of its shareholders may be.

This Government has observed that in a recent case a British prize court, applying an apparently well-established rule, condemned a vessel flying the German flag and refused an application of neutral claimants to establish that they were the beneficial owners of the vessel, owning the entire capital stock of the nominal owners, a subsidiary concern established according to the laws of Germany. The court ruled that the fact sought to be proved would not benefit the claimants.

This Government has also observed that the British authorities have in several instances requisitioned vessels flying the British flag, although the entire beneficial interest in them was owned by American citizens, and in connection with requests on the part of such beneficial owners for the release of such vessels the British Government apparently has taken the position that the vessels, flying the British flag and being owned by British corporations, must, of course, be regarded as British and not as American vessels.

It appears, therefore, from different cases of the character just mentioned that the British judicial and administrative authorities have, as a rule, attached no importance to beneficial ownership in determining the nationality of the vessels owned by corporate organizations, but have uniformly proceeded on the theory that nationality in each case must be determined by the flag the vessels fly or by their corporate ownership.

On the other hand, the British authorities in now seeking to condemn the ships of the American Transatlantic Co., which are owned by an American corporation and fly the American flag, on the ground, as they state, that they believe these vessels to be entirely, or to a large extent, enemy owned, apparently attach great importance to beneficial ownership and no importance to the flag or corporate ownership.

In this relation it should be observed that the company has presented to this Government evidence to show that all the company's stock is owned by American citizens. This Government has no information that the stock is not so owned.

Having in mind these and other facts as well as the applicable principles of international law, the seizure of these vessels appeared to this Government arbitrary and unwarranted. However, after having informed the British Government to that effect, this Government decided to let the matter rest after receiving from the British Government a promise that they were, in the language of a note addressed by Sir Edward Grey to the American ambassador at London, "willing not to capture the remaining ships of the company, unless they were found to be carrying contraband until the prize court has given a decision in the cases which are now pending, provided, of course, that the proceedings in court are not unduly prolonged by the defendants." The owners of the vessels have informed the department that they have complied strictly with the British Government's conditions, and the department has no information to the contrary.

If any one of these vessels should carry contraband, the British Government would be warranted in exercising their belligerent right to detain such vessel. But the carrying of contraband by one of these vessels would, of course, furnish no legal justification for interference with other vessels carrying innocent cargoes, and the observance by the British Government of the express language of their promise respecting the immunity of these vessels would prevent any such interference.

I observe from your note that you have been instructed by Sir Edward Grey to inform me that "the immunity from capture at present enjoyed by the American Transatlantic Co.'s vessels can only be continued provided that an assurance is given by the company that the vessels will not trade with Scandinavia or Holland."

Under these circumstances, before giving further consideration to the matters referred to in your note I would like to be informed whether, as would appear from your note, it is the intention of the British Government to repudiate their promise respecting the treatment of these vessels which in good faith has been relied on by this Government and by the owners of these vessels.

I am, etc.,

ROBERT LANSING.

The real significance of these incursions upon the commercial rights of neutrals upon the "high seas" was greatly accentuated by the publication of the recommendations of the entente conference held in Paris in June, 1916, in the matter of trade after the war. These resolutions called forth adverse criticism from such men as Ambassador Francis, who declared there was no reason why better commercial relations should not exist between us and European commercial nations, speaking especially for the trade with Russia. Continuing, he said:

That end can not be accomplished, however, if the principles of resolutions of the economic conference of the allies at Paris last June are confirmed and carried out.

Those resolutions, while inspired by the desire to prevent a revival of economic supremacy, as it were, of the countries with which the allies are at war, are at the same time a discrimination against commerce with all neutral countries, many of which have been supplying the allies with requirements for a successful prosecution of the war, and in so doing have provided much material without which the allies would not have been as successful as they have been.

The idea that America has experienced nothing but benefit from the war is a mistake, and the charge that America desires to see the war continue because of the profits she derives has so little foundation that it needs no explanation or defense.

On March 30 another order in council modifying the declaration of London in numerous details was promulgated. It was styled "The declaration of London order in council, 1916." On the 7th of July another order in council was announced, as follows:

AMBASSADOR W. H. PAGE TO THE SECRETARY OF STATE.

No. 4181.] AMERICAN EMBASSY,
London, July 10, 1916.

SIR: I have the honor to inclose herewith, for the information of the department, a copy, in duplicate, of the text of an order in council dated the 7th instant, which has been received from the foreign office, called "The maritime rights order in council, 1916," which effects a change in the rules hitherto adopted by the British Government to govern their conduct of warfare at sea during the present hostilities.

There is also transmitted herewith a copy, in duplicate, of a memorandum which has been drawn up by the British and French Governments explaining the grounds for the issue of the aforementioned order in council.

I have, etc.,

WALTER HINES PAGE.

[Inclosure 1.]

ORDER IN COUNCIL.

At the court at Buckingham Palace, the 7th day of July, 1916. Present: The Kings Most Excellent Majesty in council.

Whereas by an order in council dated the 20th day of August, 1914, His Majesty was pleased to declare that during the present hostilities the provisions of the declaration of London should, subject to certain additions and modifications therein specified, be adopted and put in force by His Majesty's Government;

And whereas the said declaration was adopted as aforementioned in common with His Majesty's allies;

And whereas it has been necessary for His Majesty and for his allies from time to time to issue further enactments modifying the application of the articles of the said declaration;

And whereas orders in council for this purpose have been issued by His Majesty on the 29th day of October, 1914, the 20th day of October, 1915, and the 30th day of March, 1916;

And whereas the issue of these successive orders in council may have given rise to some doubt as to the intention of His Majesty, as also as to that of his allies, to act in strict accordance with the law of nations,

and it is therefore expedient to withdraw the said orders so far as they are now in force;

Now, therefore, His Majesty, by and with the advice of his privy council, is pleased to order, and it is hereby ordered, that the declaration of London order in council No. 2, 1914, and all orders subsequent thereto amending the said order are hereby withdrawn;

And His Majesty is pleased further to declare, by and with the advice of his privy council, and it is hereby declared, that it is and always has been his intention, as it is and has been that of his allies, to exercise their belligerent rights at sea in strict accordance with the law of nations;

And whereas on account of the changed conditions of commerce and the diversity of practice doubts might arise in certain matters as to the rules which His Majesty and his allies regard as being in conformity with the laws of nations, and it is expedient to deal with such matters specifically;

It is hereby ordered that the following provisions shall be observed:

(a) The hostile destination required for the condemnation of contraband articles shall be presumed to exist, until the contrary is shown, if the goods are consigned to or for an enemy authority, or an agent of the enemy State, or to or for a person in territory belonging to or occupied by the enemy, or to or for a person who, during the present hostilities, has forwarded contraband goods to an enemy authority, or an agent of the enemy State, or to or for a person in territory belonging to or occupied by the enemy, or if the goods are consigned "to order," or if the ship's papers do not show who is the real consignee of the goods.

(b) The principle of continuous voyage or ultimate destination shall be applicable both in cases of contraband and of blockade.

(c) A neutral vessel carrying contraband, with papers indicating a neutral destination, which, notwithstanding the destination shown on the papers, proceeds to an enemy port, shall be liable to capture and condemnation if she is encountered before the end of her next voyage.

(d) A vessel carrying contraband shall be liable to capture and condemnation if the contraband, reckoned either by value, weight, volume, or freight, forms more than half the cargo.

And it is hereby further ordered as follows:

(i) Nothing herein shall be deemed to affect the order in council of the 11th March, 1915, for restricting further the commerce of the enemy or any of His Majesty's proclamations declaring articles to be contraband of war during the present hostilities.

(ii) Nothing herein shall affect the validity of anything done under the orders in council hereby withdrawn.

(iii) Any cause or proceeding commenced in any prize court before the making of this order may, if the court thinks just, be heard and decided under the provisions of the orders hereby withdrawn so far as they were in force at the date when such cause or proceeding was commenced, or would have been applicable in such cause or proceeding if this order had not been made.

This order may be cited as "The maritime rights order in council, 1916."

And the lords commissioners of His Majesty's treasury, the lords commissioners of the admiralty, and each of His Majesty's principal secretaries of state, the president of the probate, divorce, and admiralty division of the high court of justice, all other judges of His Majesty's prize courts, and all governors, officers, and authorities whom it may concern are to give the necessary directions herein as to them may respectively appertain.

ALMERIC FITZROY.

[Inclosure 2.]

MEMORANDUM.

At the beginning of the present war the allied Governments, in their anxiety to regulate their conduct by the principles of the law of nations, believed that in the declaration of London they would find a suitable digest of principles and compendium of working rules. They accordingly decided to adopt the provisions of the declaration not as in itself possessing for them the force of law but because it seemed to present in its main lines a statement of the rights and the duties of belligerents based on the experience of previous naval wars. As the present struggle developed, acquiring a range and character beyond all previous conceptions, it became clear that the attempt made at London in time of peace to determine not only the principles of law but even the forms under which they were to be applied had not produced a wholly satisfactory result. As a matter of fact, these rules, while not in all respects improving the safeguards afforded to neutrals, do not provide belligerents with the most effective means of exercising their admitted rights.

As events progressed, the Germanic powers put forth all their ingenuity to relax the pressure tightening about them and to reopen a channel for supplies; their devices compromised innocent neutral commerce and involved it in suspicions of enemy agency. Moreover, the manifold developments of naval and military science, the invention of new engines of war, the concentration by the Germanic powers of the whole body of their resources on military ends, produced conditions altogether different from those prevailing in previous naval wars.

The rules laid down in the declaration of London could not stand the strain imposed by the test of rapidly changing conditions and tendencies which could not have been foreseen.

The allied Governments were forced to recognize the situation thus created, and to adapt the rules of the declaration from time to time to meet these changing conditions.

These successive modifications may perhaps have exposed the purpose of the allies to misconstruction; they have therefore come to the conclusion that they must confine themselves simply to applying the historic and admitted rules of the law of nations.

The allies solemnly and unreservedly declare that the action of their warships, no less than the judgments of their prize courts, will continue to conform to these principles; that they will faithfully fulfil their engagements, and in particular will observe the terms of all international conventions regarding the laws of war; that mindful of the dictates of humanity, they repudiate utterly all thought of threatening the lives of noncombatants; that they will not without cause interfere with neutral property; and that if they should, by the action of their fleets, cause damage to the interests of any merchant acting in good faith, they will always be ready to consider his claims and to grant him such redress as may be due.

FOREIGN OFFICE, *July 7, 1916.*

Our Government's first communication on the proposed "blacklist" policy was made on July 19. After several communications on the subject the Government dispatched the following note, giving our position on the matter in controversy:

THE ACTING SECRETARY OF STATE TO AMBASSADOR W. H. PAGE.

[Telegram.]

DEPARTMENT OF STATE,
Washington, July 26, 1916.

You are instructed to deliver to Sir Edward Grey a formal note on the subject of the enemey-trading act, textually as follows:

"The announcement that His Britannic Majesty's Government has placed the names of certain persons, firms, and corporations in the United States upon a proscriptive 'blacklist' and has forbidden all financial or commercial dealings between them and citizens of Great Britain, has been received with the most painful surprise by the people and Government of the United States, and seems to the Government of the United States to embody a policy of arbitrary interference with neutral trade against which it is its duty to protest in the most decided terms.

"The scope and effect of the policy are extraordinary. British steamship companies will not accept cargoes from the proscribed firms or persons or transport their goods to any port, and steamship lines under neutral ownership understand that if they accept freight from them they are likely to be denied coal at British ports and excluded from other privileges which they have usually enjoyed, and may themselves be put upon the blacklist. Neutral bankers refuse loans to those on the list and neutral merchants decline to contract for their goods, fearing a like proscription. It appears that British officials regard the prohibitions of the blacklist as applicable to domestic commercial transactions in foreign countries as well as in Great Britain and her dependencies, for Americans doing business in foreign countries have been put on notice that their dealings with blacklisted firms are to be regarded as subject to veto by the British Government. By the same principle Americans in the United States might be made subject to similar punitive action if they were found dealing with any of their own countrymen whose names had thus been listed.

"The harsh and even disastrous effects of this policy upon the trade of the United States and upon the neutral rights upon which it will not fail to insist are obvious. Upon the list of those proscribed and in effect shut out from the general commerce of the world may be found American concerns which are engaged in large commercial operations as importers of foreign products and materials and as distributors of American products and manufactures to foreign countries and which constitute important channels through which American trade reaches the outside world. Their foreign affiliations may have been fostered for many years, and when once broken can not easily or promptly be reestablished. Other concerns may be put upon the list at any time and without notice. It is understood that additions to the proscription may be made 'whenever on account of enemy nationality or enemy association of such persons or bodies of persons it appears to His Majesty expedient to do so.' The possibilities of undeserved injury to American citizens from such measures, arbitrarily taken, and of serious and incalculable interruptions of American trade are without limit.

"It has been stated on behalf of His Majesty's Government that these measures were aimed only at the enemies of Great Britain and would be adopted and enforced with strict regard to the rights of neutrals and with the least possible detriment to neutral trade, but it is evident that they are inevitably and essentially inconsistent with the rights of the citizens of all nations not involved in war. The Government of the United States begs to remind the Government of His Britannic Majesty that citizens of the United States are entirely within their rights in attempting to trade with the people of the Governments of any of the nations now at war, subject only to well-defined international practices and understandings which the Government of the United States deems the Government of Great Britain to have too lightly and too frequently disregarded. There are well-known remedies and penalties for breaches of blockade, where the blockade is real and in fact effective, for trade in contraband, for every unneutral act by whomsoever attempted. The Government of the United States can not consent to see those remedies and penalties altered or extended at the will of a single power or group of powers to the injury of its own citizens or in derogation of its own rights. Conspicuous among the principles which the civilized nations of the world have accepted for the safeguarding of the rights of neutrals is the just and honorable principle that neutrals may not be condemned nor their goods confiscated except upon fair adjudication and after an opportunity to be heard in prize courts or elsewhere. Such safeguards the blacklist brushes aside. It condemns without hearing, without notice, and in advance. It is manifestly out of the question that the Government of the United States should acquiesce in such methods or applications of punishment to its citizens.

"Whatever may be said with regard to the legality, in the view of international obligation, of the act of Parliament upon which the practice of the blacklist as now employed by His Majesty's Government is understood to be based, the Government of the United States is constrained to regard that practice as inconsistent with that true justice, sincere amity, and impartial fairness which should characterize the dealings of friendly governments with one another The spirit of reciprocal trade between the United States and Great Britain, the privilege long accorded to the nationals of each to come and go with their ships and cargoes, to use each the other's shipping, and be served each by the other's merchants is very seriously impaired by arbitrary and sweeping practices such as this. There is no purpose or inclination on the part of the Government of the United States to shield American citizens or business houses in any way from the legitimate consequences of unneutral acts or practices; it is quite willing that they should suffer the appropriate penalties which international law and the usage of nations have sanctioned; but His Britannic Majesty's Government can not expect the Government of the United States to consent to see its citizens put upon an ex parte blacklist without calling the attention of His Majesty's Government, in the gravest terms, to the many serious consequences to neutral rights and neutral relations which such an act must necessarily involve. It hopes and believes that His Majesty's Government, in its natural absorption in a single pressing object of policy, has acted without a full realization of the many undesired and undesirable results that might ensue."

POLK.

The clear indications of a purpose to ignore neutral rights by the controlling powers in the war in Europe induced the Congress at the close of the first session of the Sixty-fourth

Congress to enact legislation to protect American rights. After many suggestions, some of which were very drastic, the revenue law of September 8, 1916, containing the following provisions was adopted:

That whenever during the existence of a war in which the United States is not engaged the President shall be satisfied that there is reasonable ground to believe that under the laws, regulations, or practices of any country, colony, or dependency contrary to the law and practice of nations, the importation into their own or any other country, dependency, or colony of any article the product of the soil or industry of the United States and not injurious to health or morals is prevented or restricted, the President is authorized and empowered to prohibit or restrict during the period such prohibition or restriction is in force the importation into the United States of similar or other articles, products of such country, dependency, or colony as in his opinion the public interest may require; and in such case he shall make proclamation stating the article or articles which are prohibited from importation into the United States; and any person or persons who shall import, or attempt or conspire to import, or be concerned in importing, such article or articles into the United States contrary to the prohibition in such proclamation, shall be liable to a fine of not less than $2,000 nor more than $50,000, or to imprisonment not to exceed two years, or both, in the discretion of the court. The President may change, modify, revoke, or renew such proclamation in his discretion.

That whenever during the existence of a war in which the United States is not engaged the President shall be satisfied that there is reasonable ground to believe that any vessel, American or foreign, is, on account of the laws, regulations, or practices of a belligerent Government, making or giving any undue or unreasonable preference or advantage in any respect whatsoever to any particular person, company, firm, or corporation, or any particular description of traffic in the United States or its possessions, or to any citizen of the United States residing in neutral countries abroad, or is subjecting any particular person, company, firm, or corporation or any particular description of traffic in the United States or its possessions, or any citizens of the United States residing in neutral countries abroad to any undue or unreasonable prejudice, disadvantage, injury, or discrimination in regard to accepting, receiving, transporting, or delivering, or refusing to accept, receive, transfer, or deliver any cargo, freight, or passengers, or in any other respect whatsoever, he is hereby authorized and empowered, in his discretion, to direct the detention of such vessels by withholding clearance or by formal notice forbidding departure, and to revoke, modify, or renew any such direction as in his opinion the public interest may require.

That whenever during the existence of a war in which the United States is not engaged the President shall be satisfied that there is reasonable ground to believe that under the laws, regulations, or practices of any belligerent country or Government American ships or American citizens are not accorded any of the facilities of commerce which the vessels or citizens of that belligerent country enjoy in the United States or its possessions, or are not accorded by such belligerent equal privileges or facilities of trade with vessels or citizens of any nationality other than that of such belligerent, the President is hereby authorized and empowered, in his discretion, to withhold clearance from one or more vessels of such belligerent country until such belligerent shall restore to such American vessels and American citizens reciprocal liberty of commerce and equal facilities of trade; or the President may, in his discretion, direct that similar privileges and facilities, if any, enjoyed by vessels or citizens of such belligerents in the United States or its possessions be refused to vessels or citizens of such belligerent; and in such case he shall make proclamation of his direction, stating the facilities and privileges which shall be refused, and the belligerent to whose vessels or citizens they are to be refused, and thereafter the furnishing of such prohibited privileges and facilities to any vessel or citizen of the belligerent named in such proclamation shall be unlawful; and he may change, modify, revoke, or renew such proclamation as in his opinion the public good may require; and any person or persons who shall furnish or attempt or conspire to furnish or be concerned in furnishing or in the concealment of furnishing facilities or privileges to ships or persons contrary to the prohibition in such proclamation shall be liable to a fine of not less than $2,000 nor more than $50,000, or to imprisonment not to exceed two years, or both, in the discretion of the court.

In case any vessel which is detained by virtue of this act shall depart or attempt to depart from the jurisdiction of the United States without clearance or other lawful authority, the owner or master or person or persons having charge or command of such vessel shall be severally liable to a fine of not less than $2,000 nor more than $10,000 or to imprisonment not to exceed two years, or both, and, in addition, such vessel shall be forfeited to the United States.

That the President of the United States is hereby authorized and empowered to employ such part of the land or naval forces of the United States as shall be necessary to carry out the purposes of this act.

Three months later, October 12, the British Government made formal reply. This reply clearly indicates the purpose of the mistress of the seas to prove her primacy.

THE BRITISH EMBASSADOR TO THE SECRETARY OF STATE.

No. 307.] BRITISH EMBASSY,
Washington, October 12, 1916.

SIR: In conformity with instructions received from Viscount Grey, of Fallodon, His Majesty's Principal Secretary of State for Foreign Affairs, I have the honor to transmit herewith copy of the memorandum (identic memorandum received from the French Embassy), agreed upon by His Majesty's Government and the French Government, embodying the joint reply of the allies to your note of May 24 regarding the examination of the mails.

I have, etc.,

CECIL SPRING RICE.

[Inclosure—Translation.]

CONFIDENTIAL.

1. By a letter of May 24 last the Secretary of State of the United States was pleased to give the views of the American Government on the memorandum of the allied Governments concerning mails found on merchant ships on the high seas.

2. The allied Governments have found that their views agreed with those of the Government of the United States in regard to the postal union convention, which is recognized on both sides to be foreign to the questions now under consideration; post parcels respectively recognized as being under the common rule of merchandise subject to the exercise of belligerent rights, as provided by international law; the inspection of private mails to the end of ascertaining whether they do not contain contraband goods, and, if carried on an enemy ship, whether they do not contain enemy property. It is clear that that inspection which necessarily implies the opening of covers so as to verify the contents could not be carried on on board without being attended with great confusion, causing serious delay to the mails, passengers, and cargoes, and without causing for the letters in transit errors, losses, or at least great risk of miscarriage. That is the reason why the allies had mail bags landed and sent to centers provided with the necessary force and equipment for prompt and regular handling. In all this the allied Governments had no other object in view than to limit, as far as possible, the inconvenience that might result for innocent mails and neutral vessels from the legitimate exercise of their belligerent rights in respect to hostile correspondence.

3. The Government of the United States acknowledges it agrees with the allied Governments as to principles, but expresses certain divergent views and certain criticism as to the methods observed by the allies in applying these principles.

4. These divergencies of views and criticisms are as follows:

5. In the first place, according to the Government of the United States, the practice of the allied Governments is said to be contrary to their own declaration, in that, while declaring themselves unwilling to seize and confiscate genuine mails on the high seas, they would obtain the same result by sending, with or without their consent, neutral vessels to allied ports, there to effect the seizures and confiscations above referred to, and thus exercise over those vessels a more extensive belligerent right than that which is theirs on the high seas. According to the Government of the United States, there should be, in point of law, no distinction to be made between seizure of mails on the high seas, which the allies have declared they will not apply for the present, and the same seizure practiced on board ships that are, whether willingly or not, in an allied port.

6. On this first point and as regards vessels summoned on the high seas and compelled to make for an allied port, the allied Governments have the honor to advise the Government of the United States that they have never subjected mails to a different treatment according as they were found on a neutral vessel on the high seas or on neutral vessels compelled to proceed to an allied port; they have always acknowledged that visits made in the port after a forced change of course must in this respect be on the same footing as a visit on the high seas, and the criticism formulated by the Government of the United States does not therefore seem warranted.

7. As to ships which of their own accord call at allied ports it is important to point out that in this case they are really "voluntarily" making the call. In calling at an allied port the master acts, not on any order from the allied authorities, but solely carries out the instructions of the owner; neither are those instructions forced upon the said owner. In consideration of certain advantages derived from the call at an allied port, of which he is at full liberty to enjoy or refuse the benefits, the owner instructs his captain to call at this or that port. He does not, in truth, undergo any constraint. In point of law the allied Governments think it a rule generally accepted, particularly in the United States (United States v. Dickelman, United States Supreme Court, 1875; 92 U. S. Rep., 520; Scott's cases, 264), that merchant ships which enter a foreign port thereby place themselves under the laws in force in that port, whether in time of war or of peace, and when martial law is in force in that port. It is therefore legitimate in the case of a neutral merchant ship entering an allied port for the authorities of the allied Governments to make sure that the vessel carries nothing inimical to their national defense before granting its clearance. It may be added that the practice of the Germans to make improper use of neutral mails and forward hostile correspondence, even official communications dealing with hostilities, under cover of apparently unoffensive envelopes mailed by neutrals to neutrals, made it necessary to examine mails from or to countries neighboring Germany under the same conditions as mails from or to Germany itself; but as a matter of course mails from neutrals to neutrals that do not cover such improper uses have nothing to fear.

8. In the second place, according to the Government of the United States the practice now followed by the allied Governments is contrary to the rule of convention 11 of The Hague, 1907, which they declare their willingness to apply, and would, besides, constitute a violation of the practice heretofore followed by nations.

9. In regard to the value to be attached to the eleventh convention of The Hague, 1907, it may first of all be observed that it only refers to mails found at sea and that it is entirely foreign to postal correspondence found on board ships in ports. In the second place, from the standpoint of the peculiar circumstances of the present war the Government of the United States is aware that that convention, as stated in the memorandum of the allies, has not been signed or ratified by six of the belligerent powers (Bulgaria, Italy, Montenegro, Russia, Servia, and Turkey); that for that very reason Germany availed itself of article 9 of the convention and denied, so far as it was concerned, the obligatory character in these stipulations; and that for these several reasons the convention possesses in truth but rather doubtful validity in law.

In spite of it all, the Allied Governments are guided in the case of mails found on board ships in ports by the intentions expressly manifested in the conferences of The Hague sanctioned in the preamble to convention 11, and tending to protect pacific and innocent commerce only. Mails possessing that character are forwarded as quickly as circumstances permit. In regard to mails found on vessels at sea the Allied Governments have not for the present refused to observe the terms of the convention reasonably interpreted; but they have not admitted and can not admit that there is therein a final provision legally binding them, from which they could not possibly depart. The Allied Governments expressly reserve to themselves the right to do so in case enemy abuses and frauds, dissimulations, and deceits should make such a measure necessary.

10. As for the practice previously followed by the powers in the time of former wars, no general rule can easily be seen therein prohibiting the belligerents from exercising on the open seas, as to postal correspondence, the right of supervision, surveillance, visitation, and, the case arising, seizure and confiscation, which international law confers upon them in the matter of any freight outside of the territorial waters and jurisdiction of the neutral powers.

11. On the high seas, under international law, it is for the belligerents to seek and prevent transportation or other acts by which neutral

vessels may lend their cooperation and assistance to hostile operations of the enemy. Now, as has long ago been observed (among others, Lord Stowell, in The Atalanta, 6 Robinson, 440, 1, English prize cases, 607; Scott's cases, 780), a few lines of a letter delivered to an enemy may be as useful as or even more useful than a cargo of arms and ammunition to promote his war operations. The assistance rendered in such cases by the vessel carrying such a letter is as dangerous for the other belligerents as the assistance resulting from the transportation of military cargoes. As a matter of fact, experience has in the course of the present war demonstrated the truth of this remark. Hostile acts which had been projected in mails have failed. Dangerous plots, from which even neutral countries are not safe at the hands of the enemy, were discovered in the mails and baffled. Finally the addressees of certain letters which the allies had seen fit to respect have evidenced a satisfaction the hostile character of which removed every doubt as to the significance of those letters.

12. The report adpoted by the Conference of The Hague in support of convention 11 leaves little doubt as to the former practice in the matter: "The seizure, opening the bags, examination, confiscation if need be, in all cases delay or even loss, are the fate usually awaiting mail bags carried by sea in time of war." (Second Peace Conference, acts and documents, vol. 1, p. 266.)

13. The American note of May 24, 1916, invokes the practice followed by the United States during the Mexican and Civil Wars; the practice followed by France in 1870; by the United States in 1898; by Great Britain in the South African War; by Japan and Russia in 1904; and now by Germany.

14. As regards the proceedings of the German Empire toward postal correspondence during the present war, the Allied Governments have informed the Government of the United States of the names of some of the mail steamers whose mail bags have been—not examined to be sure—but purely and simply destroyed at sea by the German naval authorities. Other names could very easily be added—the very recent case of the mail steamer *Hudikswall* (Swedish) carrying 670 mail bags, may be cited.

15. The Allied Governments do not think that the criminal habit of sinking ships, passengers, and cargoes, or abandoning on the high seas the survivors of such calamities is, in the eyes of the Government of the United States, any justification for the destruction of the mail bags on board; and they do not deem it to the purpose to make a comparison between these destructive German proceedings and the acts of the Allies in supervising and examining enemy correspondence.

16. As to the practice of Russia and of Japan, it may be permitted to doubt that it was at variance with the method of the Allied Governments in the present war.

17. The imperial Russian decree of May 13–25, 1877, for the exercise of the right of visit and capture, provides, paragraph 7: "The following acts which are forbidden to neutrals are assimilated to contraband of war; The carrying * * * of dispatches and correspondence of the enemy." The Russian imperial decree of September 14, 1904, reproduces the same provision. The procedure followed in regard to the mail steamers, and the prize decisions bear witness that public or private mails found on board neutral vessels were examined, landed, and, when occasion arose, seized.

18. Thus, in May and July, 1904, postal correspondence carried on the steamships *Osiris* (British) and *Prinz Heinrich* (German) was examined by the Russian cruisers to see whether it contained Japanese correspondence. Thus, again, in July, 1904, the steamer *Calchas* (British) captured by Russian cruisers, had 16 bags of mail that had been shipped at Tacoma by the postal authorities of the United States seized on board and landed and the prize court of Vladivostock examined their contents, which it was recognized it could lawfully do. (Russian prize cases, p. 139.)

19. As regards the practice of Japan, the Japanese rules concerning prizes, dated March 15, 1904, made official enemy correspondence, with certain exceptions, contraband of war. They ordered the examination of mail bags on mail steamers unless there was on board an official of the post office, making a declaration in writing and under oath that the bags contained no contraband; it was even added that no account should be taken of such a declaration if there existed grave suspicions. On the other hand, the Japanese prize court rules acknowledged the power of those courts in the examination of prize cases to examine letters and correspondence found on board neutral vessels. (Takahashi, "International Law Applied to Russo-Japanese War," p. 568.)

20. The French practice during the war of 1870 is found outlined in the naval instructions of July 26, 1870, under which official dispatches were on principle assimilated to contraband, and official or private letters found on board captured vessels were to be sent immediately to the Minister of Marine. Subsequently the circumstances of war permitted of the rule in additional instructions, under which, if the vessel to be visited was a mail steamer having on board an official of the post office of the Government whose flag she displayed, the visiting officer might be content with that official's declaration regarding the nature of the dispatches.

21. During the South African War the British Government was able to limit its intervention in the forwarding of postal correspondence and mails as far as the circumstances of that war allowed, but it did not cease to exercise its supervision of the mails intended for the enemy.

22. As to the practice followed by the Government of the United States during the American Civil War, particularly in the *Peterhoff* case, cited in the American memorandum of May 24, 1916, the following instructions issued in that case by the Secretary of State of the United States do not seem to imply anything but the forwarding of correspondence which has been found to be innocent: "I have, therefore, to recommend that in this case, if the district attorney has any evidence to show the mails are simulated and not genuine, it shall be submitted to the court; if there be no reasonable grounds for that belief, then that they be put on their way to their original destination." (Letter of Mr. Seward, Secretary of State, to Mr. Welles, Secretary of the Navy, April 15, 1863; VII Moore's Dig., p. 482.)

23. Finally, as regards the free transit granted to mails by the United States during the Mexican War, one may be allowed to recall the circumstances under which this proceeding was adopted. By a letter dated May 20, 1846, notified on the following 10th of July, the commander of the United States cruiser *St. Mary*, announced the blockade of the port of Tampico. Although that measure authorized, without a doubt, the seizure and confiscation of all correspondence for the blockaded port, the American naval authorities, on learning the circumstances of the case, declared "neutral noncommercial mail packets are free to enter and deport," and it was even added that "Mexican boats engaged exclusively in fishing will be allowed to pursue their labor unmolested." (British State Papers, vol. 35, 1846–47.)

24. It seems difficult to compare the blockade of the port of Tampico in 1846 with the measures taken by the allies in the course of this war to reduce the economic resistance of the German Empire, or to find in the method then adopted by the United States a precedent which condemns the practice now put in use by the allied Governments.

25. To waive the right to visit mail steamers and mail bags intended for the enemy seemed in the past (Dr. Lushington, "Naval Prize Law," Introd., p. 12) a sacrifice which could hardly be expected of belligerents. The allied Governments have again noted in their preceding memorandum how and why, relying on certain declarations of Germany, they had thought in the course of the second peace conference of 1907 they could afford to waive that right. They have also drawn the attention of the Government of the United States to the fraudulent use Germany hastened to make of this waiver of the previous practices above mentioned.

26. After pointing to a certain number of specific cases where American interests happened to be injured from the postal supervision exercised by the British authorities, forming the subject of the special memorandum of the Government of His Majesty, dated July 20, 1916, the Government of the United States was pleased to make known its views as to what is to be and is not to be recognized as not possessing the character of postal correspondence.

27. In this respect the Government of the United States admits that shares, bonds, coupons, and other valuable papers; money orders, checks, drafts, bills of exchange, and other negotiable papers, being the equivalent of money, may, when included in postal shipments, be considered as of the same nature as merchandise and other property, and therefore be also subjected to the exercise of belligerent rights.

28. Yet the American memorandum adds that correspondence, including shipping documents, lists of money orders, and documents of this nature, even though referring to shipments to or exports by the enemy, must be treated as mail and pass freely unless they refer to merchandise on the same ship that is liable to capture.

29. As regards shipping documents and commercial correspondence found on neutral vessels, even in an allied port and offering no interest of consequence as affecting the war, the allied Governments have instructed their authorities not to stop them, but to see that they are forwarded with as little delay as possible. Mail matter of that nature must be forwarded to destination as far as practicable on the very ship on which it was found or by a speedier route, as is the case for certain mails inspected in Great Britain.

30. As for the lists of money orders to which the Government of the United States assigns the character of ordinary mail, the allied Governments deem it their duty to draw the attention of the Government of the United States to the following practical consideration:

31. As a matter of fact, the lists of money orders mailed from the United States to Germany and Austria-Hungary correspond to moneys paid in the United States and payable by the German and Austro-Hungarian post offices. Those lists acquaint those post offices with the sums that have been paid there which in consequence they have to pay to the addressees. In practice, such payment is at the disposal of such addressees and is effected directly to them as soon as those lists arrive and without the requirement of the individual orders having come into the hands of the addressees. These lists are thus really actual money orders transmitted in lump in favor of several addressees. Nothing, in the opinion of the allied Governments, seems to justify the liberty granted to the enemy country so to receive funds intended to supply by that amount its financial resisting power.

32. The American memorandum sees fit firmly to recall that neutral and belligerent rights are equally sacred and must be strictly respected. The allied Governments, so far as they are concerned, wholly share that view. They are sincerely striving to avoid an encroachment by the exercise of their belligerent rights on the legitimate exercise of the rights of innocent neutral commerce, but they hold that it is their belligerent right to exercise on the high seas the supervision granted them by international law to impede any transportation intended to aid their enemy in the conduct of the war and to uphold his resistance. The rights of the United States as a neutral power can not, in our opinion, imply the protection granted by the Federal Government to shipments, invoices, correspondence, or communications in any shape whatever having an open or concealed hostile character and with a direct or indirect hostile destination, which American private persons can only effect at their own risk and peril. That is the very principle which was expressly stated by the President of the United States in his neutrality proclamation.

33. Furthermore, should any abuses, grave errors, or derelictions committed by the allied authorities charged with the duty of inspecting mails be disclosed to the Governments of France and Great Britain, they are now as they ever were ready to settle responsibility therefor in accordance with the principles of law and justice which it never was and is not now their intention to evade.

Aside from the controversy over commercial rights growing out of the British control of the seas, the dispute over the treatment of mails and telegraphic communication is important. This matter became the subject of diplomatic discussion, as shown by our communication, January 4, 1916:

THE SECRETARY OF STATE TO AMBASSADOR W. H. PAGE.

[Telegram.]

DEPARTMENT OF STATE,
Washington, January 4, 1916.

Department advised that British customs authorities removed from Danish steamer *Oscar Second* 734 bags parcel mail en route from United States to Norway, Sweden, and Denmark; that British port authorities have removed from Swedish steamer *Stockholm* 58 bags parcel mail en route Gothenburg, Sweden, to New York; that 5,000 packages of merchandise, American property, have been seized by British authorities on the Danish steamer *United States* on her last trip to the United States; that customs authorities at Kirkwall, on December 18, seized 597 bags of parcel mail from steamer *Frederich VIII* manifested for Norway, Sweden, and Denmark. Other similar cases might be mentioned, such as that of the steamer *Heligolav*. Department inclined to regard parcel-post articles as subject to same treatment as articles sent as express or freight in respect to belligerent search, seizure, and condemnation. On the other hand, parcel-post articles are entitled to the usual exemptions of neutral trade, and the protests of the Government of the United States in regard to what constitutes the unlawful

bringing in of ships for search in port, the illegality of so-called blockade by Great Britain, and the improper assumption of jurisdiction of vessels and cargoes apply to commerce using Parcel Post Service for the transmission of commodities. Please bring this matter of parcel post formally to the attention of the British Government.

The department is further informed that on December 23 the entire mails, including sealed mails and presumably the American diplomatic and consular pouches, from the United States to the Netherlands were removed by British authorities from the Dutch steamer *New Amsterdam;* that on December 20 the Dutch vessel *Noorder Dyke* was deprived at the Downs of American mail from the United States to Rotterdam, and that these mails are still held by British authorities. Other similar instances could be mentioned, as the cases of the steamers *Rotterdam* and *Noordam*. The department can not admit the right of British authorities to seize neutral vessels plying directly between American and neutral European ports without touching at British ports, to bring them into port, and, while there, to remove or censor mails carried by them. Modern practice generally recognizes that mails are not to be censored, confiscated, or destroyed on high seas, even when carried by belligerent mail ships. To attain same end by bringing such mail ships within British jurisdiction for purposes of search and then subjecting them to local regulations allowing censorship of mails can not be justified on the ground of national jurisdiction. In cases where neutral mail ships merely touch at British ports, the department believes that British authorities have no international right to remove the sealed mails or to censor them on board ship. Mails on such ships never rightfully come into the custody of the British mail service, and that service is entirely without responsibility for their transit or safety.

As a result of British action, strong feeling is being aroused in this country on account of the loss of valuable letters, money orders, and drafts, and foreign banks are refusing to cash American drafts owing to the absence of any security that the drafts will travel safely in the mails. Moreover, the detention of diplomatic and consular mail is an aggravating circumstance in a practice which is generally regarded in this country as vexatiously inquisitorial and without compensating military advantage to Great Britain. Please lay this matter immediately before the British Government in a formal and vigorous protest and press for a discontinuance of these unwarranted interferences with inviolable mails. Impress upon Sir Edward Grey the necessity for prompt action in this matter.

LANSING.

The following notes was received from the French ambassador and was identical to a note received from the British Government April 3, 1916:

[Inclosure—Translation.]

MEMORANDUM RELATIVE TO POSTAL CORRESPONDENCE ON THE HIGH SEAS.

FEBRUARY 15, 1916.

The treatment of mail correspondence carried by sea has, in the course of the present war, been the object of various uncertainties, has occasioned some confusion, and at times given rise to criticisms, which, for the sake of international relations and neutral commerce, the allied Governments deem it advisable to dispel.

It has always been and is the paramount object of postal services to receive, carry, and distribute written correspondence or missive letters. By degrees recourse was had to the same services for the transmission of printed documents, then samples, valuables, and finally, under the name of "post parcels," almost every kind of merchandise, provided only that certain conditions were met in respect of weight, bulk, and packing.

It is also known that, when bearing postage stamps, any sealed wrapper, irrespective of its contents, weight, or bulk, may be mailed and is treated as a letter by the postal administrations.

The reflex action of the war on that state of things suggests the following remarks:

At the time of the second conference of The Hague in 1907, the Imperial German Government argued that the telegraph offering belligerents much quicker and safer means of communication than the post, there was no longer any interest in regarding, as theretofore, postal correspondence as apt to prove contraband by analogy and in disturbing its transmission through seizure and confiscation. Their confidence won by a proposition that looked so pacific, the other powers concurred. Article I of the Eleventh Convention of The Hague of 1907 stipulates, as is known, that thenceforward postal correspondence on the high seas is "inviolable."

A first remark must be made with respect to the "post parcels."

The shipment of merchandise by "parcel post" is a mode of shipment and transportation analogous to shipment and transportation on way bills or bills of lading, with this difference, that the transportation is undertaken by the mail service, which moreover sometimes turns it over to common carriers, as is the case in France.

In no wise do such "parcels" constitute "letters" or "correspondence" or "dispatches," and they are clearly not withdrawn in any way from the exercise of the rights of police, supervision, visitation, and eventual seizure which belong to belligerents as to all cargoes on the high seas.

This was shown notably in a communication of the Post Office Department of the United States addressed on April 8, 1915, to the French authorities and transmitting a statement in conformity therewith from the commander of the *Prinz Eitel Friedrich*, a vessel of the Imperial German Navy, regarding the post parcels shipped on the French mail steamer *Floride*, which the first-named cruiser had captured. (See Exhibit 1.)

The allied Governments have also adopted this view, which in their opinion is fully founded in law and superabundantly justified by the facts.

Among many other examples it will be sufficient to cite: 1,302 post parcels, containing together 437.510 grams of india rubber for Hamburg (steamers *Tijuca, Bahia, Jaguaribe, Maranhao, Acre, Olinda, Para, Brazil*); or again, 69 post parcels, containing 400 revolvers for Germany via Amsterdam (S. S. *Gelria*).

As regards the forwarding of letters, wrappers, envelopes, and others intrusted to the postal services and generally contained in the mail bags of the post office of the countries which send them forth, the allied Governments bring the following consideration to the notice of the neutral Governments:

Between December 31, 1914, and December 31, 1915, the German or Austro-Hungarian naval authorities destroyed, without previous warning or visitation, 13 mail ships (see Exhibit 2) with the mail bags on board, coming from or going to neutral or allied countries, without any more concern about the inviolability of the dispatches and correspondence they carried than about the lives of the inoffensive persons aboard the ships.

It has not come to the knowledge of the allied Governments that any protest touching postal correspondence was ever addressed to the Imperial Governments.

Under dates of August 11, 17, and 18, 1915, the neutral mail steamers *Iris* (Norwegian), *Haakon, VII* (Norwegian), *Germania* (Swedish) had the mail bags they carried from and to all places seized on the high seas by the German naval authorities; the letters and correspondence were censored by the German authorities, as proven by the photograph herein inclosed by way of illustration (Exhibit 3). (Not printed.)

The allied Governments understand that subsequently the Imperial German Government, while announcing its intention to desist from such seizures, declared that the said seizures were and would be fully warranted in its opinion. According to the Imperial German Government, the Eleventh Convention of The Hague of 1907, not having been ratified by all the powers at present engaged in the war, would be inapplicable.

Finally the supervision within the territories of the allies of various mail bags shipped on mail steamers that call at certain ports in the said territories more recently disclosed the presence in the wrappers, envelopes, and mail matter of contraband articles particularly sought after by the enemy, and notably: On board the S. S. *Tubantia,* arriving in Europe, 174½ pounds of India rubber, of which 101 pounds of the Para, highest grade, and seven parcels of wool; on board the S. S. *Medan,* seven parcels of crude rubber. That same supervision, exercised under the same conditions on mail bags from Europe which at first sight might have been supposed to contain nothing but correspondence, uncovered in the bags put on board the single mail steamer *Zaandyjk* (Dutch) not less than 368 parcels of miscellaneous goods.

The following letter from the German firm of G. Vogtman & Co., dated from Hamburg, No. 16, Glockengiesserwall, December 15, 1915, is particularly instructive:

[Translation.]

"For some time past we have been receiving regularly from Para invoices of crude india rubber, and you might turn your attention to that line of business. The shipments are made in the shape of 'Samples without value,' registered, about 200 parcels in every mail, each containing about 320 grams of rubber, net. The trouble of doing up the parcels and the high cost of postage are amply covered by the high price commanded by the commodity here."

It is known that on December 15, 1915, crude india rubber, which the German State took all up, was worth about 25 marks per kilog, and, as the Hamburg merchant remarked, "ein guter verdienst nicht ausgeschlossen ist" (a handsome profit is not barred out).

Hostile traffic, shut out of the mastery of the seas, thus resorted to hide in mail matter in order to get through all kinds of merchandise, contraband of war even included, apparently by imposing on the post-office department of the neutral states.

From a legal standpoint, the right of belligerents to exercise police and supervision powers over vessels and particularly over what they carry has never, to the knowledge of the allied Governments, been subject to exceptions, not any more in regard to mail bags than in regard to any other cargo; nay, more, as late as 1907 the letters and dispatches themselves could be seized and confiscated.

By the eleventh convention of The Hague, and for the reasons above stated, the signatory powers waived the rights to so seize dispatches and declared postal correspondence to be inviolable.

The said inviolability only detracted from the public law as far as "correspondence"—that is to say, dispatches or "missive letters"—are concerned, because, as we have seen, it was thought, rightfully or wrongfully, that belligerents having in the telegraph a better medium of correspondence, correspondence by mail was of no interest in warfare. The result is, on the one hand, that inviolability does not apply to any mail matter that is not "correspondence"—that is to say, "missive letters"—and, on the other hand, that this inviolability would be given a wider scope than it possesses if it were regarded as exempting from any supervision goods and articles shipped by mail, even though they were contraband of war.

Under these condtions the allied governments announce:

1. That from the standpoint of their right of visitation and eventual arrest and seizure, merchandise shipped in post parcels needs not and shall not be treated otherwise than merchandise shipped in any other manner.

2. That the inviolability of postal correspondence stipulated by the eleventh convention of The Hague of 1907 does not in any way affect the right of the allied governments to visit and, if occasion arise, arrest and seize merchandise hidden in the wrappers, envelopes, or letters contained in the mail bags.

3. That true to their engagements and respectful of genuine "correspondence," the allied governments will continue, for the present, to refrain on the high seas from seizing and confiscating such correspondence, letters, or dispatches, and will insure their speediest possible transmission as soon as the sincerity of their character shall have been ascertained.

EXHIBIT I.

POST OFFICE DEPARTMENT,
SECOND ASSISTANT POSTMASTER GENERAL,
DIVISION OF FOREIGN MAILS,
Washington, April 8, 1915.

I have the honor to inform you that the German auxiliary cruiser *Prinz Eitel Friedrich* delivered to the postmaster of Newport News, Va., on March 12, 144 mail bags for places in South America which had been transhipped from the French steamer *Floride* to the said cruiser before it sank the steamer. The dispatches, which appeared to be intact, were sent to the New York office, whence they were forwarded to destination in the same condition and at the first opportunity.

In delivering to the officials at Newport News the aforesaid dispatches the commander of the *Prinz Eitel Friedrich* declared that the post parcels on board the steamship *Floride* had been regarded as merchandise and not as correspondence; that is the reason why he did not have them taken out of the *Floride* as the other mail matter was, but allowed them to sink with the vessel, basing his action on the declaration of London, according to which parcels are merchandise and not correspondence.

I further inform you that the New York post office advised the Bordeaux office of these facts by means of a check slip.

EXHIBIT II.

Mails destroyed by enemies from December 31, 1914, to December 31, 1915.

Names of ships.	Tonnage.	Dates.	Enemy ships.	Remarks.
3. Highland Brae	7,634	Dec. 31, 1914	Kaiser Wilhelm	Mails and post parcels from Buenos Aires, Santiago, and Montevideo.
1. Tokomaru	6,084	Jan. 30, 1915	Torpedoed by a German submarine	Parcels and printed matter from New Zealand
2. Aguila	2,114	Mar. 27, 1915	do	Mail for Madeira and the Canary Islands.
4. Falaba	4,806	Mar. 28, 1915	do	Mail and post parcels for West Africa.
5. Lusitania	30,396	May 6, 1915	do	United States mail.
6. Candidate	5,858	May 7, 1915	do	Post parcels for Jamaica.
7. Arabic	15,801	Aug. 19, 1915	do	Mail for the United States, Canada, etc.
8. Hesperian	10,920	Sept. 4, 1915	do	Mail and post parcels for the United States and Canada.
9. Silver Ash	3,753	Oct. 6, 1915		Mail of His British Majesty's ships.
10. Linkmoor	4,303	Sept. 20, 1915		Do.
11. Persia	7,964	Dec. 29, 1915	Torpedoed	Mail and post parcels for the Near East.
12. Ville de la Ciotat (French)	6,390	Dec. 24, 1915	Sunk by a German submarine	Far East mail.
13. Author	3,496			Africa mail.

THE BRITISH AMBASSADOR TO THE SECRETARY OF STATE.

No. 85.] BRITISH EMBASSY,
Washington, April 3, 1916.

SIR: I have the honor, by direction of Sir Edward Grey, His Majesty's principal secretary of state for foreign affairs, to transmit to you herewith a memorandum (not printed); identical with memorandum transmitted with the note of the French ambassador Apr. 3, 1916, supra, p. 406) stating the contentions of His Majesty's Government and the French Government in regard to their right to detain and examine parcels and letter mails on neutral vessels.

I have, etc.,
CECIL SPRING RICE.

THE SECRETARY OF STATE TO THE BRITISH AMBASSADOR.

[Same to the French ambassador.]

No. 1186.] DEPARTMENT OF STATE,
Washington, May 24, 1916.

EXCELLENCY: I have the honor to acknowledge receipt of your excellency's note of April 3 last, transmitting a memorandum dated February 15, 1916, and communicated in substance to the American ambassador in London on February 28, in which are stated the contentions of the British and French Governments in regard to the right to detain and examine parcel and letter mails en route by sea between the United States and Europe.

After a discussion of the use of the mails for the transmission of "parcels" and of the limitations to be placed on "inviolable mail," the joint memorandum of February 15 closes with the following assertions:

"1. That from the standpoint of their right of visitation and eventual arrest and seizure, merchandise shipped in post parcels needs not and shall not be treated otherwise than merchandise shipped in any other manner.

"2. That the inviolability of postal correspondence stipulated by the eleventh convention of The Hague of 1907 does not in any way affect the right of the allied Governments to visit and, if occasion arise, arrest and seize merchandise hidden in the wrappers, envelopes, or letters contained in the mail bags.

"3. That true to their engagements and respectful of genuine 'correspondence,' the allied Governments will continue, for the present, to refrain on the high seas from seizing and confiscating such correspondence, letters, or dispatches, and will insure their speediest possible transmission as soon as the sincerity of their character shall have been ascertained."

In reply the Government of the United States desires to state that it does not consider that the Postal Union Convention of 1906 necessarily applies to the interference by the British and French Governments with the oversea transportation of mails of which the Government of the United States complains. Furthermore, the allied powers appear to have overlooked the admission of the Government of the United States that post parcels may be treated as merchandise subject to the exercise of belligerent rights as recognized by international law. But the Government of the United States does not admit that such parcels are subject to the "exercise of the rights of police supervision, visitation, and eventual seizure which belongs to belligerents as to all cargoes on the high seas," as asserted in the joint note under acknowledgment.

It is noted with satisfaction that the British and French Governments do not claim, and, in the opinion of this Government, properly do not claim, that their so-called "blockade" measures are sufficient grounds upon which to base a right to interfere with all classes of mail matter in transit to or from the central powers. On the contrary, their contention appears to be that, as "genuine correspondence" is under conventional stipulation "inviolable," mail matter of other classes is subject to detention and examination. While the Government of the United States agrees that "genuine correspondence" mail is inviolable, it does not admit that belligerents may search other private sea-borne mails for any other purpose than to discover whether they contain articles of enemy ownership carried on belligerent vessels or articles of contraband transmitted under sealed cover as letter mail, though they may intercept at sea all mails coming out of and going into ports of the enemy's coasts which are effectively blockaded. The Governments of the United States, Great Britain, and France, however, appear to be in substantial agreement as to principle. The method of applying the principle is the chief cause of difference.

Though giving assurances that they consider "genuine correspondence" to be "inviolable," and that they will, "true to their engagements," refrain "on the high seas" from seizing and confiscating such correspondence, the allied Governments proceed to deprive neutral Governments of the benefits of these assurances by seizing and confiscating mail from vessels in port instead of at sea. They compel neutral ships without just cause to enter their own ports or they induce shipping lines, through some form of duress, to send their mail ships via British ports, or they detain all vessels merely calling at British ports, thus acquiring by force or unjustifiable means an illegal jurisdiction. Acting upon this enforced jurisdiction, the authorities remove all mails, genuine correspondence, as well as post parcels, take them to London, where every piece, even though of neutral origin and destination, is opened and critically examined to determine the "sincerity of their character," in accordance with the interpretation given that undefined phrase by the British and French censors. Finally the expurgated remainder is forwarded, frequently after irreparable delay, to its destination. Ships are detained en route to or from the United States or to or from other neutral countries, and mails are held and delayed for several days and, in some cases, for weeks and even months, even though not routed to ports of north Europe via British ports. This has been the procedure which has been practiced since the announcement of February 15, 1916. To some extent the same practice was followed before that date, calling forth the protest of this Government on January 4, 1916. But to that protest the memorandum under acknowledgment makes no reference and is entirely unresponsive. The Government of the United States must again insist with emphasis that the British and French Governments do not obtain rightful jurisdiction of ships by forcing or inducing them to visit their ports for the purpose of seizing their mails, or thereby obtain greater belligerent rights as to such ships than they could exercise on the high seas, for there is, in the opinion of the Government of the United States, no legal distinction between the seizure of mails at sea, which is announced as abandoned, and their seizure from vessels voluntarily or involuntarily in port. The British and French practice amounts to an unwarranted limitation on the use by neutrals of the world's highway for the transmission of correspondence. The practice actually followed by the allied powers must be said to justify the conclusion, therefore, that the announcement of February 15 was merely notice that one illegal practice had been abandoned to make place for the development of another more onerous and vexatious in character.

The present practice is a violation not only of the spirit of the announcement of February 15, but of the rule of The Hague Convention, upon which it is concededly based. Aside from this, it is a violation of the prior practice of nations which Great Britain and her allies have in the past assisted to establish and maintain, notwithstanding the statement in the memorandum that "as late as 1907 the letters and dispatches themselves could be seized and confiscated."

During the war between the United States and Mexico the United States forces allowed British steamers to enter and depart from the port of Vera Cruz without molesting the mails intended for inland points. During the American Civil War Lord Russell endeavored to induce the United States to concede that "Her Majesty's mails on board a private vessel should be exempted from visitation or detention." This exemption of mails was urged in October, 1862, in the case of British mails on board the *Adela*. On October 31 Secretary Seward announced that "public mails of any friendly or neutral power duly certified or authenticated as such shall not be searched or opened but be put as speedily as may be convenient on the way to their designated destination." In accordance with this announcement, the Government of the United States, in the case of the British steamship *Peterhof*, which had been seized with her mails against the protest of Her Majesty's Government, had her mails forwarded to destination unopened.

The same rule was followed by France, as I am advised, in the Franco-Prussian War of 1870; by the United States in the Spanish-American War of 1898; by Great Britain in the South African War, in the case of the German mail steamers *Bundesrath* and *General*; by Japan and substantially by Russia in the Russio-Japanese War of 1904. And even in the present war, as the memorandum of Great Britain and France states, their enemy, Germany, has desisted from the practice of interfering with neutral mails, even on board belligerent steamers. This is illustrated by the case of the French steamer *Floride*, captured by the auxiliary cruiser *Prinz Eitel Friedrich*, cited by the British and French Governments in support of their argument regarding parcel mails. In this case the letter mails of the *Floride*, amounting to 144 sacks, were forwarded to their destination by the commander at the first opportunity upon arriving in the United States. It would seem, therefore, to be conclusively established that the interferences with mails of which this Government justly complains are wrong in principle and in practice.

The arbitrary methods employed by the British and French Governments have resulted most disastrously to citizens of the United States. Important papers which can never be duplicated, or can be duplicated only with great difficulty, such as United States patents for inventions, rare documents, legal papers relating to the settlement of estates, powers of attorney, fire insurance claims, income tax returns, and similar matters have been lost. Delays in receiving shipping documents have caused great loss and inconvenience by preventing prompt delivery of goods. In the case of the MacNiff Horticultural Co., of New York, large shipments of plants and bulbs from Holland were, I am informed, frozen on the wharves because possession could not be obtained in the absence of documents relating to them which had been removed from the *New Amsterdam*, *Oosterdyk*, and *Rotterdam*. Business opportunities are lost by failure to transmit promptly bids, specifications, and contracts. The Standard Underground Cable Co., of Pittsburgh, for example, sent by mail a tender and specifications for certain proposed electrical works to be constructed in Christiania; after several weeks of waiting, the papers having failed to arrive, the American company was told that the bids could not be longer held open and

the contract was awarded to a British competitor. Checks, drafts, money orders, securities, and similar property are lost or detained for weeks and months. Business correspondence relating to legitimate and bona fide trade between neutral countries, correspondence of a personal nature, and also certain official correspondence, such as money-order lists and other matter forwarded by Government departments, are detained, lost, or possibly destroyed. For instance, the Postmaster General informs me that certain international money-order lists from the United States to Germany, Greece, and other countries, and from Germany to the United States, sent through the mails, have not reached their destination, though dispatched several months ago. It was necessary to have some of these lists duplicated and again dispatched by the steamship *Frederick VIII*, which sailed from New York on April 19, and from which all the mails intended for Germany have been taken and held in British jurisdiction. As a further example of the delay and loss consequent upon the British practice, the Postmaster General also sends me a copy of a letter from the British postal administration admitting that the mails were removed from the steamer *Medan* in the Downs on January 30 last, and not forwarded until some time "between the 2d of February and the 2d of March," and that 182 bags of these mails "were lost during transmission to Holland on the 26th day of February by the Dutch steamship *Mecklenburg*." The *Medan* arrived safely at Rotterdam a day or two after she left the Downs. Numerous complaints similar to the foregoing have been received by this Government, the details of which are available, but I believe I have cited sufficient facts to show the unprecedented and vexatious nature of the interference with mails persisted in by British and French authorities. Not only are American commercial interests injured, but rights of property are violated and the rules of international law and custom are palpably disregarded. I can only add that this continuing offense has led to such losses to American citizens and to a possible responsibility of the United States to repair them, that this Government will be compelled in the near future to press claims for full reclamation upon the attention of His Majesty's Government and that of the French Republic.

The principle being plain and definite, and the present practice of the Governments of Great Britain and France being clearly in contravention of the principle, I will state more in detail the position of the Government of the United States in regard to the treatment of certain classes of sealed mails under a strict application of the principle upon which our Governments seem to be in general accord. The Government of the United States is inclined to the opinion that the class of mail matter which includes stocks, bonds, coupons, and similar securities is to be regarded as of the same nature as merchandise or other articles of property and subject to the same exercise of belligerent rights. Money orders, checks, drafts, notes, and other negotiable instruments which may pass as the equivalent of money are, it is considered, also to be classed as merchandise. Correspondence, including shipping documents, money-order lists, and papers of that character, even though relating to "enemy supplies or exports," unless carried on the same ship as the property referred to, are, in the opinion of this Government, to be regarded as "genuine correspondence," and entitled to unmolested passage.

The Government of the United States, in view of the improper methods employed by the British and French authorities in interrupting mails passing between the United States and other neutral countries and between the United States and the enemies of Great Britain, can no longer tolerate the wrongs which citizens of the United States have suffered and continue to suffer through these methods. To submit to a lawless practice of this character would open the door to repeated violations of international law by the belligerent powers on the ground of military necessity of which the violator would be the sole judge. Manifestly a neutral nation can not permit its rights on the high seas to be determined by belligerents or the exercise of those rights to be permitted or denied arbitrarily by the Government of a warring nation. The rights of neutrals are as sacred as the rights of belligerents and must be as strictly observed.

The Government of the United States, confident in the regard for international law and the rights of neutrals, which the British and French Governments have so often proclaimed and the disregard of which they have urged so vigorously against their enemies in the present war, expects the present practice of the British and French authorities in the treatment of mails from or to the United States to cease and belligerent rights, as exercised, to conform to the principle governing the passage of mail matter and to the recognized practice of nations. Only a radical change in the present British and French policy, restoring to the United States its full rights as a neutral power, will satisfy this Government.

I have, etc.

ROBERT LANSING.

THE BRITISH AMBASSADOR TO THE SECRETARY OF STATE.

No. 307] BRITISH EMBASSY,
Washington, October 12, 1916.

SIR: In conformity with instructions received from Viscount Grey, of Fallodon, His Majesty's Principal Secretary of State for Foreign Affairs, I have the honor to transmit herewith copy of the memorandum (identic memorandum received from the French Embassy), agreed upon by His Majesty's Government and the French Government, embodying the joint reply of the Allies to your note of May 24 regarding the examination of the mails.

I have, etc.,

CECIL SPRING RICE.

[Inclosure—Translation.]

CONFIDENTIAL.

1. By a letter of May 24 last the Secretary of State of the United States was pleased to give the views of the American Government on the memorandum of the Allied Governments concerning mails found on merchant ships on the high seas.

2. The Allied Governments have found that their views agreed with those of the Government of the United States in regard to the Postal Union Convention, which is recognized on both sides to be foreign to the questions now under consideration; post parcels respectively recognized as being under the common rule of merchandise subject to the exercise of belligerent rights, as provided by international law; the inspection of private mails to the end of ascertaining whether they do not contain contraband goods, and, if carried on an enemy ship, whether they do not contain enemy property. It is clear that that inspection which necessarily implies the opening of covers so as to verify the contents could not be carried on on board without being attended with great confusion, causing serious delay to the mails, passengers, and cargoes, and without causing for the letters in transit errors, losses, or at least great risk of miscarriage. That is the reason why the Allies had mail bags landed and sent to centers provided with the necessary force and equipment for prompt and regular handling. In all this the Allied Governments had no other object in view than to limit, as far as possible, the inconvenience that might result for innocent mails and neutral vessels from the legitimate exercise of their belligerent rights in respect to hostile correspondence.

3. The Government of the United States acknowledges it agrees with the allied Governments as to principles, but expresses certain divergent views and certain criticism as to the methods observed by the allies in applying these principles.

4. These divergencies of views and criticisms are as follows:

5. In the first place, according to the Government of the United States, the practice of the allied Governments is said to be contrary to their own declaration, in that, while declaring themselves unwilling to seize and confiscate genuine mails on the high seas, they would obtain the same result by sending, with or without their consent, neutral vessels to allied ports, there to effect the seizures and confiscations above referred to, and thus exercise over those vessels a more extensive belligerent right than that which is theirs on the high seas. According to the Government of the United States there should be, in point of law, no distinction to be made between seizure of mails on the high seas, which the allies have declared they will not apply for the present, and the same seizure practiced on board ships that are, whether willingly or not, in an allied port.

6. On this first point and as regards vessels summoned on the high seas and compelled to make for an allied port, the allied Governments have the honor to advise the Government of the United States that they have never subjected mails to a different treatment according as they were found on a neutral vessel on the high seas or on neutral vessels compelled to proceed to an allied port, they have always acknowledged that visits made in the port after a forced change of course must in this respect be on the same footing as a visit on the high seas, and the criticism formulated by the Government of the United States does not therefore seem warranted.

7. As to ships which of their own accord call at allied ports it is important to point out that in this case they are really "voluntarily" making the call. In calling at an allied port the master acts, not on any order from the allied authorities, but solely carries out the instructions of the owner; neither are those instructions forced upon the said owner. In consideration of certain advantages derived from the call at an allied port, of which he is at full liberty to enjoy or refuse the benefits, the owner instructs his captain to call at this or that port. He does not, in truth, undergo any constraint. In point of law the allied Governments think it a rule generally accepted, particularly in the United States (United States *v.* Dickelman, United States Supreme Court, 1875; 92 U. S. Rep., 520; Scott's cases, 264), that merchant ships which enter a foreign port thereby place themselves under the laws in force in that port, whether in time of war or of peace, and when martial law is in force in that port. It is therefore legitimate in the case of a neutral merchant ship entering an allied port for the authorities of the allied Governments to make sure that the vessel carries nothing inimical to their national defense before granting its clearance. It may be added that the practice of the Germans to make improper use of neutral mails and forward hostile correspondence, even official communications dealing with hostilities, under cover of apparently unoffensive envelopes mailed by neutrals to neutrals, made it necessary to examine mails from or to countries neighboring Germany under the same conditions as mails from or to Germany itself; but, as a matter of course, mails from neutrals to neutrals that do not cover such improper uses have nothing to fear.

8. In the second place, according to the Government of the United States the practice now followed by the allied Governments is contrary to the rule of conventin 11 of The Hague, 1907, which they declare their willingness to apply, and would, besides, constitute a violation of the practice heretofore followed by nations.

9. In regard to the value to be attached to the eleventh convention of The Hague, 1907, it may first of all be observed that it only refers to mails found at sea and that it is entirely foreign to postal correspondence found on board ships in ports. In the second place, from the standpoint of the peculiar circumstances of the present war, the Government of the United States is aware that that convention, as stated in the memorandum of the allies, has not been signed or ratified by six of the belligerent powers (Bulgaria, Italy, Montenegro, Russia, Serbia, and Turkey); that for that very reason Germany availed itself of Article IX of the convention and denied, so far as it was concerned, the obligatory character in these stipulations; and that for these several reasons the convention possesses in truth but rather doubtful validity in law.

In spite of it all, the allied Governments are guided in the case of mails found on board ships in ports by the intentions expressly manifested in the conferences of The Hague sanctioned in the preamble to convention 11, and tending to protect pacific and innocent commerce only. Mails possessing that character are forwarded as quickly as circumstances permit. In regard to mails found on vessels at sea the allied Governments have not for the present refused to observe the terms of the convention reasonably interpreted; but they have not admitted and can not admit that there is therein a final provision legally binding them from which they could not possibly depart. The allied Governments expressly reserve to themselves the right to do so in case enemy abuses and frauds, dissimulations and deceits, should make such a measure necessary.

10. As for the practice previously followed by the powers in the time of former wars, no general rule can easily be seen therein prohibiting the belligerents from exercising on the open seas as to postal correspondence the right of supervision, surveillance, visitation, and, the case arising, seizure and confiscation which international law confers upon them in the matter of any freight outside of the territorial waters and jurisdiction of the neutral powers.

11. On the high seas under international law it is for the belligerents to seek and prevent transportation or other acts by which neutral vessels may lend their cooperation and asistance to hostile operations of the enemy. Now, as has long ago been observed (among others, Lord Stowell in *The Atalanta*, 6 Robinson, 440, 1, English Prize cases, 607; Scott's cases, 780), a few lines of a letter delivered to an enemy may be as useful as or even more useful than a cargo of arms and ammunition to promote his war operations. The assistance rendered in such cases by the vessel carrying such a letter is as dangerous for the other belligerent as the assistance resulting from the transportation of military cargoes. As a matter of fact, experience has in the course of the present war demonstrated the truth of this remark. Hostile acts which had been projected in mails have failed. Dangerous

plots, from which even neutral countries are not safe at the hands of the enemy, were discovered in the mails and baffled. Finally the addressees of certian letters which the allies had seen fit to respect have evidenced a satisfaction the hostile character of which removed every doubt as to the significance of those letters.

12. The report adopted by the conference of The Hague in support of convention 11 leaves little doubt as to the former practice in the matter: "The seizure, opening the bags, examination, confiscation, if need be, in all cases delay or even loss, are the fate usually awaiting mail bags carried by sea in time of war." (Second Peace Conference, Acts and Documents, vol. 1, p. 266.)

13. The American note of May 24, 1916, invokes the practice followed by the United States during the Mexican and Civil Wars; the practice followed by France in 1870; by the United States in 1898; by Great Britain in the South African War; by Japan and Russia in 1904; and now by Germany.

14. As regards the proceedings of the German Empire toward postal correspondence during the present war, the allied Governments have informed the Government of the United States of the names of some of the mail steamers whose mail bags have been—not examined, to be sure, but purely and simply destroyed at sea by the German naval authorities. Other names could very easily be added. The very recent case of the mail steamer *Hudikswall* (Swedish), carrying 670 mail bags, may be cited.

15. The allied Governments do not think that the criminal habit of sinking ships, passengers, and cargoes, or abandoning on the high seas the survivors of such calamities, is in the eyes of the Government of the United States any justification for the destruction of the mail bags on board; and they do not deem it to the purpose to make a comparison between these destructive German proceedings and the acts of the allies in supervising and examining enemy correspondence.

16. As to the practice of Russia and of Japan, it may be permitted to doubt that it was at variance with the method of the allied Governments in the present war.

17. The imperial Russian decree of May 13–25, 1877, for the exercise of the right of visit and capture, provides, paragraph 7: "The following acts which are forbidden to neutrals are assimilated to contraband of war, the carrying * * * of dispatches and correspondence of the enemy." The Russian imperial decree of September 14, 1904, reproduces the same provision. The procedure followed in regard to the mail steamers and the prize decisions bear witness that public or private mails found on board neutral vessels were examined, landed, and, when occasion arose, seized.

18. Thus, in May and July, 1904, postal correspondence carried on the steamships *Osiris* (British) and *Prinz Heinrich* (German) was examined by the Russian cruisers to see whether it contained Japanese correspondence. Thus, again, in July, 1904, the steamer *Oalchas* (British), captured by Russian cruisers, had 16 bags of mail that had been shipped at Tacoma by the postal authorities of the United States seized on board and landed and the prize court of Vladivostok examined their contents, which it was recognized it could lawfully do. (Russian Prize Cases, p. 139.)

19. As regards the practice of Japan, the Japanese rules concerning prizes, dated March 15, 1904, made official enemy correspondence, with certain exceptions, contraband of war. They ordered the examination of mail bags on mail steamers unless there was on board an official of the post office, making a declaration in writing and under oath that the bags contained no contraband; it was even added that no account should be taken of such a declaration if there existed grave suspicions. On the other hand, the Japanese prize court rules acknowledged the power of those courts in the examination of prize cases to examine letters and correspondence found on board neutral vessels. (Takahashi, International Law Applied to Russo-Japanese War, p. 568.)

20. The French practice during the war of 1870 is found outlined in the naval instructions of July 26, 1870, under which official dispatches were on principle assimilated to contraband, and official or private letters found on board captured vessels were to be sent immediately to the minister of marine. Subsequently the circumstances of war permitted of the rule in additional instructions, under which, if the vessel to be visited was a mail steamer having on board an official of the post office of the government whose flag she displayed, the visiting officer might be content with that official's declaration regarding the nature of the dispatches.

21. During the South African War the British Government was able to limit its intervention in the forwarding of postal correspondence and mails as far as the circumstances of that war allowed, but it did not cease to exercise its supervision of the mails intended for the enemy.

22. As to the practice followed by the Government of the United States during the American Civil War, particularly in the *Peterhoff* case, cited in the American memorandum of May 24, 1916, the following instructions issued in that case by the Secretary of State of the United States do not seem to imply anything but the forwarding of correspondence which has been found to be innocent: "I have, therefore, to recommend that in this case, if the district attorney has any evidence to show the mails are simulated and not genuine, it shall be submitted to the court; if there be no reasonable grounds for that belief, then that they be put on their way to their original destination." (Letter of Mr. Seward, Secretary of State, to Mr. Welles, Secretary of the Navy, Apr. 15, 1863; VII Moore's Dig., p. 482.)

23. Finally, as regards the free transit granted to mails by the United States during the Mexican War, one may be allowed to recall the circumstances under which this proceeding was adopted. By a letter dated May 20, 1846, notified on the following 10th of July, the commander of the U. S. cruiser *St. Mary* announced the blockade of the port of Tampico. Although that measure authorized without a doubt the seizure and confiscation of all correspondence for the blockaded port, the American naval authorities, on learning the circumstances of the case, declared "Neutral noncommercial mail packets are free to enter and depart." and it was even added that "Mexican boats engaged exclusively in fishing will be allowed to pursue their labor unmolested." (British State Papers, vol. 35, 1846–47.)

24. It seems difficult to compare the blockade of the port of Tampico in 1846 with the measures taken by the allies in the course of this war to reduce the economic resistance of the German Empire, or to find in the method then adopted by the United States a precedent which condemns the practice now put in use by the allied Governments.

25. To waive the right to visit mail steamers and mail bags intended for the enemy seemed in the past (Dr. Lushington, Naval Prize Law, Introd., p. vii) a sacrifice which hardly could be expected of belligerents. The allied Governments have again noted in their preceding memorandum how and why, relying on certain declarations of Germany, they had thought in the course of the second peace conference of 1907 they could afford to waive that right. They have also drawn the attention of the Government of the United States to the fraudulent use Germany hastened to make of this waiver of the previous practices above mentioned.

26. After pointing to a certain number of specific cases where American interests happened to be injured from the postal supervision exercised by the British authorities forming the subject of the special memorandum of the Government of His Majesty, dated July 20, 1916, the Government of the United States was pleased to make known its views as to what is to be and is not to be recognized as not possessing the charter of postal correspondence.

27. In this respect the Government of the United States admits that shares, bonds, coupons, and other valuable papers; money orders, checks, drafts, bills of exchange, and other negotiable papers, being the equivalent of money, may, when included in postal shipments, be considered as of the same nature as merchandise and other property, and therefore be also subjected to the exercise of belligerent rights.

28. Yet the American memorandum adds that correspondence, including shipping documents, lists of money orders, and documents of this nature, even though referring to shipments to or exports by the enemy, must be treated as mail and pass freely unless they refer to merchandise on the same ship that is liable to capture.

29. As regards shipping documents and commercial correspondence found on neutral vessels, even in an allied port and offering no interest of consequence as affecting the war, the allied Governments have instructed their authorities not to stop them but to see that they are forwarded with as little delay as possible. Mail matter of that nature must be forwarded to destination as far as practicable on the very ship on which it was found or by a speedier route, as is the case for certain mails inspected in Great Britain.

30. As for the lists of money orders to which the Government of the United States assigns the character of ordinary mail, the allied Governments deem it their duty to draw the attention of the Government of the United States to the following practical consideration:

31. As a matter of fact the lists of money orders mailed from the United States to Germany and Austria-Hungary correspond to moneys paid in the United States and payable by the German and Austro-Hungarian post offices. Those lists acquaint those post offices with the sums that have been paid there which in consequence they have to pay to the addressees. In practice, such payment is at the disposal of such addressees and is effected directly to them as soon as those lists arrive and without the requirement of the individual orders having come into the hands of the addressees. These lists are thus really actual money orders transmitted in lump in favor of several addressees. Nothing, in the opinion of the allied Governments, seems to justify the liberty granted to the enemy country so to receive funds intended to supply by that amount its financial resisting power.

32. The American memorandum sees fit firmly to recall that neutral and belligerent rights are equally sacred and must be strictly respected. The allied Governments, so far as they are concerned, wholly share that view. They are sincerely striving to avoid an encroachment by the exercise of their belligerent rights on the legitimate exercise of the rights of innocent neutral commerce, but they hold that it is their belligerent right to exercise on the high seas the supervision granted them by international law to impede any transportation intended to aid their enemy in the conduct of the war and to uphold his resistance. The rights of the United States as a neutral power can not, in our opinion, imply the protection granted by the Federal Government to shipments, invoices, correspondence, or communications in any shape whatever having an open or concealed hostile character and with a direct or indirect hostile destination, which American private persons can only effect at their own risk and peril. That is the very principle which was expressly stated by the President of the United States in his neutrality proclamation.

33. Furthermore, should any abuses, grave erors, or derelictions committed by the allied authorities charged with the duty of inspecting mails be disclosed to the Governments of France and Great Britain, they are now as they ever were ready to settle responsibility therefor in accordance with the principles of law and justice which it never was and is not now their intention to evade.

The Government has had a lengthy correspondence touching the matter of censorship of telegrams and cablegrams, transmitted by wireless and cable, which need not here be reproduced. The points of controversy indicate the difficulty of any neutral country securing unbiased information as news when these avenues of transmission are not open.

Another source of controversy with England grows out of the exercise of the power to take from American steamships German citizens:

THE SECRETARY OF STATE TO AMBASSADOR W. H. PAGE.

[Telegram—Paraphrase.]

DEPARTMENT OF STATE,
Washington, February 23, 1916.

Mr. Lansing informs Mr. Page that the department is advised by American consuls in Hongkong, Nagasaki, and Shanghai, and by the owners of the American steamship *China*, that on the 18th instant the British cruiser *Laurentic* stopped the *China* on the high seas, about 10 miles from the entrance to the Yangtzekiang, boarded her with an armed party, and, despite the captain's protest, removed from the vessel 28 Germans, 8 Austrians, and 2 Turks, including physicians and merchants, and took them to Hongkong, where they are detained as prisoners in the military barracks. As it is understood that none of the men taken from the *China* were incorporated in the armed forces of the enemies of Great Britain, the action of the *Laurentic* must be regarded by this Government as an unwarranted invasion of the sovereignty of American vessels on the high seas. After the notice given to the British Government of this Government's attitude in the *Pirpenbrink* case in March last, which was based upon the principle contended for by Earl Russell in the *Trent* case, this Government is surprised at this exercise of belligerent power on the high seas far removed from the zone of hostile operations. Ambassador Page is directed to present this matter to the Government of Great Britain at once and to insist vigorously that if facts are as reported orders be given for the immediate release of the persons taken from the *China*.

(File No. 341.622a/84.)

AMBASSADOR W. H. PAGE TO THE SECRETARY OF STATE.

No. 3259.] AMERICAN EMBASSY,
London, March 17, 1916.

SIR: With reference to the department's telegram No. 2924, of February 23, 1916, protesting against the removal of 38 enemy subjects of Great Britain by the British ship *Laurentic* from the steamship *China* on the high seas off the entrance to the Yangtse River, I have the honor to inclose herewith a copy of a note, deated the 16th instant, from the foreign office in reply to the representations I made to Sir Edward Grey in the premises.

I have, etc. WALTER HINES PAGE.

[Inclosure.]

THE BRITISH SECRETARY OF STATE FOR FOREIGN AFFAIRS TO AMBASSADOR W. H. PAGE.

FOREIGN OFFICE, *March 16, 1916.*

YOUR EXCELLENCY: His Majesty's Government have given the most careful consideration to the memorandum which your excellency was good enough to communicate to me on the 24th ultimo, conveying a protest from the United States Government against the removal of 38 enemy subjects by His Majesty's ship *Laurentic* from the steamship *China* on the high seas off the entrance to the Yangtse River, and I now have the honor to offer the following observations as an expression of the views of His Majesty's Government in regard to the matter.

The latest attempt to define by common agreement the limits within which a belligerent naval power may remove enemy persons from neutral ships on the high seas is represented by article 47 of the Declaration of London, 1909. This article permitted the arrest of such persons if "embodied in the armed forces of the enemy," without regard to the destination of the ship on which they were found traveling. The commentary on article 45 of the declaration contained in the report of the drafting committee of the London naval conference states that on practical, not legal, grounds it was agreed that the terms "embodied in the armed forces of the enemy" should be considered as not including reservists not yet attached to their military units.

At the beginning of the war His Majesty's Government adhered to articles 45 and 47 of the Declaration of London, as interpreted by the report of the drafting committee. They took this step as a matter of convenience, being at liberty, as the declaration was an unratified instrument, to cancel at any time their adherence, provided always that their subsequent action did not conflict with the general principles of international law. When the German authorities began to remove able-bodied persons of military age from the occupied portions of France and Belgium, His Majesty's Government, as indicated in the circular note which I had the honor to address on the 4th November, 1914, to the representatives of neutral powers in London, felt that they could no longer accept the restrictive interpretation placed for practical reasons on the terms of article 47 of the Declaration of London by the report of the drafting committee, and that they must arrest all enemy reservists found on board neutral ships on the high seas, no matter where they might be met.

I am aware that the United States Government, after their suggestion early in the war that the belligerent powers should adopt the Declaration of London in its entirety as a code of international naval law, did not find general acceptance, having declared that they no longer consider the declaration as being in force. I have referred at some length to the bearings of the declaration on the position of His Majesty's Government in this question, because article 47 represents the latest, if not the only, attempt to arrive at a definition, by common consent of the chief maritime nations of the law in regard to the matter. The attempt was necessarily conditioned by the experience of previous wars, and the definition was reached after weighing the claims and the convenience of neutral shipping against the importance to belligerent powers, as shown by the experience of previous wars, of preventing enemy subjects from proceeding to their destination and pursuing the hostile purposes for which they were organized.

It is evident, however, from the foregoing observations that the principle (often contended for in the past by certain continental nations) that there are certain classes of persons who are not protected by a neutral flag on the high seas and may therefore, without any invasion of the sovereign rights of the neutral, be removed from a neutral ship is now generally admitted. The carriage of such persons may in some cases amount to unneutral service, rendering the ship liable to condemnation; but even when this is not so, the removal of such persons from a neutral ship by a belligerent does not justify any complaint by the neutral State concerned. The question in the present case is, therefore, whether the character and position of the persons removed from the *China* were such as to bring the case within the principle enunciated above.

The present war has shown that the belligerent activity of the enemies of this country is by no means confined to the actual theaters of military and naval operations and that there is no limit to the methods by which Germany in particular seeks to secure a victory for her arms. The hostile efforts of the enemy have shown, and continue to show, themselves on neutral soil in many parts of the world in political intrigues, revolutionary plots, schemes for attacking the seaborne trade of this country and her allies, endeavors to facilitate the operations of ships engaged in this task, and in criminal enterprises of different kinds directed against the property of neutrals and belligerents alike. War has in effect been extended far beyond the bounds of the area in which opposing armies maneuver, and an unscrupulous belligerent may inflict the deadliest blows on his enemy in regions remote from actual fighting. It may be recalled that a certain Lieut. Robert Fay, of the German Army, was reported in the press last autumn to have been detected experimenting with bombs designed to destroy merchant ships leaving America and operating in the interests of the enemies of Germany. He was said to have admitted that he was sent by the German authorities to the United States expressly for this purpose. His Majesty's Government are not aware what degree of truth there may be in this story, but numerous incidents in America and elsewhere have shown that the facts may be as stated and may be typical.

It is then evidently of the greatest importance for a belligerent power to intercept on the high seas not only mobilized members of the opposing army who may be found traveling on neutral ships, but also those agents whom the enemy sends to injure his opponent abroad or whose services he enjoys without having himself commissioned them. Practical considerations from the belligerents' point of view have changed, and the change necessarily implies a modification in the precise description of enemy subjects whom it is lawful to arrest, supposing such a precise description can be said to have existed in any binding form.

I may add that the action of the United States Government in forwarding requests for safe conducts for agents of states at war with this country whose actions had been such that their continued presence in the United States could no longer be tolerated affords a strong indication that the right to remove certain classes of persons from neutral ships can, in the circumstances of this present war, not be confined to persons embodied in the armed forces of a belligerent.

I may add for the confidential information of the Government of the United States that from actual occurrences and from reliable information received it has been definitely established that the Germans resident in Shanghai have been engaged for some time past in the collection of arms and ammunition, both for clandestine transmission to India and, if possible, for the arming of a ship to play the part of a Far Eastern *Moewe*. His Majesty's Government were able to cope with this activity to a considerable extent and obtained the arrest of various German agents caught in the act of attempting to smuggle arms out of Shanghai; further, the Germans became aware that His Majesty's Government knew of their plots. The commander in chief, China station, received information that owing to this fact the Germans were planning to shift the center of their activity from Shanghai to Manila. Subsequently he was definitely informed that 35 Germans had planned to leave Shanghai in the steamship *China* and proceed to Manila.

His Majesty's ships were sent to patrol off the mouth of the Yangtze with the view of intercepting this party. The date of the *China's* departure was more than once postponed, but she eventually sailed, was intercepted by His Majesty's ship *Laurentic* and found to have on board Germans and Austrians corresponding to those concerning whom information, as mentioned above, had been received. The *Laurentic*, therefore, had no hesitation in removing them. The next ostensible port of call of the *China* was Nagasaki, a convenient place at which to transfer to another vessel proceeding to Manila.

It may be added that subsequent information fully confirms that the movement of the body of Germans in question was an integral part of the plot referred to above.

I do not think it will be disputed that persons of this description must be placed within the category of individuals who may, without any infraction of the sovereignty of a neutral state, be removed from a neutral vessel on the high seas. The object of their journey was to find another neutral asylum in which they might continue their operations against the interests of this country. The acts which they desired to perform upon the soil of the United States were such as possibly to compromise the neutrality of that country or to constitute an offense against its criminal laws. They were in effect persons whose past actions and future intentions deprived them of any protection from the neutral flag under which they were sailing.

In your excellency's note reference is made to the case of the *Trent*. I venture to hope that the preceding observations show clearly that the present case is of an entirely different nature to that on which the United States Government rely. At the date when the *Trent* case occurred no agreement had been reached as to the claim put forward by certain countries that a belligerent is entitled to remove certain classes of individuals from a neutral ship without bringing the vessel in for adjudication in the prize court; since then, as I have pointed out above, a considerable measure of agreement had been reached on this point. In any case the nature of the persons concerned in the episode of the *Trent* was entirely different from that of the individuals removed from the *China*. Messrs. Slidell and Mason were proceeding to Europe, according to their contention, as the diplomatic representatives of a belligerent; at that time the suggestion that the functions of a diplomatic representative should include the organizing of outrages upon the soil of the neutral country to which he was accredited was unheard of, and the removal of the gentlemen in question could only be justified on the ground that their representative character was sufficient to bring them within the classes of persons whose removal from a neutral vessel was justifiable. The distinction between such persons and German agents whose object is to make use of the shelter of a neutral country in order to foment risings in British territory, to fit out ships for the purpose of preying on British commerce, and to organize outrages in the neutral country itself is obvious.

It is hardly necessary for me to state that it is far from the wish and intention of His Majesty's Government to take any action involving an invasion of the sovereign rights of the United States Government; the above observations will have made it clear that in the view of my Government no such invasion was involved in the action of His Majesty's ship *Laurentic*, and I feel confident that after the foregoing explanations in regard both to the general question involved and to the removal of enemy subjects from the *China* the United States Government will not feel disposed further to contend that this action was not justified.

I have, etc.,

E. GREY.

Our latest effort to insure neutral rights upon the high seas is the following proposed code for the freedom of the seas. Coming at this time it can only serve as a suggestion for the future.

INTERNATIONAL LAW INSTITUTE RECEIVES DRAFT MADE AT LANSING'S SUGGESTION—BARS COMMERCE BLOCKADE—NO MERCHANT SHIP TO BE SEIZED OR DESTROYED IF IT BEARS VISÉED PAPERS.

HABANA, CUBA, *January 22.*

A code of rules of maritime neutrality which should govern the relations between belligerents and neutrals, prepared at the suggestion of Secretary of State Robert Lansing of the United States, was submitted to the American Institute of International Law in annual session here to-day.

The proposed regulations practically provide for freedom of the seas in time of war. Commercial blockades would be forbidden and mails inviolate; merchant ships without contraband, whether of belligerent or neutral registry, would be unmolested if they bore viséed papers; right of search at sea would be abolished. The mandates would be enforced by a neutral conference with authority to take "severe measures" against violators.

The code was drafted by Dr. Alejandro Alvarez, secretary general of the institute, and who formerly was juriconsult to the Chilean foreign office and counselor to the Chilean legations abroad. It will be referred to the national society of international law in each of the 21 American Republics, and final action on it will be taken by the institute at its next annual meeting.

The code follows:

CHAPTER I.

GENERAL DECLARATIONS.

ARTICLE 1. Neutrality is the situation of States which, in the course of a war, are not participants therein.

Neutrality, especially maritime neutrality, must hereafter be regulater not merely on the basis of the rights of the belligerents but especially on that of the rights of neutrals, by safeguarding commercial liberty and releasing neutrals from the useless burdens resting on them with a view to observing neutrality. This new conception of neutrality is demanded by reason of the bonds of solidarity which exist between all the members of the society of nations.

ART. 2. In case of war between two or more countries, the rest of the States must refrain from increasing the number of belligerents.

If not able to prevent the conflict, they must do all they can to put an early end to it, neutrality not merely being an impartial duty between belligerents equally respectful of right but a duty of pacification toward mankind.

CHAPTER II.

THE CONFERENCE OF NEUTRALS.

ART. 3. When war is declared, the neutral States of the entire world shall, upon the request of the Administrative Council of the Permanent Hague Court, meet in conference, in order:

1. To take all necessary measures to maintain the freedom of commerce and navigation of the neutral countries.

2. To determine the list of articles to be regarded as contraband.

3. To see especially to the observance of all neutral rights and duties established in these present rules, and to exercise any other powers granted them by the said same rules.

ART. 4. The conference of neutrals shall gather in The Hague Peace Palace unless the council directs otherwise.

The belligerents shall be invited to send representatives, who may take active part in the discussions and have the right to vote.

Resolutions shall be adopted by a majority vote and bind the minority.

ART. 5. In important cases the conference may authorize severe measures against the belligerent or against the neutrals refusing to respect the rights and duties of neutrality.

Such measures may be public blame, pecuniary indemnity, commercial boycott, and even the use of an international force to be determined by the conference.

ART. 6. The conference of neutrals may organize in any number of commissions thought necessary, one of these commissions to be especially designated to consider such pecuniary indemnities as are referred to in these rules.

CHAPTER III.

FREEDOM OF COMMERCE IN TIME OF WAR.

ART. 7. The commercial blockade, both of the belligerent ports and the maritime zones along belligerent coasts, is formally forbidden, no matter what the means by which the blockade is to be effected.

ART. 8. Private property in the open sea is inviolable. Belligerent and neutral merchant vessels may in no case be confiscated, nor sunk, under any pretext whatever.

If carrying contraband, this may be confiscated or destroyed by the captor.

ART. 9. The right of search is abolished. The local authorities of each country shall visé the papers of merchant vessels leaving port for a belligerent port.

Belligerent vessels may not stop neutral merchant vessels or merchant vessels belonging to the other belligerent except to demand examination of the vessel's papers. Despite the regularity of the said papers, they (belligerent vessels) may proceed to the search of merchant vessels. If shown that the vessel does not carry contraband, the searching vessel shall be condemned to pay to the vessel searched a fine to be determined by the conference of neutrals; and in case the vessel searched carries contraband, the country whose authorities viséed the false passport shall be condemned to pay an indemnity to be determined by the said conference of neutrals.

Vessels not carrying duly viséed papers may be searched conformable to present international practice without the right to an indemnity.

ART. 10. Belligerent merchant vessels may not refuse to carry from one neutral port to another neutral port persons or merchandise under pretext that they (persons or merchandise) belong to a nation with which their (belligerent merchant vessels) country is at war.

Exception to be made regarding persons who by reason of their age or condition might serve their country and who might be presumed to leave in order to join the enemy forces of the country to which the vessel belongs.

ART. 11. The official or private postal correspondence of neutrals or belligerents found in the open sea on board a neutral or enemy vessel is inviolable. It may not be seized, even under the pretext of the police right of warships over merchant ships of their own nationality.

CHAPTER IV.

RIGHTS AND DUTIES OF BELLIGERENTS.

ART. 12. Belligerents are held to respect the sovereign rights of neutral powers and to refrain, within neutral territory or neutral waters from committing acts which, if tolerated by neutral powers, would constitute a breach of neutrality.

ART. 13. Belligerents are especially forbidden to make of neutral ports and waters the base for naval operations against their adversaries, and, particularly, to install therein wireless stations or other apparatus intended as a means of communication with belligerent land or naval forces.

ART. 14. Regarding the sojourn, victualing, and provisioning of belligerent vessels in the neutral ports, roadways, and jurisdictional waters, distinction must be made between warships and merchant vessels.

The following dispositions concerning warships are also applicable:

(1) To ordinary auxiliary vessels.

(2) To merchant vessels transformed into war vessels, conformable to Convention VII of The Hague.

(3) To merchant vessels giving continuous or occasional aid to the war vessels of their country, if they have not been transformed into war vessels according to the said convention.

(4) To neutral vessels giving continuous or occasional aid to belligerent vessels, and the following dispositions regarding merchant vessels are likewise applicable to vessels which have been auxiliary vessels, but retransformed into merchant vessels according to article 18.

ART. 15. Belligerent warships shall not have access to the ports, roadways, and territorial waters of neutral powers, except in the duly justified case of force majeure.

They may not there repair beyond what is indispensable to the safety of their navigability, and not in any manner whatever to increase their military capacity. The neutral authorities shall establish the nature of repairs to be effected, and these must be carried out as rapidly as possible. They must depart immediately after the force majeure has ceased to exist.

It is especially forbidden said war vessels to renew or to increase their military provision or armaments or to complete their crews.

The need of revictualing, of fuel, or provisions does not constitute a force majeure permitting a warship to enter the ports, roadways, or territorial waters of neutral powers.

ART. 16. Belligerent merchant vessels may take fuel and provisions on board in neutral ports subject to the conditions especially determined by the local authorities, or, wanting these special conditions, in the same manner as in time of peace.

ART. 17. If proven that the merchant vessel taking fuel or provisions on board in a neutral port has passed all or part of such provisions to a belligerent warship within or without the territorial waters of the neutral power, no fuel or provisions shall thereafter be furnished in such country to any ship of the company to which belongs the vessel committing such infraction.

ART. 18. If, ascertained by its installations or other facts, a merchant vessel is suspected of furnishing to the warships of its country provisions it asks for, the local authorities may, according to the circumstances, regard it as a naval auxiliary, and on this account refuse to it any provisions or request the agent of the company to which the vessel belongs to furnish bail guaranteeing that the said vessel will neither help nor assist the belligerent.

When a vessel is suspected, the case must be notified at once to all other countries, through the medium of the conference of neutrals, especially so if the vessel has furtively left a port of the country.

ART. 19. Belligerent auxiliary vessels retransformed into merchant vessels shall be admitted as such into neutral ports, provided—

1. That the retransformed vessel has not violated the neutrality of the country where it arrives;

2. That the retransformation has been effected in the ports or in the jurisdictional waters of the country to which the vessel belongs, or in the ports of its allies;

3. That such retransformation be effective; that is to say, that the vessel, neither through its crew nor through its installations, shows that it can, as an auxiliary, as before, give aid to the armed fleets of its country;

4. That the government of the country to which the vessel belongs notify to all the nations interested, through the medium of the conference of neutrals, the names of the auxiliary vessels which shall have lost this quality, to resume that of merchant vessels; and

5. That the said government agree that in the future the said vessels shall not again, as auxiliaries, be destined to the service of the armed fleet.

ART. 20. Aeroplanes, dirigibles, or airships of the belligerent countries may not fly over the territory or over the jurisdictional waters of the neutral powers. Infraction of this rule entitles to the confiscation of the craft, if possible, and, at any rate, to an indemnity to be determined by the conference of neutrals.

CHAPTER V.

RIGHTS AND DUTIES OF NEUTRALS.

ART. 21. In a war distinction must be made between the acts of aid on the part of neutral States and acts of commerce on the part of the individual; the former only are contrary to neutrality.

Conveyance, on whatever ground, made directly or indirectly by a neutral power to a belligerent power, of warships, munitions, or war material, is forbidden.

ART. 22. If a neutral power, notified of the opening of hostilities, learns that a belligerent warship is within one of its ports, roadways, or within its territorial waters, it must inform the said vessel that it must clear within 24 hours or within the time prescribed by the local law.

ART. 23. The neutral Government must use all available means to prevent within its jurisdiction the equipping or arming of any vessel which it has reason to believe is intended for cruising purposes or for aiding in hostile operations against a power with which it is at peace. It is likewise bound to exercise the same care in order to prevent the departure from its jurisdiction of any vessel intended for cruising purposes or for aiding in hostile operations, and which vessel, within the said jurisdiction, might have been adapted, in part or in its entirety, to war purposes.

ART. 24. Neutral powers are not bound to prevent the exportation or the transit, for the account of the one or the other belligerent, of arms, munitions, and, in general, of anything that may be of any use to an army or to a fleet.

ART. 25. Neutral Governments must prevent agents of the belligerent Governments from enrolling, within their territory, their (the belligerents') nationals, and especially to prevent their (the nationals) being summoned under the penalty of being declared deserters, should they not answer the summons.

They shall not, however, prohibit the voluntary departure of the nationals of the belligerent States, even when organized on a large scale.

Neutral Governments might, however, forbid the voluntary departure, for the purpose of joining the forces of one of the belligerents, of persons who, being its (the neutral's) nationals, are also nationals of one of the belligerent countries, except by declaring that in enrolling they intend to lose the nationality of the country from which they leave.

ART. 26. In war time the use of the telegraphs or cables of neutral powers by the nationals of the belligerent powers shall be subject to measures edicted by the local authorities.

ART. 27. Neutral powers must use all available means to prevent violation of their neutrality within their ports or roadways and within their territorial waters.

ART. 28. Belligerent war or merchant vessels entering the ports, roadways, or jurisdictional waters of a neutral country, without the right to do so according to the provisions of these rules, may be interned by the neutral country.

A vessel shall be deemed interned from the moment it is ordered interned by the neutral local authorities, even in case a request to reconsider is made by the infracting vessel.

ART. 29. Interning of a vessel and of its crew must be effected in the place and in the manner deemed most appropriate by the interning country.

The costs of internment are borne by the infracting vessel.

The country which interns a vessel is not responsible for injuries sustained by the interned vessel, except in the case of gross negligence.

ART. 30. When a merchandise-bearing vessel is to be interned in a neutral country, the part of the merchandise destined for the neutral country must be unloaded and the part destined for other ports must be transshipped.

ART. 31. In case where, in consequence of naval operations taking place without the jurisdictional waters of a country, there should be killed or wounded, provisional hospital vessels, under the control and watchfulness of the neutral Government, may be sent to the scene of the action, and the said vessels shall to the end of their mission enjoy absolute inviolability.

The said wounded or wrecked shall not be interned, but given their freedom as soon as possible.

CHAPTER VI.

OBSERVANCE AND SANCTIONS OF THE LAWS OF NEUTRALITY AND BELLIGERENCY.

ART. 32. The belligerent who violates the rights of neutrals established by these rules or by the conference of neutrals shall pay to the State interested a pecuniary indemnity to be determined by the said conference.

In case a belligerent commits at the same time and against the same country several infractions of neutrality, each of such infractions must be indemnified separately.

The conference of neutrals shall determine the manner of payment of the payment of the indemnity, and in case of need determine the measures and means to which neutrals may resort to secure payment of the amount due by the infracting belligerent.

ART. 33. In case of war the local authorities of neutral countries are especially charged with:

1. Seeing to the observance, within the territory of the country, of the resolutions of the conference of neutrals.

2. Settling provisionally all controversies of an urgent character that may arise between the belligerents and the country where reside the authorities, especially controversies concerning the interning of vessels, without prejudice as to what may be finally decided by the said authorities.

3. Viséeing the papers of merchant vessels leaving the part of the country. The said documents shall certify as to the nature of the merchandise carried by the vessels, so as to liberate them from the right to search.

4. Deciding questions concerning requests for the embarkation on board a merchant vessel of a belligerent country, of nationals of the other belligerent country or countries, according to article 10.

ART. 34. The conference of neutrals referred to in chapter 2 might appoint commissions composed of neutrals, whose duty it would be to watch in each belligerent country, over the manner in which the laws and customs of war are there observed.

Upon the basis of the information and reports of these commissions, the said conference, in the name of all the neutral countries, may, if deemed appropriate, protest against the violation of the laws and usages of war.

Secretary Lansing addressed a memorandum to Dr. Scott as follows:

"At the first meeting of the institute I had the honor to direct attention to the imperfect code or rules which define and govern the relations between belligerents and neutrals. These rules, which have grown up during the past 125 years, and have been in some cases differently interpreted by courts of different countries, have been frequently found inadequate to meet new conditions of warfare, and as a result every war has changed, modified, or added to the rules, generally through the process of judicial decisions.

"The prize courts of belligerents have thus become the interpreters of belligerent rights and neutral obligations, and their interpretations evidence an unconscious prejudice arising from overappreciation of the needs of the belligerent. Writers on international law have relied upon the prize court decisions in dealing with the subject of neutrality, so that they have laid down rules formulated indirectly from a belligerent's point of view.

"In addition to these influences affecting a code to govern the conduct and treatment of neutrals, international conferences, and congresses have generally confided the drafting of rules relating to belligerent and neutral rights to military and naval experts who naturally approach the subject from the belligerent's standpoint. Thus judicial decisions, text writers, and international agreements have given all the advantage to the belligerent, and have shown little regard for the rights of neutrals.

"It would appear that it is time to reverse this process of treatment of the subject of neutrality and to deal with it from the point of view of the neutral.

"I would, therefore, suggest that a committee be appointed to study the problem of neutral rights and neutral duties, seeking to formulate in terms the principle underlying the relations of belligerency to neutrality rather than the express rules governing the conduct of a nation at war to a nation at peace.

"I would further suggest that the subject might be advantageously divided into two parts, namely, the rights of neutrals on the high seas, and the duties of neutrals dependent upon territorial jurisdiction.

"In view of the past year and a half of war, the present time seems particularly opportune to study this question, and this institute, being composed of members from neutral nations, is especially fitted to do this from the proper point of view, and with the definite purpose of protecting the liberty of neutrals from unjustifiable restrictions on the high seas and from the imposition of needless burdens in preserving their neutrality on land."

63. On the 25th of January, 1917, radical Admiralty action was taken by England in which a wide area of the North Sea was declared dangerous for shipping. The real reason for the change was not announced. The action was made public two days later in the following language:

American Embassy, London, has received information from the British Government that on account of belligerent operations the undermentioned area in the North Sea is dangerous to shipping:

Area comprising all the waters, except Netherlands and Danish territorial waters, lying to the southwestward and eastward of a line commencing 4 miles from the coast of Jutland, in latitude 56° N., longitude 8° E. from Greenwich, and passing through the following positions: Latitude 56° N., longitude 6° E., latitude 54° N., longitude 45′ E., thence to a position in latitude 53° 37′ N., longitude 5° E., 7 miles off the coast of the Netherlands. (New York Times, Jan. 27, 1917.)

On the 16th of February a new Admiralty decree suggesting intensified action in the North Sea was announced, in which it was officially declared the zone will be made perilous by operations against the enemy.

Ambassador Page's dispatch reads:

Following revised notice, dated February 13, received from the Foreign Office respecting dangerous area in North Sea, which is intended to replace notice of January 25, 1917:

"Caution with regard to dangerous area.

"In view of the unrestricted warfare carried on by Germany at sea by means of mines and submarines not only against the allied powers, but also against neutral shipping, and the fact that merchant ships are constantly sunk without regard to the ultimate safety of their crews, His Majesty's Government gives notice that on and after the 7th of February, 1917, the undermentioned area in the North Sea will be rendered dangerous to all shipping by operations against the enemy, and it should therefore be avoided.

"Dangerous area: The area comprising all the waters, except Netherland and Danish territorial waters, lying to the southward and eastward of a line commencing 4 miles from the coast of Jutland in latitude 56° north, longitude 8° east, and passing through the following positions: Latitude 56° north, longitude 6° east, and latitude 54° 45′ north, longitude 4° 30′ east; thence to a position in latitude 53° 27′ north, longitude 5° east, 7 miles from the coast of the Netherlands.

"To met the needs of the coastal traffic which can not strictly confine itself to the territorial waters owing to navigational difficulties, it will be safe to navigate between the coast of Jutland and a line passing through the following positions: Latitude 56° north, longitude 8° east, and latitude 55° 40′ north, longitude 8° east; latitude 55° 36′ north, longitude 7° 15′ east; latitude 55° 32′ north, longitude 7° 15′ east; latitude 55° 22′ north, longitude 7° 45′ east; latitude 55° 19′ north, longitude 8° 4′ east; latitude 55° 22′ north, longitude 8° 19′ east, which is 3 miles from the coast of Fano Island.

"Also a safe passage will be left along the Netherland coast southward of a line joining the following positions: Latitude 53° 27′ north, longitude 5° east; latitude 53° 31½′ north, longitude 5° 30′ east; latitude 53° 34′ north, longitude 6° east; latitude 53° 39′ north, longitude 6° 23′ east." (New York Times.)

The press to-day, February 22, 1917, carries another order in council which declares neutral vessels must be examined by allies or face confiscation.

The order in council is as follows:

Whereas these enemy orders are in flagrant contradiction of the rules of international law, the dictates of humanity, and treaty obligations of the enemy, and render it necessary for further measures to be adopted in order to maintain the efficiency of those previously taken to prevent commodities reaching or leaving enemy countries.

His Majesty has ordered that the following directions shall be observed respecting all vessels which sail from their port of departure after the date of this order:

"First. A vessel which is encountered at sea on the way to or from a port in any neutral country affording means of access to enemy territory without calling at a port in British or allied territory shall, until the contrary is established, be deemed to be carrying goods with enemy destination or of enemy origin, and shall be brought in for examination, and, if necessary, for adjudication before a prize court.

"Second. Any vessel carrying goods with enemy destination or of enemy origin shall be liable to capture and condemnation, in respect of the carriage of such goods: *Provided*, That in the case of any vessel which calls at an appointed British or allied port for examination of her cargo no sentence of condemnation shall be pronounced except on carriage of goods of enemy origin or destination, and no such presumption as laid down in article 1 shall arise.

"Third. Goods which are found on examination of any vessel to be goods of enemy origin or destination shall be liable to condemnation."

Criticism of H. R. 18984.

EXTENSION OF REMARKS

OF

HON. WILLIAM W. HASTINGS,

OF OKLAHOMA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, February 12, 1917.

Mr. HASTINGS. Mr. Speaker, I herewith submit a letter from S. H. Harris, president of the Oklahoma Game and Fish Protective Association, inviting attention to some objections to House bill 18984. The objections urged in his letter seem to me to be serious and worthy of careful consideration. I submit same, in order to invite the attention of Members of the House to the amendment he suggests should be made.

The letter is as follows:

OKLAHOMA GAME AND FISH PROTECTIVE ASSOCIATION,
Oklahoma City, Okla., February 3, 1917.

Hon. WILLIAM W. HASTINGS,
House of Representatives, Washington, D. C.

MY DEAR SIR: I wish to call your attention to House bill 18984 by Mr. MEEKER. There are some serious objections to this bill. In section 6 you will notice that game can not be carried from one State to another except by the person or in the personal baggage of the individual who has lawfully procured the same. I believe all the States, with the exception of Arkansas, issue hunting licenses to nonresidents, and all these States have some provision or regulation calculated to insure compliance with the law with reference to the amount of game taken and the method of transporting the same. For example, in Texas,

where I usually go duck shooting in the winter, the game which I desire to send to my home is exhibited to a game warden, with whom I leave an affidavit setting forth full compliance with the game law and my purpose in shipping the game. This game is then iced and packed under the supervision of the warden and sent by express to my home. This game could not possibly be carried in my possession nor in my personal baggage, for the reason that it would spoil before reaching my home. This is practically always the case with reference to transporting game from one State to another. In Oklahoma the nonresident license has attached to it a certificate, which must in turn be attached to the package containing the game lawfully killed and to be shipped to the home of the licensee.

The provision referred to in section 6 should be stricken out or so modified as to permit the icing and shipping of game as the only way it can be transported from one State to another.

Again, in section 9, there is a provision against the use of "automatic, pump, or repeating guns." This provision is foolish and highly unreasonable. The bill in question carries a very strict bag limit, and this is the case with all State laws. There is no reason why this bag limit should not be acquired by means which are now practically universal. The so-called pump or repeating gun is the poor man's gun. There are probably more than 100,000 of these weapons in Oklahoma to-day, costing on an average of about $25. To duplicate this 100,000 with equally safe and efficient double guns it would cost three times as much as the original cost of more modern guns. This would amount to an enormous confiscation of property without any logical beneficial results. If the hunter can lawfully take 15 birds in one day, it is really immaterial to the birds and the public whether he kills them with a cheap pump gun or with a fancy engraved and inlaid gentleman's double gun. I have no fault to find with other provisions of this bill, but it appears to me that Senate bill 7858 and House bill 20080, about which I wired you some days ago, really cover the ground as far as necessary. The State can very well take care of the other details.

Very truly, yours,

S. H. HARRIS, *President.*

Conference Report on the Indian Appropriation Bill—Unfitness of R. C. Allen to Serve as National Attorney for the Creek Nation.

EXTENSION OF REMARKS

OF

HON. JAMES S. DAVENPORT,

OF OKLAHOMA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 21, 1917.

Mr. DAVENPORT. Mr. Speaker, when the Indian appropriation bill was under consideration in the House on December 12, 1916, I offered an amendment, the effect of which would have been to employ no tribal attorney for the Creek Nation after the end of the present fiscal year, June 30, 1917. The amendment was overwhelmingly adopted in the House. I offered it, as frankly stated by me at that time, because in my judgment the records show the present Creek tribal attorney, R. C. Allen, should never have been employed and should not now be employed to represent the Creek Tribe of Indians, a number of whom live in my district.

At that time I had incorporated in the RECORD a letter from S. M. Brosius, agent Indian Rights' Association, addressed to the Secretary of the Interior, dated July 9, 1915, which goes into details why Allen was not a fit person to be employed. I also submitted a statement, a certified copy of the docket of the United States District Court for the Eastern District of Oklahoma, showing that a large number of suits were pending against Allen and the Coweta Realty Co., of which he was the principal if not the sole owner.

I invited special attention to the letter of Mr. Brosius, as he had no interests to serve other than the best interests of the tribe. No one has ever attempted to answer the facts set forth in his letter.

Now, it will be remembered that one of the principal duties of the attorney for the Creek Tribe of Indians is to bring suit and help restricted Indians in clearing the title to their lands. I submit that in view of the court records Allen was the chief offender in clouding titles to lands, and is an unfit person to be employed. He does not dispute that he was the holder of a large number of spurious titles. He does not state that these suits were not instituted against him. He does not deny that he was the principal owner of the Coweta Realty Co., as charged by Brosius. If this be true, I do not see how the Secretary of the Interior can justify his recommendation of the approval of a contract with a man who is the chief offender against the law he is to enforce.

When called upon to explain, Allen never answers the statements made by Brosius. He begs the question and dodges the issue by calling attention to the fact that a large number of suits are pending, where members of the Creek Tribe of Indians are interested; and he tries, of course, to insinuate that objections to him arise from bad motives. However, this is no answer on the part of Allen. Why does he not say whether or not these suits were pending against him in the United States Court for the Eastern District of Oklahoma; and also whether or not he was at the time the chief owner and legal adviser of the Coweta Realty Co., or the company that clouded so many titles to lands in the Creek Nation? The truth is, Allen first started the clouding of titles in Wagoner County. He had the Coweta Realty Co. organized for this very purpose. He was the chief offender.

J. S. Bilby is another large land speculator. He owned whole townships of land in the northwestern part of Wagoner County and in various other parts of Oklahoma, as well as other States. He has the reputation of being one of the largest landowners in America, and was reported five or six years ago to have more doubtful titles, except perhaps Allen himself, than any other man in Oklahoma.

Mr. Brosius, in his statement to the Secretary, called attention to the fact, as showing Allen's unfitness, that while he was a candidate for the nomination of district judge in 1910 he secured a loan from this same J. S. Bilby of $10,000, and that Bilby had brought suit to recover upon the note. Brosius states that this note was secured by mortgages on lands held by Allen, the titles to which were spurious. Realizing that a foreclosure on them would not avail anything, Bilby did not foreclose but brought a suit on the notes. The records of the district court in Wagoner County show that two judgments were rendered against R. C. Allen and Lillian Allen, his wife, on December 22, 1916. This was 10 days after my amendment was adopted in the House. One of these judgments was for $7,622.22, with an attorney's fee of $100; and the other was for $770 and an attorney's fee of $50, as follows:

COWETA, OKLA., *June 1, 1910.*

Six months without grace, after date, for value received, we, as principals, promise to pay to the order of John S. Bilby, at his office, $10,000 in lawful money of the United States of America, of or equal to the present standard of value, with interest at 8 per cent per annum from date, interest to become as principal when due and bear the same rate of interest. The makers and indorsers of this note hereby severally waive presentment for payment, notice of nonpayment, protest and notice of protest, and consent that time of payment may be extended without notice thereof. Appraisement and all exemptions waived. If suit be instituted we agree that judgment be rendered for 10 per cent additional as attorney's fees, and we hereby give full authority to said John S. Bilby, or his assigns, to sell any collateral security assigned or attached at public or private sale, without notice, upon nonpayment of this note.

R. C. ALLEN.
LILLIAN ALLEN.

Post office: Coweta, Okla.
Indorsed.
June 2, credit $5,000.

STATE OF OKLAHOMA,
County of Muskogee, ss:

[In the district court. John S. Bilby, plaintiff, *v.* R. C. Allen and Lillian Allen, defendants. No. 4100.]

JUDGMENT.

Now, on this 22d day of December, 1916, the same being a judicial day of the regular September term of this court, the above-entitled cause coming regularly on for hearing, and the plaintiff appearing by his attorneys, Rittenhouse & Brown, and the defendants, although duly served with summons herein personally as required by law, and having heretofore appeared in this cause, appear not at this time, nor anyone for them, but make default, and the defendants and each of them being three times called in open court appear not and default is here and now entered against them, and the court having heard the pleadings, the evidence offered by plaintiff, and being well and sufficiently advised in the premises, finds that the allegations contained in plaintiff's petition are true and that the defendants, R. C. Allen and Lillian Allen, are justly indebted to the plaintiff herein in the sum of $7,622.22, together with interest thereon from this date at the rate of 8 per cent per annum, and the further sum of $100 attorney fees herein.

It is therefore considered, ordered, and adjudged that the plaintiff, John S. Bilby, do have and recover of and from the defendants, R. C. Allen and Lillian Allen, the principal sum of $7,622.22, together with interest thereon from this date at the rate of 8 per cent per annum until paid, and all costs of this action, including an attorney fee in the sum of $100, for all of which let execution issue.

CHAS. G. WATTS,
District Judge.

WAGONER, OKLA., *March 19, 1910.*

Two years after date, for value received, we promise to pay to J. S. Bilby, or order, $500, at Broken Arrow, Okla., with interest after date at 8 per cent per annum until paid, and 10 per cent on the entire amount at attorney's fees if placed in the hands of an attorney for collection or suit is filed thereon. The makers and indorsers hereby severally waive protest, demand and notice of protest and nonpayment in case this note is not paid at maturity, and agree to all extensions and partial payments before or after maturity without prejudice to the holder.

Secured by:

R. C. ALLEN.

Due: March 19, 1912.
Post office: Coweta, Okla.
No indorsements.

[In the district court. John S. Bilby, plaintiff, v. R. C. Allen, defendant. No 4101.]

JUDGMENT.

Now, on this 22d day of December, 1916, the same being a judicial day of the regular September term of this court, the above-entitled cause coming regularly on for trial and the plaintiff appearing in person and by his attorneys, Rittenhouse & Brown, and the defendant, although having been personally served with summons, as required by law, appears not, nor anyone for him, and being three times called in open court appears not, and default is here now entered against him; and the plaintiff having waived a jury and submitting his cause to the court, and the court having heard the pleadings and evidence of plaintiff and being well and sufficiently advised in the premises, finds that the plaintiff's petition is true and that defendant is indebted to plaintiff in the principal sum of $500, with interest thereon, as therein alleged;

It is therefore considered, ordered, and adjudged that the plaintiff, John S. Bilby, do have and recover of and from the defendant, R. C. Allen, the sum of $770, together with interest thereon from this date at the rate of 8 per cent per annum, and all costs of this action, including an attorney fee in the sum of $50, for all of which let execution issue.

CHAS. G. WATTS,
District Judge.

It is interesting to see upon what these judgments were founded. One note was for $10,000. It is dated June 1, 1910, and signed by R. C. Allen and Lillian Allen, his wife. You will notice that the next day after it was signed, or June 2, 1910, the sum of $5,000 was credited upon it. This may have been a campaign contribution of $5,000 or an actual loan of only $5,000. The next note was dated March 19, 1910, and was for $500.

Three things stand out prominently, as follows: First, Bilby was one of the large land speculators, the holder of a great number of disputed titles to land; second, R. C. Allen was seeking the nomination for district judge at the time of the very district in which 39 suits on disputed titles were pending against Bilby, and the primary was to be held the first Tuesday in August, 1910; and third, the judgments show that no appearance was entered by Allen at the time the judgments were entered, or, in other words, they were entered by default, as he made no defense. I submit that this transaction alone shows Allen is entirely unfit to be employed as attorney for the Creek Tribe of Indians. What would anyone think of a candidate for a judicial position going to the violators of the law to borrow money to pay his campaign expenses during a primary election? People do not do something for nothing. There is always a motive prompting their actions. I again insist that one who does not see the impropriety in soliciting loans from a man who had more disputed land titles, perhaps, than anyone else, is not a fit person to represent the Creek Tribe of Indians.

I invite attention again to the letter of S. M. Brosius, as follows:

DENVER, COLO., *July 9, 1915.*

Hon. FRANLIN K. LANE,
Secretary of the Interior, Washington, D. C.

DEAR SIR: Several weeks since we were advised, by letter, of numerous charges which had been filed by certain Creek Indians of Oklahoma, protesting against the reappointment of Mr. R. C. Allen to the position of attorney for the Creek Tribe of Indians.

Within the past fortnight I was in the State of Oklahoma and gathered additional information regarding conditions among the Creek Indians, together with matters which bear upon the fitness of Mr. Allen for the position of attorney for that tribe.

As a result of official investigation of the case, it is no doubt conceded by the Indian Department of the Government that the conduct of Mr. R. C. Allen prior to his appointment as Creek attorney for the year ending June 30 last in his transactions in matters directly concerning the interests of the Creek Indians was such as to render him totally unfit to represent these Indians in any capacity.

As proof of the alleged unfitness of Mr. Allen, brief mention may be made of the charges filed in your department by Messrs. Cowe, Brown, and Hodge, citizens of the Creek Nation, during the month of May last. In part these charges, chiefly in the form of affidavits and certified official records, show that on May 15, 1915, there were 20 cases pending in the United States District Court for the Eastern District of Oklahoma against the Coweta Realty Co. to cancel deeds and conveyances affecting titles of Creek Indian allotted lands. It is charged that one-third of the Coweta Realty Co.'s stock was at the time of the organization of the company owned by Mr. R. C. Allen, and it is now understood that he is the owner of all of the stock of said company.

It is further officially certified that there were 26 cases pending against said Allen in the United States district court of the said district in Oklahoma on May 15, 1915, all, or nearly all, of such cases affecting title to the allotted lands of these Indians. We submit that the fact that such suits are now pending renders the interests of Mr. Allen antagonistic to those of the Indians and disqualify him for the position of Creek attorney.

Another feature of the case, which has been called to your attention, is that Mr. Allen borrowed large sums of money from various persons and is alleged to be heavily indebted at this time and is further believed to be execution proof. It is shown that shortly prior to his appointment as Creek attorney Mr. Allen was a candidate for district judge in Wagoner County, Okla., and that during the time of the canvass and previous to the election to the judgeship said Allen is charged with borrowing the sum of $10,000 from one John S. Bilby, a large landowner in said district, and who had numerous cases then pending affecting Creek Indian lands located in the district in which Mr. Allen would preside if elected to such judgeship. The court cases referred to then pending were 39 in number, as shown by the inclosed statement of causes pending in the court at Wagoner, Okla., over which Mr. Allen would preside as judge if elected, and over which he did preside as judge in due course. It is further asserted that said Allen mortgaged various tracts of Indian allotted lands, which the Government at that time or afterwards contested his title to, the mortgages running in favor of said John S. Bilby to secure payment of the loan of the $10,000 referred to. I am informed that quite recently Mr. Bilby had brought suit to recover personal judgment against Mr. Allen for the money loaned to him as aforesaid, and that this suit did not comprehend a foreclosure of the mortgage allotments, which is evidence that Mr. Bilby considers that Mr. Allen's title to the mortgaged lands is of little value.

We submit that no comment is necessary in reference to the foregoing transactions to show the unfitness of either of the principals therein to hold any position affecting or relating to the property right of the Creek Indians.

Mention has been made by those in favor of Mr. Allen's appointment as Creek attorney that he has secured a large number of indictments during his term in that capacity against alleged violators of law. It is asserted that in no case has a conviction been secured under these indictments, thus showing that Mr. Allen may be making a spectacular demonstration or that he may not be a keen attorney, such as should be secured for the Indians if an attorney is deemed necessary.

In the celebrated "Tommy Atkins" case, in which Mr. Allen seeks to set aside a fictitious Creek allotment, which is now very valuable by reason of its rich deposits of oil, etc., it is understood that Mr. Allen, if not actually favoring, has acquiesced in the contest being prosecuted by a noncitizen Creek Indian, who seeks to secure this allotment by showing it was improperly allotted to Atkins. If the allotment to Atkins is canceled and a noncitizen is declared entitled to the property, the Creek Tribe of Indians will apparently not profit thereby, since the property goes to an outsider. This, we submit, indicates that the energy seemingly displayed by Mr. Allen in the case and the large amount of money belonging to the Creek Indians which has been expended by him in this matter will not benefit the Creek Tribe in the least, these being the Indians whose interests he is employed to protect.

During my recent visit to Oklahoma I called upon Chief Moty Tiger, at Okmulgee, on June 30 last. The chief stated very plainly to me that he was opposed to the reappointment of Mr. Allen as the Creek Tribe attorney. He said that while on account of the persuasions of Mr. Allen he had at first agreed to recommend the latter as attorney for another year, upon reflection and after securing more definite views from the members of the Creek Tribe he was now opposed to Mr. Allen's appointment.

At the time I called upon Chief Tiger he was clear-headed and sober, a fact which to my mind set at rest some of the stories I had heard regarding his condition and habits. I was impressed with his conscientious convictions in the matter of the attorneyship, which was interpreted to me by Samuel Haines, a Creek citizen.

We call attention to the fact that by a section of the Federal statutes the United States district attorney for the district in which the lands are located shall represent all Indians in matters pertaining to their allotted lands.

The history of Mr. Allen's connection with transactions involving the interests of the Creek Indians probably were not well known at the time he was first appointed as Creek attorney for the term which expired June 30 last. Now that these transactions are of public notice, we submit that it would be a distinct step backward in Indian administration to reappoint him as attorney.

It seems unnecessary to suggest that the same rules should apply for the protection of the interests of the Creek Indians as are promulgated for the government of employees among other Indian tribes. These rules and regulations, which have been in force for perhaps two years or more, subject any employee in the Indian Service to dismissal for dealing in Indian lands.

We believe a consideration of all the conditions of the case render it advisable at this time to place the legal matters affecting the Creeks under the exclusive jurisdiction of United States district attorney for the district where the lands are located, who by law, as heretofore noted, is charged with the protection of the Indians in matters pertaining to their allotted lands.

The statements made herein which are within my own knowledge are true, and those given upon information are believed to be true.

Very respectfully,

S. M. BROSIUS,
Agent Indian Rights Association.

I also invite attention to the following certified record of suits pending in the United States District Court for the Eastern District of Oklahoma against R. C. Allen and the Coweta Realty Co., of which he was the principal owner:

UNITED STATES OF AMERICA,
Eastern District of Oklahoma, ss:

I, R. P. Harrison, clerk of the United States District Court for the Eastern District of Oklahoma, do hereby certify that the following is a list of the suits pending to cancel deeds and conveyances in the name of the Coweta Realty Co. only:

Case No. 479 (p. 86): United States *v.* August Land Co. et al., Coweta Realty Co., special defendant; suit to cancel deed from Sam Simon to Coweta Realty Co.

Case No. 479 (p. 88): United States *v.* August Land Co. et al., Coweta Realty Co., special defendant; suit to cancel deed from Wisey Lovett Scott and Sanford Scott to Coweta Realty Co.

Case No. 479 (p. 90): United States *v.* August Land Co. et al., Coweta Realty Co., special defendant; suit to cancel deed from Ida Williams to Coweta Realty Co.

Case No. 493 (p. 182): United States *v.* John Bright et al., Coweta Realty Co., special defendant; suit to cancel deed from Sam Simon to Coweta Realty Co.

Case No. 496 (p. 183): United States *v.* John Bright et al., Coweta Realty Co., special defendant; suit to cancel deed from Peter McKellop and Betsie McKellop to Coweta Realty Co.

Case No. 496 (p. 184): United States *v.* John Bright et al., Coweta Realty Co., special defendant; suit to cancel deed from Ben White to Coweta Realty Co.

Case No. 496 (p. 185): United States *v.* John Bright et al., Coweta Realty Co., special defendant; suit to cancel deed from Wisey Scott, née Lovett, and Lucy Lovett to Coweta Realty Co.

Case No. 496 (p. 186): United States *v.* John Bright et al., Coweta Realty Co., special defendant; suit to cancel deed from Lucey Lovett to Coweta Realty Co.

Case No. 496 (p. 188): United States *v.* John Bright et al., Coweta Realty Co., special defendant; suit to cancel deed from Peter McKellop and Betsy McKellop to Coweta Realty Co.

Case No. 496 (p. 189): United States *v.* John Bright et al., Coweta Realty Co., special defendant; suit to cancel deed from Peter McKellop to Coweta Realty Co.

Case No. 496 (p. 190) : United States *v.* John Bright et al., Coweta Realty Co., special defendant; suit to cancel deed from Joseph Pike to Coweta Realty Co.

Case No. 496 (p. 191) : United States from John Bright et al., Coweta Realty Co. Ben White to Coweta Realty Co.

Case No. 496 (p. 195) : United States *v.* John Bright et al., Coweta Realty Co., special defendant; suit to cancel deed from Lucy Lovett to Coweta Realty Co.

Case No. 496 (p. 198) : United States *v.* John Bright et al., Coweta Realty Co., special defendant; suit to cancel deed from Ben White to Coweta Realty Co.

Case No. 496 (p. 199) : United States *v.* John Bright et al., Coweta Realty Co., special defendant; suit to cancel deed from Ben White to Coweta Realty Co.

Case No. 500 (p. 50) : United States *v.* L. D. Vance et al., Coweta Realty Co., special defendant; suit to cancel deed from John Martin to Coweta Realty Co.

Case No. 902 (p. 258) : United States *v.* J. L. Adair et al., Coweta Realty Co., special defendant; suit to cancel deed from Ben White to Coweta Realty Co.

Case No. 911 (p. 40) : United States *v.* W. E. Dixon et al., Coweta Realty Co., special defendant; suit to cancel deed from Sophia Thompson and husband to Coweta Realty Co.

Case No. 911 (p. 41) : United States *v.* W. E. Dixon et al., Coweta Realty Co., special defendant; suit to cancel deed from Ben White to Coweta Realty Co.

Case No. 945 (p. 21) : United States *v.* Bert G. Greer et al., Coweta Realty Co., special defendant; suit to cancel deed from Austin Frank and Lizzie Frank to the Coweta Realty Co.

As the same appears from the records in my office.

In testimony whereof I have hereunto set my hand and affixed the seal of said court, at my office in the city of Muskogee, in said district, this 15th day of May, A. D. 1915.

[SEAL.]

R. P. HARRISON, *Clerk.*
By H. E. BOUDINOT, *Deputy.*

—

UNITED STATES OF AMERICA,
Eastern District of Oklahoma, ss:

I, R. P. Harrison, clerk of the United States District Court for the Eastern District of Oklahoma, do hereby certify that the following is a true list of cases pending and undetermined against R. C. Allen:

Case No. 294 (p. 16) : United States *v.* H. O. Malot et al., R. C. Allen, special defendant; suit to cancel deed from Ben White to Ellis H. Hammett, R. C. Allen, and J. C. Pinson.

Case No. 356 (p. 27) : United States *v.* Perry McKay et al., R. Clyde Allen, special defendant; suit to cancel mortgage with power of sale from James Bustar and Becca Bustar to R. Clyde Allen.

Case No. 479 (p. 38) : United States *v.* August Land Co. et al., R. C. Allen, special defendant; suit to cancel deed from Annie Childers to R. C. Allen.

Case No. 479 (p. 220) : United States *v.* August Land Co. et al., R. C. Allen, special defendant; suit to cancel deed from Joe Childers to Ellis H. Hammett, R. C. Allen, and J. C. Pinson.

Case No. 479 (p. 221) : United States *v.* August Land Co. et al., R. C. Allen, special defendant; suit to cancel deed from Lucy Lovett to Ellis H. Hammett, R. C. Allen, and J. C. Pinson, Coweta Realty Co.

Case No. 479 (p. 222) : United States *v.* August Land Co. et al., R. C. Allen, special defendant; suit to cancel deed from Joe Childers and Googe Childers to Ellis H. Hammett, R. C. Allen, and J. C. Pinson.

Case No. 482 (p. 197) : United States *v.* Levi Ackley et al., R. C. Allen, special defendant; suit to cancel deed from Googie Childers and Eliza Childers to Ellis H. Hammett, R. C. Allen, and J. C. Pinson, Coweta Realty Co.

Case No. 482 (p. 200) : United States *v.* Levi Ackley et al., R. C. Allen, special defendant; suit to cancel deed from Ben White to Ellis H. Hammett, R. C. Allen, and J. C. Pinson, Coweta Realty Co.

Case No. 482 (p. 201) : United States *v.* Levi Ackley et al., R. C. Allen, special defendant; suit to cancel deed from James Buslar Chockley and Rebecca Chockley to Ellis H. Hammett, R. C. Allen, and J. C. Pinson.

Case No. 482 (p. 202) : United States *v.* Levi Ackley et al., R. C. Allen, special defendant; suit to cancel deed from James Buslar Chockley and Rebecca Chockley to Ellis H. Hammett, R. C. Allen, and J. C. Pinson.

Case No. 482 (p. 205) : United States *v.* Levi Ackley et al., R. C. Allen, special defendant; suit to cancel deed from Ben White to Ellis H. Hammett, R. C. Allen, and J. C. Pinson, Coweta Realty Co.

Case No. 482 (p. 204) : United States *v.* Levi Ackley et al., R. C. Allen, special defendant; suit to cancel deed from Ben White to Ellis H. Hammett, R. C. Allen, and J. C. Pinson, Coweta Realty Co.

Case No. 482 (p. 203) : United States *v.* Levi Ackley et al., R. C. Allen, special defendant; suit to cancel deed from Joe Childers and Google Childers to Ellis Hammett, R. C. Allen, and J. C. Pinson, Coweta Realty Co.

Case No. 487 (p. 156) : United States *v.* Jos. F. Atchley et al., R. C. Allen, special defendant; suit to cancel deed from Johnson Martin to Ellis H. Hammett, R. C. Allen, and J. C. Pinson, Coweta Realty Co.

Case No. 487 (p. 157) : United States *v.* Jos. F. Atchley et al., R. C. Allen, special defendant; suit to cancel deed from George Childers and Eliza Childers to Ellis H. Hammett, R. C. Allen, and J. C. Pinson, Coweta Realty Co.

Case No. 487 (p. 158) : United States *v.* Jos. F. Atchley et al., R. C. Allen, special defendant; suit to cancel deed from Johnson Martin to Ellis H. Hammett, R. C. Allen, and J. C. Pinson, Coweta Realty Co.

Case No. 485 (p. 10) : United States *v.* Charles Bagg et al., R. C. Allen, special defendant; suit to cancel deed from Noah Davis to R. C. Allen. Suit dismissed April 1, 1914.

Case No. 487 (p. 17) : United States *v.* Joseph F. Atchley et al., R. C. Allen, special defendant; suit to cancel quitclaim deed from Joe

Barnwell to R. C. Allen; partial dismissal September 10, 1913. Decree (partial) March 16, 1915.

Case No. 490 (p. 149): United States *v.* Albert Anderson et al., R. C. Allen, special defendant; suit to cancel quitclaim deed from Commercial Land Co. to Ellis H. Hammett, R. C. Allen, and J. C. Pinson. Suit dismissed April 30, 1913.

Case No. 494 (p. 384): United States *v.* T. T. Owens et al., R. C. Allen, special defendant; suit to cancel deed from Marchie Tiger to Ellis H. Hammett, R. C. Allen, and J. C. Pinson. Suit dismissed in part April 30, 1913.

Case No. 902 (p. 12): United States *v.* J. L. Adair et al., R. C. Allen, special defendant; suit to cancel deed from Lewis Deere and Hattie Deere to R. C. Allen. Suit dismissed December 4, 1913.

Case No. 902 (p. 13): United States *v.* J. L. Adair et al., R. C. Allen, special defendant; suit to cancel deed from Lewis Deere to R. C. Allen. Suit dismissed December 4, 1913.

Case No. 902 (p. 331): United States *v.* J. L. Adair et al., R. C. Allen, special defendant; suit to cancel deed from Marchie Tiger to Ellis H. Hammett, R. C. Allen, and J. C. Pinson. Partial dismissal April 30, 1913.

Case No. 917 (p. 13): United States *v.* Frank L. Mars et al., R. C. Allen, special defendant; suit to cancel mortgage, power of sale from Joe Barnwell and Emma Barnwell to R. C. Allen and W. G. Robertson. Suit dismissed September 10, 1913.

As the same appears from the records in my office.

In testimony whereof I have hereunto set my hand and affixed the seal of said court at my office in the city of Muskogee, in said district, this 15th day of May, A. D. 1915.

[SEAL.] R. P. HARRISON, *Clerk.*
By H. E. BOUDINOT, *Deputy.*

I also invite and direct your attention to the following affidavit of Martha McKinley (née Verner), Creek freedwoman, as to a transaction of Mr. Allen with her regarding an attempted purchase of a portion of her allotment as a Creek allottee. This woman is an uneducated ignorant colored woman, and some argument might be made that she was induced to make this affidavit and statement in order to prejudice or injure Mr. Allen, but should that be done your attention is directed to a copy of the marriage record which is hereto attached, showing that the marriage was solemnized on the 20th day of January, as stated in the affidavit, and your attention is further directed to a copy of a warranty deed signed by Martha McKinley (née Verner), by Mark and Cecil McKinley, to R. C. Allen, the date of the deed being the same as given in the affidavit of Martha McKinley, and the same date as the date of the justice of the peace who certified to having married Martha Verner and Cecil McKinley, which was the 20th day of January, 1909, and the marriage certificate purports to be witnessed by Joe Hawkins, the same colored man who is mentioned in Martha McKinley's affidavit, as coming to her home with Mr. Allen on the 20th day of January, 1909, before the marriage ceremony was performed.

Your attention is also directed to a certified copy of a probate proceeding, wherein the guardian of Martha Verner applied to have her lands sold through the probate court, the order confirming the sale and the bill of Mr. Allen presented against the estate of $1,801 for alleged improvements and money furnished.

[Copy.]

AFFIDAVIT OF MARTHA M'KINLEY, NÉE VERNER, A CREEK FREEDWOMAN, ROLL NO. 2409.

STATE OF OKLAHOMA,
County of Wagoner, ss:

Martha McKinley, née Verner, of lawful age, being first duly sworn, on oath deposes and says: That I am a citizen of the Creek Tribe of Indians, duly enrolled as Creek freedman on the rolls of the Dawes Commission, after roll number 2409, of the freedman rolls of the said Creek Tribe of Indians, in the office of the Superintendent of the Five Civilized Tribes at Muskogee, Okla., and by virtue of such citizenship I had allotted to me and received as my proportionate share of the lands of the said Creek Tribe of Indians the following-described lands, to wit:

"The northeast quarter of section 16, township 17 north, range 16 east, of the Indian base and meridian, and containing 160 acres according to the Government survey thereof, and which is situated in what is now Wagoner County, Okla."

That my age, according to the roll on file in the said office of the Superintendent of the Five Civilized Tribes at Muskogee, Okla., at the time of the application for such enrollment was made by my father, Ben Verner, to wit, September, 1898, was 4 years of age, thus making the date of my birth in the month of September, 1894; that I attained my majority, to wit, 18 years of age in the month of September, 1912.

That in the month of January, to wit, the 20th day, 1909, R. C. Allen, who was then living in the town of Coweta, Okla., 3 miles from where my father lived, and who was at that time engaged in buying and selling land, came to my father's house in a surrey in company with one Joe Hawkins, a colored man, who was then working for R. C. Allen, and with Cecil McKinley, a young colored boy whom I had known only about one month, and took me to the town of Coweta. When we got to the town of Coweta Cecil McKinley had a marriage license to marry me and R. C. Allen had a warranty deed already prepared covering 80 acres of my allotment. They all three prevailed and induced me to marry the said Cecil McKinley and to sign the warranty deed so prepared by the said R. C. Allen to 80 acres of my allotment, being a part of the land above described, and the said R. C. Allen gave me $150 and promised to pay me more money later on, and did afterwards pay me $500, and making a total of $650 I got for the 80 acres.

Joe Hawkins and R. C. Allen had well knew me and all my family for a number of years prior, and both well knew my age at that time, and both knew I had a legal guardian at the time.

That I was at the time and am at this time an ignorant and illiterate colored person, unable to read or write the English language.

Nearly three years thereafter my legally appointed and acting guardian filed a petiton in the probate court in Wagoner County, Okla., praying permission to sell my allotment; that an order of the said probate court was made directing my guardian to advertise and sell all of my allotment; that due notice was published, according to law, of the sale thereof; that on the day of sale the said R. C. Allen, then being the judge of the third judicial district of the State of Oklahoma, Wagoner County being a part of said district, and by virtue of his official position and influence procured an appraisement at a much smaller valuation than the land was really worth, and that he prevented competitive bidding on the day of sale, and had his agent buy the 80 acres he claimed to be the owner of by virtue of his aforesaid deed for the sum of $1,800, being a very much less sum than its actual value. The remaining 80 acres of my allotment and adjoining the Allen 80, and being of the same character and value, sold the same day for $30 per acre.

That after said sale was made he, the said R. C. Allen, judge of the district court for Wagoner County, Okla., did procure an order from the probate court of Wagoner County, Okla., directing and ordering my guardian to turn over to him, the said R. C. Allen, all the money derived from the sale of the said Allen 80 acres, and which order was complied with by my guardian, and that I did not receive one cent from said sale thereof by my guardian, R. C. Allen, or any other person. That said order of the probate court was made and complied with without my knowledge or consent, and that I did not justly owe R. C. Allen one cent for any cause or reason, and that I have been for the past three years, or ever since I have attained my majority, trying to employ different lawyers to bring a suit to recover my land or its value, but by reason of the official capacity of the said R. C. Allen and his influence by virtue of being the Creek national attorney I have been unable to get any lawyer to so prosecute any suit against him.

Further affiant sayeth not.

The name of Martha McKinley was written by me at her request and in her presence, and mark made by her in my presence.

MARTHA (her x mark) MCKINLEY (née VERNER),
Affiant.

Attest:

MARRIAGE RECORD.

APPLICATION FOR MARRIAGE LICENSE.

STATE OF OKLAHOMA,
Wagoner County, ss:

I, Cecil McKinley, of Wagoner County, State of Oklahoma, aged 21 years, and legally competent to make and take an oath, do solemnly swear that I am acquainted with Mr. ——— ——— myself and Miss Martha Verner, who are parties for the marriage of whom a license is hereby applied for. The said parties, and each of them, are of sound and contracting mind and unmarried and not disqualified or incapable under the law of entering into the marriage relation. That said parties are not of the relations prohibited by law and may lawfully contract and be joined in marriage.

I furthermore do solemnly swear that the following schedule, containing the names of the aforesaid parties, their age, color, place of birth, and residence, is correct in every particular, to the best of my knowledge, information, and belief, to wit:

NAMES OF PARTIES.

Cecil McKinley, groom; age, 21; color, black; place of birth, ———; residence, Coweta, Okla.

Martha Verner, bride; age, 15; color, black; place of birth, ———; residence, Coweta, Okla.

CECIL MCKINLEY, *Applicant.*

Subscribed and sworn to before me January 20, 1909.

W. T. DRAKE, *County Judge,*
By HENRY M. BROWN, *Clerk.*

WAGONER, OKLA.,
January 12, 1909.

I do give my permission and consent for the marriage of Miss Martha Verner, age 15, to Cecil McKinley.

(Signed) BEN VERNER.

Subscribed and sworn to January 12, 1909, before me, a notary public.

N. V. LEONARD, *Notary Public.*

My commission expires April 12, 1912.

MARRIAGE LICENSE.

IN THE COUNTY COURT.

STATE OF OKLAHOMA,
Wagoner County, ss:

To any person authorized to perform the marriage ceremony, greeting:

You are hereby authorized to join in marriage Mr. Cecil McKinley and Miss Martha Verner of the county aforesaid, whose ages, residence, etc., are as follows:

NAMES OF PARTIES.

Cecil McKinley, groom; age, 21; color, black; place of birth, ———; residence, Coweta, Okla.

Martha Verner, bride; age, 15; color, black; place of birth, ———; residence, Coweta, Okla.

And of this license you will make due return to my office within 30 days from this date.

In testimony whereof I have hereunto set my hand and affixed the seal of said court in Wagoner, in said county, this 20th day of January, 1909.

W. T. DRAKE, *Judge of the County Court.*
By HENRY M. BROWN, *Clerk.*

CERTIFICATE OF MARRIAGE.

STATE OF OKLAHOMA,
Wagoner County, ss:

I, J. E. Jerome, justice of the peace for Coweta Township, of Coweta, in Wagoner County, Okla., do hereby certify that I joined in marriage the persons named in and authorized by this license to be married on the 20th day of January, A. D. 1909, at Coweta, in Wagoner County, Okla., in the presence of Joe Hawkins, of Coweta, Okla., and George Williams, of Coweta, Okla.

J. E. JEROME,
Justice of the Peace for Coweta Township.

Witnesses:
JOE HAWKINS,
GEORGE WILLIAMS.

DEED, GENERAL WARRANTY.

OKLAHOMA.

This indenture, made this 20th day of January, A. D. 1909, between Martha McKinley, née Verner, and Cecil McKinley, her husband, of Wagoner County, in the State of Oklahoma, of the first part, and R. C. Allen, of the second part.

Witnesseth the said parties of the first part, in consideration of the sum of $2,000, the receipt whereof is hereby acknowledged, do, by these presents, grant, bargain, sell, and convey unto said party of the second part, his heirs and assaigns, all the following-described real estate, situated in the county of Wagoner and State of Oklahoma, to wit:

West half of the northeast quarter of section sixteen, township seventeen north, range sixteen east.

To have and to hold the same, together with all and singular the tenements, hereditaments, and appurtenances thereunto belonging or in any wise appertaining, forever.

And said Martha McKinley and Cecil McKinley, for their heirs, executors or administrators, do hereby covenant, promise, and agree to and with the said party of the second part that at the delivery of these presents they are lawfully seized in their own right of an absolute indefeasable estate of inheritance, in fee simple, of and in all and singular the above granted and described premises with the appurtenances; that the same are free, clear, discharged, and unincumbered of and from all former and other grants, titles, charges, estates, judgments, taxes, assessments, and incumbrances of what nature and kind soever, and that they will warrant and forever defend the same unto the said party of the second part, heirs and assigns, against said parties of the first part, their heirs, and all and every person or persons whosoever lawfully claiming or to claim the same.

In witness whereof the said parties of the first part have hereunto set their hands the day and year first above written.

MARTHA (her x mark) MCKINLEY (née Verner).
CECIL MCKINLEY.

AFFIDAVIT OF CECIL M'KINLEY.

Cecil McKinley, of lawful age, being first duly sworn, on oath deposes and says: That my post-office address is Coweta, Wagoner County, Okla.; that I am 25 years of age. That in January, 1909, I was living on the farm and working for Jacob Nelson, a colored man, near Coweta, Okla.; that Jacob Nelson had been summoned as a juror and I had drove him to Wagoner to attend court; arriving in Wagoner, I spent the night there in company with the said Jacob Nelson. The following morning before sunup R. C. Allen came to the rooming house where the said Jacob Nelson and myself had stopped over night and told said Nelson that if he would get me to marry Martha Verner, and that if Martha and myself would then give him, the said R. C. Allen, a deed to 80 acres of her allotment, that he, R. C. Allen, would give the said Nelson $50. After R. C. Allen left the rooming house Jacob Nelson talked to me about marrying Martha and explained to me that whatever money she received one-half would be mine. I was at that time an illiterate negro boy 21 years old and had known Martha Verner only about a month, but was not engaged to be married to her, and at the same time Joe Hawkins, who was a relative of Martha Verner, came in the rooming house and told me that if I wanted to marry he would speak a good word for me to her; after we all talked the matter over for a few minutes R. C. Allen and myself went to the county judge's office and procured a marriage license for me to marry Martha Verner, and R. C. Allen paid the clerk for the license.

R. C. Allen procured a surrey in Wagoner, and he, together with Joe Hawkins and myself, drove to the home of Martha Verner and persuaded her to go to Coweta with us; on arriving at Coweta, Allen and Hawkins persuaded her to marry me.

Immediately after the marriage ceremony Allen taken us to an office where he had a warranty deed prepared for our signatures conveying to him 80 acres of Martha Verner's allotment, and for which he gave us $150.

Further saith not.

CECIL MCKINLEY, *Affiant.*

PETITION TO SELL REAL ESTATE BY GUARDIAN.

STATE OF OKLAHOMA, *County of Wagoner, ss:*

IN COUNTY COURT.

In the matter of the guardianship of Martha Verner, now Martha McKinley. Comes now J. H. Thigpen, guardian of Martha Verner, now Martha McKinley, a minor, and shows to the court the condition of the estate of the above-named ward, to wit:

The personal property of said ward consists of nothing, of the approximate value of none; that the annual income therefrom is approximately none.

That said ward owns the following described real estate, of the approximate value of $———, to wit: Northeast quarter of section 16, township 17 N., range 16 E., Wagoner County, Okla.; that the annual income therefrom is approximately $50; that said estate is encumbered to the amount of none, with an annual interest charge of none; that the annual expense chargeable against the estate of said ward for maintenance and education is approximately $600; that it is necessary and for the best interest of the minor that the hereinafter described portion of said real estate should be sold, for the following reasons, to wit, to maintain, educate, and support the ward, and that the surplus over the amount necessary for her support and education be invested in productive stock and other productive investments.

That the next of kin and persons interested in the estate of said ward, together with their respective places of residence, are as follows: Ben Verner, father; Rachel Verner, mother; Cecil McKinley, husband; Bella Hines, sister; Ernest Allen, brother; Bessie Verner, sister; Lucy Verner and Julia Verner, sisters, all of Coweta, Okla.; and Nellie Sellers, a sister, of Porter, Okla.

Wherefore, petitioner prays the court that upon hearing had hereon he be authorized to sell the northeast quarter of section 16, township 17 N., range 16 E., Wagoner County, of said real estate, at public or private sale, as shall be deemed most beneficial and for the best interest of said ward.

J. H. THIGPEN.

STATE OF OKLAHOMA, *Wagoner County, ss:*

J. H. Thigpen, petitioner above named, being duly sworn, says that he has read the foregoing petition and knows the contents thereof, and the same is true of his own knowledge, except the matters therein stated to be on information and belief, and as to those matters he believes to be true.

J. H THIGPEN.

Subscribed and sworn to before me this 3d day of July, 1911.

[SEAL.] ESTELLE SIMPSON, *Notary Public.*

My commission expires December 10, 1914.

IN THE MATTER OF THE GUARDIANSHIP OF MARTHA VERNER, NOW MARTHA MCKINLEY, A MINOR.

STATE OF OKLAHOMA, *Wagoner County, ss:*

IN THE COUNTY COURT.

ORDER CONFIRMING SALE OF REAL ESTATE BY GUARDIAN.

Now, on this 20th day of September, 1911, there coming on for hearing the return of sale made by J. H. Thigpen, as the guardian of the estate of Martha Verner, now Martha McKinley, a minor, said hearing of said return of sale having been regularly continued by order of this court from the 11th day of September, 1911, to the 18th day of September, 1911, and on said 18th day of September, 1911, having been regularly continued by order of this court from said 18th day of September, 1911, to this day, and said J. H. Thigpen appearing in person and by his attorneys, J. H. Sutherlin and B. J. Beavers, and no one appearing in opposition hereto; and the court having examined said return of sale and having heard and considered the evidence of witnesses in support of said return, and it being proven that notice of sale was given as prescribed in the order of sale made and entered herein on the 2d day of August, 1911, and according to law, and it

being further proven that notice of the hearing of said return of sale has been given by posting three notices in three of the most public places in Wagoner County, Okla., for at least 10 full days prior to said September 11, 1911, as prescribed by the order for hearing said return of sale made and entered on August 31, 1911, and according to law, and the court being fully advised in the premises, finds:

That in pursuance of said order of sale said J. H. Thigpen on the 28th day of August, 1911, sold the following parcels of real estate of said estate, all lying and being situated in Wagoner County, Okla., at private sale in accordance with said order of sale to the following persons, for the following sums, to wit:

The northeast quarter of the northeast quarter of section 16, in township 17 north, range 16 east, to E. E. Lewis, for the sum of $1,100.

The southeast quarter of the northeast quarter of section 16, in township 17 north, range 16 east, to E. E. Lewis for the sum of $1,100.

The west half of the northeast quarter of section 16 of township 17 north, range 16 east, to E. E. Lewis for the sum of $1,800; and said sums of $1,100, $1,100, and $1,800, respectively, being at least 90 per cent of the appraised value of said parcels of land, respectively.

And on the 11th day of September, 1911, and before hearing is had for the confirmation of the sales of said parcels of real estate, A. J. Barnes appearing and filing herein his bid in writing for the southeast quarter of the northeast quarter of section 16, in township 17 north, range 16 east, of said real estate for a sum of 10 per cent in excess of said sum of $1,100, bid by said E. E. Lewis for said parcel of land as aforesaid, the last bid of said A. J. Barnes for said parcel of real estate being the sum of $1,210, and said sum of $1,210 being the highest and best bid received for said southeast quarter of the northeast quarter of section 16, in township 17 north, range 16 east, and being more than the appraised value of said parcel of real estate, the same, to wit, the southeast quarter of the northeast quarter of section 16 of township 17 north, range 16 east, is hereby sold at private sale to A. J. Barnes for the sum of $1,210; and all of said parcels of real estate being sold on the following terms, to wit: Cash upon confirmation of sales by the county court of Wagoner County, State of Oklahoma.

That said sales were made, after due notice, as prescribed by said order of sale; that said purchasers, E. E. Lewis and A. J. Barnes, were, respectively, the highest bidders for said parcels of real estate, respectively; and said sum of $1,100 bid by said E. E. Lewis for the said northeast quarter of the northeast quarter of section 16, in township 17 north, range 16 east; and said sum of $1,210 bid by said A. J. Barnes for the said southeast quarter of the northeast quarter of section 16, in township 17 north, range 16 east; and said sum of $1,800 bid by said E. E. Lewis for the said west half of the northeast quarter of section 16, in township 17 north, range 16 east, being the highest and best sums bid for said respective parcels of real estate, that said sales were legally made and fairly conducted; that said sums, respectively, are not disproportionate to the value of said parcels of real estate respectively sold; and that a sum exceeding any of said bids, respectively, for said parcels of real estate, respectively, of at least 10 per cent, exclusive of the expenses of a new sale, can not be obtained; and that said J. H. Thigpen, as such guardian, in all things proceeded and conducted and managed such sales as required by the statutes in such cases made and provided and as by said order of sale required and directed.

It is therefore ordered, adjudged, and decreed by the court that the said sale of the southeast quarter of the northeast quarter of section 16 in township 17 north, range 16 east, to A. J. Barnes, and of the northeast quarter of the northeast quarter, and west half of the northeast quarter of section 16, in township 17, range 16 east, to E. E. Lewis, be, and the same is hereby, confirmed and approved and declared valid, and said J. H. Thigpen, guardian, is directed to execute to said purchasers, E. E. Lewis and A. J. Barnes, proper and legal conveyances of said respective parcels of real estate so sold and confirmed to them, respectively.

[SEAL.] LEON B. FANT, *County Judge.*

(Indorsed:) No. 321. In the matter of the guardianship of Martha Verner, now Martha McKinley, minor. Order confirming sale of real estate by guardian. Filed Oct. 12, 1911. A. F. Evans, court clerk. Journal 4, pp. 361 and 362.

BILL OF B. C. ALLEN AGAINST THE ESTATE OF MARTHA VERNER, NOW MARTHA M'KINLEY, A MINOR.

Jan. 20, 1909, cash paid to Martha McKinley (née Verner)	$1,000.00
Improvements placed upon the premises during the year 1909–10 (see testimony of D. M. Hauser hereto)	801.50
Total	1,801.50

R. C. Allen, being duly sworn, deposes and says that the annexed claim against the estate of Martha McKinley, a minor, as justly owing to said R. C. Allen; is due and wholly unpaid.

R. C. ALLEN.

Subscribed and sworn to before me this 20th day of September, 1911.

[SEAL.] LEON B. FANT, *County Judge.*

The documents herein referred to clearly disclose the method used by Mr. Allen in dealing with these poor unfortunate Creek freedmen, for whose tribe he is now acting as Creek national attorney.

No effort has been made to explain the necessity of requiring the Creek Tribe of Indians to continue to employ a national attorney, nor has anyone undertook to justify the actions of Mr. Allen in his methods and dealings with the Creek lands as hereinbefore set out, nor has he himself undertook to justify such actions. My contention is that if the Creeks are to have an attorney to represent them and protect their interests, they should have a man who had not been engaged in clouding the titles to the lands of the allottees, and especially one that, when he had sought and secured the marriage and found that his purchase or attempted purchase was then unlawful, would wait a year or two until the guardian of the colored woman that he had assisted in getting married had advertised her allotments for sale, and then present a bill against her to the guardian amounting to more than one-half of what her entire allotment sold for. If this is protecting the uneducated and ignorant allottee of an Indian tribe, be he Indian, intermarried citizen, or freedman, then, I say, may the Divine Providence have mercy upon the allottee.

He goes early in the morning to where the negro, Cecil McKinley, was rooming, before sunup, and tells Jacob Nelson if he would get Cecil McKinley to marry Martha Verner and then get them to give him a deed to 80 acres of Martha's land he, Allen, would give Jacob Nelson $50. Was he protecting the Indian then or running a matrimonial bureau? He knew this negro girl was under age. He knew he was violating every principle of law—at least, he should have known he was violating the law. Yet he secures these negroes to marry. The same day he takes a deed to 80 acres of her land. All the time we find him going from one home of these colored people to the other, until the marriage takes place and the deeds are secured from these colored people. Then the curtain drops and later we find him, on the 20th day of September, 1911, presenting to the probate court of Wagoner County a claim against Martha Verner for $1,801. Having failed in his efforts to get her land by his first move he seeks to use up the funds the lands sold for in another way. You be your own judge as to whether his actions were proper and honest when he presented his claim for $1,801 for cash and improvements. He was then clothed with the judicial ermine and was supposed to see that justice was administered to all without fear or favor and that no one was imposed upon. How oft does justice go astray and injustice reign in the house of the mighty.

After the report of Brosius to the Secretary of the Interior was made, the Department of the Interior dispatched a special confidential officer, E. B. Linnen, to investigate the question of the fitness of the said R. C. Allen for the position he holds. I have tried in every possible way to get the report of E. B. Linnen from the department, in order to read it, and even introduced the following resolution requesting the Secretary of the Interior to transmit copies of the reports made by Inspectors Linnen and Cook to the House of Representatives:

Whereas there is now a bill pending to repeal all laws giving to the acting chief or governor of the Muskogee or Creek Nation of Indians the authority to employ a national attorney for the Muskogee or Creek Tribe of Indians, subject to the approval of the Secretary of the Interior and the President of the United States; and

Whereas the said chief or governor has an existing contract with Judge R. C. Allen, of Muskogee, Okla., as Creek national attorney, which will expire by the terms of the contract on June 30, 1916; and

Whereas all the lands of the Muskogee or Creek Tribe of Indians have been alloted and disposed of except a small portion, and there is not funds enough in the Treasury of the United States belonging to the said Creek Tribe to equalize the allotments to the respective members of the said tribe of Indians; and

Whereas there is no further business of said tribe to be transacted, excepting such business as must be transacted in the name of the Department of Justice of the United States, by and with the assistance of the representatives of the Interior Department; and

Whereas there were charges filed against the said Judge R. C. Allen last year with the Interior Department protesting against his reemployment as Creek national attorney, and the Interior Department, through its representatives, investigated those charges made by the different parties against the said Judge R. C. Allen, the representatives of the Government making such investigations being Judges Linnen and Cook, and the said Linnen and Cook made a report of their investigations to the Secretary of the Interior, and it is understood that the said reports were adverse to the reemployment of the said Judge R. C. Allen, but notwithstanding said reports a contract was entered into with the said Allen as national Creek attorney for the Creek Tribe of Indians for a year, which contract will expire on June 30, 1916; and

Whereas the report of the special Government officers named herein is now in the files of the Interior Department and considered by the Interior Department to be confidential reports; and

Whereas it is understood that the said chief or governor of the Muskogee or Creek Tribe of Indians is about to enter into a contract with the said Judge R. C. Allen for another year, beginning July 1, 1916, and it is believed that a contract will soon be submitted to the Secretary of the Interior for his recommendation for approval by the President of the United States; and

Whereas the charges show, and it is understood, that the reports of the special representatives of the Government making the investigations confirm the charges that the said Judge R. C. Allen, prior to his appointment as Creek national attorney, was engaged in such transactions, dealing in lands belonging to the Creek Tribe of Indians, and that out of such transactions there were a number of suits brought in the United States Court for the Eastern District of Oklahoma to set aside the transactions which took place in violation of law, a number of which suits are now pending on the docket of the United States Court for the Eastern District of Oklahoma: Now therefore be it

Resolved, That the Secretary of the Interior, if not incompatible with the public interest, transmit to the House of Representatives, copies of the reports made by the Government representatives, Judges Linnen and Cook, and also by Hon. S. M. Brosius, agent of the Indian Rights Association, together with copies of all charges and papers pertaining thereto, together with a copy of all the evidence taken by the said Government representatives in investigating the charges against the said Judge R. C. Allen and his fitness to represent the Creek Tribe of Indians as national attorney before the courts and the departments of the Government and the Congress of the United States.

Everybody knows that these reports are very detrimental to Allen and conclusively show his unfitness for the position he

holds, or else the department would be glad to make them public. I challenge anyone attempting to defend the employment of R. C. Allen as Creek national attorney to have the investigations of Inspectors Linnen and Cook made public. They are the trusted agents of the department.

I am further advised that Mr. Allen attempts to defend himself by inviting attention to the suits pending in the various courts in Oklahoma which involve very large amounts. Some of them are to cancel allotments and to recover the lands for the Creek Tribe. I am reliably informed that Allen is not now permitted to join with the United States district attorney in handling these cases, as the district attorney will not divide responsibility with him. All these suits are brought by the district attorney and handled by him or his assistants. Allen has no part in them and will not have in the future.

I submit that this record shows conclusively to any fair-minded man the absolute unfitness of R. C. Allen to hold any public position or represent the Creek Tribe of Indians. It justifies my action in offering the amendment on December 12 last to the Indian appropriation bill.

Compulsory Military Training.

EXTENSION OF REMARKS

OF

HON. JESSE D. PRICE,

OF MARYLAND,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 21, 1917.

Mr. PRICE. Mr. Speaker, in these days of wars and rumors of wars it behooves the American people and the American Congress to exercise the greatest patience, wisdom, and conservatism lest we be swept off our feet, forsake all our inherited traditions, abandon all our century-old ideals, and commit national suicide. We are essentially a peaceful and peace-loving people, but history shows that we have not been too proud to fight when our own sacred rights or the rights of weaker peoples are involved. We have never sought war, nor started a fight, and I do not believe that we ever will; but any nation, large or small, which will tamely submit to insult and loss of honor and self-respect is not deserving of national existence.

Our ideals were to build a nation that should stand out for its humanitarianism and its love of liberty and peaceful progress, free from the taint of militarism and selfish conquest. I am glad to say that we have maintained these ideals. In order to do so we have never found it necessary to maintain a large standing army in times of peace or to invoke the military spirit among our people.

We have been successful in all the wars that we have undertaken with other nations because we have been right, and not merely because we were better prepared or that we have cultivated the militant spirit. That we should be prepared to defend ourselves and to protect the priceless institutions of America there should be no question, but in providing for this defense and protection let us not allow ourselves to be swept into the spirit of conquest and aggression and lose thereby the very ideals that have made us great. I believe and am sure that the great majority of American people believe in thorough preparedness to meet ordinary emergencies, but it is impossible for America to be always prepared for abnormal and extraordinary emergencies, without sacrificing the national spirit and degenerating into a nation of militarism.

If, then, we agree that we should be prepared, the only question is as to adequate preparation and that is the point about which there is great diversity of opinion. The one great lesson which we have learned from the European war, is that we were not adequately prepared as a nation to defend ourselves, and I am glad to see that men of all parties, led by the President and the administration, have fully realized it and have grasped the situation and are trying to meet the requirements of the country. No Member of Congress is willing to go further in the proper national defense than am I, and I have voted for all the appropriations for the Army and Navy and I am willing to go the limit in necessary protection, but when it comes to fastening upon this country a system of compulsory military training and service in times of peace, then, I must dissent, and it is to this proposed feature of the national defense that I wish to address my remarks. It is un-American, undemocratic, and wholly unnecessary. It violates every American tradition, every American impulse, and would eventually destroy American liberty. It would fasten upon this country a military system that would eventually dominate all civil government. It would abridge the fundamental rights and liberties of a hundred million free people and would be a blight upon democracy the world over.

In all our history such a system has been considered as inconsistent with the theory of a democracy, and until recently has never been seriously considered. I regret to say, however, that many patriotic Americans honestly believe that to be the only solution to our present situation, and for that reason, and before it is too late, I want to voice my protest as an American who believes in and reveres the traditions of his country against any such radical departure; from the policies and ideals that have made us what we are and which has brought us safely thus far. I would caution those who advocate this system whether they are not fastening upon posterity a blight that centuries will not eradicate. I would ask you to refuse to consider such a step unless and until all other plans have been tried out and have failed. I want to say to you, gentlemen, that all other plans have not been tried out and failed. Those who advocate this strange doctrine cite for proof of the merit of it various countries where some such plan exists. We have heard a great deal about the Swiss system, the Australian system, and the Argentine system. I wish briefly to call your attention to these various systems and to show that none of them would be applicable to the United States or in any way meet the needs of this Nation. It is obvious that because a system is suitable to one nation it does not necessarily prove that it is good for another. Various things should be taken into consideration—geographical location, ideals of the people, size of the nation, and so forth. It is just as idle to contend that a system that may be good for Switzerland, Argentina, or Australia is also good for America as it would be to contend that the same kind of government would be applicable to New York City as it would be in a village in Alaska or the Philippines.

SWISS SYSTEM.

Let us look at the Swiss system and see how it would meet the requirements of America. This is the system that we have heard so much about from our militarist friends, who laud it as a democratic system whenever the question of compulsory training and service are referred to as being antagonistic to the spirit of democracy.

It is claimed for it that it helps to break down "class distinction," but when examined closely it appears to be too democratic for America, in that it conscripts not only enlisted men but officers as well, and that without pay. Does anyone contend that the United States should compel its youth to enlist for military training and service without compensation? We would hang our heads in shame should this rich Republic deal thus with its citizens, and if we paid them, which we undoubtedly would, it would prove very expensive and more burdensome than even this rich Nation could stand.

Let us take into consideration the size and geographical location of Switzerland as compared to the United States. Switzerland is a nation of less than 4,000,000 people in the midst of four powerful nations which have a conscript military system, namely, Germany, Austria, Italy, and France. Naturally, the Swiss people imbibe the spirit of their neighbors and realize that with their small population it is impossible to recruit and maintain a standing army of any size or to have a reserve force that would be in any way formidable unless by a compulsory military system such as neighboring nations have, and no doubt had they undertaken to rely upon a voluntary system of service would have been unable to make any sort of a military showing.

On the other hand, the United States is a nation of 100,000,000 people not surrounded by militaristic people but with large bodies of water and thousands of miles removed from military nations. It does not require a very fertile imagination to observe a great difference in the position of the two nations nor in the spirit of their people. As stated, the Swiss nation is too poor to maintain a large standing army and necessarily must rely for protection upon some sort of a reserve force; and, as a matter of fact, they have no large standing army, and their entire military strength is their reserve force, which corresponds to the National Guard of the United States.

The Cantons of Switzerland, which are virtually to Switzerland what our States are to the Union, have control of the military, except in times of war, the same as our States have over the National Guard; so that it becomes evident that the only real practical difference between the Swiss military system and our own military system is that we have more of a standing army in proportion, that we rely upon voluntary service,

and that we pay our soldiers, while the Swiss have practically no standing army, use compulsory conscription, and do not pay either enlisted men or officers. I have no doubt that the system which they have established is better for Switzerland than ours would be. I am also equally certain that our system is better for America than the Swiss system would be.

Without going into the details of the service required for training a Swiss soldier, suffice it to say he receives about six months training, covering a period of 12 years, which would not appear to the average mind as being the sort of training necessary to produce a seasoned soldier. In fact, it is not nearly so effective a training, to my mind, as that at present received by our own National Guard. In our National Guard, as at present organized, a man serves nearly 600 hours covering a period of 3 years, while the Swiss serve less than 1,500 hours, covering a period of 12 years.

ARGENTINE SYSTEM.

There are a number of our militarist friends in this country who are fond of holding up to our gaze the Argentine military system, which also has as its basis the compulsory conscription and which also has as its only redeeming feature, the National Guard feature of the United States. They train their young men in the military service and, judging from their history, it has tended to incite revolution and disorder, and has no doubt been the cause of the numerous revolutions in that country, resulting in almost perpetual conflict between the military and civil authorities.

With the history of that country so plainly written I can not conceive why the advocates of compulsory military training should want to transplant such a system into the United States.

AUSTRALIAN SYSTEM.

The other system of compulsory military training, so often held up for our admiration, is the Australian system. This system was established in 1910, and if it is good for Australia it has not as yet been demonstrated. Australia is an island with a territory greater than that of the United States and with a population of less than 5,000,000, and it is evident that a system which would be good for Australian conditions would not necessarily be effective in the United States. This is the system, however, most seriously considered and most generally advocated by our militarist friends in this country to-day and it is the most undemocratic of any of the systems referred to. The training proposed is inadequate for the purpose intended; the exemptions are unfair and undemocratic and do not deserve consideration at the hands of a free people. The provisions are susceptible to great abuse and in the hands of unscrupulous officials could be made very objectionable. The provisions of it could also be administered so that the rich could get their children exempted by sending them to certain schools, while the poor man's children would be turned over to the military authorities for military service.

It will be seen from these brief references to the different systems of compulsory military training and service and without going into minute details, that none of them would bear transplanting to the soil of this free Republic, and that we do not have to go to South America or those other countries for a military system suitable for the needs of our country. I do not believe that the time has come when we should uproot our present system and all that we have accomplished and put in its place something new and untried and foreign to our institutions and conditions. We do not claim to be a militarist Nation, and we are not. I do not believe that we ever will be, and while we have never maintained a large standing army, we have always been able to maintain our national prestige and have been successful in every war that we have waged.

I believe that we should hold on to our present system, profiting by the experiences of the past; that we should enlarge upon it and perfect it. It is the system established by the founders of the Republic and if properly amplified and supported by the Government will fully meet the requirements of the Nation in the future.

It is distinctly an American system and I am proud of its Americanism.

We have undertaken in this Congress to improve and extend our military system in what is known as the national-defense act of last year. Under that act we now have a standing army of 135,000 men capable of expansion to 225,000. In addition to that we have a National Guard of some hundred and sixty thousand men, capable of expansion to 400,000 men, giving us an effective military strength of nearly 300,000 men. Under that act we have given the President authority, in times of war or threatened disaster, to conscript sufficient men to fill the National Guard organizations. We have doubled the capacity at West Point and Annapolis; we are training 30,000 young men every year in military tactics in land-grant colleges throughout the country. Under this same act we have provided reserve officers' corps in the various colleges of the Nation which will train many thousand more young men in military practice, and that number will be constantly increased until in a few years we will be training young men at the rate of 250,000 a year. Under the national-defense act referred to we have provided for training every year about 300,000 young men, and it must be borne in mind that this is all being done under a voluntary system. We are not taking unwilling people but men who are situated, domestically, financially, and physically, to undergo this test, so that in time to come, and in a very few years at that, this Nation will have a very formidable reserve force of trained men. It is estimated that in 10 years, under our present system and plan, we will have a reserve force of trained men of 3,000,000. We have appropriated vast sums of money within the past year to build up our Military and Naval Establishments.

Great attention is being paid to the Aviation Service, and vast sums are being appropriated for aircraft, aircraft guns, and ammunition. We have provided already sufficient guns and ammunition to instantly equip an army of a million men. In this same national-defense act provision was made for federalizing the National Guard, for making it an effective national force, and providing for their pay. This guard was mobilized on the Mexican border during the past year, which has proved its value as a national asset, and too much praise can not be given for the manner in which this mobilization was conducted on such short notice and the behavior of this force on the line of duty. Can it be said, then, that we have no military system worthy the name, and that it should be uprooted and something foreign and untried substituted? The only thing needed to perfect our defense as a Nation is for those who are criticizing our present system, and who would uproot our American democratic system, to withhold their criticism and encourage Congress and the Military Establishment in their efforts to perfect and extend our present organization. If the experience of over a hundred years is of any value, it should teach us that our present system is, and can be made, effective for the requirements of the American Nation. Our history shows that in all the wars in which we have been implicated we have been able to secure sufficient men and to train them in a short time to more than take care of themselves on the field of battle. We are proud of the achievements of the American soldier, and they have almost always been volunteers. It is claimed by the militarists that it is criminal to send raw recruits to face an enemy, all of which is true, but, as a matter of fact, in practice this is not done. Should the time come when we should need to engage in war to defend our rights the volunteers would be trained before being sent to the front, and history also shows that the American is easily susceptible to military training, and it is my contention that very few months of intensive military training will be more effective and produce a better soldier than the sort of training proposed by the advocates of compulsory conscription.

It is claimed also that the recruiting and training of an army which has to be done quickly and intensively is more costly. This is no doubt true, but at the same time this consideration should not compel us to abandon our traditions and experience of over a hundred years, and we had better make some sacrifices occasionally and temporarily, both in blood and treasure, than to fasten upon this country a system so repulsive to our sense of freedom and liberty as a compulsory military training and service. It is my belief that whenever this country is threatened with invasion by a foreign foe, or the rights and liberties of our people are endangered, there will be found volunteers enough and to spare to repel such invasion and to protect such rights and liberties. If there should not be sufficient volunteers, it is an inherent right in nations to conscript for such purposes, so there need be no fear of proper protection in times of national emergency. Every citizen recognizes that obligation to his Government, but the average American will be slow in recognizing the right of his Government to compel him to undergo military training in times of peace. I believe in our present military system. Our difficulties are not due to the system, but to the fact that we have not developed it as we should, and it took the European war and its lessons to open our eyes to our remissness. I have shown you how we are meeting the situation and how, by the national-defense act of 1916, we are preparing ourselves, and how by that act we have fixed our military policy, I hope, for all time. At any rate, let us not throw it into the discard until we have tried it out. I do not want to be misunderstood as to my attitude toward military training. I believe in it, and believe that our laxness in this respect should be condemned.

I am heartily in favor of training, at the expense of the Government, every young man who is so situated as to offer him-

self for training and service, and we are lending encouragement in this direction by establishing training camps, and we should go just as far in this direction as is necessary, and we should be more liberal in the future than in the past. I believe we should train everyone who will offer himself and that we should encourage all to offer themselves, but I do object to turning this Nation into a great military camp. I object to making professional soldiers of our boys. I sympathize with the American mother who would feel that every son born to her must submit himself to miltary training and discipline at the very time in his life that would interfere with his education and training in the peaceful pursuits and often change the whole current of his life's work. In other words, I believe in preparedness along volunteer lines and not compulsory lines. We are a great Nation and are destined to even greater things in the future if we adhere to the fundamental principles laid down by the fathers of the Republic and not go off after strange gods. But just so sure as we try to imitate militant nations by fastening this undemocratic policy upon ourselves we will strike the rocks of militarism and go the way of other nations that have tried it and failed. Let us not be carried away by clamor or scare headlines in the newspapers, but let us adhere to our time-honored faith by maintaining a strictly democratic military system, without the objectionable features of a monarchy, which always relies on the strength of their arms for perpetuation. Let us rely, rather, upon a relatively small standing Army, a continuously trained volunteer reserve force, a powerful Navy, and the patriotism of a hundred million free people. Let us preserve unsullied by militarism this great Nation and its ideals which we have inherited from our fathers, and hand it down to future generations of unborn Americans without the taint and blight of this hydraheaded monster which is seeking to fasten itself upon us under the guise of preparedness.

Army Appropriation Bill.

EXTENSION OF REMARKS

OF

HON. JAMES A. GALLIVAN,

OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 21, 1917.

Mr. GALLIVAN. Mr. Speaker, I understand that examinations are being held from time to time, in accordance with legislation included in the national-defense act of June 3, 1916, which provided for an increase in the number of officers in the Army to the extent of 1,600 for the year 1916 and 1,200 annually for the next five years. These examinations are not overdifficult, being much easier than even the entrance examinations to West Point. If I am not mistaken, the successful candidates are given provisional commissions for two years, at the end of which, if they can pass another similar simple examination, they are regularly commissioned; and I am told that their commission dates from the commencement of their service.

Now, Mr. Speaker, I want this House to know that because of this practice the cadets who are now at West Point are discriminated against. These young fellows entered the academy after signing for eight years' service with the Government, four at the academy and four in the service. You all know that the entrance requirements at West Point are very rigid, and that the work of the four years' course calls for about all the efforts the cadets can put forth to keep up with their studies and their physical and military training. It is safe to say that every boy who is now in the academy entered there with the prospect of a certain promotion which would in time bring him a respectable rank and the salary accompanying it. I am told that there are now about 1,200 officers above the rank of captain. Under the national-defense act the graduating class of 1917 at West Point will have 1,600 officers from civil life outranking them. The class of 1918 will have 2,800 officers from civil life outranking them, and so on, with an increasing amount for each class. Let it be understood that the standing of the students in their class governs their standing in the service for the rest of their lives, but, under the present system, what will a few points up or down in the standing of the individual amount to in the matter of promotion? Unless I am very much mistaken every incentive for good work, intensive study, and careful training has been practically taken from under their feet.

Mr. Speaker, if it has been thought necessary in the past for an officer to have four years at West Point for the good of the service, of what particular benefit, under the present conditions, is the training at the academy, if there will be so many officers outrank its graduates that there will be very few of them come to that rank in the service where the training will really count for what it should? In my judgment, these young men for the most part will be outranked by men from civil life whose training has been like that of a primary-school education compared with the career of a college graduate. Supposing a private corporation made contracts with young men for eight years, four as an apprentice and four as a workman, and that certain chances of promotion were held out to them as an inducement for that service; and then suppose that the corporation suddenly decided to enlarge its entire plant and engage its workmen and its prospective foremen from among persons outside of the corps of apprentices and would not even permit the apprentices any chance to give up their contracts and come in on an even basis with the outsiders. You would call that a pretty raw deal, would you not? And yet, I can not conceive any other term for it even if the Government is one of the contracting parties in the proposition that I now set forth.

To show you how unjustly it works out I want to cite the case of one young man who was found deficient and was dismissed from the academy. He later took the examination as a civilian, passed it, and was commissioned, and is now a first lieutenant. He will outrank for the rest of his life not only his own class but the members of the class immediately preceding his entering class; outranking, you see, about 300 or more of his classmates who by diligent work and perfect conduct were qualified to remain and finish their four years' course.

Mr. Speaker, I believe that this injustice ought to be remedied and it can be if legislation will be adopted dating the commission of the West Point graduates from the day of their entering West Point instead of from the date of their graduation, and I want to go on record as being strongly in favor of the bill introduced by the gentleman from New York [Mr. CALDWELL], which proposes to rectify the present unfair and unjust system. Our boys at West Point are handicapped, and unless a change is brought about, in my opinion, it will be difficult for us hereafter to secure candidates for West Point when the young men of the country learn that with equal or even less knowledge than it requires to enter the academy they can obtain a commission in the Regular Army which will be dated four years earlier than that which would come to them after a course at West Point.

This matter ought to be given serious consideration now, and I trust that the House will do something in fairness to our cadets at the academy.

The Reed Prohibition Amendment.

EXTENSION OF REMARKS

OF

HON. JAMES J. BRITT,

OF NORTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 21, 1917.

Mr. BRITT. Mr. Speaker, I shall vote for the Senate amendment because I believe it means a further restriction of the liquor traffic. A good deal has been said here about the motives of its author, whether his purpose was to promote or to hinder the cause of prohibition. With that I am not greatly concerned. It is results more than motives that count. The question in which I am interested is whether the cause of temperance will be promoted. If it was in fact his purpose to advance the cause of prohibition, then he should be commended; but if he meant to retard it, then he should be pitied, for the one would be a fit and timely response to a great moral public demand, while the other would disclose a woeful disregard of prevailing public opinion. It would indeed require a dull and unobserving mind not to detect the irresistible march of prohibition in this country to-day. Neither blind statesmanship, nor commercial greed, nor the cohorts of wickedness, nor any other earthly power can stay it. There is nothing for its opponents to do but join the procession, stand aside, or be crushed by its on-treading hosts.

It is the first and most imperative duty of the American people to see that all their laws, both State and Federal, are fully and implicitly obeyed, and that all their constituted authorities are duly respected. This amendment would be a great

aid to that end. It would be of incalculable service to the States in the enforcement of their prohibition laws. That, as I understand it, is its primary purpose. But it would also vastly extend and promote general temperance reform.

In the discussion of our State antiliquor laws we hear a great deal of silly cant about the right of local self-government. That this is a fundamental principle of our institutions no one will, of course, deny. But it was never intended, either by us or by our forefathers, to be a barrier to the moral progress of the people or a cloak for vicious and immoral legislation. Local self-government is a sound principle only where the questions involved begin and end in their practical effect in a given locality, but it is wholly unsound where the object to be controlled, however destructive it may be, may, like a noisome wind, rise in one community and sweep uncontrollably over another, leaving the people to its cruel mercies without remedy. That is precisely the case with the liquor traffic in this country to-day. Our units of government are so numerous and our interstate trade so great that the regulation of our internal affairs can not, from its very nature, be left solely to single communities. It is because of this fact that prohibition in America can never be fully and wholly enforced until Congress prohibits its manufacture and sale in every nook and corner of the land.

Mr. Speaker, nine years ago the people of North Carolina, by an overwhelming vote, decreed that no person, firm, or corporation in that State could make, transport, or sell any intoxicating liquors whatever. I gave to that movement my heartiest and most active support. The people of the State were profoundly in earnest. Temperance reform with them has become a new order of life, and the sentiment in favor of prohibition has gained strength with each passing year. True, under our laws, we have permitted the shipping into the State by outsiders of a quantity not in excess of one-half gallon per month to one person, but this was done, not because the people of North Carolina approved it, but because they were unable, under the Interstate Commerce power of the Federal Constitution, to control it, and it was permitted by law rather than forbidden by a provision that could not be enforced, but which would be a mere dead letter. Does anyone suppose for a moment that the people of North Carolina would deny to their own citizens the right to make, ship, and sell intoxicating liquors, and at the same time willingly concede that right to nonresidents of the State? The suggestion is preposterous. We merely provided for uncontrollable conditions as they were. But, happily, these conditions have now been remedied by the Webb-Kenyon law, the validity of which has just been upheld by the Supreme Court of the United States.

If a man's home were attacked by robbers and despoilers, he would be justified in the use of every possible instrument of defense—fists, clubs, firearms, explosives, and every other means of destruction. It would be his duty to strike fore and aft, right and left, up and down, in defense of those whose protection God had devolved upon him. Intoxicating liquor is the greatest enemy, the most insidious foe, the most ruthless invader, that ever crossed a State line or passed the threshold of any man's home. It is our duty to use every weapon in our power to repel this invader. I may vote mistakenly here, even blindly, but so long as I am a Member of this House I will cast my vote and lift my voice for the destruction of this enemy of the American home. Just as I attained my majority I cast my first vote in opposition to the liquor traffic, and I have so voted continuously from that day to this, and, by God's help, I intend that my last vote on earth, whether as legislator or citizen, shall be recorded in protest against the manufacture, sale, and use of this enemy of the human race.

We have made tremendous progress. One by one the great Commonwealths of America are passing from the dark map of liquor to the white map of prohibition, but there is yet a great work to do. The strongest citadels remain to be taken. We must put on our armor, draw our girdles about us, and get ready for the last fierce struggle. The ramparts of the enemy will fall before our determined onslaughts.

The Old World is furnishing us some shining prohibition examples, some mighty temperance inspirations. In Russia, dark Russia, the deadly vodka has been outlawed; in France, gay, luxurious France, absinthe has been tabooed; and even in China, heathen China, the deadly opium has been prohibited. Is it possible that America is to lag behind this procession of the world's march to moral redemption?

Mr. Speaker, a great and overshadowing duty devolves upon this House. We owe it to the people to give them this legislation. In a large sense we are the conservators of the Nation's morals, health, and happiness. Particularly are we the constitutional guardians of this Capital city and the District of Columbia. We have here the most beautiful city in all the world, and it is our duty to make it the cleanest and most livable. It is a city prettier than Babylon, with its swinging gardens; more beautiful than Naples, with its golden bays; grander than Paris, with its gorgeous splendors; more imposing than London, with its majestic buildings and solemn temples. But it is a shame to the Nation that our sons and daughters, coming here from every part of the Republic to see their Nation's Capital, to behold its beauty, to receive its inspiration, must first have their senses offended by the fumes of whiskies and the stench of liquors that smell to high heaven. It is our duty to help make this city and this District as dry as a bone, as clean as snow, and as beautiful as a fairy court.

Much of our legislation is poor, unsound, and ill-advised. We have just made a great national tax levy, and in doing so we have taxed heavily the earnings of toil, the fruits of industry, honest savings, and sundry legitimate businesses, some of it being done recklessly and without inquiry. We have made a great national blunder. We have utterly failed to find the proper subjects of taxation. We should have raised every additional dollar by an increased tax on whisky, beer, tobacco, and other luxuries. We should then have served two great purposes. We should have put the burden of taxation on needless luxuries and at the same time have promoted national morality. It was cowardly in this House, cowardly in you, gentlemen of the majority, cowardly in us, gentlemen of the minority, that we did not do it. Of one thing the American Congress must take notice. The legislation of the future, of whatever sort and on whatever subject, must respond more heartily to the moral and humane demands of the people. Archaic phrases and outworn shibboleths will not suffice. The people are going to demand wholesome legislative food, and will not be satisfied with Dead Sea fruit. If we who are here now do not respond to these needs, then the scepter will pass from Judea and other and more worthy legislators will be called to shape the course of national legislation.

Mr. Speaker, I hope this amendment will receive the unanimous vote of the House.

"Stand by the President."

EXTENSION OF REMARKS

OF

HON. S. TAYLOR NORTH,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 21, 1917.

Mr. NORTH. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD by printing a concurrent resolution adopted by the Senate and House of Representatives of the Commonwealth of Pennsylvania, sitting in General Assembly at Harrisburg, conveying to the President and Federal Government assurances of loyal support in the present national crisis, which was offered by Hon. William C. Sproul, a member of the Senate:

Concurrent resolution conveying to the President and Federal Government assurances of loyal support in the present national crisis and calling upon citizens of Pennsylvania to give to the President and Federal Government patriotic support and assistance.

Whereas the President of the United States has informed the Congress that a very grave crisis exists in the international relations of the country, which, in his opinion, may lead to the necessity of defending our national rights, dignity, and honor by force of arms, all other reasonable and honorable means having failed after patient and forbearing negotiations: Now, therefore, be it

Resolved, That the Senate and House of Representatives of the Commonwealth of Pennsylvania, sitting in General Assembly at Harrisburg, do send to the President and Government of the United States assurances of the loyal support and full cooperation of Pennsylvania in every national undertaking which in their wisdom may be necessary to meet the situation and to protect and vindicate American rights, dignity, and honor, wherever or by whom they may be endangered; and be it further

Resolved, That the general assembly calls upon the people of Pennsylvania to give to the President and the Federal Government in all ways their patriotic support and assistance in whatever plans or measures may be required in the present emergency, as they have done in the past in every crisis in the Nation's history; and be it further

Resolved, That the governor of the Commonwealth be, and he is hereby, requested to forward copies of these resolutions to the President of the United States and to the presiding officers of both of the Houses of Congress.

The Newlands Commission.

SPEECH
OF
HON. OTIS WINGO,
OF ARKANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, January 9, 1917.

The House had under consideration the following resolution:
"*Resolved*, That immediately upon the adoption of this resolution the House shall proceed to the consideration of S. J. Res. 190, reported by the House Committee on Interstate and Foreign Commerce. The first reading of the resolution shall be dispensed with, there shall be general debate not exceeding one hour, to be equally divided between those favoring and those opposing the resolution. During the general debate any Member may be recognized by the Chair to offer germane amendments to the resolution. At the end of said general debate the previous question shall be considered as ordered on the resolution and all amendments to final passage without any intervening motion except one motion to recommit."

Mr. WINGO. Mr. Speaker, I voted against the rule the other day, and I voted against the rule to-day, and I shall vote against the resolution. I take it that there is no one, unless it be my good friend from Texas, Mr. BLACK, who is misled as to what the scope of this inquiry will be and what the result of it will be. It is not quite so puzzling as this rule, which, in my opinion, is like the ways of God, in that it passes all understanding; and I am not surprised that the Speaker was somewhat puzzled to determine who was to be heard upon the resolution, either for or against, or who controlled the time. I think I can reassure my friend from Texas, Mr. BLACK, that there is no serious intention on the part of those who advocate the continuation of this hearing to force him to accept Government ownership.

The gentleman from Ohio [Mr. FESS], I think, has very frankly stated what is commonly understood and what the understanding is of this investigation and hearing, and that is that it is to direct public opinion. I take it that we all understand that public opinion is fairly well settled upon each and every one of the multitudinous questions set out in the public resolution No. 25 of this Congress, which was the resolution that originally constituted this subcommittee, and the gentleman from Ohio, I repeat, has frankly stated the object of the continuation of this hearing, and that is to direct public opinion. This subcommittee has had a few hearings since it was constituted. About five months ago they asked Mr. Thom, a railroad attorney, a question, and he has been ever since then making a speech to the committee answering that question, and he has not yet concluded nor will he conclude unless this resolution is adopted to-day. One of the plans of the railroads, which they frankly state—and it is not my object to abuse them for that—is to direct public opinion by taking the speech which Mr. Thom made before the committee and carrying it as plate matter in all the country newspapers in the United States, and I presume it is their intention if this hearing continues until next December, as proposed by this resolution, to continue to try to direct public opinion by letting the gentleman conclude his speech and carrying the remainder of it as plate matter in the country papers. That gentleman has made the same speech, word for word, twice before a committee of Congress, but he thinks no doubt it will have a better effect on public opinion if that speech is printed as it is now being printed, purporting to be the statement of a gentleman before a Government commission charged to investigate all these numerous questions. Do they intend to direct public attention and opinion away from its present convictions upon all these questions? No, Mr. Speaker; one of them is upon the question of change in the organization of the Interstate Commerce Commission. We are not waiting for that. Those who favor this line of thought and this line of action are perfectly satisfied that public opinion is correct now, and they need no additional information of that kind, because this House has already passed a bill to increase the personnel of the Interstate Commerce Commission, and that matter, if report is to be believed, is being pressed very vigorously by the same influences in the United States Senate that is pressing this resolution, and very likely before the 4th of March that change will have been brought about. But on the question of the Rayburn bill, upon which public opinion is pretty well fixed at this time, a subject upon which every member of this committee, both Senate and House, no doubt has a fixed opinion, and I have no doubt that every Member of the House has a fixed opinion upon it—on that question they want to direct public opinion, and they are not ready to have that bill brought up at this session of Congress, but the whole intent is to simply enter in Congress a motion for a continuance, and if this resolution be adopted it will be in effect a motion for a continuance in their behalf, and it will permit these gentlemen to continue to direct public opinion.

Mr. DILLON. Mr. Speaker, will the gentleman yield?

Mr. WINGO. I yield for a question.

Mr. DILLON. Will the gentleman tell us, in this connection, why the Rayburn bill was sidetracked in the United States Senate in the Sixty-third Congress?

Mr. WINGO. Possibly when I shall have been here as long as the distinguished gentleman I shall be able to give that information. Frankly, I do not have any idea at the present time.

Mr. ADAMSON. Mr. Speaker, will the gentleman yield?

Mr. WINGO. For a question.

Mr. ADAMSON. I know the gentleman is always fair, and I want to remind him that our committee, disregarding the claim that the inquiry operated as a restraining order, disregarding it as a restraining order, reported the Rayburn bill to the House, and disregarding the order we reported the bill to increase the commission, which was opposed by the same influences that opposed the Rayburn bill; and we also reported the Cummins amendment and passed it through the House, and one or two bills and put them on the calendar.

Mr. WINGO. Will the gentleman state the date the Rayburn bill was reported to the House?

Mr. ADAMSON. At the same time that this resolution was reported, and it was understood in the committee that the gentlemen of the subcommittee should not hinder the passage of the Rayburn bill.

Mr. WINGO. This resolution has just been reported this session of Congress.

Mr. ADAMSON. All this resolution does is to extend the time in which to finish the investigation under the original resolution.

Mr. WINGO. I understand that.

Mr. COOPER of Wisconsin. Mr. Speaker, will the gentlemen permit me to ask the gentleman from Georgia one question?

Mr. WINGO. Yes.

Mr. COOPER of Wisconsin. Does the gentleman from Georgia and his committee propose hereafter to allow witnesses to go on and testify for two or three weeks at a time, as just stated by the gentleman from Arkansas? If so, I do not want this investigation to go on by that committee.

Mr. ADAMSON. Replying to the gentleman, when a witness finishes the committee insists upon the right to cross-examine him.

Mr. WINGO. Mr. Speaker, with all due deference, I must insist on not yielding further. Of course it is to be presumed that the committee will do as the gentleman says, and I am not questioning the good faith or the actions of the committee, but I am questioning their judgment. I do not agree with their judgment.

Mr. ADAMSON. We do not agree in judgment, either.

Mr. WINGO. The committee will necessarily be compelled to permit Mr. Thom to complete his testimony, and if they did not they would be charged with trying to suppress it.

Mr. ADAMSON. But Mr. Thom completed his general statement and now the committee insists on cross-examining him, and we think we are doing the country good by cross-examining him.

Mr. WINGO. I understand that. Now, they will start this cross-examination of this witness, and I venture the assertion that with the cross-examination of this witness upon the multitudinous questions involved in his original statement it will be physically impossible for the committee, if it does not sit more regularly than it has already, to get half through the examination of this one witness before next December. Then what will we have? We will have the same old story of these special joint commissions. Every Member of this House knows it is a favorite method of Congress by which they put off questions of this kind. They will come in here next December and ask for a continuance again, and especially if those who ask a continuance are opposed to bills that are then pending—like the Rayburn bill. The only excuse I have heard here for the nonconsideration of the Rayburn bill and its immediate passage is that they ought to wait until this commission has reported the result of their examination. I do not think it will ever get to Government ownership. Government ownership, I will say to the gentleman from Texas [Mr. BLACK], is the sugar coating of this resolution. I will say in all seriousness I do not believe it was ever intended to make a report advocating Government ownership. I will say to the gentleman that men upon this

floor who voted for the resolution, if they thought there was the slightest danger of the committee bringing in a report even intimating that Government ownership was to be desired, that those men instead of favoring would be opposed to this rule to-day.

The gentleman from Ohio [Mr. FESS] has been frank about it. Those who oppose Government ownership in this House, with the exception of the gentleman from Texas, are in favor of this resolution. They want to direct public attention. They frankly believe the public is in favor of Government ownership. They think the unfortunate conditions which have existed in the railroad world recently has caused the public to come to a wrong conclusion, and they want to draw the public away from that conclusion. How? By bringing testimony, by holding out expectations of Federal incorporation, by wiping out of State control, by wiping out State railroad commissions, and so forth. The whole object, Mr. Speaker, in my candid judgment, and if it is not the object it will be the effect, is to force upon Congress a vote upon the question, and when it does vote upon it there can not be anything in the mind of any candid man present but that the American Congress under the report that will be brought in, with the testimony that this man Thom submitted, with the figures he submits, will be voting upon a bill to carry into effect the theory and principles laid down by Mr. Justice Hughes in the Shreveport case. That is the whole object of the railroads. I am not criticizing and saying that they are doing anything wrong. I am differing with the policy of those who advocate this, and for the reason that when this question is first raised and the first step is taken in it, I am going to take my stand, and I know where we will have to stand when the original question comes before Congress. I know the ultimate issue out of this program is whether Congress by congressional action will carry into full force and effect the principles and theories Mr. Justice Hughes laid down in the Shreveport case. Not being one who agrees with those theories, believing it is dangerous, believing it will ultimately bring chaos in the regulation of the railroads of this country and in their efficiency, I at the very beginning voice my protest against it and refuse to be a party to any proceeding or to approve of any proceeding intended to bolster up that proposition. [Applause.]

"Bone-Dry" Amendment to the Post Office Appropriation Bill.

EXTENSION OF REMARKS

OF

HON. SAMUEL H. MILLER,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 21, 1917.

Mr. MILLER of Pennsylvania. Mr. Speaker, I desire to give my approval to the Senate amendment to the Post Office appropriation bill, and which has been reported to the House by the conference committee, and now being considered under a motion to concur. The text of the amendment is as follows:

SEC. 5. That no letter, postal card, circular, newspaper, pamphlet, or publication of any kind containing any advertisement of spirituous, vinous, malted, fermented, or other intoxicating liquors of any kind or an order or orders for said liquors, or any of them, shall be deposited in or carried by the mails of the United States, or be delivered by any postmaster or letter carrier, when addressed or directed to any person, firm, corporation, or association, or other addressee, at any place or point in any State or Territory of the United States at which it is by the law in force in the State or Territory at that time unlawful to advertise or solicit orders for such liquors, or any of them, respectively.

If the publisher of any newspaper or other publication or the agent of such publisher, or if any dealer in such liquors or his agent, shall knowingly deposit or cause to be deposited, or shall knowingly send or cause to be sent, anything to be conveyed or delivered by mail in violation of the provisions of this section, or shall knowingly deliver or cause to be delivered by mail anything herein forbidden to be carried by mail, shall be fined not more than $1,000 or imprisoned not more than six months, or both; and for any subsequent offense shall be imprisoned not more than one year. Any person violating any provision of this section may be tried and punished, either in the district in which the unlawful matter or publication was mailed or to which it was carried by mail for delivery, according to direction thereon or in which it was caused to be delivered by mail to the person to whom it was addressed.

Whoever shall order, purchase, or cause intoxicating liquors to be transported in interstate commerce, except for scientific, sacramental, medicinal, and mechanical purposes, into any State or Territory the laws of which State or Territory prohibit the manufacture or sale therein of intoxicating liquors for beverage purposes shall be punished as aforesaid: *Provided*, That nothing herein shall authorize the shipment of liquor into any State contrary to the laws of such State: *Provided further*, That the Postmaster General is hereby authorized and directed to make public from time to time in suitable bulletins or public notices the names of States in which it is unlawful to advertise or solicit orders for such liquors.

It will be observed that the first paragraph of the amendment prohibits the sending of a letter, postal card, circular, newspaper, pamphlet, or publication of any kind containing any advertisement of spirituous, vinous, malted, fermented, or other intoxicating liquors of any kind through the United States mail, and that such publication or newspaper shall not be delivered by any postmaster or letter carrier when addressed or directed to any person, firm, corporation, or association at any place or point in any State or Territory of the United States at which it is by the law in force in the State or Territory at that time unlawful to advertise or solicit orders for such liquors.

The second section provides for inflicting a penalty upon the publisher of any newspaper or other publication or the agent of such publication, and upon the dealer in such liquors, or his agent, who shall knowingly cause to be sent anything to be conveyed or delivered by mail in violation of the provisions of the amendment.

In addition thereto, the second paragraph prohibits the importation, in either small or large quantities, of intoxicating liquors, as designated in the first paragraph, for personal use, into any State or Territory the laws of which State or Territory prohibit the manufacture or sale therein of intoxicating liquors for beverage purposes, and imposes the same penalty for the violation of this provision as for sending such liquors or advertisement by mail.

The amendment, when agreed upon by the Senate and House and approved of by the President, will add immediately to the "bone-dry" territory about one-third of the continental United States.

Mr. Speaker, the amendment is a just, wise, and humane provision. It is entirely in harmony with the interstate-commerce provisions of the Constitution of the United States. It has been brought about by the indiscriminate and unwise acts of the manufacturers and dealers in intoxicating liquors in sending by mail their literature soliciting orders for their supplies, from business men, mechanics, and professional men, not exempting ministers of the gospel. It has also been hastened by newspapers, periodicals, magazines, and other publications that come into our homes, flaunting in the faces of their readers, old and young, temperate and intemperate, the well-displayed and decoratively illustrated advertisement of the wares of the liquor manufacturer and dealer.

It will help to make a publication clean and wholesome that for a few paltry and unclean dollars polluted its pages with advertisements which were an offense to a vast number of clean-living and clean-minded readers. It restrains the liberty of no man, unless to make men better, to make homes happier, to make the lives of young men purer and sweeter, and the helping of all to live better, happier, and more prosperous lives is a restraint on the liberty of the individual.

I have the hope and faith that the House will concur in this amendment and to help secure that end shall vote for concurrence.

Washington.

EXTENSION OF REMARKS

OF

HON. WILLIAM H. COLEMAN,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 22, 1917.

Mr. COLEMAN. Mr. Speaker, Washington, more than any other American, has been the recipient of the reverence and the veneration of his countrymen. As his memory is revered by the people of his own land, so it is honored by the people of many nations.

Greene, the English historian, wrote of him:

No nobler figure ever stood in the forefront of a nation's life.

Von Moltke, an authority on military affairs, called Washington one of the world's foremost strategists, and in reference to his movements on the Delaware:

No finer movement was ever executed than the retreat across the Jerseys, the return across the Delaware the first time, and then a second time, so as to draw out the enemy in a long thin line.

Napoleon, in his day, gauged Washington's place in history, and said in conversation to some Americans that the fame of

Washington would endure when that of his own was lost in the vortex of revolution.

Frederick Harrison, an Englishman, comparing him with Cromwell and William the Silent, said:

All three carried on in mature life a long and desperate struggle in a fierce civil war against the tyranny of a retrograde King. All three after beating back the tyrant were chosen by their people to be the first chiefs of a new Commonwealth. All three showed an organizing genius of the first order in welding into a nation the broken sections of the people whom they had saved from slavery by their armies.

Then showing a closer analogy between the careers of William the Silent and Washington, and pointing out some of the conditions that each of them faced, he continued:

On the other hand, in the grand point of character, Washington will ever stand out in history as greater than William, greater than almost any statesman in supreme place in the whole record of the modern world. His unshaken devotion to right, his perfect justice, his transparent truthfulness and lofty sense of honor will ever place him above even the best of modern statesmen in virtue. That which sets him in a rank by himself among chiefs of state is the unfailing honor and guileless candor of his whole public career toward both home and foreign opponents.

If foreigners thus praise him, where shall we find words with which to extol his name? Among the list of American patriots his name stands to the fore. Great in his isolation, grand in his solitude, there are none among all the great heroes of our land whom we dare compare with him save only the honored Lincoln. As we read of his achievements as patriot, warrior, and statesman; as we are impressed with his integrity of soul, well may we give expression to the language of the poet when he said:

How shall we rank thee on glory's page?
Thou more than patriot and just less than sage.

With only an elementary schooling, and summoned before age to protect a family of orphans, he at 27 years had become the foremost man in all Virginia. It was in May, 1759, his first war over, that Mr. Robinson, the speaker of the House of Burgesses in the State of Virginia, in behalf of the people of that State, expressed their gratitude to Washington for the splendid services he had performed on the field of battle. Washington was so overcome by the speaker's words that he was unable to reply, causing Mr. Robinson to remark:

Your modesty is equal to your valor, and that surpasses the power of any language that I possess.

To think that such words as these, under such circumstances, were spoken of a young man but 27 years of age gives us some idea of the greatness of George Washington.

He was serious, reserved, and dignified to an unusual degree. Even the famed Judge Marshall, foremost among the jurists of America, within three months of his own death, stated that he was never free from restraint in Washington's presence, such was the stateliness and dignity of the man.

Robert Morris, one of the leading patriots of the Revolution, whose name is an honor to the old State of Pennsylvania, said that—

In the presence of Washington he ever stood in awe.

If men like these were thus impressed we can reason that the effect upon ordinary men must have been most pronounced. The magnifying of this attribute of Washington has led some of his biographers to extreme statements, leaving the impression that his nature was cold and at times even harsh. That such is not a true view of the man is soon discovered by the student of his life. On the contrary, he was kindly disposed to his fellow men, and most loyal in his friendships. It is true that he was just and even close in all his business dealings, but at the same time generous to those in need.

One of the best examples of his friendship, as well as of his generosity, is contained in the history of his relations with Lafayette. Because of his love for the man he kept up a regular correspondence with the French patriot, and when misfortune overtook the latter, and he was confined in an Austrian prison, Washington sent money to his wife, having her believe that it was the payment of an obligation due her husband. Through his friends he entertained Lafayette's son in this country until he himself could do so in a private capacity, freed from his state duties as President. He sent to the Marquis himself 1,000 guineas, and wrote a letter to the Emperor of Germany, soliciting his discharge, in which he used these words:

As it is a maxim with me never to ask what under similar circumstances I would not grant, your Majesty will do me the justice to believe that this request appears to me to correspond with those great principles of magnanimity and wisdom which form the basis of sound policy and durable glory.

A short time after this letter was written his friend was released from prison.

It is not to be wondered at that Washington was of a serious turn of mind, for at an age in life when most young men are leaving school he was intrusted with important State duties by the colony of Virginia, and from this time on his life was well filled in the performance of official duties. He was thus cheated out of his boyhood, and influences around him tended to make him serious and thoughtful.

It is not true, however, that he was cold in his dealings with his fellows, for evidence of his kindly disposition is found on frequent occasions and is well illustrated by incidents like the following: When on a journey in 1789 he met an old servant whom he had not seen for 30 years, and at once put him at ease by his kindly recognition. Such always was his attitude to the Revolutionary soldier, and these were sure of a cordial greeting wherever he chanced to meet them. He contributed freely to the needy, and when himself away from his Mount Vernon home, left instructions with those in charge that poor persons should have help from his kitchen and his granaries.

The attempt that has at times been made to make him appear too dignified to enjoy life as ordinary men is an exaggeration of the true situation, for Washington when freed from the cares of state acted as other men and enjoyed all things human. From some statements we would be led to believe that he scarcely knew how to laugh, but I call your attention to an incident in which this great man so completely forgot his dignity as to prove that he was fully capable of enjoying the funny side of things. Judge Marshall, in company with Judge Washington, a nephew of the general, arrived at Mount Vernon. They were attended by a servant who had charge of a portmanteau containing their clothes. At their previous stopping place there happened to be a Scotch peddler with a bag of goods which resembled their portmanteau. Just as they had prepared themselves for their new garments, the servant opened up his bag and out flew some fancy soap and various other articles belonging to the peddler whose goods had been brought along instead of their own. They were so struck by the consternation of their servant and the ludicrousness of their position that they burst into loud and repeated shouts of laughter. Washington, who happened to be out on his grounds near by, heard the noise and came to see what it meant. When finding his friends in that strange plight, he was so overcome with laughter that he actually rolled upon the ground.

Some writers seem to think that it is unbecoming the dignity of Washington that such instances as these be related, but for myself, I am glad to know that so great a man possessed human traits similar to those which run through all of us.

As a McKeesporter, I refer with pride to the occasion on which he marched through what are now the streets of our city with the famous Braddock expedition, and made his present of a match coat and bottle of rum to Queen Aliquippa, which latter he remarked was thought to be much the better present of the two. I will not discuss this expedition and the disastrous battle of Braddocks Fields, which is also in the district which I represent, further than to say that Washington saved the army from complete annihilation, and in the contest had two horses shot under him and his coat pierced with four bullets, prompting a minister to preach a sermon, in which he said:

That heroic youth, Col. Washington, whom I can not but hope Providence has hitherto preserved in so signal a manner for some important service to his country.

To Washington various religious views have been attributed. By some he is claimed to have been a most devout churchman, and others have not hesitated to class him as an atheist. But that he was a man of deep religious convictions is not to be doubted. Aside from the many references in state papers indicating his reliance upon God, there are numerous passages to be taken from his private letters which prove beyond question his abiding faith in the Deity. At one time he wrote to a friend:

The Great Ruler of events will not permit the happiness of so many millions to be destroyed.

At another time, to another friend:

At disappointments and losses which are the effects of Providential acts I never repine, because the all-wise Designer of Events knows better than what we do that which is best for us and what we deserve.

And still stronger, perhaps, than either of these the following quotation:

The hand of Providence has been so conspicuous in all this that he must be worse than an infidel that lacks faith, and more than wicked that has not gratitude enough to acknowledge his obligations.

And what, perhaps, speaks more eloquently still of his religious convictions were the words that he spoke to the doctor just before he died:

Doctor, I am dying, and have been dying for a long time; but I am not afraid to die.

But while he had deep religious convictions he did not deny himself reasonable enjoyment during those years of his life when relief from pressure of duties permitted him to do so. Among other things, he indulged in theater-going, enjoyed rac-

ing, and from his earlier to his later years dearly loved to dance.

He was married to Mrs. Custis on January 6, 1759, and was rewarded by finding a good wife, to whom he was ever after devoted. They lived happily together, and throughout all the stress of his after career there was nothing that appealed to him more than to return to his home and be, in his favorite expression, "Under his own vine and fig tree."

On receiving his commission as Commander in Chief of the Army he wrote to his wife in these words:

I have used every endeavor in my power to avoid it, not only from my unwillingness to depart from you, but from a consciousness of its being a trust too great for my capacity, and that I should enjoy more real happiness in one month with you at home than I have the most distant prospects of finding abroad. I shall feel no danger of the campaign; my happiness will result from how you will feel in being left alone.

At the age of 43 years, in the year 1775, our hero was called to head the Continental Army. There was placed before him a mighty task of organizing into an army a body of raw volunteers, and with that army to fight a stupendous conflict with the foremost power of the world, and wring from that power an assent to the independence of the colonies.

His tact and judgment quickly won the confidence of his troops, and it was well for him that he had their confidence in the trying difficulties that were to follow, for after the successful Boston siege there was little for a time in the way of encouragement to the troops or the country. But whatever failures came, it was Washington who propped up disconsolate generals and encouraged the friends of the Government on every hand. To the sorely troubled Schuyler he wrote in the time of his bitter experiences:

We must bear up and make the best of mankind as they are, since we can not have them as we wish.

But in these dark days there was none to prop the courage or the confidence of Washington, on whom responsibility most heavily rested.

In the year 1776, the Army had been obliged to retreat from place to place, beginning at Long Island, N. Y., until they crossed the Delaware to Pennsylvania. Gen. Reed, at this critical juncture, addressing Gen. Washington, said:

My God, how long shall we retreat? Where shall we stop?

To which the great Washington replied:

Why, sir, if we can do no better, we will retreat over every river in America, and last of all over the mountains, whence we shall never lack space to annoy, and finally, I hope to expel the enemy from our country.

The winter was coming on, the trials were almost too much to bear. The English, flushed with their successes, felt that the end must soon be near.

Howe is now stationed at Trenton with his 4,000 men, and at this time when confidence was at so low an ebb, Washington resolved to strike a blow for his country. It was on Christmas night that he divided his soldiers into three divisions, one under Gen. Ewing, the other under Gen. Cadwallader, and the other under his personal direction. Everything was arranged, and the armies started on their course, with the intent of crossing the Delaware and striking a blow at the enemy at Trenton. When the river was reached it was found to be filled with ice, and the progress of Ewing and Cadwallader was arrested, they being unable to transport their troops over the rushing waters. Washington, on approaching the river, heard the unwelcome roar of ice and the loud crash under the angry flood, but the object before him was too vast to allow one thought about the difficulties.

The troops were embarked, the river was crossed. Many of the soldiers frost bitten as they reached the other side of the river on the same shore with the enemy. Forming into line they pressed forward to the contest. The sun was just rising over the hilltops as the army of the enemy came into sight. His soldiers on sight of the enemy, with pale cheeks, turned their wistful looks to him. The eager wish for battle flushed over his burning face, and rising on his stirrups he waved his sword toward the hostile enemy and said:

There, my brave friends—there are the enemies of your country, and now all I ask of you is to just remember what you are about to fight for. March.

Soon they were in the thick of the contest, and while many a brave soldier and splendid leader fell, victory perched on the banners of Washington. Had Ewing and Caldwallader crossed the river like Washington, nothing of the whole of the enemy's lines would have been spared. As it was, with the thousand prisoners that fell into their hands, Washington marched into the city of Philadelphia, making a triumphal entry with his prisoners, and this encouraged the people of the country to continue the contest for the great prize that was before them.

His treatment of the enemy, especially the Hessian soldiers, was most diplomatic, and the courtesies shown them completely dispossessed their minds of the poisonous statements that had been made to them of the American people by the British soldiers with whom they were engaged.

This victory gained on the 26th of December, the work having been begun on Christmas night, was scarcely over until we find Washington again on the 1st day of January, with his country's flag still waving over the heights of Trenton, being rapidly hemmed in by the forces under Lord Cornwallis. It really seemed as if there could be no escape, and as Cornwallis saw the position of Washington's forces he said to one of his inferior officers:

The old fox can't make his escape, for with the help of the Delaware, now filled up with the ice, we have completely surrounded him. To-morrow morning we will fall upon him and take him and his ragamuffins all at once.

Night came on, the artillery ceased to roar, and both armies proceeded to supper and to sleep. About midnight, having renewed all the fires, Washington put his little army in motion, and passing along the enemy's rear, hastened to surprise a large body of their troops at Princeton, on the other side of the river. As the day broke, Cornwallis was greatly mortified to find there was no American Army on the banks of the Sand Pink at Trenton, and presently he heard the roar of Washington's cannon at Princeton. On hearing the cannons, Sir William Erskine said to Cornwallis:

There is Washington now cutting our troops up.

And so he was, for on arriving at Princeton about sunrise, Washington met three British regiments who were coming on in high spirits to take him at Trenton. Both parties attacked like heroes at the first, until the Americans gave way, but realizing that all was at stake, Washington snatched the standard and advancing on the enemy called to his countrymen to follow. His countrymen heard, and rushed on to the charge. When the battle was over Washington again had been victorious. Four hundred prisoners were taken, but the battle was won at the cost of many gallant heroes who fell in the strife. For the splendid generalship thus displayed Gen. Washington was given full credit by his British opponents, and from that time on they took notice, realizing that they were confronted by a worthy foe. The tide was now turning, England was awakening from her sleep, the world was looking on, and Washington was exalted to the highest pitch not only among the people of his own country but throughout all the nations of Europe.

But notwithstanding this success many dark days yet remained, during which it seemed impossible that the Colonial forces could be successful. One of the darkest periods of the war was the winter spent at Valley Forge. Hope had almost ceased to beat in the hearts of the faithful, and all seemed to have been lost. It was at this time that Washington in a letter to Gov. Clinton wrote:

A part of the army has been a week without any kind of flesh, and the rest for three or four days. Naked and starving as they are, we can not enough admire the incomparable patience and fidelity of the soldiery, that they have not been ere this excited by their suffering to a general mutiny and dispersion.

But notwithstanding the darkness of the hour, as in the early years of the contest, he gave support to discouraged generals, so now he strove to engender in the hearts of the faithful renewed hope in the successful final outcome. It was during these days that it is reported he was seen wandering from headquarters out into the darkness and gloom of the night where with the trees as companions he knelt upon the earth and poured out his heart to the great God of battles. From this time forth he continued to encourage his troops and appealed to the people in all sections of the country, succeeding eventually in extricating himself and his army from their difficulties, and finally crowning their efforts with success. Throughout the whole of his career as General of the Army he was continually pleading for powder with which to fight, for food and clothing for his soldiers, and deplored the short enlistments which were continually breaking up the efficiency of his army. It was under such difficulties as these that he strove, and the wonder is that out of these difficulties he was able to wrest a victory.

Without dwelling further upon the details of that struggle, the surrender of Cornwallis, or other incidents during the war, I wish to call your attention to a situation at its close in which Washington rose to his grandest height.

The Army was at Newburgh without pay, almost without food and suffering in rags, Washington himself described its condition in a letter to the Secretary of War, in which he said:

Under present circumstances, when I see a number of men goaded by a thousand stings of reflection on the past and anticipations of

the future about to be turned on the world, forced by penury and by what they call the ingratitude of the public, involved in debt without one farthing to carry them home, after spending the flower of their days and many of their patromonies in establishing the freedom of their country and suffering everything this side of death, I repeat that when I consider these irritating circumstances without one thing to soothe their feelings or dispel their prospects, I can not avoid apprehending that a trend of evils will follow of a very serious and distressing nature. You may rely upon it, the patriotism and long-suffering of this Army is well-nigh exhausted, and there never was so great a spirit of discontent as at present.

There he stood between the Army and the Congress sympathizing with his comrades in arms, deploring their condition, and at the same time in their presence and in all of his relations with them upholding Congress and finding excuses for its failure to make provisions for the Army. While standing thus between these forces, a movement in the Army was begun to shake the faith of the soldiers in their leader, and in the manifesto that was scattered among these soldiers were found these words:

Suspect the man—

Meaning Washington—

who would advise to more moderation and longer forbearance. Tell Congress that with it rests the responsibility of the future, that if peace returns, nothing but death shall separate you from your arms, and that if war continues you will retire to some unsettled country to smile in turn and mock when their fear cometh.

Such was the critical situation in the hour of apparent triumph. Washington appreciated its gravity. He issued a peremptory order postponing a meeting which had been called without his knowledge for a period of four days, and then when the meeting was held on March 15, 1783, he walked into the presence of those assembled, unrolled his manuscript, and began to feel for his glasses, and just before adjusting them, with words full of emotion, said:

These eyes, my friends, have grown dim, and these locks white in the service, yet I never doubted the justice of my country.

And then, referring to the manifesto that had been issued, he continued:

My God! What can this writer have in view in recommending such measures? Can he be a friend of the country and the Army? No; he is plotting the ruin of both. Let me conjure you in the name of our common country, as you value your own sacred honor, as you respect the rights of humanity, as you regard the military or national character of America, to express your utmost horror and detestation of the man who wishes, under any specious pretense to overturn the liberties of our country, and who wickedly attempts to open the floodgates of civil discord and deluge our rising empire in blood.

Such an appeal from such a man had its effect. The officers at once adopted resolutions of thanks reciprocating the affectionate expressions of their commander and indignantly refuting the manifesto. Civil war which seemed imminent was at that moment averted. Washington himself, speaking of this matter, has said that it was the darkest day of all his life.

After this he soon retired to Mount Vernon to enjoy again the peace and quiet that he loved. It was impossible, however, that he should completely sever himself from the great problems which now confronted the States. It became more apparent every day that some stronger government must be formed if the benefits obtained by the Revolution were to be retained. Washington, as much, perhaps more than any man of his time, realized the need of a stronger Union, and from the quiet of his Mount Vernon home, by means of letter writing, impressed this thought on many great men of the day. Washington was no longer a Virginian, but was now an American in the larger sense, realizing that there must be a nationality distinct from and superior to the individual States. With the gradual failure of the confederacy it became more and more impressed upon the country that such a union as Washington and Hamilton and others had in mind must be adopted. The result was the Convention of 1787, to which Washington was elected a delegate from the State of Virginia. He declined the honor, but little heed was paid to his declination. His State insisted that he accept and give way to the general demand. He finally accepted and made his way to Philadelphia, arriving there on the 13th of May, 1787. About a week later, when enough delegates had arrived to constitute a quorum, the convention organized, with Washington unanimously chosen as the presiding officer.

The work was steadily carried on from that time until September 17, when Washington's signature was affixed to the Constitution of the United States. It was not such a document as he desired, but was the best that could be obtained under the circumstance, and he did his part to bring about its adoption by the people.

With the adoption of the Constitution and the first election for President of the United States, Washington was unanimously chosen and was inaugurated on the 30th of April, 1789, in the city of New York.

On May 1, 1789, George Washington, the President, with the Congress and an army of a few hundred men, was all there was of the Government of the United States. No Navy, no traditions, no funds with which to carry on work. It was January 4, 1790, before the new Government was fully organized, and perplexing were the questions with which it was called upon to deal.

The Indian question was one of the most troublesome. And speaking in a general way in order that we may gather an idea of what that question then meant we may say that west of the Alleghanies all belonged to them. Washington, better than any man, understood the American Indian, and knew him as a dangerous, treacherous, and fighting foe. There were the Six Nations around New York; the tribes of the Wabash west of Kentucky; the Creeks surrounding Georgia; the Cherokees south of the Ohio, and all of them stirred up and urged on to activity against our Government either by the Spaniards or the English. Thus Washington was not only confronted with the work of establishing a new government, but he was called on to face the serious Indian problem; to quell the pirates of Morocco who were then destroying our commerce in the Mediterranean; to meet and treat with the Spaniard, who was endeavoring to shut us out of the Mississippi; to deal with the old enemy, the British, who were still threatening war, and to impress upon the States a loyalty to the new Government which was necessary for their protection against these foes. And to face all of these dangers there was an Army of about 600 regular troops, with the Government $80,000,000 in debt.

I shall not dwell upon the manner in which he met and solved these problems as President of the United States, but suffice it to say that he brought to this high office that same sound judgment and rectitude of character that had aided him during the trying years through which he had already passed. His unselfish devotion to country guided him safely throughout the stormy years of his two administrations. He had but one thought and aim in view—the welfare of the Nation—and there was present in his make-up no madness of ambition to wreck his course.

He looked beneath the surface of the people's whims, and was heedless of their gusts of passion, keeping ever in view their final good and remained unmoved by the sharp criticisms that were so frequently and forcefully hurled at him. He looked forward to posterity and trusted the good sense of the Nation to approve his work when they could judge free from the prejudices and the passions of the hour.

As if our domestic troubles were not sufficient, with the breaking out of the French revolution, and the sympathy of our people for the cause, his cup of tribulation was filled to the brim. And when this was followed by war between England, our old enemy, and France, our former ally, his judgment, ability, and power were tried as they had never been tried before. You have heard to-day from the gentleman from Iowa [Judge TOWNER], in the splendid address delivered in this House, of the troublesome Genet, of the unjust attitude of the English, and how Washington, knowing that peace was the right policy for this Government and neutrality the true course to pursue, held steadily to his course. His calm, considerate judgment surmounted the difficulties, and all dangers were safely passed.

Jay, the special envoy to Britain, procured a treaty which, though not what could have been desired, brought about the surrender of the Western British posts and enabled us to keep peace with England. Unpopular as the treaty proved to be, the course of Washington in ratifying it was the true course and gave to the new Government time to establish itself before being thrown, as it was in after years, into the second war with England.

In his proclamation of neutrality, in his signing of the Jay treaty, and in his attitude toward Genet, he was on the unpopular side, standing aloof from the demands of the people and insisting upon the course of action contrary to the popular clamor. But he remained steadfast in his course, and took what posterity now knows to have been the right line of action for the welfare of the new struggling Republic.

When he left the Presidency it was with prosperity abounding at home and with his Nation honored abroad. Peace had been established with England, Spain, France, and the American Indians. Our ships were sailing on every sea, revenues were rapidly increasing, and national glory and happiness were found on every hand.

It was in such a condition as this that he, before the time for the election of a successor, decided not to be a candidate, and issued his famous farewell address, which made so profound an impression upon his countrymen. From that address, which has been read in this House to-day, I shall call to your special attention only the following sentence:

Citizens by birth, or choice, of a common country, that country has a right to concentrate your affections.

This address was in truth a father bidding farewell to his children. How they had looked up to him through the stormy years of the Nation's life, and now they realized that they were to lose his services as he retired to a much-needed rest ere he himself, in his own words, was to be received into the final mansion of rest. This act of retiring voluntarily from the high office of President, in the language of another, "is the one act of abdication of power in recorded history that was based on public duty and not on personal motive."

On the day on which his successor, John Adams, took the oath of office, when the ceremony was over, Washington turned to leave the assembly, passing through the crowd, who cheered him, to the street, where in answer he waved his hat. From the lips of an eyewitness, Irving gives this account:

The crowd followed him to his door. There, turning around, his countenance assumed a grave and almost melancholy expression. His eyes were bathed in tears; his emotions were too great for utterance, and only by gestures could he indicate his thanks and convey his farewell blessing.

His remarkable success throughout the various positions which he was called upon to fill has been attributed to various causes. Weems, in his Life of Washington, says:

That his success was due to his great talents, constantly guided and guarded by religion.

It is certainly true that throughout the course of his career, in his younger days, in the midst of war, and as President of the United States, he frequently called upon Divine Providence to guide him in his undertakings. He had been brought up in the Protestant Episcopal Church, and to that church he always adhered. Yet he was far from being a sectarian, and there is not a word of his which shows anything but the most entire liberality and toleration.

Greene in his English history, writing of the American people, said:

The greatness of their leader, his clear judgment, his heroic endurance, his silence under difficulties, his calmness in the hour of danger or defeat, the patience with which he watched, the quickness and hardness with which he struck, the lofty and serene sense of duty that never swerved from its task through resentment or jealousy, that never through war or peace felt the touch of a meaner ambition, that knew no aim save that of guarding the freedom of his fellow countrymen, and no personal longing save that of returning to his own fireside when their freedom was secured.

Thomas Jefferson, a member of his Cabinet, and not always in sympathy with his measures, has said of him:

His integrity was the most pure, his justice the most inflexible I have ever known, no motive of interest, of consanguinity, of friendship, or hatred being able to bias his decision. He was, indeed, in every sense of the word a wise, a good, and a great man.

Chief Justice Marshall, in his biography of Washington, says:

No man has ever appeared upon the theater of public action whose integrity was more incorruptible or whose principles were more perfectly free from the contamination of those selfish and unworthy passions which find their nourishments in the conflicts of party.

He further said of him:

Trusting to the reflecting good sense of the Nation for approbation and support, he had the magnanimity to pursue its real interests in opposition to its temporary prejudices.

In more instances than one we find him committing his whole popularity to hazard and pursuing steadily in opposition to a torrent which would have overwhelmed a man of ordinary firmness that course which had been dictated by a sense of duty.

Such, my friends, was the character of the great man, who more than any other guided the destinies of this people in the trying years of the Revolution and in the organizing of the new Republic and the shaping of its policies in the early years of its existence, and who is honored to-day in more lands than any other figure in the history of the world.

The Military Bill.

EXTENSION OF REMARKS

OF

HON. THOMAS J. STEELE,

OF IOWA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, February 20, 1917.

Mr STEELE of Iowa. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD on the military bill which has just passed the House, I desire to have printed an address recently delivered before the Rotary Club of Sioux City by Dr. William Jepson, who was mustered out of the Army service of the United States on December 31, 1916, after having served six months on the border as major in the Medical Corps of the Iowa National Guard. Maj. Jepson has made a careful study of military training and conditions in the National Guard and the Regular Army, and his remarks which follow ought to be of interest to Members of Congress and to the country at large:

Mr. President and fellow rotarians, I feel that I would be false to my obligations to our country if I did not accept this opportunity to acquaint you with the state of preparedness as it appears to me. To my mind it seems far from adequate to afford our country that security to her integrity and the pursuit of her ideals which is justly hers and which many of her citizens believe her possessed of.

In making preparations for a state of preparedness for eventualities we must have a clear conception of what those eventualities may be, namely, what forces may threaten us. Those forces inimical to our integrity may be, first, such as arise within, seeking to put at naught the law and order of our land; second, such as arise through other Governments taking umbrage at some act of ours. Until 1898, when we acquired possessions in the distant Atlantic and Pacific Oceans, we could consider ourselves most fortunately located geographically as a Government, for occupying as we did the most sanitary and fertile territory on the North American Continent—if not of the world—our wants were supplied with little effort; and, being bordered on the south by a small nation of Indians, or practically so, with a population of from 13,000,000 to 15,000,000, and to the north by a dependency of a foreign country, with a population of nine or ten millions, and as we outnumbered either of the nations 7 to 1, we had every reason to feel safe from attack, while against all other nations, except England, we were protected by vast expanses of water which would have made an attack upon us impracticable, except by England—and even by her, by reason of her unpreparedness—as she, like us, lacked trained men. So we were quite secure from molestation.

Alaska was then not known to be worth much, nor our island possessions in the Pacific Ocean. That condition has been changed most materially, for to-day we find ourselves the largest nation of Caucasians, dominated by the same civic ideals and speaking the same language, occupying this globe. Furthermore, we are probably the most opulent in accumulated wealth and natural resources of any of the nations, while the territory which we seek to control is scattered far from our shores, to the north, east, south, and west, part of which territory, namely, Panama, is most vital to us, unless we will bear the burden of maintaining a fleet in each ocean large enough to protect us from attack by way of either route.

Up to the time that we acquired our Colonial possessions our standing Army of less than 100,000 men, supported by our militia of possibly twice as many men with some training and organized so as to be susceptible of being called out and given additional training, might have been sufficient preparation for any eventualities. Until that time only two nations could have attacked us with any hope of success, namely, Japan on the west, who could probably only have taken our possesions in the Pacific Ocean, including Alaska; and only after taking, holding, and using those possessions as a base could she have gained access to our shores; and England, to the east, which could have used Canada as a base. No other powers could well have dreamed of or sanely contemplated an attack on us.

We now see Europe, Asia, and Africa, divided into two camps, contending for supremacy. Which of these allied forces are going to gain that supremacy none may at this time divine; but certain it is that if peace is secured only after the crushing of one or the other of these forces the victorious one will, in so far as might makes right, dominate the world, or, rather, to whatever extent it wishes. Whether our relations with the countries of the successful allied forces have always been so satisfactory in the past and will always be so in the future as to leave nothing further to be desired as between us and them I am not in a position to say.

If, on the other hand, there exists a possibility of differences of opinion as to what may be just and right as between us and such victorious forces we might be prepared to resist by might any unjust demands with such power might seek to enforce upon us unless we are willing to accept of their viewpoint as to what is right. We must be prepared to defend ourselves against being robbed of our rights. Such preparation to be efficient must be upon a scale which few men would have contemplated prior to the European war, for the victorious forces would be able to hurl against us, should they act in unison, as they are now doing, at least from eight to ten million seasoned troops, if not twice that number. Contemplate what it would mean if the allied forces of England, Japan, France, and Russia were to attack us! Why, Canada alone could be a source of worry to us if she had her trained troops back home and acted quickly.

In the light of such possible needs, what is our state of preparedness at this time? As you know, our defensive and offensive land forces consist of two distinct military organizations, one of which is designated as the Regular Army, probably so named in order to accentuate the impression that the other is irregular or no army at all, it being dubbed the National Guard. I may say that between these two military organizations there apparently does not exist that bond of fraternity which would be advantageous to a country in arms. Each organization is no doubt responsible in part at least for the antipathy which they show one another.

As the Regular Army is the exponent of all things military, you may ask the question as to whether it is of faults. Gentlemen, it is not proper that I should attempt any criticism, were I even capable of this, yet for our country this is all important, for upon its efficiency in the performance of the various duties which may devolve upon it will depend our success or failure in any struggle with foreign powers which may befall our lot.

Without in any sense desiring to criticize, I may possibly be permitted to point out a few facts as they appear to me. Military science and art in any of its branches is a highly specialized and technical knowledge and is not to be obtained overnight by dreaming about it, and for this reason our country has provided facilities for the acquisition of this knowledge on the part of selected students at its Military Academy at West Point, and it is deemed that the acquisition of this knowledge by a young man will require four years, and such as have completed said course of instruction are the repository of the science and art of warfare, in so far as we have any in this country, and through them others must acquire this knowledge, if it is necessary for additional numbers to have it. As I view it, the West Point graduate should consider himself as a repository for the Government of such knowledge of the science or art of warfare as it has intrusted to his keeping by it and at its expense, and such knowledge should be freely delivered to others when the need arises for others to have it. In so far as my observation has gone, I must question whether but a very small per cent of West Point graduates have arisen to this conception of their duties.

But a small per cent of such as I have seemed willing or possessed of the ability to impart knowledge to others, unless the constant finding of fault because things or conditions do not suit their pleasure could be so construed. Let me cite an example of this tendency to fault-finding: Soon after entering camp at Brownsville an order was issued that each kitchen must have four flytraps, with the information that they might be secured of the quartermaster. Requisition disclosed the fact there were no flytraps in his possession; so, of course, none received. Well, the poor fellows in the kitchen were harrassed by the sanitary inspector for not having the traps, and I (in common with others, I suppose) kept after the quartermaster, so that after two or three weeks he had some made, and they were issued to the companies; so everything went well on this score, until one day the sanitary inspector was ill and another appeared in his place. Now the poor chaps were censured because the traps were no good; the legs were too long. They have rather impressed me as feeling that they were members of a limited aristocracy with whom no common mortal might come in contact. A superior being, so to say. But can we blame the poor fellows much for this impression of themselves? For the country for which they are hired to serve (they would resent the idea that they serve) does everything, or, at least, much, to give them this impression. Thus we are supposed to pick from the various parts of our country the choicest boys, physically and mentally, and place them in West Point for four years' training, and after they enter its walls they lose all individuality and responsibility except as they are commanded, the parental government looking after their every want. When he has finished his course, with a commission of second lieutenant, he finds himself suddenly vested with command of men who have, with few exceptions, enlisted either because they are unwilling or unable to compete with their brothers in the everyday activities of life for a livelihood, or of some deluded youth. And as he passes from rank to rank, which he does, not in consequence of merit, but time serving, his authority correspondingly increasing, until he finds himself the ruler of ever increasing masses of men, with practically unlimited authority, all of which must tend to the creation of an exalted opinion of himself. But can we blame him for this, especially as rarely does he get into actual contact with the business and intellectual everyday activity of life about him, so that he can get a fair valuation of himself and his real worth compared with his brother in civil life. Were we subjected to the same environment we no doubt would react to it as he has done; so we must not blame him, but the system.

Did the guard represent a perfectly efficient and equipped military organization at the time of the President's call last June? No; far from it. Some defects existing in it, it, as an organization, may have been responsible for; others our Government or the Regular Army representing it, or both together, were certainly responsible for. Let us see what some of those defects were:

First, the National Guard, like the Regular Army, was supposed to be enlisted up to peace strength, but in neither of the organizations was this true. In our State (Iowa) companies had five days, namely, *the time* given between the President's call and leaving for the mobilization camp, in which to recruit their organizations up to as near war strength as possible. This resulted in many organizations having their number increased by one-third or more of new recruits without previous training or equipment. That such organizations should suffer in comparison with Regular Army organizations, where recuits have received three months' preliminary training before entering organizations and are fully equipped, goes without saying. Yet such odious comparison is constantly made. To me it appears that in place of holding the organizations blameworthy for not being better, though to an extent justifiable, they are entitled to some commendation for having done as well as they did. Thus the officers of the National Guard (and be it remembered they were not educated at the public expense for four years, but men who, impelled by patriotism, did at their own expense in money and time acquire whatsoever knowledge of military science and art which they had) brought into the field a body of troops between two and three times as large as our Regular Army within a week after the President's call, and that, too, without the same having been a source of previous expense to the Government, except for such equipment in the way of clothing and armament as had been issued and the 10 days annually. You may say this is no achievement. Possibly not; but what, then, shall we say of the officers of the Reguuar Army not being able to keep their little organization recruited up?

Thus, in October they lacked 14,307 men to complete their peace strength and 34,307 their war strength, and that, too, after having recruiting stations opened all over our country at great expense. If I am correct it costs our Government about $80 for each enlisted man it secures—furthermore, having employed every means to secure recruits from among the militia organizations, with whom they were encamped. In fact, so marked was this activity that personally I felt as if I had been lured into getting an organization together and taking it (in common with others) to the border and holding it there while it was being pawed over by the Regular Army officers for recruits to fill up their organizations. I may state that none of my men left me nor did any leave the regiment that I heard of, though we did nothing to prevent it. I said none left me; no, not voluntarily, but the Regular Army officers know of other methods. I had not been in Brownsville but a few days until six of my efficient men, one-fourth of my organization, were directed by superior authority to do work in Regular Army organizations, and I could get along as best I might with what I had left.

You may be interested in knowing something about the physical condition of this organization, one-third of which was thus hastily picked up by the officers without much regard for any qualifications except willingness to serve. I shall only speak of conditions as found in our own State. They were all subjected to a critical physical examination, with the result, as I recall, of about 6 per cent being rejected on account of physical and mental unfitness. The percentage should have been somewhat higher, as the Government forced the acceptance of some who should have been rejected. Compare this with the rejections of applicants for Regular service, which, if I am correctly informed, is at least 2 out of every 3. You will say that we could certainly not have the best men; probably not. Yet these men were taken into the Tropics or semi-Tropics at the hottest period of the year, without the slightest regard for climatic or sanitary conditions, and put at the hardest kind of work in the way of clearing ground and drilling, and yet throughout the whole stay, month after month, the percentage of illness and ineffectiveness for duty of the militia troops has been less than that of Regular troops serving there by their side. In six months my regiment had only two deaths, one from drowning and one from a gunshot wound, and not a single death from a preventable disease, and similar favorable conditions existed in other militia organizations.

At the end of six months these hastily assembled troops represented military organizations which, from every point of view, were probably as good soldiers as the Regulars. Who trained them; officers of the Regular Army? No. Did we have no aid? Yes; for example, our regiment had a lieutenant serving as inspector—a very nice fellow—whose time was largely devoted to paper work.

A word to the preparedness of our Regular Army or Government to receive us. The Government called these troops out on the 19th of June, and must have known approximately the number it would have to equip in the way of clothing, armament, etc. Let us see how well this was done, for it is quite as much an index of preparedness as is the men's training.

Hats and khaki suits for the newly enlisted men began to reach us in small quantities after a couple of weeks; so did shoes, consisting of plowing shoes and stable shoes of all descriptions, gathered apparently from discarded stocks where everything could be found, and while men might stand in them, they certainly could not march in them without ruining their feet. Had we treated the feet of our Government-owned mules with no more consideration than the Government did the feet of our men in their shoeing, I have no doubt we would have been court-martialed, and rightly so. It was so with many things. We got our first cots after having been in the service about four months, and was given mosquito netting after about five months, and both were highly necessary, for the ground was frequently flooded and mosquitoes were a constant pest and menace as disease carriers, in spite of our efforts to prevent their breeding. In this connection I shall mention one fact which to me seems an inconsistency. Thus, after having permitted the men to be subjected for nearly four months to the danger of malaria and other infections from mosquito bites through failure of the Government to supply the netting, soon after it was supplied an order came out that anyone failing to keep himself protected would be subjected to punishment, and nightly inspections were made to see that the order was not violated. A Regular Army officer in calling my attention to the violation of this order on the part of some men received the reply that I was sure that it was difficult for them to understand that it could be such a serious crime to be found temporarily unprotected when the Government had seen fit to have them unprotected so long. Gentlemen, I must not tire you with a continued recital of our lack of preparedness in various directions.

In conclusion, I may say that after spending six months in the effort we probably added about 160,000 troops, fully equipped and fairly well trained to our material preparedness, and much experience has been gained in various directions; as to whether this experience will ever prove an assistance through being utilized remains to be seen. If it is, the price is too high. While these men have progressed in the matter of military training, many have retrogressed in the matter of patriotism, and though they would unquestionably give their country, in event of need, the benefit of their services, yet I am inclined to believe that many will want to know that there is a real need before they respond, and having responded that they are not to be penalized for their patriotism by being forced to hold themselves at the beck and call of their country to do police duty for a period of six years. The sacrifice made by the men on the border this summer can be best conceived by each of you if you will contemplate what would happen to you if each of you were to suddenly be stricken with illness and incapacitated from doing a solitary thing for from six to nine months, your physician being unwilling to give you any idea as to when you might resume management of affairs. It would not be far short of a catastrophe in many instances. With these thoughts fresh in their minds, will not many militia officers in the future be a little slow in soliciting men to join their organizations or forming new ones, as will be necessary if the organization is to reach the size called for by the bill passed by Congress last winter? How they can do so without being conscience stricken I do not understand. That the National Guard organization will be able to augment its numbers to meet the requirements of the above-mentioned bill does not seem to me possible. Even if it did, it would represent a degree of preparedness far short of our needs. In my opinion, there are not enough men in our country who value their citizenship and all the blessings that go with it to voluntarily submit to military training in such numbers as to form an adequate force for defense against attacks by such forces as we now recognize might be hurled against us. There is only one other solution—that of compulsory military training. If no other lesson than this has been learned during the summer, it will be worth the price.

Woman's Division, Department of Labor.

EXTENSION OF REMARKS

OF

HON. JOHN J. CASEY,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, February 23, 1917.

Mr. CASEY. Mr. Speaker, on June 9, 1916, I introduced in the House a bill to establish in the Department of Labor a division to be known as a woman's division, of which the following is a copy:

[Sixty-fourth Congress, first session.]

A bill (H. R. 16358) to establish in the Department of Labor a division to be known as a woman's division.

Be it enacted, etc., That there shall be established, under the direction and control of the Secretary of Labor, within the Department of Labor, a division to be known as a woman's division.

SEC. 2. That the said division shall be under a chief, a woman, to be appointed by the Secretary of Labor, and shall receive an annual compensation of $3,500. The said division shall investigate and report to

the said department upon all matters pertaining to the welfare of wage-earning women and shall especially investigate the questions of the competitive influence of women in the several industries, the adjustment of modern industrial mechanism and management to the nervous organization of women, and the influence of industrial employments upon the subsequent home life of wage-earning women.

SEC. 3. That the chief of such division shall, when investigating subjects also involving children, consult and cooperate with the Chief of the Children's Bureau. She shall also, whenever possible, cooperate with the Chief of the Bureau of Labor Statistics when coöperation is necessary to eliminate needless duplication of expense in the conduct of investigations. The chief of said division may, from time to time, publish the results of these investigations in such manner and to such extent as the Secretary of Labor may prescribe.

SEC. 4. That there shall be in said division, until otherwise provided by law, an assistant chief and editor, to be appointed by the Secretary, who shall receive an annual compensation of $2,500; one field expert at $2,280; one field expert, at $2,000; one field expert, at $1,800; three special agents at $1,600; three special agents, at $1,400; three special agents, at $1,200; three stenographer-clerks, at $1,000; two clerks, at $900.

This bill was referred to the Committee on Labor, and after careful consideration, on December 5, 1916, was reported to the House with the unanimous recommendation of the committee that it be passed without amendment. (H. Rept. No. 1205.) This bill has also the indorsement of the Secretary of Labor, the Chief of the Children's Bureau, and the Chief of the Bureau of Labor Statistics.

THE PURPOSE OF THE BILL.

The bill is designed to create a division charged with the duty of ascertaining the facts concerning wage-earning women of the country, what they are getting for their work, the conditions under which it is being done, and the effect upon the health of such women.

The need for the division rests mainly on three propositions:

1. The growing army of wage-earning women creates problems in the industrial world of far-reaching importance to the public as a whole.

2. Solutions of these problems can only be achieved by recognizing the essential differences in conditions surrounding wage-earning women and wage-earning men.

3. The record of 25 years shows that without statutory existence the work for women in industry can not be continuous and coherent, because the resources for it are uncertain and its very existence is a matter of chance.

NEW DIVISION WILL SECURE NEEDED INFORMATION.

Information concerning women in industry is necessary if the country is to know what work and what conditions make for healthy womanhood; if industry is to know in what work and under what conditions women can give their best service; if the schools are to know what industrial training their young people should receive; if the public is to know what need there is for remedial legislation and the effect of such legislation upon the women and upon the industry. Organizations which are working for reform laws are handicapped by lack of exact data regarding the very conditions which they are trying to improve.

We must know how women fit into the great army of wage earners, and where and under what conditions they join in the industrial conflict with danger to themselves, to their brother wage earners, and to the public. We must know in a given industry whether women suffer more or less from unemployment than men in that industry.

We must know to what extent the equipment of machinery and the general management of the various industries take into consideration the physical and nervous organization of women wage earners. We must know the effects of speed, complexity, and monotony—all factors in modern industry—on the physical and nervous organization of women. The division's greatest value will lie in its ability to settle questions of fact by furnishing accurate descriptions of the demands of various occupations upon women; in its cooperation with Federal and State agencies in the effort to determine the extent to which these demands endanger the health of women wage earners; and in devising and suggesting practicable means to lessen these dangers.

For instance, it is known that handling heavy machinery is ruinous to the health of women. What is known about practical and inexpensive changes in foot-treadle machines in power laundries so as to lessen the strain?

What is known of the effect of reaching and stretching the arms at the looms in the textile mills? Is it not reasonable to suppose that a study of this fatiguing industry would show how the machinery could be readjusted so as not to undermine the health of the women operatives?

It is known that operatives in textile mills become deaf. What is known of practical means of varying the pitch of the machinery in order to lessen the harm done to the operatives' ears?

It is known in general that a reasonably short working day is an efficient working day, yet women all over the country are working 10 and 12 hours and ruining their health and their chances of wholesome motherhood because we lack accurate knowledge of what is the most efficient workday in each industry and in the various processes of the complex industries. Is it not reasonable to look to the Government of the United States for the facts which will keep the employer from ignorantly opposing reform laws which will really work out in the end to his benefit and at the same time protect the health of his employees?

It is known that unceasing high-speed work in one position at a power sewing machine is ruinous to women's health. Do we know how, with little expense to the employer, this type of work can be varied by relief periods so as to lessen the strain?

Do we know whether work in stores, factories, and mills affect the health of women during their years of childbearing unfavorably? Do we know whether such employment during the formative years of their early youth affects their subsequent health during later life? If it should be found that certain occupations are impairing the motherhood of women, should not every effort be made to safeguard and modify these occupations and to direct women into other lines?

Do we know whether and why unemployment varies in different industries—less, for example, in department stores than in factories? Do we know in what occupations it is important for women to have one day's rest a month?

Can legislation on unemployment insurance or fixing of wages be drafted intelligently without a thorough knowledge of the facts as their basis?

ESSENTIALLY DIFFERENT INDUSTRIAL PROBLEMS OF WOMEN AND MEN REQUIRE SEPARATE TREATMENT.

There are already enough recognized differences in the problems of men and women in industry to indicate the need of special studies into the problems peculiar to women. Some of the essential differences are:

First. Men enter industry in their youth and stay there until old age. Women seek a temporary income during the period of transition from their fathers' to their husbands' home. The natural pull for women is toward a home, a husband, and children. The very fact that the individual woman stays only a few years in industry means that she does not reap the benefit of bonus and pension systems.

Second. Irregularity of employment among women and men is due to different causes. Family demands and illnesses peculiar to women cause much unemployment among them and do not enter the problem of irregularity of employment among men. We do not as yet know to what degree women are more susceptible to industrial depressions than men.

Third. The attitude assumed by the public and the courts toward women in industry is distinct from the attitude toward men in industry. The State has police powers to protect maternal functions against injury from industrial demands in order to conserve the well-being of the race. Therefore facts as to the effect of industrial conditions upon women must be secured to create the public sentiment upon which such protective legislation must be based.

Fourth. The physical strength and endurance and physiology of women and men are very different.

Fifth. Wage questions for men and women are different, in that the youth of women wage earners and their attitude toward industry makes their organization into unions difficult; therefore they lack this necessary protection enjoyed by men wage earners.

WARRING COUNTRIES OF EUROPE RECOGNIZE URGENCY OF WOMEN'S INDUSTRIAL PROBLEMS.

Recognition of these differences between men and women has been forced upon England by the conditions arising from the war. The committee on the health of munition workers, appointed "to consider and advise on questions of industrial fatigue, hours of labor, and the matters affecting the personal health and physical efficiency of the workers in munition factories and workshops," has made a special study of the conditions of the women in the munition plants. It says in part:

Conditions of work are accepted without question and without complaint which are immediately detrimental to output and would, if continued, be ultimately disastrous to health. It is for the nation to safeguard the devotion of its workers by its foresight and watchfulness lest irreparable harm be done to body and mind, both in this generation and the next.

The imperative necessity of war has revived night work for women in factories, with the disastrous results reported, showing deterioration in health, disturbance of home life, with its injurious effect upon the children, and diminished value of the work done.

That the industrial situation abroad has been entirely changed since August, 1914, is indicated by the following table:

	Estimated number of females employed in July, 1914.	Estimated increase in the number of females employed since July, 1914.		Estimated number of females reported by employers as directly replacing men.	
		April, 1916.	July, 1916.	April, 1916.	July, 1916.
Industrial occupations	2,117,000	275,000	362,000	213,000	263,000
Commerical occupations	454,000	166,000	198,000	152,000	201,000
Professional occupations (mail clerks)	67,000	13,000	15,000	12,000	15,000
Banking and finance (mail clerks)	9,500	23,000	30,000	21,000	26,000
Hotels, places of entertainment, etc.	175,000	12,000	19,000	27,000	71,000
Agriculture, Great Britain only	130,000	14,000	66,000	37,000	66,000
Transportation (other than municipal)	15,000	23,000	31,000	24,000	31,000
Civil service	66,000	39,000	48,000	30,000	38,000
Arsenal, dock-yards	2,000	25,000	69,000	13,000	69,000
Local government (including teachers and municipal transportation workers)	184,000	21,000	28,000	18,000	26,000
Total	3,219,000	583,000	866,000	547,000	766,000

Since the war about 866,000 additional women and girls, or 27 per cent of the number employed in July, 1914, have been drawn into industry. Women are now substituting for men in all sorts of occupations, from agriculture to mining, through the entire gamut of industry, in tanning and leather work, sawmilling and woodwork, glass, china, earthenware, rubber, etc.

That this condition is not confined to England is indicated by the following report from Russia:

The Journal of the Central Committee on War Industries of Petrograd, in its issue for the 20th of June (N. S.), discussing the great increase of women's labor in the factories and works in Russia since the war, states that in the early days of mobilization the engagement of women to fill the places of skilled men was resorted to only by means of experiment, but the work at the various machines was found so simple that in a short time it was possible to fill up the cadres of trained women workers. The first women fitters were employed in the autumn of 1914 at well-known private works in Petrograd. The women began to be employed at lathes in the Government workshops, and men taken from drilling, planing, milling, and other machines were more and more frequently replaced by women without any complaints being heard from the employers as to reduced productivity of labor. At the time of reporting from 4 to 5 times as many women were being employed in factories and workshops in Petrograd as before the war, the total number being estimated to exceed 50,000. (Board of Trade Labor Gazette, London, Aug., 1916, Vol. XXIV, No. 8, p. 275.)

In some machine shops and manufacturing plants as many as 80 per cent of the operatives are women. * * * The success of women in industry in Germany has led to a movement to favor compulsory Government service for women analogous to military service for men, required of all except those physically incapacitated or prevented by motherhood. Yet this participation of women in industry has been attended by disadvantages, for it is claimed that so apt have the women proved at their work, that with small wages their labor has been exploited. * * *

With women even excelling men in the use of automatic machinery, it is intensely probable that they will play a still more important part in manufacturing and a consideratble readjustment of social conditions must ensue. (Review of Reviews, September, 1916, p. 337.)

POSSIBLE REACTION OF EUROPEAN CONDITIONS ON AMERICA.

Inevitably these changed conditions in Europe will react on America—in just what ways or to what extent we can not foresee—and on that account it seems imperative that we have an agency, thoroughly equipped, to give to the country all the facts of women in industry, so that our national readjustment may be as free as possible from the friction which would otherwise follow any great industrial changes.

So far as any one knows some effects of these changes may already have been felt in the munition factories and metal industries of this country. Plans should be started immediately to prevent any injury to the women workers.

In the present international crisis, when all Federal agencies are using every resource for adequate preparation, we should have some agency equipped to tell us how the 8,000,000 women workers of the country may be utilized to give the greatest service to the country without detriment to themselves. We should profit by the mistakes of the European countries and be prepared for the necessary readjustments before it is too late.

CONTINUOUS STUDY OF CONDITIONS INSTEAD OF SPASMODIC INQUIRIES.

In 1907, through the efforts of the women of the country, Congress made a special appropriation for a comprehensive investigation into the condition of wage-earning women and children. This investigation, made in 1907–1909, covered conditions surrounding wage-earning women in selected industries for a year or less and was designed to supply the widespread demand for information concerning women in industry, which information had been furnished through no regular governmental agency. This investigation, costing the people approximately half a million dollars, developed partial pictures of employment conditions of women during sharply restricted periods and showed the need, not of big, spasmodic, drag-net investigations made at great cost, but of continuous, coherent, and constructive studies.

In 1909 the National Women's Trade Union League officially requested the creation of a separate woman's division within the Department of Commerce and Labor, which would devote itself to studies of women in industry. As an answer to this request and to the increasing sentiment throughout the country in favor of an independent woman's division, a subordinate division was created in the Bureau of Labor Statistics, and there was apportioned thereto such of the bureau's resources as other work previously organized and under way would permit.

Only very recently has the public come to recognize the importance of women in industry, and before that recognition had become articulate the bureau had inaugurated lines of work which are valuable and which it can not well drop, but which interfere with an adequate allotment of funds to the work for women. This allotment remained small in proportion to the importance of the work, and the very existence of the division became more and more difficult until early in 1916 its life was suspended altogether on account of the resignation of the chief of the division and of her successor and the unwillingness of efficient women to undertake the work until the division is created by statute with the proper provision for salaries and with adequate appropriation for its work.

That is what the bill under consideration insures. It merely guarantees the continuous development of an organization, the need of which has been proved, which was started five years ago, which has been engaged in an unequal struggle for existence during the entire period. The weaknesses of subordinating the work of the division to that of the Bureau of Labor Statistics has been demonstrated in its experience in three different ways.

1. As part of the Bureau of Labor Statistics, its bulletins were naturally forced into the form of reference books for experts only, whereas the woman's division should tell the very human story of women wage earners in a way that every intelligent person can easily understand.

2. A just apportionment of the funds for the development of the work of the woman's division could not be obtained because the bureau had a traditional field of investigation which took most of its appropriation. Inasmuch as these investigations, although frequently into industries employing large numbers of women, uniformly failed to reveal the factors especially affecting their welfare, the large expenditure of funds involved in such studies yield little or no value to wage-earning women as differentiated from wage-earning men.

3. Without statutory existence there could be no certainty of the continuance of the woman's division, which might live or die at the pleasure of each commissioner of labor.

SECRETARY OF LABOR INDORSES BILL.

It should not be considered, however, that the proposed division involves the establishment of a new agency; but rather a change of organization within the Department of Labor, which is indorsed by the Secretary of Labor in the following terms:

DEPARTMENT OF LABOR,
OFFICE OF THE SECRETARY,
Washington, D. C., July 26, 1916.

Hon. DAVID J. LEWIS,
House of Representatives, Washington, D. C.

MY DEAR CONGRESSMAN: In accordance with your request, I am giving you the following expression of my views on H. R. 16358, a bill to establish in the Department of Labor a division to be known as a woman's division.

With the purpose of this bill we can all no doubt agree. My first impulse, however, was to suggest that, in view of the fact that the Bureau of Labor Statistics has a jurisdiction covering all of this field, the division should be created within that bureau rather than directly attached to the department. Upon more mature deliberation I am convinced that while there are no sharp lines of demarcation between women in industry and men in industry, so far as certain phases are concerned, and the same machinery which is established to collect and compile wage schedules of men could, with superior efficiency, be utilized for collecting and compiling the wages of women in the same industry, there is a vast field for investigation and study which specially and peculiarly affects women in industry which could be more effectively handled under the immediate direction of women than under the direction of men. I have particular reference to the physical and mental effects of certain lines of modern industry upon those who are to be the mothers of the future generations and the effect of that effect upon those generations themselves.

For this reason I favor the enactment of the Casey bill, H. R. 16358.

Sincerely, yours,

W. B. WILSON, *Secretary.*

Neither will it mean a wasteful duplication or illogical separation of functions, since the bill under consideration provides for adequate cooperation and since the organization within the Department of Labor is such that the chief of this division, the Chief of the Children's Bureau, and the Commissioner of Labor

Statistics could constitute themselves a commission on industrial investigations, reenforcing and supplementing each other's programs. That such cooperation is the desire of the existing bureaus is indicated by the following statements:

UNITED STATES DEPARTMENT OF LABOR,
Washington, February 3, 1917.

The Hon. JOHN J. CASEY,
House of Representatives, Washington, D. C.

MY DEAR MR. CASEY: In my judgment, the provisions of the bill to create a women's division in the Department of Labor are well calculated to insure effective and economical cooperation between that division and the Children's Bureau. No duplication is possible if the provisions of the bill are carried out in good faith by the bureau and the proposed division.

Yours, respectfully, JULIA C. LATHROP, *Chief.*

The Commissioner of Labor Statistics, in a letter to Senator JONES, under date of January 26, 1917, wrote:

Seemingly, the only possibility of securing sufficient appropriations to carry on these much-needed studies for women in industry is through the creation of an independent woman's division. If this is the case, an independent woman's division should be created immediately. If such a division is created by Congress, it will, of course, be my duty to cooperate in every possible way with the chief of this division, and I shall do so with enthusiasm to the extent of my ability.

FUNDS NECESSARY FOR THIS WORK.

Women constitute approximately one-fifth of the total number of wage earners in manufacturing, mechanical, and mercantile employment. It is not necessary to argue that their importance to society is much greater than this proportion represents, for these women are not only the mothers of men, but to a large extent they are the mothers of wage-earning men of future years.

This Congress has been in the habit of giving about $212,000 to the Bureau of Labor Statistics yearly, and has just given about $300,000 to the Children's Bureau. It certainly is not an extravagance to provide one-fifth of the Bureau of Labor's appropriation for the work for women in industry. This is practically the amount of money provided in the bill, namely, $46,920. The chief's salary was placed at $3,500 a year. Many chiefs of divisions subordinate to other bureaus get salaries as large and even larger than this, while chiefs of independent divisions, where the responsibility and the demand for initiative are much greater, get $5,000 and more. The staff is so constructed as to permit of its organization into three sections, two of which would be free to answer calls for special investigations, and one of which could keep continually at the work of building up a body of information which would be coherent and would furnish convincing demonstrations of the direction in which lies sure progress toward betterment of conditions of woman labor. The miscellaneous expense fund is based on eight months of field work for special agents and a general fund of $3,000 for miscellaneous expenses. It is not intended that the statutory appointees should be in the field necessarily for eight months, but the expense fund may be used in hiring local service available from the civil-service registers in special investigations.

The arrangement for temporary services with work of this character has a double advantage, inasmuch as in such cases per diem and expenses are eliminated, and the employment of local talent temporarily affords the opportunity of training investigators in different localities in the country. The repeated employment of local help for short periods would in time have a very constructive influence in developing an investigating standard throughout the country.

AUTHORITATIVE DATA AS BASIS FOR LEGISLATION.

Owing to the limited resources and uncertain conditions, the subordinate woman's division in the Bureau of Labor Statistics was never able to build up a continuous and coherent plan of investigation, but the possibilities for its practical usefulness are indicated by some of its past achievements.

In 1913, when Congress was considering a bill to establish an eight-hour day for women in the District of Columbia, no one knew how long women were actually working, nor was this information available until the woman's division secured from both employers and employees the unbiased facts, on the basis of which Congress granted the eight-hour day for women workers in February, 1914.

Again, in 1914, a State commission in Indiana called upon the woman's division for advice and cooperation in securing data concerning the condition of wage-earning women. Without such cooperation it would have been impossible for the State, with the funds at its disposal, to secure the necessary facts upon which to base legislation. It is interesting to note that among the supporters of the bill is a prominent Indiana manufacturer.

To make these practical aids continuous and available to the entire country will be one of the functions of the proposed division.

We must know more about minimum wage laws, the extent of night work and its results, the employment of married women in industry, and the health effects of dangerous processes. The difficulties of varying legislation in different States may be made to serve a useful purpose if the Federal Government will draw conclusions as to their relative merits. The creation of a woman's division seems to be a promising first step in a more coherent, nation-wide program for protecting women in industry.

Women all over the country are urging the passage of the bill. It has, moreover, the indorsement of numerous labor organizations and the four following national women's organizations: The National Women's Trade Union League, the National Federation of Women's Clubs, the National Consumers' League, and the women's division of the National Civic Federation.

It is my earnest hope that this important piece of legislation will be placed on the statute books before this Congress adjourns.

Armor Plant.

EXTENSION OF REMARKS

OF

HON. C. BASCOM SLEMP,

OF VIRGINIA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, February 23, 1917.

Mr. SLEMP. Mr. Speaker, the proper location of the armor-plate plant is now being considered by the Armor Plant Board, and the merits of Big Stone Gap, Va., are so great and so apparent that I have asked unanimous consent to insert in the RECORD a statement on the subject by the Board of Trade of Big Stone Gap. This statement is as follows:

ARMOR-PLANT HEARING.

The Armor Plant Board, composed of Admiral Fletcher, Commander Clark, and R. C. Backenhaus, engineer, gave a hearing to the committee of the Board of Trade of Big Stone Gap at Bristol on Monday.

Messrs. C. S. Carter, J. M. Goodloe, John W. Chalkley, Horace Fox, H. L. Miller, John Fox, R. E. Taggart, R. T. Irvine, and R. A. Ayers represented Big Stone Gap.

The board gave a very earnest and attentive hearing and were greatly impressed with the showing made for Big Stone Gap as a location. Indeed, the brief prepared by Gen. R. A. Ayers, which was filed with the board, was a clear exposition of the wonderful advantages to be derived from this location, which is so strong and forceful that we reproduce it as follows:

TO ARMOR PLANT BOARD, *Washington, D. C.:*

The following table filled out is returned to the board as requested:

Material.	Freight per ton.	Remarks.
Coal, gas producer	25 cents per ton	See A.
Coal, steam	do	See B.
Pig iron, Bessemer		See C.
Pig iron, local market		See D.
Ferromanganese	36 cents per 100 pounds	See E.
Ferrochrome	do	See F.
Nickel ingots	95 cents per 100 pounds	See G.
Limestone	25 cents per ton	See H.
Dolomite		See I.

For general remarks see M et seq.

A—COAL, GAS-PRODUCER.

Coal, gas-producer, will be supplied from the Black Mountain field, which has no superior in the United States. The freight rate now in force and in daily use is 25 cents per ton. The following analysis was made a few days ago from a carload being shipped in regular course of business by one of our mining companies:

Moisture	per cent	1.16
Volatile	do	34.10
Ash	do	2.54
Fixed carbon	do	62.20
Sulphur	do	.582
Phosphorus	do	.002
British thermal units		15,014
Fusing point, ash	° F	2,337

B—COAL, STEAM.

Coal, steam, will be supplied by the Black Mountain field, which is without a superior. The freight rate now in daily use is 25 cents per ton. The following analysis was recently made from car samples in regular course of business:

Moisture		Dry.
Volatile	per cent	34.50
Ash	do	5.17
Fixed carbon	do	60.33
Sulphur	do	.75

We also refer to J, K, and L, where will be found analysis and tests made by the Government with both gas-producer and steam coals from this field, mined and shipped under its supervision.

C.

Pig iron, Bessemer, will be supplied by the furnaces here up to the following analysis:

Silicon	1.00 to 2.00
Sulphur, under	.05
Phosphorus, under	.10
Manganese	.50 to 1.00

D.

The pig iron from native ores will be supplied from the furnaces here. The following is the analysis:

From native ores.

Phosphorus	0.65
Manganese	.05
Sulphur	.007
Silicon	1 to 1 or 2 points above.

There will be no freight upon either, as the proposed site adjoins furnace yards, and the iron can be delivered in the cars of the plant either in pigs or hot direct from the stacks, avoiding reheating.

E—FERROMANGANESE.

Ferromanganese will be supplied from Lebanon or Sheridan, Pa., at a freight rate of 36 cents per hundred pounds.

F—FERROCHROME.

Ferrochrome will be supplied from Niagara Falls, N. Y., at a freight rate of 36 cents per hundred pounds.

G—NICKEL INGOTS.

Nickel ingots will be supplied from Bayonne, N. J., at a freight rate of 95 cents per hundred pounds.

H—LIMESTONE.

Limestone will be supplied from an adjacent quarry, very high grade and free from impurities, at a freight rate of 25 cents per ton.

I—DOLOMITE.

Dolomite will be supplied from a quarry adjoining the site, and the cost of delivery will be negligible, as it will be handled by a locomotive of the plant.

J.

Government test of coal from Black Mountain field, mined and shipped under Government supervision.

[Boiler test No. 248. State: Virginia, No. 4.]

Duration of test, 8.02 hours.
Kind of coal, lumps.
Kind of grate, plain.

Size of coal, average in inches	0.96
British thermal units per pound dry coal	14,677
Per cent of rated horsepower of boiler	97.50
Efficiency, per cent	68.52
Water evaporated per pound of coal as fired	8.23
Equivalent water evaporated:	
Per pound of coal as fired	9.86
Per pound of dry coal	10.18
Per pound combustible	10.86
Water in furnace, inch	.11
Furnace temperature, ° F	24.83
Equivalent pounds of coal used per individual horsepower hour at steam engine:	
Dry	2.78
As fired	2.88
Equivalent pounds of coal used per engine horsepower hour developed at switchboard:	
Dry	3.43
As fired	3.56
Dry coal burned per square foot of grate surface per hour, pounds	17.14

Analyses.

PROXIMATE.

Fixed carbon	56.58
Volatile matter	35.84
Moisture	3.62
Ash	3.96
Sulphur, separately determined	.44

ULTIMATE.

Carbon	81.15
Hydrogen	5.03
Oxygen	7.86
Nitrogen	1.39
Sulphur	.46
Ash	4.11
Equivalent pounds water evaporated per square foot of water-heating surface per hour	3.48

K.

Government test of coal from Black Mountain field, mined and shipped under Government supervision.

[Coking test No. 62. State: Virginia, No. 4.]

Analyses.

M.

We are filing herewith "Map of Coal Fields of Southwestern Virginia and Southeastern Kentucky," which shows the location of the immense deposits of Black Mountain coal and native red fossil ores tributary to Big Stone Gap, the location of the proposed site with reference to Louisville & Nashville, Southern, Norfolk & Western, and Carolina, Clinchfield & Ohio Railroads, great trunk lines of the South, and Interstate Railroad, which connects with all of them and also serves a large number of the mining and coke oven plants, from which it will be seen clearly that the transportation facilities are unequaled by any site proposed to the board. This map shows the proposed site for the plant, its location with reference to the furnaces producing the bessemer and local pig irons, the large area (10 square miles) of adjoining flat lands available for indefinite expansion and the high mountains surrounding Powells Valley, rendering it practically impregnable from attack by any foe.

We propose to furnish for drinking and domestic purposes the water from a pure spring upon a hillside, above all possibility of pollution, having a normal flow of over 300,000 gallons a day, shown by actual tests, situated one-half mile from the plant. The water for the plant will be taken from the same stream used by the furnaces of Intermont Coal & Iron Corporation, which has a flow of 2,500,000 gallons per day, tested during one of the most severe drouths ever experienced in this section. Should the plant expand and require it, there is a natural reservoir over 2 miles long, 1,000 feet wide, and over 100 feet high, which when closed by a dam at a narrow gorge will store many billions of gallons of water 1,000 feet above the valley, which would not only guarantee against any shortage but would produce enormous power at the point it would pass over water wheels and be thoroughly aerated before entering the mains.

The proposed site is easily accessible to railroads, is located upon an improved macadam and asphalt finished road, is practically all underlaid with black shale from 1 to 3 feet below the surface, affording strength to support extraordinary heavy structures; it adjoins a boundary of flat land extending up Powells Valley, embracing 10 square miles suitable for indefinite plant extension, and 10 square miles of rolling land suitable for residential purposes. In fact, it would be easy to build a city like Essen and a plant like Krupp's and then have land to spare.

We propose to furnish brick in such quantities as may be required for construction work, classed A1 by United States Government expert, at prices which shall equal any f. o. b. price obtainable, to be delivered at 25 cents per ton rate.

We understand that the board expects the town near which the plant is located to absorb the people employed at the plant, and we therefore propose that as soon as the plant is definitely located here to commence the erection of comfortable dwelling houses to accommodate all the employees, estimated at from 1,500 to 2,000, which will be either rented at fair rates or sold to employees payable upon long time in monthly installments about equal to rent.

We propose that as soon as the plant is definitely located here and construction work commenced that the town of Big Stone Gap and Wise County will commence and complete as soon as may be necessary a large free-school building with sufficient capacity to accommodate all school children of employees in primary and high school departments.

Wise County has a complete public-school system, embracing a larger number of high schools than any county in the State of Virginia, out-

side of the larger cities, which makes it very attractive to intelligent labor and easy to secure and retain it.

This is shown by the fact that, although the coal mines of this section have been developed for more than a quarter of a century, we have never had a strike, which speaks volumes for the section and the quality of the labor.

Adjacent to the proposed site is a large area of rich and fertile lands, producing enormous quantities of foodstuffs, and there will be no shortage of provisions, or anything necessary to a good living and a contented and happy people.

Having shown that we can furnish 367,000 tons of material out of the total of 371,000 tons required, at less than 25 cents per ton freight rate; a site capable of practically indefinite expansion; a reserve of raw material which will last for centuries, we submit with the utmost confidence that armor plate can be manufactured at Big Stone Gap for less cost than at any other point in the United States.

THE BOARD OF TRADE OF BIG STONE GAP, VA.

The Cost of Living.

EXTENSION OF REMARKS
OF
HON. WILLIAM J. SEARS,
OF FLORIDA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, February 26, 1917.

Mr. SEARS. Mr. Speaker, under the leave granted to me, I insert the following article from the Florida Times-Union of February 23, 1917:

FLORIDIAN RETORT IS GIVEN TO THE NORTH ON THE COST OF LIVING.

That it took a Jacksonville woman to call the hand of W. J. Lampton, who has daily an essay on some section of the United States in print on the editorial page of the New York Herald, is shown in a reply communication from Mrs. A. D. Parker. The issue of this paper, February 20, carries the reply under the caption "A Floridian retort."

The friendly but sharply handled battle is shown as follows:

"In Florida here lately where the orange blossoms blow, where the grapefruit and the 'piney' in a large luxuriance grow, where the lemons come in clusters and the berries from the straw are surely and certainly the best you ever saw, where the kitchen vegetables put a cover on the land so thick that only experts would know that it was sand, where conditions are ideal and the farmer cultivates all sorts of stuff for shipment, except the shipping crates; where they tell us in their folder which they send us here, in luscious limpid language it is summer all the year—in Florida, take notice, they have had a killing frost and they're sending forth the tidings that their eating truck is lost.

"Perhaps they're talking truthful, but in rising times like these they can raise some other products than the kind they raise on trees, and without their affidavits we are certain to believe that the stories they are telling are intended to deceive.

"Or, if their tales are truthful and the growing things are killed and we get their testimony in the way what's left is billed, we shall know by that for certain that they've subsidized Jack Frost to join with them agin us to jack up the living cost. It may be we're mistaken, thus far we do not know; but watch, please, which direction that later prices go."—Was the opinion of W. J. Lampton, a writer on the editorial page of the New York Herald, February 13.

Under the caption "A Floridian retort," printed in the New York Herald of February 20, Mrs. Fannie M. Parker, wife of Dr. A. D. Parker, 22 East Monroe Street, has the following to say:

"Oh, yes, Mr. Lampton, 'we have had a killing frost,' but not all of our vegetables or citric fruit was lost. The prices may go higher than they have been before, but you'll at least admit that we don't blame it on the war. For some time past we've paid your price on beans and cheese and meat, as it is very necessary to have these things to eat. Of course we grumbled sometimes, and expect the same of you, when you pay for one pineapple what you used to pay for two. We did not raise these prices until we got a tip from Mr. Johnny Frost on his most recent trip. He whispered as he took a bite of alligator pear, 'I'm here to teach a lesson, friends—wake up and get your share!' It really was most generous in you to send him here. So do not criticize us if we hold our produce dear. We are very much obliged to him for opening up a way to bring our shekels home again, the ones we had to pay. So if we've raised our prices, didn't 'you all' do the same? We've some excuse, you hadn't, and we beat you at your game."

Speech of Mr. George M. Clark.

EXTENSION OF REMARKS
OF
HON. J. M. C. SMITH,
OF MICHIGAN,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, February 24, 1917.

Mr. SMITH of Michigan. Mr. Speaker, under leave granted me to extend my remarks in the RECORD I wish to incorporate a part of the splendid speech of Mr. George H. Clark, temporary chairman of the Republican State convention of Michigan, held at Detroit on the 20th day of February, 1917, as it appeared in the Detroit Free Press the next day. In comparing the national parties, Mr. Clark spoke in part as follows:

COMPARES NATIONAL PARTIES.

Nationally the party has much responsibility even when we are defeated and out of power. It must be remembered that the Republican Party is a party of progress, a party of achievement, and its appeal has been to men of that spirit. Our platforms have made common use of the words "We favor," "We propose," "We support," while the other party may have by long use the exclusive right to such words as "We oppose," "We deplore," "We condemn." By an adroit opposition or by our own folly our party must not be made a party of obstruction. We must not employ indiscriminate criticism and complaint. We must not desert principle for seeming expedience.

Fidelity to Republican principles alone will retain the continued support of Republicans and assure our ultimate success.

Can the American laborer maintain his high standard of living in open and free competition with the cheap labor of Europe and Asia? He can not. As water seeks a common level, mankind tends toward a common equality. Under normal conditions when this truth shall be borne home by the business disaster that has always attended a free-trade law Americans will turn to the "Grand Old Party," as they did in the days of William McKinley, and our vindication and victory will be certain and complete.

Gentlemen of the convention, there is something that we prize beyond loyalty to party beyond our desire for power and even beyond our faith as Republicans, and that is our country, the United States of America. First and above all else we are Americans. In this time of national peril party difference will be forgotten. In this hour of national distress our watchword will be "America first." The party of Lincoln, the party of Grant, the party of McKinley will not be un-American. It will not give aid and comfort to our enemies. It favors peace; but in the name of peace it will not advocate treason and dishonor. By strife or criticism it will not add to the burdens of those in authority. It will be true, loyal, patriotic, and dependable.

The convention also adopted the following patriotic resolution to stand by the President:

We approve of the declaration of our temporary chairman that the Republican Party is not an organization of obstruction nor of opposition. In all the line of its history it has affirmed and enacted and accomplished. At this time of national stress and of deepest concern we are not less persuaded than on any former day in the value of Republican policy and of our party's principles. But we recognize also the higher call of country and the larger demand for unity in purpose and in expression on the part of all our people. We therefore pledge to the President of the United States and to its Congress prompt and loyal acceptance of every national mandate intended to establish the rights of our people and the position of our country. There will be no wavering or hesitation on the part of the men of to-day who have upon their lips the names of Lincoln and Grant and Garfield and McKinley as interpreters of American obligation and American duty in responding to the wishes of our Nation's rulers and in upholding their decrees and their desires before the nations of the world.

H. R. 20573—The Revenue Bill.

EXTENSION OF REMARKS
OF
HON. HENRY W. WATSON,
OF PENNSYLVANIA.

Tuesday, February 30, 1917.

Mr. WATSON of Pennsylvania. Mr. Speaker, the daily statement of the United States Treasury does not convey to the untutored public a clear understanding of the country's finances, as the system of bookkeeping adopted by the department since October 1, 1915, is quite different from the rules prescribed by the Comptroller of the Currency for national banks and those observed by commercial institutions.

March 4, 1913, when the Democratic administration assumed control of the Treasury of the United States, there was an actual cash balance of $126,664,000, as I have heretofore stated, over and above all liabilities of the Government, and by September 30, 1915, this balance had dwindled to $40,898,894.97, thus in two years and a half over two-thirds of the sum left in the Treasury by the Republican administration had been drawn to meet the current expenses of the Government, demonstrating very clearly that the taxes collected under the Democratic revenue bill were not sufficient to pay the Nation's obligations.

The statement of September 30, 1915, we find, included in the liabilities of the Government the following:

To the credit of disbursing officers	$60,409,181.11
Treasurer's checks outstanding	4,863,924.24
To redeem national-bank notes	23,096,069.50
Total	88,369,174.85

The succeeding day, when the new system of bookkeeping was inaugurated, the statement defined a net balance of $126,741,279.21, although not one dollar had been visibly added to the Treasury account except the liabilities as above stated.

I have tabulated the receipts and disbursements of the Government for the years 1914, 1915, and 1916, the first three years of the present administration, which are as follows:

Statement of receipts and disbursements fiscal years 1914 to 1916, inclusive.

Receipts.	1914	1915	1916
Ordinary receipts:			
Customs	$292,320,014.51	$209,786,672.21	$213,185,845.63
Internal revenue—			
Ordinary	308,659,732.56	283,398,760.85	303,486,474.04
Emergency revenue		52,069,126.29	84,278,302.13
Corporation excise tax	10,671,077.22		
Corporation income tax	32,456,662.67	39,155,596.77	56,993,657.98
Individual income tax	28,253,534.85	41,046,162.09	67,943,594.63
Total internal revenue	380,041,007.30	415,669,646.00	512,702,028.78
Sales of public lands	2,571,774.77	2,167,136.47	1,887,661.80
Miscellaneous	50,740,370.13	64,860,990.44	51,889,016.23
Total ordinary receipts.	734,673,166.71	692,484,445.12	779,664,552.49
Panama Canal receipts: From tolls, etc		4,130,215.15	2,869,995.28
Public debt receipts:			
Deposits for postal savings bonds	3,118,940.00	633,540.00	1,803,500.00
Deposits to retire national-bank notes	19,902,282.50	21,553,415.00	56,648,902.50
Total public debt receipts	23,021,222.50	22,486,955.00	58,452,402.50
Total receipts, exclusive of postal	757,694,389.21	719,101,615.27	840,986,950.27
Postal revenues, under control of Postmaster General	287,934,565.67	287,248,165.27	312,057,688.83
Total receipts, including postal	1,045,628,954.88	1,006,349,780.54	1,153,044,639.10
DISBURSEMENTS.			
Ordinary disbursements	700,254,489.71	730,103,591.80	724,492,998.90
Panama Canal disbursements	34,826,941.76	29,187,042.22	17,503,728.07
Public debt disbursements:			
National-bank notes retired	$26,852,200.00	$17,205,958.00	$24,633,010.50
Miscellaneous redemptions	109,127.00	47,533.00	35,903.00
Total public debt disbursements	26,961,327.00	17,253,491.00	24,668,913.50
Total disbursements exclusive of postal	762,042,758.47	776,544,125.02	766,665,640.47
Postal service disbursements from postal revenues under control of Postmaster General	283,558,102.62	[1] [2] 287,248,165.27	[1] 306,228,452.76
Total disbursements, including postal	1,045,600,861.09	1,063,792,290.29	1,072,894,093.23

[1] Exclusive of grants from the Treasury for deficiencies in postal revenues, included in ordinary disbursements, as follows: For 1915, $6,636,592.60 and for 1916, $5,500,000.
[2] An additional sum of $4,696,716.37 was paid in 1915 by the Post Office Department from postal balances of prior years.
The Postmaster General deposited in the Treasury on account of surplus revenues of the Post Office Department, as follows:
In the year 1914, $3,800,000 for 1913.
In the year 1915, $3,500,000 for 1914.
In the year 1917, $5,200,000 for 1916.

The statement shows a deficit in each of the above periods, except in 1916, when an apparent net balance of $81,000,000 was indicated. The administration approved of another method of bookkeeping, which went into effect October 1, 1915, and developed the above figures. A person unfamiliar with this new and expansive rule of the Secretary of the Treasury would be very easily misguided and suppose the money that had been appropriated to the credit of disbursing officers, checks that had been drawn but not returned, and cash available for redeeming national-bank notes were all to be considered as available assets in the Treasury.

I believe that the financial statement of the people's moneys should be clear and explicit for all to understand, without being obliged to refer to footnotes for explanations that the net balance, as stated, is not correct.

The statement for Monday, January 29, 1917, indicated that there was a net balance of $93,156,307.58, but upon careful examination I find that there was actually a deficit of $38,204,833.41. The above balance includes $75,594,526.81 to the credit of disbursing officers and $4,665,383.18 of Treasurer's checks outstanding. It is proper that these checks should be deducted from the balance, although the warrants had not been returned. Deducting these two items reduces the balance for January 29, 1917, to $12,896,397.59. Included also in this balance is the amount on deposit in the Treasury for the redemption of national-bank notes, which at the close of business on January 29, 1917, amounted to $51,101,231, and deducting this amount leaves an actual deficit of $38,204,833.11, as above set forth. The very grave questions of a public debt and excessive taxation are now confronting us. The Democratic Party is responsible for these conditions, and if they continue their policies during the remaining years they are in power the Government must issue many millions of bonds to pay for the extravagance and incompetency of the present administration, and half a century will pass before these debts are canceled and the heavy load of taxation is lifted from the shoulders of the American people.

During the year ending December 31, 1916, the total value of all merchandise imported for consumption into the United States amounted to $2,391,716,000. The Payne tariff yielded an average ad valorem rate of duty of 19½ per cent, whereas the present Underwood tariff law yields an average ad valorem rate of duty of but 9$\frac{1}{10}$ per cent. Had the Payne law been in effect during 1916 there would have been collected on the above imports approximately $468,000,000, over $250,000,000 more than the Underwood tariff provided.

Our Fighting Editors.

EXTENSION OF REMARKS
OF
HON. J. HAMPTON MOORE,
OF PENNSYLVANIA,
IN THE HOUSE OF REPRESENTATIVES,
Friday, February 23, 1917.

Mr. MOORE of Pennsylvania. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD by inserting a short editorial from the Washington Post of this morning advising the people to go slow on war; also one from the Akron Beacon-Journal, of Ohio, which suggests the mobilization of the editors of the country for fighting purposes. [Laughter.]

The SPEAKER. Is there objection? [After a pause.] The Chair hears none.

The editorials are as follows:

[From the Washington Post.]

PRELIMINARY TO WAR.

The newspapers that are nagging President Wilson because he does not arm merchant vessels, furnish them with convoys, and forthwith ask for a declaration of war against Germany are doing him and the country poor service.

If there is to be war, there need be no hurry in getting into it. There is plenty to do beforehand, and no doubt the war will last long enough to satisfy the most enthusiastic bellicist.

Presumably the President is taking the steps that are obviously suggested by the threatening situation. The fleet must be placed where it will be safe against submarine attacks. No one knows where German submarines may be. The spreading of nets at the principal harbors is an indication that the Government is active in defense measures. The President would be foolish, indeed, to precipitate a crisis while the fleet was exposed to submarine attack and before measures had been taken to rescue Americans in Turkey and elsewhere who would be exposed to deadly danger in case of war.

The country can well afford to curb its indignation so long as Germany does not hasten a crisis by destroying American lives and ships. The time is not wasted. Necessarily the President can not take the country into his confidence in regard to precautionary steps he may be taking. It is well to recall the period before the Spanish-American War, when President McKinley was criticized for his apparent inaction. He was actually making vital preparations. He expended a great many millions before Congress appropriated the $50,000,000 which was supposed to have been expended afterwards. He did this after consulting Senators and Representatives and showing them the necessity of celerity and secrecy in taking certain precautions and obtaining from them the assurance that any expenditures he might make would be approved by Congress. The same situation may exist now, for all that the public knows.

When Germany destroys an American ship or American lives the crisis will be at hand. The President will not ask Congress to declare that a state of war exists, but his request for authority to use force to defend American life and property will be equivalent to beginning a state of war. Whatever pacifists may say now in Congress, there will be few legislators who will dare to brave the wrath of the people by voting against the measure designed to enforce American rights.

Every day of delay before the inevitable break with Germany is of value in making preparation for war. The country can well afford to be patient.

[From the Akron Beacon-Journal.]

MOBILIZE THE EDITORS.

The Beacon-Journal a few days ago published an editorial which expressed a regret that the great papers of the country had ceased to lead sane thought in the country, but on the contrary are doing their best to force us into war by publishing sensational stuff that is not wise and making biased, radical, and often wholly untrue comment often upon situations that have no existence except in their bellicose brains. Forthwith we were assailed as a strange and spiritless creature, without patriotism, that wanted peace at any price. Of course that argument can not be answered and we were about to admit that probably we are wrong, join the war party, and petition Congress to pass a bill

to conscript all editors and send them to the front with the first fighting contingent when we ran across the speech of Senator STONE on this very subject. Here is the account of it:

"The Senate turned its attention to the international crisis again to-day, a debate on the administration bill to curtail activities of foreign agents developing many references to the situation with Germany and drawing from Chairman STONE of the Foreign Relations Committee a bitter denunciation of newspapers which circulate false statements in order to create a sentiment for war.

"'There is no shadow of doubt in the mind of any fair-thinking man,' said Senator STONE, 'that there is a cabal of great newspapers in this country seeking to create sentiment and coerce the Government of the United States into an attitude of hostility with one of the belligerent powers. I believe anyone who makes such false statements is a public enemy and that he should be punished.'

"The Foreign Relations chairman made this statement in discussing a section of the bill which would make it a crime to willfully or knowingly not under oath make an untrue statement intended to influence the measures or conduct of a foreign Government in relation to any dispute or controversy with the United States.

"He argued that the same punishment should apply to any person, including editors or publishers, who knowingly or willfully made such statements not under oath."

Now, STONE seems to be also a poor, spiritless creature that wants peace at any price; but he is company anyway, and unless he puts on a red cap and jumps astride a cannon and yells, "On to Berlin!" we believe we will stick around our original opinion for a while. The trouble with our great editors is very much like that of the Second Congress, under the Jefferson administration, as described by John Randolph. Mr. Beecher, of Ohio, was trying to shut off debate on an administration measure while Randolph had the floor, and every minute or so he yelled, "Question!" With withering contempt Randolph turned upon him and said: "Mr. Speaker, in Holland they make a cheap and ingenious toy out of a little wood and leather that upon being pressed cries out 'Cuckoo!' 'Cuckoo!' The people of Ohio, with not nearly as good material, have made a cheaper toy that is not ingenious, which, when this House is trying to attend to business not wanted by the administration, continually interrupts it by crying 'Question!' 'Question!'" And so with our editorial cuckoos. When the aspirations in one's mind, the yearning in one's heart turn in loathing away from the ghastly horrors of war; when one believes that Jesus Christ was a safer guide than Bismarck; when one wants to believe that peace is a saner philosophy than that preached by Bernhardi; and when one suggests that we try to keep out of war so long as that course may be consistent with national honor, then these valorous gentlemen, as invincible in peace as some of them would be invisible in war, offend the ears of heaven by calling us poor, spiritless creatures, and a lot of polite names like cowards and poltroons who want peace at any price. We have long fought the new idea of giving the General Government unlimited powers. We have also been against conscription. But we are now for conscription if Congress will specifically provide to mobolize the editors and give them the first chance to defend the honor of the country. They might not be able to handle a musket, and no doubt they could carry a baseball bat with far more dignity than a sword, but what a power of strength they would lend to the poisoned-gas division.

Mr. MOORE of Pennsylvania. Mr. Speaker, as the Washington Post presented strong editorial views opposing Great Britain's war tactics during January, 1916, and was equally strong for war with Germany in February, 1917, it is good to have it now advise those newspapers that have been "nagging the President" for "a declaration of war" to let the President alone. The Post is an influential newspaper, and its suggestion that "the people can well afford to be patient" before plunging the country into war is significant.

As to the Akron Beacon-Journal, it seems to be incorrigible. The suggestion that any of the "great editors" would have time to leave their sanctums for the battle field in Europe is untenable.

If they placed themselves under military discipline how could they continue to direct Congress and the President?

Query: If an editorial writer on an American newspaper owes allegiance to some other country than the United States could he be expected to fight for the United States?

American editors who are free from "entangling alliances" will please copy.

Revenue Bill—Oleomargarine Tax.

EXTENSION OF REMARKS

OF

HON. EDWARD E. BROWNE,

OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, February 24, 1917.

Mr. BROWNE. Mr. Speaker, as one of the Representatives of Wisconsin, a State whose dairy industry surpasses that of any other State in the Union, I wish to oppose the Underwood amendment to the revenue bill, H. R. 20573.

In my speech in opposition to this amendment delivered before this House on Thursday I said that I believed that the legislation proposed in this amendment would be destructive of the great dairy industry, an industry in which four and one-half million farmers in this country are engaged, an industry that produces each year a billion dollars in national wealth.

The more I study this amendment the more thoroughly am I convinced of its harmful effects to the dairy interests of the country.

Proposed legislation similar to that in the Underwood amendment has been introduced in every Congress for a number of years. After having public hearings upon such proposed legislation and upon due consideration of the committees in Congress such legislation has been considered mischievous and ill advised, and has consequently not been enacted into law.

The great Meat Trust, packing factories, and cottonseed oil manufacturers have not been discouraged by their many defeats, and their organs, some of which bear the name of "pure-food journals," have been active in trying to create public sentiment in favor of oleomargarine and this Underwood amendment.

This seems to be an opportune time to get the legislation they have desired for so many years and have been heretofore unable to obtain.

The attention of the people of the United States and Congress is fixed upon preparedness.

Our relations with Germany have been severed and the United States is confronted with a crisis greater than at any time in its history since the days of the Civil War.

A great revenue bill which proposes to raise over $400,000,000 passed the House of Representatives, and while in the Senate committee this bill is amended so as to reduce the 10-cent tax on colored oleomargarine to 2 cents.

The purpose of this amendment is expressed in the title, to wit, "To provide increased revenue to defray expenses of the increased appropriations for the Army and Navy and the extension of fortifications, and for other purposes." A fitting title for this amendment would be "An amendment to destroy the great dairy industry of this country in the interests of the Meat Trust, oleomargarine and cottonseed-oil interests."

UNTIMELY LEGISLATION.

It does not seem like the proper time, with only another week before Congress is compelled to adjourn, with the rush and confusion in legislation which always attends the closing days of Congress, to legislate on a matter so vitally affecting the agricultural interests of the United States without having such legislation thoroughly considered by the Agricultural Committees of each House.

COLORING WILL INCREASE THE PRICE OF OLEOMARGARINE.

For every million dollars of revenue received under this amendment $10,000,000 would be taken by the oleomargarine interests, the Beef Trust, above a legitimate profit from the people who use oleomargarine.

Congress placed the tax on oleomargarine to protect the consuming public from fraud and deception in the purchase of butter. The present law of the United States places a tax of 10 cents a pound on oleomargarine when it is colored to imitate butter. It is taxed only one-fourth of a cent a pound when it is put up and sold in its natural color.

This one-fourth of a cent a pound tax was placed on oleomargarine so as to bring it under the Internal Revenue Department, as this department of the Federal Government has police facilities for enforcing the law and protecting the public against fraud.

OLEOMARGARINE.

The question is asked often "What is oleomargarine"? I once asked this question of Mr. J. Q. Emory, a great chemist, who was dairy and food commissioner of Wisconsin, a man who has done as much as anyone in the United States to enforce the pure-food laws and protect the people from impure foods, and who is known throughout the United States as a chemist and food expert, and he informed me that as many chemical analyses would be required to answer that question as there are multitudinous articles that can legally enter into the manufacture of oleomargarine, and he referred me to section 2 of the present oleomargarine law, which states the articles that legitimately can be entered into the composition of oleomargarine. The statute reads as follows:

All substances heretofore known as oleomargarine, oleo, oleomargarine oil, butterine, lardine, suine, and neutral; all mixtures and compounds of oleomargarine, oleo, oleomargarine oil, butterine, lardine, suine, and neutral; all lard extracts and tallow extracts; and all mixtures and compounds of tallow, beef fat, suet, lard, lard oil, vegetable oil, annotto, and other coloring matter, intestinal fat, and offal fat.

From this it is apparent that no chemical analysis can reveal the constituents of the various articles offered to the public as oleomargarine, unless an analysis is made of every single output of every factory manufacturing oleomargarine.

Now, I do not propose to discuss the question of whether oleomargarine is wholesome or not. I desire to direct my argument to the question of the fraud connected with its manufacture and sale as an imitation of a genuine article.

HISTORY OF "OLEO."

Oleomargarine originated in France during the Franco-Prussian War. France has twice had to amend its laws to protect the public from fraud in the sale of oleomargarine.

Germany, France, and Belgium require oleomargarine to be sold in separate stores.

Germany and France prohibited the coloring of the product in imitation of butter.

Every country where oleomargarine is sold or manufactured has certain restrictive measures controlling its sale and manufacture.

Denmark, a great dairy country, prohibits the coloring of oleomargarine in imitation of butter and compels it to be sold in oblong packages to distinguish it from butter.

I am opposed to oleomargarine masquerading and pretending to be butter, and the fact that the manufacturers of oleomargarine desire to color it and make it look as nearly as possible like butter, and place upon it such marks as "Butterine," "Jersey brand," "Holstein brand," "Guernsey brand," "Cottage Dairy," and other such names, implying that it is made from milk, stamp with fraud the entire oleomargarine business.

PRESENT LAW REGARDING OLEOMARGARINE NOT STRICT ENOUGH.

The present law permits oleomargarine manufacturers to use the cheaper fats, such as intestinal fats and vegetable oil, and does not limit the amount of water that may be incorporated in oleomargarine, and also allows them to use names indicating that it is made from milk and cream.

On the other hand, if a dairyman by mistake sells butter that contains more than 16 per cent moisture, he is required to pay a tax of 10 cents a pound and a license of $600 a year, and to brand it "Adulterated butter."

A creamery in my congressional district that produces a high grade of butter had some of its butter condemned in this way by the United States Government because it had a small amount of moisture in excess of that specified in the law, and was fined $900, when it had the requisite amount of butter fat, no adulteration, but the butter maker accidentally allowed more moisture than the Government allows.

What good reason is there to discriminate against a genuine article in favor of an imitation? And yet the present United States law governing oleomargarine allows the oleomargarine manufacturer to color his product so it resembles butter, place upon it "Jersey brand," leave as much moisture in it as he desires, and allows him to put intestinal fat and vegetable oil in its composition, and place it upon the market, when it compels a dairyman to stamp upon his genuine product the label "Adulterated butter" if by chance it contains a small per cent more of moisture than the internal-revenue agent recognizes as legitimate.

TAXING OLEOMARGARINE.

We hear a great many arguments advanced that by taxing oleomargarine we are taxing the poor consumer. They say, "Why tax a thousand families that one dairy farmer may make money?" Let us see whether that argument is sound.

In the first place, as I have stated, we only tax oleomargarine one-fourth of a cent a pound when it is put up and sold in its natural color; and this tax, as I have stated, is only placed on oleomargarine to bring it under the Internal-Revenue Department, as this department of the Federal Government has police facilities for enforcing the law and protecting the public against fraud.

Thus there is practically no tax on oleomargarine, unless the manufacturers desire to color it and have it pass as butter.

There was manufactured, according to the report of the Commissioner of Internal Revenue, during the last year 145,760,973 pounds of uncolored oleomargarine, which paid a tax of only one-fourth of a cent a pound. Of this enormous amount of oleomargarine produced only 3,403,287 pounds were taxed at 10 cents a pound, or a little less than 2¼ per cent of the total manufacture.

UNDERWOOD AMENDMENT AS A TAX MEASURE.

The Underwood amendment would increase the tax from one-fourth of a cent to 2 cents per pound on the 145,760,973 pounds, and would reduce the tax 8 cents a pound on only 3,403,287 pounds of the colored oleomargarine, which pays the 10-cent tax. This is an increase to the consumer on the uncolored product of $2,550,817.03 annually in taxes alone, provided the output remains the same. Thus the people who are eating the uncolored oleomargarine and buying it as oleomargarine, who are the people who feel they can not afford butter, would be paying over $2,500,000 annually if this proposed amendment becomes a law.

Thus the poor consumer would pay more than he does at the present time, and the only ones profiting would be the oleomargarine factories, the packing houses, and the cottonseed-oil people.

WHAT THIS AMENDMENT WOULD ACCOMPLISH.

The only purpose of coloring oleomargarine is to deceive the public and make them think they are eating butter, and thus raise the price of oleomargarine.

To-day dairy butter sells at the creamery at 45 cents a pound and oleomargarine without color at 20 cents a pound and with color 32 to 35 cents per pound. Remove the restriction upon color and the difference in the price of genuine butter and imitation butter would disappear, because no one would know when they were buying or eating pure butter. It would bring up the price of oleomargarine and lower the price of butter. The poor consumer that can now buy his uncolored oleomargarine for 20 cents a pound would get the same product with a little coloring in it and have to pay from 30 to 35 cents per pound. The article would be no better than he is getting at the present time.

WHAT EFFECT WOULD THIS HAVE ON THE FARMER?

The dairy farmers of the country, as I have stated, are adding around a billion dollars in wealth to the country each year. By raising stock they are keeping up the fertility of their land and making it more productive for their crops.

Dairying is a basic fundamental industry; butter is only one of its products.

To strike a blow at our great dairy industry in this country, such as I believe this legislation will do, would injure every agriculturist, whether he is engaged in dairying or any other industry, and would help no one except the cottonseed-oil interests and the packers' trust.

President Cleveland, in a message to Congress concerning the proposed tax of 10 cents per pound on oleomargarine, said:

I am convinced that the taxes which it creates can not possibly destroy the open and legitimate manufacture and sale of the thing on which it is levied. If the article has the merit which its friends claim for it, and if the people of the land, with full knowledge of its character, desire to purchase and use it, the taxes exacted by this bill will permit a fair profit to both manufacturer and dealer. If the profits of its manufacture and sale depend upon disposing of it to the people for something which it deceitfully imitates, the entire enterprise is a fraud and not an industry.

WOULD OVERRIDE STATE LAWS.

Wisconsin's strong protective laws (sec. 4607c, Revised Statutes of Wisconsin) prevents the sale of colored oleomargarine. This and the other provisions in the law have been contested in the highest courts by the oleomargarine people, and our State laws have been sustained.

Meyer against State (134 Wis., 156) is the leading case on the subject.

DANGER TO STATE LAWS.

The second section of the Underwood amendment, known as No. 501, which provides that "manufacturers' original packages shall not be broken, and shall have the revenue stamp thereon," if enacted into law, in my opinion would allow these packages to go into any State in the Union and be sold by retail dealers in original packages in violation of any State law.

BUTTER OF GREAT FOOD VALUE.

We hear some complaint about the price of butter being higher than it should be. The food value of butter is greater than the food value of most any food that can be obtained for the same money.

Until recent years butter sold for much less than its food value warranted, sometimes below the real cost of production.

With increased land values, increased labor, and increased price of dairy cows, and the cost of employing skilled butter makers, the farmer is making no more than a legitimate profit on his dairy products, and the purchasers of milk, butter, and cheese are getting value received.

Prof. F. B. Osborne, of the Connecticut Experiment Station; Dr. Mendel, of Yale University; and Prof. E. B. McCollum, of the University of Wisconsin, have made experiments which prove beyond any doubt that butter fat not only yields energy and heat, as do other fats, but that in addition it contains other elements more vital than other fats which supply growth and life itself.

SUCCESSFUL EXPERIMENTS.

The experiments of these disinterested scientists in the employment of the State demonstrated that young animals when fed on mixtures composed of chemically pure protein, starch, fat, sugar, and various salts thrived for a short time, then they lost appetite and fell off in growth, and finally became sickly, and in some cases died.

When milk was added to the ration, the animal that was sickly immediately began to recuperate and regained its normal condition and grew and thrived.

It has been demonstrated beyond fair controversy that butter fat supplies something necessary for growth, which lard and other fats and oils can not supply.

Hoard's Dairyman gives an account of two instances in which two public institutions had, in the interest of economy, substituted oleomargarine for butter in the diet of the inmates. It was noticed that when oleomargarine was used the inmates were not in as good physical condition and required a physician's services much more frequently than before. When the oleomargarine was replaced by butter it was reported that the health of the inmates was materially improved.

Thus it is scientifically established that fats obtained from the living protoplasm of the animal have the property of inducing growth after growth has ceased, a quality that in other fats is lacking.

COST OF OLEOMARGARINE.

Oleomargarine can be manufactured according to the most competent experts for from 8 to 12 cents per pound. I herewith attach a formula for the cost of low-grade oleomargarine, which is a little less than 8 cents per pound.

Formula for and cost of low-grade oleomargarine.

Material and quantities.	Cost per pound.	Total cost.
350 pounds No. 2 oleo oil	$0.08	$28.00
250 pounds cottonseed oil	.04	10.00
450 pounds neutral lard	.08125	36.54
60 gallons 2½ per cent milk	[1].12	7.20
Labor and package		12.00
Salt and color		1.00
Total		94.74

[1] Per gallon.

This formula will yield 1,200 pounds of oleomargarine. Therefore, the cost of producing and packing for shipment will be $0.0789 per pound.

It will be seen from the cost of production that if oleomargarine was allowed to be colored in imitation of butter and only taxed 2 cents a pound the days of the dairy farmer would be numbered.

The manufacturers of oleomargarine admit that it will bring down the price of butter 50 per cent, but say the farmer can sell his milk to the condensed-milk factories.

[See letter from Johnson Soap Co. inserted in RECORD by Mr. BROWNE, February 22, p. 3954.]

ALL FOOD PRODUCTS SHOULD BE TRUE TO NAME.

Under our pure-food laws we have prevented manufacturers from labeling foods untrue to name.

Before the enactment of our pure-food laws people did not know what they were eating. I remember seeing in the city of Chicago, a few years ago, printed on the side of a large brick building the letters "Pure Vermont Maple Sirup." The pure-food commissioner analyzed this product and found that there was no maple sugar in it, that it was not even remotely connected with the product of the maple tree or even the State of Vermont. Down came the sign, and in place of it was another sign, reading "Karo, the best sirup in the world."

FARMERS ONLY ASK WHAT IS JUST.

The farmer asks only what has been conceded to every other producer of any food product, to wit, that his genuine article, butter, be protected from an imitation article that can be produced very much cheaper and of inferior nutritive value.

CONSUMER.

The millions of people who are consumers of butter are also deeply interested in being able to know with a certainty that the product they use, both in their homes and where they take their meals, is the real, genuine dairy product, and not the product of the cottonseed-oil factory or the product of the slaughter-house.

VERY LITTLE IMPURE BUTTER.

The same interests that are seeking this legislation are extensively circulating literature attacking the purity of butter.

Why do they wish to color their oleomargarine in imitation of butter and place upon the package "Jersey or Guernsey Brand," if butter is so impure?

There is very little impure butter. The great dairy States, like Wisconsin, New York, and Minnesota, have the most stringent inspection of dairies and creameries and dairy herds. Inspectors visit every dairy barn, every place where cream or milk is separated or allowed to remain. They examine every separator that separates the cream from the milk, every dairy cow and every creamery in Wisconsin under the laws of that State, and a heavy penalty falls upon anyone that violates the law. Every butter maker must be qualified and have a license before he can operate a creamery. If anyone who has any question about the purity of butter or cheese or milk will look up the dairy and pure-food laws of the dairy States, they will be satisfied that no purer or more wholesome food products are placed on the market than butter, cheese, and milk. In Wisconsin, the leader of all the States in the value of its dairy products, that annually produces one-half the cheese and one-sixth of the butter produced in the United States, the statutes regu- and the inspection of dairy barns and dairy herds are section 4601e to section 4607d, inclusive, Revised Statutes of Wisconsin. Upon application to the dairy and food commissioner of that State these laws will be gladly sent.

I have received letters from the National Grange and Society of Equity and other organizations composed of farmers opposing this amendment.

I offer in the RECORD a telegram received from the Society of Equity, that has its offices in my district:

WAUSAU, WIS., *February 21, 1917.*

Congressman E. E. BROWNE,
437 House Office Building, Washington, D. C.:

Representing 50,000 farmers in dairy districts, I earnestly protest against tax reduction on oleomargarine.

J. W. LONG,
National Secretary-Treasurer American Society of Equity.

Rural Sanitation.

EXTENSION OF REMARKS

OF

HON. LADISLAS LAZARO,

OF LOUISIANA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, February 24, 1917.

Mr. LAZARO. Mr. Speaker, I am glad the sundry civil bill carries an increase in the appropriation for rural sanitation.

The careful student of sanitary progress in the United States to-day is early impressed with the difference between sanitary conditions in the country districts and those in the cities. Recent years have witnessed great progress in the cities. Effective health departments have been organized, and the effect of measures, such as the supervision of water and milk supplies, the visiting nurse, and the tuberculosis dispensary, medical inspection of schools, and the control of contagious diseases, has been so pronounced as to place their work on a firm foundation. While much remains to be done in the cities, the foundations have been laid and the methods of work standardized. The solution of many of the problems of municipal sanitation are taking place every day.

While these facts are true of the cities, conditions have not been so much improved in the country. While the country districts have made a great deal of progress during recent years, we still lack the organization and cooperation we should have. In only a few States is there real health supervision of the rural communities. The great contributions of modern science to the prevention of disease are for the most part lost to the people of the country by the lack of organization and cooperation. There are, of course, exceptions to this statement.

The reasons for this contrast, in the main, is perfectly obvious. There is in the first place a greater survival of the individualistic idea of life in the country than in the city. Government touches the life of the individual in the country to a limited degree only. His personal liberty, so called, is seldom interfered with. In the city the communal idea prevails. The Government interferes to a greater degree with the citizen. In the second place the very isolation of the country makes it more difficult to educate the people in the importance of health measures. In the third place the difference between country and city is due to the fact that health measures are more obviously necessary in the city where people are crowded than in the country. In other words, where we are separated from contagious diseases only by the thin wall of an apartment house, we feel the necessity for and yield more readily to preventive measures.

The explanation for this contrast, however, is not its justification. The country, no less than the city, needs education in health matters. The bearing of rural sanitation on the health of our cities is a good reason why we should devote special attention to the health of the people in the country. The health of the city depends in a very large measure on the health of the country. We know that practically all the food

products of the city come from the country districts. A single case of typhoid fever on a dairy farm may, if neglected, infect a whole town or city. Then, again, there is a great need for better rural sanitation, because of the more or less general residence of city people in the country during vacation time. If, therefore, the health of the people of the cities is to be improved, the health of the people of the country must be bettered. And if we are ever to stamp out disease, it must be by a general attack in both the city and the country.

In addition to the need for such work, conditions in the country offer to the sanitarian the attraction of almost unparalleled opportunities for research work in the transmission of disease. To trace the means of dissemination of typhoid germs in a city, with its many sources of food supply, with the daily contact between so many people, and with the constant temptation to attribute the disease to the water supply, is surrounded with so many difficulties as to make it almost hopeless.

In the country and the small towns conditions are very different. Given a country district free from typhoid for several years, the first case is easily discovered and the transmission of the disease may often be worked out with accuracy.

Nor is typhoid the only disease which can be advantageously studied in the country. We have found the study of the transmission of smallpox easy. Diphtheria, studied case by case in the rural districts, should throw great and much needed light on the transmission of this disease. Malaria offers a large field in the study of its transmission and prevention.

The country districts, however, offer even greater possibilities in practical prevention than as a field for studies. With trained men, and an adequate system for collecting and studying statistics, preventive work in the country may be made to have the efficiency of a well-oiled machine.

If we are to study rural hygiene for its own importance, and if we must limit our study, we must begin our study on the farm. We should not, of course, omit the small towns as they offer problems intermediate between those of the country and those of the city.

The first question is that of education. At the outset it should be insisted on that such health education should be an education regarding established facts and not regarding individuals or experimental ideas. The physicians who are to educate the people in health matters and in the prevention of diseases should be especially trained and competent to do this work. By their influence the whole community becomes rapidly interested in the work; the worst cases are soon treated; and with the spread of the truth regarding the prevalence of the disease and methods of its spread comes the desire for better sanitary conditions.

As long as man was compelled to battle with hosts of enemies, the stings of whose shafts he could feel and whose ravages in his ranks he could realize, but of whose character and location he knew nothing, it was hard, dull, and uphill fight; but since the microscope and the science of bacteriology have driven away the surrounding mists and revealed the enemy in plain sight, so that to-day we know just what we have to battle against—the different germs which invade our bodies and cause different diseases—and their exact location, we are on better ground, better armed and prepared, not only to treat disease, but to prevent it as well. It is only with this knowledge that we can say hygiene is a science; that hygiene is the most neglected and most important of all the sciences. Who can deny its importance when we are told in words that are true, that its aim is to render growth more perfect, decay less rapid, life more vigorous and happy, and death more remote.

Knowing the remedy to be applied is not all, we must find a way to get the people to apply the remedy. In our country the sovereign people are the fountainhead of all authority, and to get the authority in the form of law and money, which is necessary in war against disease as well as war against our fellow men, it is absolutely necessary to go to the fountainhead. In other words, a public-health system, like any other arm of the government, must derive its power from where power exists—in a monarchy, from the king; in a democracy, from the people. Of course those who expect a sudden change will be disappointed; they will be like Pelias's daughters. An old fable tells us that Pelias's daughters, desiring to at once make their aged father young again, injected young blood in his vein; the result was, naturally, the old blood ran out and the young blood would not stay. So it is with the State; the new and better elements (ideas) must enter the system and gradually drive out the unwholesome particles (old ideas) slowly. The people must be educated up to the new forms, just as they were for centuries brought up to the old. It is contended by some that it is useless to try and convert old people to new ideas on the theory that an old dog can not be taught new tricks, and that we should go after the children. Oliver Wendell Holmes, however, when asked the question as to what age he considered best to begin the education of children, answered, "One hundred and twenty-five years before birth."

After the wisdom and good to be derived from education in sanitation is understood by the public they will demand that the work of preventing disease and preserving health be placed in the hands of sanitarians who will devote all of their time to the work and get their pay for services from the State. These sanitarians will work under the State and Federal authorities, each department within strict constitutional limits. Suppose each parish or county had a trained sanitarian with the authority of the State health department, in cooperation with the Federal Government, back of him, and whose permanent residence, office, and laboratory would be at the parish or county seat instead of on a passing train, and whose business it would be to educate the people in the prevention and checking of epidemics—why, the work of this department would return directly to the people even twenty times the amount in proportion to its cost that is returned by any other department of our Government. We protect our forests, waterways, fish, and game; we protect our cattle, hogs, and plants. Why not protect human life?

I repeat, however, our health laws must have their origin in the work of an enlightened public opinion, such as can be had only as a result of a campaign of education. Laws are a success or a failure in direct ratio to the extent to which they are backed by public sentiment. Think of the vast amount of work it will require to make some people understand the relation between individual liberty and public welfare—to make them understand that effective freedom is built up as much of limitations as of opportunities; that supervision over food and drugs, the enforcement of quarantine, the reporting of contagious diseases, and the keeping of vital statistics—which is really the bookkeeping of humanity—in fact, almost all measures for the public welfare which are bitterly decried in some quarters as infringement on the liberty of the individual, when in reality they are for the good and happiness of humanity. Confucius said, "Study the past if you would divine the future"; and this maxim applies with special force to our subject. The final triumph of scientific medicine will be the victories of preventive medicine. We know that the ancient physicians had a very small or no conception of prevention; their time, talents, and energies were given in devising ways of curing diseases; they were filled with the Shakespearean idea, "We can not hold mortality's strong hand," and were too willing to admit the pessimistic precept, "The lot of man—to suffer and die," of Pope. From the beginning of time the medical profession has always had the welfare and happiness of mankind at heart, but owing to a lack of knowledge concerning the real causes of disease very little could be expected in the way of prevention. It was bacteriology that explained the mystery and showed the way. The world is full of hero worship, and the ones who have slain the largest number on the field of battle and have won the greatest victories are the ones who are immortalized in the pages of history and whose statues fill public halls and public parks. The school child is familiarized with the lives and achievements of Cæsar, Hannibal, and Napoleon; but these heroes won their fame, their victories, and their glory by sacrificing thousands of lives and causing untold suffering and misery, and all for selfish ends. Peace has its heroes and victories as well as war. To my way of thinking three of the greatest heroes who ever lived were Pasteur, Lister, and Koch. Their names are eminently worthy of being placed in the world's hall of fame, for "great is the victory without bloodshed." These men had no selfish motives, no bright uniforms, no flags, no brass bands, nor cheering crowds—their victories were won at the bedside and in the silent laboratories, in bloodless battle with the most stubborn, most dangerous, and most bitter enemy of man—disease.

Think of the lives saved by vaccination from that loathsome and fatal disease, smallpox. We owe this boon to humanity to the immortal Jenner. Think of the Pasteur treatment for the prevention of hydrophobia and the consequent number of people saved from that horrible death! Think of wound infection; recall the fate of the wounded in the Civil War and the high death rate! How all of this has changed since the light of science has shed its bright rays on the bloody battle fields! We can truly assert that military surgery has reduced itself largely into prevention. In private practice the blessings of aseptic surgery are even greater. Think of the lives saved from that dreadful and fatal disease, puerperal fever; also from typhoid, lockjaw, cholera, and bubonic plague, yellow and malarial fevers. Think of the building of the gigantic Panama Canal, which has resulted in the wedding of the At-

lantic and Pacific. Without the intervention of sanitation the second attempt by Americans would have ended as disastrously as the first under the French. As this new waterway is being opened to commerce it is not the President, nor the United States Congress, nor the engineers, but Col. Gorgas who is entitled to the greeting "Hail to the chief who in triumph advances!" as without his wise and sanitary intervention the whole scheme would have remained an idle dream. This indeed was a beautiful and fitting illustration of the saying that in the ability to conquer environment lies civilized man's chief claim to superiority in the animal kingdom.

Let us hope that from now on there will be cooperation and coordination of all educational factors with the physicians and sanitarians in lifting the reproach of sanitary ignorance which stands as an obstacle to the fullest development of the unlimited and unrivaled resources of our country. It does not behoove us to soothe ourselves with self-praise because of what nature has done for us—we are entitled to no credit for our unexcelled climate, products, and resources. It is only the manner in which we are conserving and developing our resources and the degree of health and happiness and liberty we are giving our people that can confer distinction upon our citizenship, raise our standard, and fix our place in history.

Human life in its beginning, its duration, and its ending is the predominant consideration in all personal, social, State, and National problems. It is the most valuable asset of the individual and the State. The standard of a nation is finally to be measured by the standard of human lives. The man who, next to Pitt, was probably England's greatest premier, said:

> You can take the richest and most beautiful of kingdoms, cover it with temples and palaces, defend it with armies and navies of the most advanced type, do all things else to forward its interests and its glory, and despite all these things, if its people decline in stature and vigor, or its birth rate falls below its mortuary rate, that nation is doomed.

Hence the very highest obligation of statesmanship is public health.

The Present Crisis in Our International Affairs.

EXTENSION OF REMARKS

OF

HON. WARREN WORTH BAILEY,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, February 19, 1917.

Mr. BAILEY. Mr. Speaker, under the leave granted me, I desire to extend my remarks further by the printing of a few of the many telegrams, letters, newspaper notices, and resolutions which have reached me, bearing on the subject of the present crisis in our international affairs. They are fair samples of many others relating to the same great issue, but before laying these before the House, permit me to submit the result up to Monday morning, February 19, of the results of a postal-card referendum on the subject of war taken in my district, the nineteenth Pennsylvania:

Against entering the war and in favor of a national referendum	478
Against entering the war	318
Total	796
In favor of entering the war	80

The letters, resolutions, telegrams, and so forth, are appended:

[From the Johnstown (Pa.) Democrat.]

APPEAL ISSUED ON BEHALF OF MEETING TO SUPPORT PEACE—GATHERING AT MAJESTIC THEATER NEXT SUNDAY AFTERNOON WILL DISCUSS AVOIDANCE OF WAR.

Indications multiply that there will be a tremendous outpouring of the people of this city and vicinity at the Majestic Theater Sunday afternoon, when questions of grave moment will be discussed by able speakers. This outpouring will reflect the great wave sweeping this country now in favor of avoiding war with Germany or with any other country and of maintaining our ideals as a peace-loving people.

The men and women of Johnstown and vicinity are asked to assemble in mass meeting Sunday afternoon at 3 o'clock at the Majestic Theater. Purpose:

To encourage President Wilson and the Congress of the United States in their efforts to keep our country out of the European war.

1. By voicing our protest against the agitation by the metropolitan press and other powerful interests which would persuade our Government that war with Germany is inevitable.

2. By emphasizing the fact that our national honor, like our individual honor, can be sullied only by our own acts. That our national ideals, on which alone our honor as a Nation must rest, would be endangered by being drawn into the mighty struggle that is drenching Europe with human blood.

The Rev. J. N. Scholes, the Rev. R. D. Clare, the Rev. S. N. Carpenter, the Rev. David Berkey, the Rev. H. C. Michael, the Rev. A. K. Travis, the Rev. E. W. Rishel, the Rev. Stephen A. Ward, the Rev. Hyman Kaminsky, C. W. Gould, W. F. Patch, Fred Krebs, Thos. Barnes, P. S. Fisher, Henry W. Salus, M. J. Boyle, P. H. Mahaffey, H. S. Bender, J. R. Swope, John E. Gable, J. N. Adee, Geo. W. Swank, Curt Barnhart, John S. Gaffney, Albert J. Owen, W. F. Murdock, R. G. Rose, Joseph T. Kelly, Fred W. Church, B. Elkins Longwell, James E. Kress, Jas. A. Warren.

BLAIR COUNTY CENTRAL LABOR UNION,
Altoona, Pa., February 11, 1917.

Hon. W. W. BAILEY,
Washington, D. C.

DEAR SIR: The Blair County Central Labor Union by resolution declares for:

1. Abolition of secret diplomacy.
2. Reparation for damages only after war.
3. Asks Congress or the President to advise Americans not to travel in any war zone.
4. Referendum to determine war or peace.

Very truly, yours,

[SEAL.] C. L. BRUMBAUGH, *Secretary,*

ALTOONA, PA., *February 8, 1917.*

Hon. W. W. BAILEY,
Congress Hall, Washington, D. C.:

Expect you to do all you can to keep us out of war. Honor not at stake. We want peace.

GEORGE BREISACHER.

PRICE LEATHER CO.,
Boston, Mass., February 8, 1917.

Hon. WARREN WORTH BAILEY,
House of Representatives, Washington, D. C.

MY DEAR MR. BAILEY: I have a feeling that a letter of this kind to you will do more good than it would if I sent it to Mr. RICHARD OLNEY, 2d, who is the Congressman from my Massachusetts district, or to either Senators LODGE or WEEKS, from Massachusetts.

Be that as it may, I want to set forth my concern over the present situation and its possibilities with respect to the central powers and the allies.

Perhaps my position is best outlined by saying that I am almost wholly in accord with Mr. Bryan's proposal, and particularly that part in which he urges a referendum before any declaration of war is made. In this last connection, however, I think that the women of the country are as deeply, and perhaps more deeply, concerned than the men. Consequently, they should have an opportunity to express their opinion on this matter.

If you think it would be of the slightest importance for me to address other officials in Washington along these lines, I should be pleased to have you designate such individuals.

With best wishes and personal regards, I am,

Yours, fraternally, H. C. JOY.

WESTPHALIA, MO., *February 8, 1917.*

Hon. WARREN WORTH BAILEY,
Washington, D. C.

MOST ESTEEMED SIR: Keep up your good and noble work, such as the inclosed clipping shows. Your name shall go down in history. We, as true American citizens, appreciate kind work of your kind.

Many thanks.

Your servant, Dr. L. F. BIESMEYER.

PEACH BOTTOM, PA., *February 10, 1917.*

WARREN WORTH BAILEY,
House of Representatives, Washington, D. C.:

With consummate courage and skill you have so far in these trying circumstances kept us free from war and we are confident that you will continue to strive for peace with honor. We send you this telegram to let you know that the metropolitan press in urging immediate war is not representing the feelings of our people, who deplore the possibility of war at all, and certainly not until every peaceful alternative has been tried. Have sent a copy of this telegram to President Wilson.

OLIVER WILSON,
B. JOHN BLACK,
JOHN A. MCSPARRAN,
Legislative Committee National Grange.

JOHNSTOWN, PA., *February 12, 1917.*

Washington, D. C.:

Inasmuch as this Nation is at present in danger of being precipitated into war, we, as a Bible class of the First English Lutheran Church of Johnstown, wish to express our sincere approval of the conservatice course that you have pursued and hope that in the future the principles of the religion of Jesus Christ and the desire for the extension of the ideal of brotherhood of man may guide your thoughts and actions to the end that this country may take its place among the nations as the standard bearer of universal peace, liberty, and love.

METROPOLITAN BIBLE CLASS.

PITTSBURGH, PA., *February 9, 1917.*

HONORABLE SIR: This message relative to foreign relations voices the opinion of thousands of Pittsburghers as well as millions of Americans. First, let it be understood that we are every inch Americans, but we have studied the situation conscientiously without discrimination and give our objections to action already taken.

For the past two and one-half years England has ruled the seas, contrary to international law, interfering with our rights as well as all neutrals, in their commerce and mails and also in blacklisting them, and we have allowed (under protest) this interference for two and one-

half years and there does not exist any law or treaty allowing for such interference to be continued. We know that this interference has also worked to the disadvantage of the Central Powers and the question arises whether international laws changed to suit the purpose of England should take preference over a new law to suit the purposes of Germany, or whether relations should be broken off with England as well as with Germany.

In the spirit of fairness and conscious that we are right, if any international law is considered which is founded on real principle without prejudice, we protest most vigorously against any war under the present circumstances and we appeal for a measure warning Americans and American ships to stay out of the war zone.

Also that before any declaration of war is made over any issue, it should be referred first to the referendum vote of the people. We are very much aware that a strong press propaganda has for two and a half years endeavored to drag us into war and now it is rumored, and very possibly true, that strong financial interests are lending every effort to involve us. We protest most vigorously against this propaganda as being one of the most cowardly crimes in all history. Our conscience and our unbiased principles speak in these lines in the true spirit of undiluted Americanism without prejudice.

The majority of the American people will unquestionably appreciate your efforts to keep Americans out of the war zone, which will in turn keep America out of the war.

Sincerely, yours,

CHAS. S. SMITH.

—

COLONIAL PRINTING CO.,
Johnstown, Pa., February 8, 1917.

Hon. WARREN WORTH BAILEY,
Washington, D. C.

DEAR MR. BAILEY: Your letter of the 7th instant inquiring about the sentiment of the working people (of which I am one) came to me this morning.

I am glad to tell you that, as far as I can find out, the working people do not want any trouble, for God knows we have always to pay the price.

Personally, I can see no reason so far for our country taking up arms to fight with Germany.

I agree with you that there is a powerful force trying to push us into the present conflict. Men whose God is the god of gold and greed should not be allowed to dictate to the great big majority of common people.

I pray God that we will never be called into the present war, and I know that you and our dear President will do everything that can be done to keep our boys at home in peace; but if we are called to keep the enemy off our shore I assure you that the working class will do their duty now as they have always done in the past.

I hope Almighty God will give you strength and years to continue to fight the noble battle for the common people.

Truly, your friend,

CHAS. A. MCKEOWN.

—

BEAVER, PA., *February 9, 1917.*

Hon. WARREN WORTH BAILEY,
Washington, D. C.

* * * * * * *

Yours, truly,

CHARLES R. ECKERT.

—

BLAIR COUNTY CENTRAL LABOR UNION,
Altoona, Pa., February 11, 1917.

Hon. W. W. BAILEY, *Washington, D. C.*

MY DEAR MR. BAILEY: Yours regarding local sentiment to hand.

Permit me to state that opinion is practically unanimous among the workers and business and professional men against our participation in the war on any side.

There is no demand for war: there is a tremendous feeling against war.

There is a growing distrust of secret diplomacy, fearing its connection with commercial interests.

We are expecting to hear your voice against both and also against conscription, compulsory training, and all the hellish military enterprises.

Labor feels that once again in our beloved country capitalism is attempting, at a time when to protest is to have loyalty questioned and at a time when a great furor in favor of war is set by the press in the interest of special privilege, to destroy through legislation the economic betterments secured by organized labor during centuries of effort and suffering.

But let all politicians and parties beware! Labor is not asleep. It will at the first opportunity strike mightily at the ballot box those who dare so to tyrannize at such time as this.

I believe that, if the autocracy go too far, the answer will be internal revolution, for I have never known so much embitterment against the attempted despotism of the big interests.

The toilers may be depended upon to defend the right at all costs, but they will first be convinced of what is right. Jingoism or junkoism will not fool them any longer.

Let us have a referendum on war.

Very truly, your,

C. L. BRUMBAUGH.

—

WILLIAM PENN HOTEL,
Pittsburgh, February 12, 1917.

DEAR MR. BAILEY: There is no need to "manufacture peace sentiment," as a dispatch from Washington says is being done.

Ninety per cent of the voters are opposed to war to maintain a duelist's concept of honor.

If those favoring war doubt this, let them submit the question to a vote of the people.

Truly, yours,

WILL ATKINSON.

—

BARNESBORO, PA., *February 12, 1917.*

Hon. W. W. BAILEY,
Washington, D. C.

MY DEAR MR. BAILEY: I have received a referendum card from the American Union Against Militarism, and to No. 1 I have voted no. My reason for so doing is that war never settles anything, but good common sense and moral reasoning along lines of justice will bring us peace and justice. But some say if militarism and overbearing monarchy are allowed to win this war, what chance have reason and morals. If this country only had reason and morals, we would simply refuse to have anything to do with any country that had chosen the barbarity of old ages to settle their troubles. What we are concerned in is the causes and reasons and the moral foundation upon which peace can be built that will be lasting. It is almost unthinkable there should be any nation upon the face of the earth that would be so degraded in morals that they would overrun a peaceable habitation who offered no resistance and conquer them against their will. That should be one stipulation in the peace treaties, that no country should annex without a referendum vote of the population what their wish was. Mr. BAILEY, I want you to stand for the moral indignation of our country against any of the countries at war, for any unlawful act, and that our relation is severed until such time that full and satisfactory settlement is effected; that, if he have to, not a single ship from America will enter Germany, nor will we allow a German ship to enter American ports. If she chooses to become an outlaw, let us show her the effect.

To No. 2 I voted yes. How nice would I not have felt if this card would have come from my Government at Washington, recognizing me as a citizen, asking me how I stood in regard to the welfare of our beloved country. Would I not have been proud that I was an American citizen, and by my vote help to direct its destiny?

Very respectfully,

A. HAMMARSTROM.

—

ALTOONA, PA., *February 10, 1917.*

Hon. WARREN WORTH BAILEY, M. C.,
Washington, D. C.

DEAR CONGRESSMAN BAILEY: My hand to you as I see you standing foursquare against the world murderers who are stretching out their blood-bespattered talons toward this corner of this sad old world. Yes! Whose "honor," whose "rights," are the governmental powers, the paid press prostitutes and the caviling, chattering, human apes sniveling about? Not yours; not mine; not 100,000,000 others that need no "routes to Falmouth"; that need themselves the wealth, the food and clothing and shelter they themselves produce, and have no blood crying out to be coined into dollars.

How can a President or Congress voice the will of the 100,000,000 when that 100,000,000 have not spoken? Does Congress speak for the people or for the money lords? Has it not been enough that the profit mongers have robbed us of our food, our clothing, our every need, that they must now take toll of our blood and tears? Is America about to perpetrate the most tragic farce of the ages? Is democracy about to turn back and thrust itself into the midst of the hellish maelstrom of murder created by the plutocracies and their tools, the autocracies and aristocracies of Europe? Not with your yes, not with my yes, not with the yes of the great unconsulted crowd, the people; only with the yes of capitalism and its thousand times accursed mercenaries and trade mongers, now wallowing to the armpits in the blood of the race. Stand by the great common crowd, the men, women, and children of this land that have nothing to gain and everything to lose.

My hand to you,

FREDERIC J. SHALLOR.

—

608 SIXTH AVENUE,
Juniata, Pa., February 11, 1917.

Mr. WARREN WORTH BAILEY,
Washington, D. C.

DEAR SIR: Am inclosing herewith a clipping from a local paper. I think we have enough of misery without a war.

There is a Federal statute against carrying explosives on passenger trains, but there does not seem to be any objection to that practice on liners; in fact, we seem to aid it, in a sense. This trouble seems to arise in carrying the munitions to France.

I can not understand the American press for the past two weeks—so very eager for war. I always supposed they were truthful and can not think they are being paid for such misstatements.

You have a great many friends in our town, and I believe I can truthfully say they are very much opposed to us entering the world war. In defense of our country they are ready.

Yours, most respectfully,

WALTER S. DUNMIRE.

—

No. 1225½ SEVENTH AVENUE,
Altoona, Pa., February 12, 1917.

WARREN WORTH BAILEY, M. C.,
Nineteenth District, Pennsylvania.

DEAR SIR: I have just read a letter from you addressed to Mr. McCaleb, in which you ask the question: "What is the sentiment among the railroad men in regard to our participation in the European war?" I presume those I come in immediate contact with are typical of the masses of them, and, as usual, they are passive, as workingmen are in a problem that covers such a vast scope as to become universal. Workingmen have never been consulted in a matter where they are only asked to furnish the corpses, widows, cripples, and orphans, and so-called business interests furnish the bonds at 4 to 6 per cent (guaranteed gold). The mixture of these two is called "patriotism." The railroad workingman will do the same as all workingmen when the time arrives for strife—become inoculated with passion, excitement, and prejudice, banish reason, and march off to the shambles. The powers that control the money and press will prevail, if they want war (and it looks as if they desire it). Then I am afraid all the forces that a poor workingman (who is struggling to make a meager salary meet the soaring prices) will not avail to prevent it, and he will be caught in the whirlpool of blind enthusiasm. If the influence of the working class is all that stands between strife or no strife, then I am afraid the former will win, as I think it is safe to say 90 per cent of the laboring class never reason, and if here and there you find one who does, and gives expression to his thoughts, he only is sacrificed to Mammon or Mars.

Personally I hope with you that there will be no war. I abhor it. I abhor the causes that lead to it; but, like many things, I, no less than you, am often more a creature of a condition than a creator of it. It looks as if corporate capitalists are about as easy stampeded as range cattle. They see hobgoblins, etc., where none exist, and from

preparations to guard inland transportation, I think if some person would at the present time throw a pack of shooting crackers in the air it would set something off. Mr. BAILEY, it will take a braver man to oppose war in a week or two than to advocate it.

Again trusting we may pass through it without strife, I remain,

Respectfully, yours,

J. H. MCGRAIL.

Following is a copy of resolutions adopted at a meeting of the Blair County (Pa.) Pomona Grange, No. 37, held at Altoona February 15, 1917:

Whereas all just government is based upon the consent of the governed; and

Whereas such consent we believe to be fundamental to political and industrial democracy; and further

Whereas history has uniformly shown that war and military systems have ever autocratically withdrawn all means of discovering such consent or lack of consent; and

Whereas in the present world war one of the first acts of said dictatorial power has been the loss of the economic and industrial power which labor has struggled centuries to obtain with untold suffering and persecution: Be it

Resolved, That the Pomona Grange No. 37, of Blair County, believes that the secret diplomacy of statecraft should be abolished, the United States making a lead in that direction; and be it also

Resolved, That unless in case of actual invasion or threat of invasion a referendum should be taken to determine the course of our Government in the matter of entering upon war; and be it finally

Resolved, That the Pomona Grange No. 37 communicate its support of the Callaway resolution, introduced in the House of Representatives at Washington, to the President of the United States, Senators, and Congressmen.

—

NEW YORK, *February 15, 1917.*

Hon. WARREN W. BAILEY,
House Office Building, Washington, D. C.:

In voting "no" on the recent increased naval appropriation bill you have refused to play the Wall Street game. May we congratulate you and those who voted with you and suggest that you consider yourselves a committee to keep Congress from declaring war and, in the last emergency, to demand a policy of armed neutrality, as did the Congress of 1798?

COMMITTEE FOR DEMOCRATIC CONTROL,
AMOS PINCHOT, *Chairman.*

—

SOUTH FORK, PA., *February 14, 1917.*

Congressman W. W. BAILEY,
Washington, D. C.

DEAR SIR: I am returning to you my card which was sent to me to give you my opinion of peace or war.

I say peace, as for this country to enter the war would be something that would not be right.

Suppose we were in war with another country, and Germany was supplying the other country with ammunition and food, would we not do the same as Germany is doing? Of course we would.

I do not have any use for the German Government. I am not siding in with them.

Another thing is if we would enter the war it would only be for the capitalist, as our Government does not manufacture war material for the allies; we need all the war material we can get for ourselves. Why ship abroad?

And for our people to risk their lives on merchant ships, I say let them go to it and take a chance.

They do not have to go on merchant ships, as Germany offers safe passage for all American passenger ships. What else should we ask for?

I think it would be wiser to protect ourselves from Mexico, as they are doing more damage to us than Germany.

Thanking you for this privilege, I am,

Yours, truly, JAS. W. LOHR.

—

ALLENTOWN, PA., *February 15, 1917.*

Hon. WARREN WORTH BAILEY,
Washington, D. C.

DEAR SIR: Having seen your letter to Hon. James H. Maurer in the Reading Labor Advocate, inquiring as to what stand labor takes in regarding the war.

I am the bookkeeper of one of the silk mills of this city, and am personally acquainted with every one of the employees, and can vouch for it that the employees of this estab..shment are against going to war almost to a man.

These employees, who are unorganized, sent a petition to the President of the United States last week, asking him to place a complete embargo, if necessary, upon all shipments to the belligerent countries in order to preserve peace. This petition was signed by all the adult males with the exception of five men. These five men, when questioned, all say that they do not expect to do any fighting in case of war.

These employees are also opposed to compulsory military training with the exception of three men.

Respectfully, yours,

EDWIN H. KUDER,
Box 313, Allentown, Pa.

—

CAMBRIA PLUMBING & HEATING CO.,
Johnstown, Pa., February 14, 1917.

Hon. W. W. BAILEY, *Washington, D. C.*

FRIEND BAILEY: If there is any sentiment hereabouts favorable to war, the zero weather is keeping it pent up. True, there are some who, while they profess to abhor war, would accept its horrors rather than witness unavenged any infraction of "the tradition of the elders." To them the dueling code is still sacred among nations, and the sacrifice of war alone can atone for an offense against national honor.

Would that President Wilson might add to his other great democratic pronouncements the truth that, as with individuals, so is it with nations—their honor can be sullied only by their own acts, and the injustices of other nations will return most to plague them and call not on us for vengeance.

Yours, very truly,

P. H. MAHAFFEY.

HYNDMAN, PA., *February 14, 1917.*

DEAR SIR: The inclosed card received and I am interested in it. I have signed it and am returning it.

I will say that I stand firmly not for war. I will stay by this conclusion to the end, unless the enemy invades the country, and at that time we will stay to the end. Myself and my sons as well.

Very sincerely, yours, A. J. SHROYER.

—

INDIANAPOLIS, IND., *February 13, 1917.*

MY DEAR MR. BAILEY: Permit me to second heartily your efforts to avoid the injury the United States must necessarily suffer should it enter the war now maintaining in Europe. We are suffering less by far than all the other neutrals of Europe. Their honor is as keen as ours. Under the circumstances prevailing in the world, our honor demands entering the war only in case of invasion or threatened invasion of our country by either faction of the war. God speed your efforts.

—

NEW YORK CITY, *February 12, 1917.*

Representative BAILEY, *Washington, D. C.*

DEAR SIR: I have read something about your interest in referendum on war. This is just as it should be. Why should any King or any President and his Secretary of State so involve us in trouble with any country that we would have to back him up against our convictions?

It is as much as making a dictator out of Wilson and Lansing by allowing them to go ahead in the threatening way they have treated Germany all the time in order to provoke trouble and then allow England to do as she pleases by way of contrast. No wonder the thinking people of the country are disgusted at such an exhibition of spite work and partisanship which we call neutrality.

I understand that Lansing has on several occasions refused to furnish information to Congress about what he was doing. Now, if Lansing is the emperor or dictator of about 100,000,000 people, why don't Congress and the Senators adjourn and go home? If I were a Member of Congress I would either be fired out of Congress or Lansing be fired for such a refusal, as I would raise hell from my toe nails up.

If this is a republican form of government, let the people and the people's Representatives have some influence in its most important affairs, and not allow the so-called Department of State to act as if we were a lot of boobs without understanding.

I must commend your course and hope that you will vigorously pursue it.

For some time I have been wondering which was the most useless body in actual influence; that is, the American Congress or the Russian Duma. I have finally concluded that the Russian Duma has more courage, as some of them are sent to Siberia when they kick too hard, and I suppose after the censored bills are put into effect some of you people will be landed into jail for daring to open your mouths for the people.

One of the reasons why the British diplomacy is successful is the fact that all that she has to do is to make it interesting for the secretary of foreign affairs of any country and the little clique that runs the roost, and then they can make treaties which the people have got to pay for in blood, iron, and money.

Supporting the President is one thing when he is right. But let the people of the United States say whether he is right or not. Supporting him in partisan or unneutral acts is certainly against the people of the United States.

Sincerely, yours, D. F. PENINGTON, M. D.

—

DUNLO, PA., *February 15, 1917.*

Hon. W. W. BAILEY,
Washington, D. C.

DEAR SIR: I feel it my duty at this critical moment to ask you, as our Representative, to use all the influence possible within your power to prevent us from entering this war.

I can say from the conversations I hear that the sentiment is 10 to 1 for peace. For my part I heartily sympathize with Mr. Bryan and Senators Lane, Works, and others. If one blockade is international law, why is another not? If we are barred from one country, why not another? I would consider our Government insane if we were in Germany's place and would allow ammunition and other deadly supplies that would destroy our people to land for our enemies, if we had the means to prevent the landing.

Hoping you will use all your influence for the defense of American shores first and last, I am,

Respectfully, yours, JAS. RHOADS.

—

24 SECOND STREET NE.,
Washington, D. C., February 5, 1917.

Hon. W. W. BAILEY, M. C.

DEAR SIR: My husband and I have watched and seconded your efforts in behalf of arbitration and peace. We are loyal Pennsylvanians and have no coward blood, having ancestors and near relatives in every war this country has ever engaged in. Please continue your efforts for peace, both in the press and in the House, and may God bless your efforts.

Very respectfully, yours,

ANNA R. ARNOLD.

—

DAWSON HARDWARE & SUPPLY CO.,
Gallitzin, Pa., February 10, 1917.

W. W. BAILEY,
Washington, D. C.

HONORABLE AND DEAR SIR: Realizing the enormity of the present crises, having all faith in our Government, and in particular the President of these United States and his advisers, I take it for granted they fully understand the situation and will be very slow in making any move that would cause us (the United States) to enter the "Hell on earth," or in other words, the awful war in Europe.

Now, my dear Mr. BAILEY, we, up here on the mountain top, in peaceful Cambria County, realize what it would mean to have war from any cause whatever, but to declare war under the existing circumstances because some thoughtless person risked his or her life to go on a vessel, or because some large corporation hired some person to try to make the voyage knowing full well that if the ship was sunk we (the United States) would take up the question of destroying American lives, declare war, and they (the big concerns) would reap big monetary returns.

As a father of a family I protest (through you) against war, only when it is necessary for our own protection.

When it comes to protecting our homes and families you can count on mine and me coming to the front and dying for our country.

But to go to war to uphold a few people that are not patriotic enough to stay at home and mind their own business while Europe is insane, I can see no justice and protest most emphatically.

Yours, very truly,

FRANK P. DAWSON.

Resolutions.

We, American citizens, assembled in mass meeting at the call of the mayor of Minneapolis, beg to address the President and Congress of the United States, as follows:

"1. We appreciate the difficulties confronting the administration in the conduct of our foreign affairs. We are grateful that our beloved America is not a party to the awful war which is devastating Europe and pray you will use your great influence and authority to keep our land at peace.

"2. We desire respectfully to recall the fact that in the election of November the citizens of this country strongly favored our keeping out of the war in Europe, and the administration then elected was committed to a policy of peace. Now to abandon that policy and plunge us into war we hold is to make a solemn mockery of the great American principle of the consent of the governed.

"3. We denounce the attempt of a large portion of our press to stampede our great Nation into war, and therefore we believe that the time for the citizens and the Government to take counsel is now, for as loyal men and women of America we shall stand by our country, but as thoughtful men and women we realize and repeat the time of sane counsel is now, for when the fateful plunge is taken our lips must and shall be sealed.

"4. We favor the use of the influence of this country in every proper way to end the horrible conflict in Europe, reminding the world that we stand for the American principle of equal justice to both sides, fair play to all. To that end we favor a conference of all the neutral nations to consider peaceful ways and means of terminating the war at the earliest possible moment.

"5. We urge all American citizens, and believe it their duty in behalf of their country to keep out of the barred zones of all belligerents.

"6. We believe that those citizens who object to being dragged into fighting other nations' battles are not lacking in patriotism for America, and we denounce the idea promulgated by the press that only the desire for war is the test of loyalty.

"7. We hold to the principle laid down by Washington, Father of his Country, to avoid entangling alliances with European countries, and in our dealings with other nations to deal justly by all and make favorites of none, and if during this awful war our Nation in its dealings with either or any belligerent has done anything that savors of favoritism to any country we do not approve of it, and we hope and pray all such things shall cease, so that our beloved land may stand before the judgment bar of history without a stain upon her flag, the flag we love.

"*Resolved*, That copies hereof be forwarded to the President and Congress of the United States and the press."

I certify above resolution was enthusiastically and unanimously adopted by meeting of 3,500 citizens, limit of hall capacity. Seven thousand more could not gain entrance.

CHAS. A. DALBY,
Chairman of the Mass Meeting.

Torrens Land Title System.

EXTENSION OF REMARKS
OF
HON. WILLIAM H. MURRAY,
OF OKLAHOMA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, February 19, 1917.

Mr. MURRAY. Mr. Speaker, a subject of great importance to the various States, but which properly does not come under the control of Congress, is some method by which titles to real estate may be more definitely known. This becomes doubly so because of the rural-credit law, for the reason that all of the countries of Europe which have adopted the rural-credit system have adopted this law. Such is essential in order to reduce the loss to a minimum. The smaller the loss the lower the rate of interest in the end would be.

For this purpose I offer a speech I delivered in the House of Representatives of the First Legislature of Oklahoma, May, 1908. The speech is as follows:

"Gentlemen, I desire briefly to explain that system of land registration known as the Torrens land system, a system of registering titles as distinguished from registering evidence of title, such as deeds, which system brings about our cumbersome, expensive, and uncertain abstract system. The Torrens system had its origin in Australia in 1854. It first came to the United States and received official notice by Gov. Russell, of Massachusetts, where it is in force in its fullest vigor of any State in the American Union, although it is in force in modified form in the States of California, Colorado, Illinois, Minnesota, Oregon, and Washington, and by the Philippine Commission, and acts of Congress has been adopted in Hawaii and the Philippine Islands, a copy of which last laws I have in my possession. It is now adopted in New York and the Republic of Mexico. It was extended throughout the German Empire by the code of 1900. It is also used in Denmark, Austria-Hungary, and most of the Cantons of Switzerland, the county of London, England, and in most of the Provinces of Canada; in fact, in my opinion, the law as it is in force in the Province of Ontario is the best on this continent. It is in force in some form in all of these States, notwithstanding the stubborn opposition with which it has been met by the abstract companies and by land attorneys. When once understood, it is irresistible, because it is the one law, and the only one with which I am acquainted, upon which the richest man in the State as well as the poorest in the State unite their indorsements. It is true it is hurtful to the abstract system, and they fight it. It is hurtful to the land lawyer, and, of course, he fights it; however, for the first generation it will assist the land lawyer and give him an increased amount of litigation; that is, until the system is completely installed, after which a land suit involving title is practically unknown. Suits, of course, will occur to foreclose liens for taxes and for the loan of money, and also to probate wills and estates, but the title is at every stage known to every citizen who can read; not so with the abstract system. By the method of abstracting generally in force in the United States everything is uncertain and attended with great expense. Any farmer or business man desiring to purchase land first demands of the landowner to procure an abstract, which usually costs $1 a page, with the minimum price of $5; there is one page for every transfer; hence in the course of a hundred years, say, there may be 20 or 100 more of these transfers, each costing 50 cents to $1 a page; every step since the beginning of the sale of that land is recited in an abstract. A friend of mine recently told me of one abstract in the State of Kansas that cost him $1,400. There was an abstract made out in the City of Mexico a short while ago that weighed 500 pounds and cost thousands of dollars. The next step of the purchaser is to present that abstract to a lawyer and retain him to look it over and render an opinion as to the title. The lawyer does so and gives an opinion that may be good and it may be absolutely worthless; the man goes upon the land—perhaps it is unimproved—he builds a home upon it, and after he is fixed and feels that he is safely anchored once in a home. Years rolled by; a defect in the title is discovered; the real owner sued him for possession; he goes into court, is defeated in the first trial; he sells some of his personal property and appeals the case and his home. This is not overdrawn; hundreds of occurrences of this kind have happened; it is not an exception even to the rule; it is the rule. Again, under the abstract system a man desires to borrow some money quickly to save him, perhaps, from financial ruin; he goes to the bank; the bank is afraid of the title; the bank has no certain means of knowing, especially at the moment, perhaps by reason of not being able to get the loan when he had landed security he meets with financial ruin. Now, the Torrens system is the reverse; it is not a registration of deeds and evidence of title; it is an absolute register of title. First, however, there must be a trial to determine the ownership, and then all deeds are canceled and all except loans or liens upon the land; a certificate is issued to the owner for the decree, and after that there is never but one outstanding certificate, and that certificate shows every condition of title. Any man, as soon as he sees the certificate and it is marked 'Torrens land,' knows that it is good; it is just as sound and as safe as buying a Government bond; in fact, the Wall Street Journal last spring said that 'the Torrens land certificate is the safest security that could be made by law.' I have but recently a letter from the Governor General of Ontario, in one of the Provinces of Canada, in which he said, 'Of all the many things of which we are proud in this Province, we are most proud of our Torrens land law.' Now, suppose the holders of a Torrens certificate desired to borrow some money upon a tract of 160 acres of land, say $100, and he'd go to Representative Briggs's bank over there and say, 'I desire to borrow $100.' Mr. Briggs would say, 'Is your land abstract land or Torrens?' If he should reply, 'abstract,' Mr. Briggs would say, 'I would like to submit that to my attorney first'; and perhaps at the end of a week he might get an opinion and then refuse the loan; but if he said, 'It's Torrens,' he would say, 'Let me see the certificate.' The moment he looked upon the certificate he knew every condition of the title without a single cent of expense. Now, the only thing he would want to know would be the kind of land or about what the land was worth.

"If he knew of the land he would be ready then, as he would ever be, to make the loan, because he would know the whole power of the State was behind that property to protect the title. Now, suppose he would loan the $100, the owner would have that certificate canceled on the clerk's records and a new one issued to the owner, whom we will suppose to be Representative

Rainey, here. On the face of that certificate issued to Rainey would be this statement: 'G. W. Briggs holds a first lien for the sum of $100 on this tract of land.' Then, if Mr. Rainey would show that certificate to anyone it could be seen easily what the condition of the title is; that is to say, that the title in fee belonged to R. M. Rainey, of Atoka, but that G. W. Briggs, of Granite, holds a first lien for $100. Now, suppose Mr. Rainey at a later date would desire to borrow another $100, and he should go to Representative Robert Johnson's bank in the town of Chickasha. Mr. Johnson would ask, 'What kind of land is it, abstract or Torrens?' Mr. Rainey would answer, 'It is Torrens.' Then he would ask to see the certificate. When Johnson looked at the certificate he would know the condition of title, and the only question that he would want to know is whether or not the land would stand one more hundred dollars. If he knew, from traveling over the land or from his personal knowledge previously gained, it to be valuable land, he would be as ready then as he ever would be to loan on that piece of land. Should he make the loan that certificate would be canceled and a new one issued showing that the land belonged to R. M. Rainey, that the first lien was held by G. W. Briggs for $100, and that a second lieu was held by Robert H. Johnson for $100. Now, as Mr. Rainey paid off that lien, the same process of canceling the certificate and the issuance of new ones eliminating the payments until all had been paid and no liens existing, there would not be any mortgages filed; but all liens would show themselves on the face of the certificate. The transfers made would cost the ordinary fee of 50 cents or $1, of getting certificates of any matter or copies of ordinary certificates of any matter of record. It is just as simple, and, indeed, works on the same plan of transferring stock in a corporation on the books of the company, except the land is transferred on the books of the Torrens land records by a bonded officer of the State, usually made by the register of deeds. Now, opponents of this system, when they make an argument against it, begin to recite that it is declared unconstitutional in Illinois and Ohio. Yes; that is true. True, because there was some kind of sympathy, in one instance, between the lawyer and the court, in others, because of the State constitution; but it has been tested before the Supreme Court of Massachusetts and has gone to the Supreme Court of the United States in the case wherein the Supreme Court of the United States has said that it complied with the due process of law of the land and that it did not violate the Constitution of the United States if it did not violate the constitution of the State. It was declared unconstitutional in Illinois because there were judicial powers placed upon the clerk, although it is in force in a defective way in Cook County, Ill., and yet I hold before me a book from a real estate dealer of Illinois, in which there are the names of some 300 business men, bankers, real estate dealers, railroad magnates, capitalists, and other citizens of Chicago, all stating that they were satisfied with the Torrens land certificate under the Illinois plan, even in its defective form. Railroad presidents say in this booklet that they would accept a Torrens land certificate in preference to a warranty deed backed up by bond to guarantee title, because it is safer, and, as you know, bonds are supposed to be the safest thing in the business world.

"Now a word as to the guaranty proposition. One might say that it is subject—and the charge has been made—to a liability of bankruptcy itself to guarantee these titles. The method of guarantee is similar to the bank-guaranty law enacted by this legislature; that is, when the suit is filed to clear the title a certain very small per cent—in Massachusetts one-half of 1 mill—of the value of the land is put into a fund known as a 'Torrens guaranty fund,' and remains there with which to pay the owner should the court make a mistake in the land after it is registered. The real owner might turn up and prove that the court erred in its decision, but he would have to do this in the limit of time—in most laws within one year—or he is forever barred from bringing the suit. If he should do so, he can't recover the land, but from this guaranty fund he is paid the value that is placed upon the land at the time the title was cleared up by the court. If we continue the present method, and we will have to do so unless we amend the State constitution, of loaning the school fund on real setate, we will run into extreme danger of losing a lot of that fund unless we had a very certain system, such as the Torrens land system would afford us. We need the system in Oklahoma for that reason more than any other. For another reason, the titles are young; that is, transfers have been made but a short time. We could start out issuing certificates upon the 3,000,000 acres of school land, and by that means start big heavy acreage under the system at practically no expense. We could take the allotted lands and do the same way, so there would be absolute certainty as to their title, and within a generation every piece of land in the State would be carried into the court and its title cleared up by itself, when the school fund being loaned upon that would thus be protected. In brief, the Torrens land system is a quick, inexpensive, certain method of ascertaining titles and a quick, easy method of transfer."

FORM OF CONSTITUTIONAL AMENDMENT.

In view of the necessities above recited and those that are likely to arise, the legislature must be given ample power by any amendment ratified for the installation of the Torrens system. I offer the following as one of proper form and with such power:

SECTION —. The legislature shall have power to provide for the investigation and determination of the ownership of real estate and for the registration of the titles thereof; and shall have power to create a court or courts with special and original or appellate jurisdiction, or both; and shall have power to appoint State and county registrars or to empower any State or county officers to act as such registrars.

Ship Subsidy.

EXTENSION OF REMARKS
OF
HON. CHARLES A. LINDBERGH,
OF MINNESOTA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, February 12, 1917.

Mr. LINDBERGH. Mr. Speaker, I have given much thought to the high cost of living and already have given to the House many of the reasons. Aside from the monopoly of money control, which is the underlying cause of it all, there are very prominent elements to be considered. Ship subsidy has been much discussed and many seek to remedy some defects in ocean transportation by giving subsidy. I have always opposed ship subsidy because it is not a fundamental way to deal with the problem; besides the subsidy is merely another item in taking more from the poorer to give to the richer.

It is not so easy for everybody to study shipping conditions as might seem. It involves investigation into conditions that we can get little report on. I looked into this problem in 1908, but was not able to give time enough to it to satisfy me that I could give the House any satisfactory information. Luckily, in some way Dr. J. E. Engstad, of Minneapolis, happened to write me, and as a result we had considerable correspondence regarding ocean traffic. Dr. Engstad, I learned through the most reliable sources, is a doctor with extensive information, has traveled much, is a careful investigator of subjects relating to economics and social problems generally. His own letters make it clear that he knows what he writes and only writes what he knows. I now quote important paragraphs from Dr. Engstad's letters, as follows:

At the close of the war our Nation will be handicapped for markets, for the allies now own or control most of the world as colonies or dependencies, and, further, every harbor and railway in South America is owned in England and France, making the system a bar against our commerce. We will find the world a very small and tight globe.

Terminals are as vital for ocean traffic as for railways, and more so. Land is plentiful around almost any city, but harbors are often small, and frontage is as a rule owned by a strong interest, which, with interlocking directorates as we know them in this country, prevents outsiders from getting a share of the traffic, except at ruinous harbor dues.

There are only a few free harbors in the world. In Europe we have Copenhagen, Hamburg, Antwerp, and now Christiania is establishing a free harbor.

There are no free harbors in all Asia, if my information is correct.

By free harbors is understood docks and warehouses owned by the commune and with equal rates for all.

New York is practically a free harbor, while Philadelphia is burglar proof, and is made so by the Pennsylvania Railway Co. Boston has recently established a small free harbor.

On the coast, Hill and the Hill interests own all water frontage in Seattle, Portland, and Tacoma. San Francisco is theoretically free. Los Angeles gave all they had to the Southern Pacific Railway, and the Government had to build an extra dock for the southern metropolis.

San Diego is at the mercy of Santa Fe Railway, except 300 feet which the company had spurned as worthless.

The same conditions prevail all over the world.

Without equal opportunities for our shipping with our competitors we will be in the same predicament that the Goulds' Wabash Railway was when it was extended to Pittsburgh. George Gould got to the city limits and no farther, and this venture almost broke the Gould family.

And, further, all the world submarine cables are owned by English capital with the exception of a few short lines owned by Danish capital.

An exception may be made to this, for we own a number of cables laid to serve between England and our country, but this means of communication does not serve any new territory.

Then the wireless and English Marconi Co. has the monopoly of air communications. All messages are sent by code and can be read by

English officials. If sent in secret code, the rates are higher. Every message sent to western Asia and Africa are relayed at Valetta and are read by our competitors, which may not be of advantage to us.

Then the trade follows the flag (?), and there we are at a disadvantage. The world has been divided since the days of the Civil War. The pie was cut, and we did not get a piece of it.

The docks and the harbors of Santos River, Buenos Aires, the only free territory in the world, are owned by the Pearson's interest, London.

All the railways, with the exception of a few short lines, are owned by the same interest.

In the World's Work for January, 1915, an article was published wherein the author explains how the Brazilian Lloyd Steamship Line had a deficit every year of half a million dollars.

This deficit was due to excessive dockage charged in their own country by the owners of the docks.

Of course Brazil has objected, and for its complaint one European Government compelled a prime minister of Brazil, M. Moller, to resign. Brazil needed credit, and a poor borrower has to submit to usury.

In Hongkong British vessels get a rebate and our ships must pay the full charges and are not granted any rebate.

I send you a map of China, which is drawn and colored to show the "sphere of influence" of each great power. An article was published a short time ago in a leading magazine on this very question, and the division is, in the main, as he explained it.

Tibet was conquered by Lieut. Younghusband with a mixed force of Indians and English troops in 1912, and without a word of protest from Washington.

This gives England entrance to China from the back door; the back door is right in the kitchen of the Celestial Kingdom.

Granting that the trade, the investment of capital follows the trade, and trade is shipped in home bottoms, where do we get our piece of pie?

To the British Empire belongs the following colonies, nations, and trading spheres of semiownership:

Wee Hei Wei, commanding the Gulf of Pechili (this is a second Port Arthur), and with this key northern China, Shanghai, not fortified, but the Hongkong and Shanghai Banking Corporation, with two hundred millions of capital and branch banks all through China, keeps us out of central China. Hongkong, the Gibraltar of the East, commands the whole southern China. Amoy is also English and all its hinterland.

Tibet taken a year before the war, and with this the back door to China; Borneo; half of the Kingdom of Siam; the Straits Settlements; Singapore; Burma; the Continent or Empire of India, with 318,000,000 inhabitants; Kashmir; Nepal; Afghanistan; the southern Persia; the mouth of Euphrates; the Garden of Eden; Aden and fortress, the key to the Red Sea; Suez Canal (English shipping gets a rebate, but this is a secret one); lower, middle, and upper Egypt; Sudan; Cyprus, the key of the eastern Mediterranean Sea; Malta; island of Manos, the key of the Dardanelles; the world fortress of Gibraltar; Port Guinea, Dahomey; Nigeria; Kamerun; German West Africa; German East Africa; Sierra Leone; Basutoland; Cape Colony; Rhodesia.

South African Republic; Transvaal; Uganda and Nigeria; Zanzibar; English East Africa; Sokoto Island; Gilbert Islands; Central Africa and the Gold Coast; Australia; Tasmania; New Zealand; New Guinea; Tahiti, and about a thousand islands in the Pacific Ocean; the island of Bermuda, threatening New York City; the Bahamas, group of about a hundred islands; the greater and lesser Antilles; Jamaica, with the impregnable Kingstown; the Mosquito territory, reaching to within a few miles from the Panama Canal; British Honduras; British Guiana; British Venezuela and the mouth of Orinoco River; Newfoundland; Nova Scotia; the Empire of Canada; St. Helena, the key to southern Atlantic Ocean; Falkland Islands; Ceylon.

FRANCE.

Algiers; Morocco; French Congo; Central Africa, French Guiana, in South America; Madagascar; Indo-China, right of policing and sphere of influence in Younnan and Sechuen, the richest Province in China; the city of Tientsin; two islands near the coast of Maine.

RUSSIA.

Unhappy Finland; Kourland; nineteen-twentieths of Poland; Little Russia, with 30,000,000 Ukranians; Caucasus; Esthonia; three-fourths of Manchuria; Siberia, 5,000 miles long; and Mongolia, taken after the war; Armenia; and Basarabia.

JAPAN.

Formosa; the iron works and trading rights in Fuklen; part of Shantung; Korea; southern Manchuria, to within 20 miles of Habeer.

GERMANY.

Lost: East and West Africa; part of Shantung; the Danish part of Holstein; one-nineteenth of Poland; Alsace and Loraine, retaken from France in 1871. These Provinces were taken from Germany in 1746. They had been German since the time of Cæsar.

UNITED STATES.

Luzon and the other islands making the Philippine Group, Porto Rico, and the two Negro Republics.

* * * * * * *

The inclosed map will show how we are out of China. It will also show that it would be to an advantage for a certain power to kill off one of the late comers in the game of grab. But the pie is cut, and therefore where shall we start our ships for with a full cargo both ways?

These are the statements of Dr. Engstad. He informs me that he has had neither the time nor the opportunity to verify to an absolute certainty the accuracy of each and every one of the facts stated, but that they are substantially correct. I have examined into the circumstances that control under the conditions involved, and I am certain that the conditions would logically result in what Dr. Engstad states. Combinations of capital and their associations bring about exactly that condition.

I give some further extracts from Dr. Engstad's letters, which are very instructive—the following paragraphs:

Of course, the so-called sphere of influence in China is a sealed book to all outsiders, but judging from history, treaties, manifestos, trade privileges obtained, settlements, fortifications, and occupation, the territory allotted to each power can be approximately mapped out.

It must also be remembered that commercial supremacy is often of more value and potency than purely military possession.

And China is mortgaged, trade of, and hypothecated, until there is not a free acre of land in the whole Celestial Republic.

We know that Russia notified our minister to Petrograd a short time ago that in the Czar's dominions were 40,000,000 Mongols, and of course they inhabited Mongolia, taken from China since the war.

And the disintegration still goes on. If this war could have been postponed 20 years China could have prevented her spoliation, and by that time the giant would have been able to defend himself against his enemies.

The other statements quoted are historical or financial news and can be proven.

When we permitted England to take Tibet and the Chinese hinterland we lost all our rights and privileges.

* * * * * * *

Russia's 40,000,000 Mongols are the inhabitants of Mongolia, the half of China's territory.

I wish that you would read an article on Japan in the last issue of Everybody's, which is an inspired article against the Empire.

Of course, England and Russia desire us to kill off the miserable Japs. Do you see the point?

If I had a chance to let the world know the fact from the floor of Congress, I would on the first occasion speak plainly and state that foreign money—and millions of it—is and will be spent here to get us war crazy with the object in view to getting us to destroy Japan. Of course, it is cheaper and safer for them to hire us to do it than for them to do it themselves.

High finance—no; frenzied, bloody finance.

I would urge you to show the map to Senator STONE. It tells the story, and it is a true one.

* * * * * * *

Inclosed clipping from pro-English paper, the Journal, confirms what news or statements I have given you about China.

China is partitioned, and we are helpless.

The clipping referred to is from the Minneapolis Journal. The doctor inclosed another clipping from the same paper, and commented upon that in the following language:

Inclosed clipping explains itself. Of course, all the big papers are against the so-called "pork," they having obtained post-office buildings and other Government structures are not in the line for "pork," but are clamoring for Army and Navy "porterhouse steak."

The Journal is, as you know, a Hill and Steel Trust paper, and steel orders for battleships is not only "pork" but plain stealing.

This shipping problem is not a subject upon which the public generally informs itself, and I think it is very important that it should be brought to the attention of the people and Congress.

A world commerce would be desirable if it was governed by natural selection and rules for equitable exchanges. That is not, however, the kind of commerce that we now have. Nevertheless let us hope that the cut-throat barbarity and false economic trade and barter will before long be thrown into the discard. Surely civilization ought soon to discover itself and set up shop. When it does the freedom of the seas will be of little value if the ports are not open to all nations on like as well as just terms.

Talk of Saving Daylight.

EXTENSION OF REMARKS

OF

HON. WILLIAM C. ADAMSON,

OF GEORGIA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, February 23, 1917.

Mr. ADAMSON. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include an editorial from the Enquirer-Sun, Columbus, Ga.

The editorial is as follows:

TALK OF SAVING DAYLIGHT.

Considerable discussion is being indulged in concerning the setting forward of the hands of the clock in order to save an hour of daylight. Of course, as everyone knows, it would not actually save an hour of daylight. That would be impossible. So far as the records show there has been only one man in the history of the world who has saved daylight, and that was Joshua, who commanded the sun to stand still until he could whip the army of the enemies of the Lord.

It is more amusing than otherwise, therefore, to hear people discuss this question. There is no reason why the hands of the clock should be set forward in the first place. If a man wants to begin his day's work an hour earlier all he has to do is to begin it. If a large industrial plant wants to begin work at 5 o'clock in the morning instead of 6 all it has to do is to begin at the earlier hour.

There is no class of workers who value daylight more than the tiller of the soil. In fact he can not do farm work except during the daylight hours.

But the farmer has never had to set his clock an hour ahead of time in order to deceive himself into going to work. On the farm the time for rising is about 4 o'clock, and in very few instances are farmers found abed after that hour in the morning.

The farmer has never so much as given the matter of moving up the hands of his clock a thought. In other words, the farmer does not let his clock govern his movements. He works by the sun. When daylight comes he is ready to begin his day's duties and when it begins to get dark he "takes out" for the day.

Post Office Appropriation Bill.

EXTENSION OF REMARKS
OF
HON. ISAAC SIEGEL,
OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 21, 1917.

Mr. SIEGEL. Mr. Speaker, it is because this bill carries with it a small increased salary for most deserving employees and the men to be benefited thereby are in no position to wait much longer for financial relief that I vote for it. I regret exceedingly that there was no way of dividing up what was known as the first part of the so-called Reed amendment.

I hope that in the Sixty-fifth Congress a bill along the lines of H. R. 17806 will receive favorable consideration at the hands of Congress. That bill reads as follows:

A bill (H. R. 17806) to regulate the payment of salaries of post-office clerks in first and second class post offices and letter carriers in the City Delivery Service.

Be it enacted, etc., That after the passage of this act clerks in first and second class post offices and letter carriers in the City Delivery Service shall be divided into six grades, as follows: First grade, salary $1,000; second grade, salary $1,100; third grade, salary $1,200; fourth grade, salary $1,300; fifth grade, salary $1,400; sixth grade, salary $1,500. Clerks and carriers shall be promoted successively to the sixth grade.

SEC. 2. That after the passage of this act all promotions of both clerks and carriers shall be made at the beginning of the quarter following the expiration of one year's service in the next lower grade. No clerk or carrier shall be denied promotion until he has been notified by his postmaster in writing of the reasons why and the employee has been given an opportunity to submit an answer in writing. The recommendation of the postmaster withholding the promotion of a clerk or carrier, together with all correspondence, including the answer of the clerk or carrier, must be forwarded to the Post Office Department for review before final action is taken. The Post Office Department may reduce a clerk or carrier from a higher to a lower grade whenever necessary for purposes of discipline. A clerk or carrier charged with any infraction of the postal laws or rules or regulations shall be furnished with a copy of the charges and all evidence in the case, and shall be given a reasonable length of time to answer same. The charges and answer must be made a part of the records of the post office and a copy of the record must be mailed to the Post Office Department for review. Before any recommendation for demotion or for removal from the service shall be approved the accused employee shall have the right to a hearing by a board, which shall be designated by the United States Civil Service Commission for that purpose, and the decision of said board shall be final. When a clerk or carrier has been reduced in salary he may be restored to his former grade or advanced to an intermediate grade at the beginning of any quarter following the reduction on evidence that his record has been satisfactory during the intervening period. Should a clerk or carrier fail of promotion because of unsatisfactory service he may be promoted at the beginning of any quarter thereafter on evidence that his record has been satisfactory during the intervening period. Clerks and carriers of the highest grade in their respective offices shall be eligible for promotion to the higher positions in said post offices, and the recommendations of postmasters shall be based on the record and qualifications of the employees, and no discrimination shall be made against either clerks or carriers in making recommendations for promotion to the higher positions. All positions in the classified civil service in the supervisory grades in post offices shall be filled by promotion from the ranks of the employees in said offices, and no position shall be filled by the transfer of an employee from another office or from another bureau or department unless the postmaster certifies in writing to the Post Office Department officials that there is no employee in his office who is competent to fill the place.

SEC. 3. That after the passage of this act any clerk shall be eligible for transfer to the service of a carrier and any carrier shall be eligible for transfer to the service of a clerk upon the recommendation of the postmaster to the Post Office Department, such transfer to be made to the corresponding grade of salary, and the time which such clerk or carrier shall have served in the grade from which transfer was made shall be counted in connection with the service to which such transfer may be made in computing the time of service necessary to entitle such employees to promotion: *Provided*, That no clerk or carrier shall be promoted more than one grade within one year's period of service.

SEC. 4. That all acts or parts of acts inconsistent with this act be, and the same are hereby, repealed.

I also insert, Mr. Speaker, the statement made by me before the Committee on the Post Office and Post Roads, wherein I said:

STATEMENT OF REPRESENTATIVE ISAAC SIEGEL BEFORE THE COMMITTEE ON THE POST OFFICE AND POST ROADS IN RE H. R. 17806.

Mr. Chairman, I am in favor of the bill introduced by Mr. MADDEN to regulate the payment of salaries of post-office clerks in first and second class post offices and letter carriers in the City Delivery Service because it will be extending to these hard-working and conscientious servants of the Government that fair measure of treatment which is theirs by right. It will eliminate immediately the proposition of favoritism, prejudice, ill will, and in some cases bigotry, which exists at the present time before some of the men can obtain an increased salary. In addition thereto it will give the men an opportunity to be heard before a board before they are demoted or removed from the service, and what is more important, once the board shall have rendered its decision, by the language of the bill, namely, "shall be final," it means the end of the constant and numerous requests which men of the service are compelled to make to their Representatives in Congress in order that unfair and unjust demotions and dismissals be taken up before higher officials in the Post Office Department.

That under the present system, intentionally or unintentionally, men have been the victims of gross injustice in treatment accorded to them in the Post Office Department. I could point out one case where an inspector alleged that a clerk who had been a long time in the service had taken 25 cents from a letter. A search of the clerk failed to reveal the money. He was removed from the service, arrested, indicted, but a jury of his peers acquitted him forthwith. The clerk in question was not in financial straits, was fairly well to do, having inherited some money, was known to be economical, had a good reputation and character, and although acquitted by 12 men and believed to be innocent by his fellow employees, he can not obtain reinstatement in the Postal Service because the word of the inspector is deemed of greater weight than the man's previous good character and the decision and opinion of 12 jurors. This man certainly learned nothing while in the Postal Service that can be of any use to him in obtaining employment elsewhere. He was kept by the Government for 10 years and now he finds himself suddenly compelled to seek another line of employment, when for 10 years he gave the best that was in him to the Government.

I could point out another case where a clerk was slated for dismissal because he had taken a magazine from what is known as the trash waste in the post office. There was no address on the magazine and it would have been thrown out with the rest of the waste in the office. The value of the magazine at retail, if in good condition, would have been 15 cents. Yet here was a clerk with a wife and family dependent upon him, with never a charge of any kind or description against him, and with good reputation and character, about to be thrown out of employment for a charge of this kind. This was also an inspector's case. After being out of employment as a result of suspension for nearly two months the request for dismissal was denied, but his salary was reduced.

I could point out a case of a letter carrier who has been in the service for nearly 20 years, who is suffering from asthma, yet who is trying to do his work properly, but is being constantly annoyed by charges that are untrue but which are made against him with the idea of piling up a record against him so that he can be dismissed from the service.

There are a number of other cases which could be pointed out, some in New York City, some in Baltimore, and some in the other cities of the country, where inspectors, desiring to make a record, prefer charges, and whether the men be innocent or guilty the word of the inspectors is taken as against the man every time. Before a board the testimony of both could be taken, the demeanor of the men, their manner of testifying, with surrounding circumstances of each case, their previous records in the department, their character and reputation, would all be taken into consideration, and such a decision would be bound to command respect not only amongst the men themselves but also amongst the people. It would tend to help the Government maintain discipline, and the grumblings and expressions of dissatisfaction which are now heard regarding demotions and dismissals would be eliminated.

The fact that under this bill promotions and increases in salaries would be automatic are the very things which will help to make men remain in the employ of the Government and give them a feeling of contentment, which is bound to reflect itself in the quicker and better handling of the mail by them.

I sincerely hope that the committee will report this bill favorably and endeavor to have it enacted into law.

Mr. Speaker, nothing that I might say would express the feeling of the general public in the East on the "bone-dry" amendment than that which was contained in an editorial that appeared in the New York Times on February 23 last, reading as follows:

THE "BONE-DRY" AMENDMENT.

The affirmation by the Supreme Court in January of the constitutionality of the Webb-Kenyon law giving effect to State laws prohibiting the transportation in interstate commerce of liquor consigned to persons in prohibition States abandoned the principle, long held by that tribunal, that the regulation of interstate commerce belongs to the Congress exclusively. It was approved even by opponents of prohibition, in spite of the obvious danger of future diminutions of the Federal power over interstate commerce, for which it might serve as a precedent. The enforcement of prohibition in States that believe in prohibition is in every way more desirable than the imposition of it by a Federal amendment on States that are opposed to prohibition. This Congress seems to be as enthusiastic for prohibition by all methods as too many Members of it are lukewarm or hostile to the enforcement of American rights. A week ago a majority of the House Judiciary Committee conceived it to be the duty of Congress to submit a prohibition amendment to the States. Now the House has passed, by a vote of 319 to 72, the amendment to the Post Office appropriation bill offered by Senator REED and passed by the Senate, absolutely prohibiting the shipment of intoxicants to any State or Territory that prohibits the manufacture or sale of them for "beverage purposes."

Prohibition is a term of varying meaning in the States classed as "dry." Some States allow a certain monthly ration of strong or milder waters to be imported for personal use. Other States put no limit on that use. "Bone-dry" prohibition is, or soon will be, the law in 10 States, and similar measures are before 7 or 8 legislatures, and there is a bill in Congress to make Alaska "bone-dry." At present, however, only 8 of 22 States now or soon to become "dry" prohibit the importation of liquor for individual consumption.

The decision on the Webb-Kenyon law courtesies to State rights yields to prohibition States a part of the exclusive Federal power to regulate interstate commerce. "We can have no doubt," said Mr. Chief Justice White, "that Congress has complete authority to prevent paralyzing of State authority." Now Congress uses complete authority to paralyze in more than a dozen States the authority of the State to permit the importation of liquors for personal use. Both by the assertion and by the waiver of the Federal power over interstate commerce is "bone-dry" prohibition to be served.

It would be interesting to speculate on the respective shares of sincerity, of politics, of the desire of statesmen to "get on the band wagon" now that prohibition is become popular, and of "wet" finesse in the great vote by which this measure was passed. Many opponents of prohibition hold cynically that the best way to fight it is to make it unpopular and odious by making it as severe, hampering, and absolute as it can be made. They hold that many prohibitionists hate the saloon but not the drink; that they wish to benefit others, to improve the good order and economy of the community without sacrifice of their personal habit, the Times has no means of knowledge as to the merits of that theory and no objections save on principle to a prohibition that rests on the belief and practice of the majority. It passes over here

the questions of property rights and loss of Federal revenue under this bill. Grave doubts must arise, however, as to some of its provisions and implications.

It excludes from the mails "every letter, postal card, circular, newspaper, pamphlet, or publication of any kind containing any advertisement" of or order for intoxicants of any kind if the addressee is in a State or Territory where such advertising or soliciting of orders is forbidden by law; and it enacts that:

"If the publisher of any newspaper or other publication, or the agent of such publisher, or if any dealer in such liquors or his agent, shall knowingly deposit or cause to be deposited, or shall knowingly send or cause to be sent, anything to be conveyed or delivered by mail in violation of the provisions of this section, or shall knowingly deliver or cause to be delivered by mail anything herein forbidden to be carried by mail, he shall be fined not more than $1,000 or imprisoned not more than six months, or both; and for any subsequent offense shall be imprisoned not more than one year. Any person violating any provision of this section may be tried and punished, either in the district in which the unlawful matter or publication was mailed or to which it was carried by mail for delivery according to direction thereon or in which it was caused to be delivered by mail to the person to whom it was addressed."

The question of revenue from liquor advertisements in newspapers is here beside the purpose, but it is worth noting that an advertisement lawful in New York, for example, is made unlawful if the journal in which it appears is mailed to Alabama. A Federal statute is to make a publisher, innocent in New York, a criminal in Alabama. The alternative haling of the innocent-guilty, the criminal (limited), publisher to another jurisdiction is characteristic of the sentiments of too many politicians toward newspapers. That is a mere expression of zeal or malice; but is the freedom of the press safe under legislation of this kind? If the Government can edit advertisements, why can't it edit news and editorials? Take out liquor advertisements, and accounts of a meeting of brewers or distillers or an editorial opposing prohibition might be next to be excised.

The Postmaster General is to make known by bulletins from time to time the names of States that prohibit liquor advertising. The map of innocence and crime by mail will change from year to year. It will be curious to see, in case this bill is signed by Mr. Wilson, whether it impairs any constitutional rights or guaranties.

The Ruthenians (Ukrainians).

EXTENSION OF REMARKS

OF

HON. JAMES A. HAMILL,

OF NEW JERSEY,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 21, 1917.

On Senate joint resolution (S. J. Res. 201) requesting the President to appoint a day for the relief of the Ruthenians (Ukrainians).

Mr. HAMILL. Mr. Speaker, this resolution was conceived in a spirit of humanity. It explains its own purpose. Millions of Ruthenians have been sorely oppressed and scourged by the ravages of war in eastern Europe, and no helping hand has thus far been extended to them, save the feeble assistance which a few of their own people from the Ukrain now residing in America have been able to render.

The matter was first brought to my attention by the very reverend administrator of the Ruthenian Catholic Diocese in the United States, the Rev. Father P. Poniatishin, through his counsel, Mr. William J. Kearns, of the New Jersey bar. Before the Christmas holidays Mr. Kearns consulted me with reference to the adoption of some measure of relief for the Ukrainians, especially for those in war-stricken Galicia, Bukowina, and other Provinces of Austria. Then I received a letter from the very reverend administrator, which I beg to insert, as follows:

NEWARK, N. J., *December 27, 1916.*

Hon. JAMES A. HAMILL, M. C.,
Jersey City, N. J.

MY DEAR CONGRESSMAN: I have to thank you most cordially for the deep interest you are taking in the cause of our Ruthenian war sufferers, and to say that the Ruthenians who have made their homes in this country will always feel that they owe you a sincere debt of gratitude. In our diocese in the United States there are at least 600,000 souls from Galicia, besides some 500,000 more Ruthenians, who are also of Ukrainian origin, from Hungary, Bukowina, and other parts of Austria. I know I speak the true sentiment of my people in expressing our warmest appreciation of your efforts in their behalf. These people deeply sympathize with their afflicted brothers, but have been unable to render them much practical assistance in their great misfortunes and terrible sufferings. Millions of our people in Galicia have been deprived of all their property and belongings and are in actual need of the necessaries of life. In Galicia alone, prior to the war, there was a Ruthenian population of some 4,000,000. At least 1,000,000 of these former inhabitants have been driven out of their country through the scourge of war, and are wandering without home or friends through other parts of the Austrian Empire. These Ukrainians seem to have been forgotten, or overlooked, for notwithstanding that measures of relief have been undertaken for other nationalities, nothing whatever of a systematic, regular character has yet been done for them. If the President of the United States would designate a day for the collection of funds to relieve their destitution I feel that America out of its great, generous heart would respond nobly. May I, therefore, supplement the request of my counsel, Mr. Kearns, that you stand sponsor for a resolution requesting the President so to act?

With sentiments of deep respect, I am,

Very sincerely, yours,

P. PONIATISHIN, *Administrator.*

On January 3, 1917, Very Rev. P. Poniatishin, with his counsel, came to Washington with reference to this measure and enlisted my interest more thoroughly. On January 23, 1917, they visited the Capitol again, and on January 24, 1917, the resolution was introduced in this House and simultaneously in the Senate. Senator HUGHES of New Jersey stood sponsor for it in the other House, and the Senate Committee on Foreign Relations reported it with unanimous approval. It passed the Senate and has now been substituted on the House calendar for my measure. It appeals to the humanitarian instinct of every Member of this House. It breathes the spirit of a broad charity. The great American heart will unquestionably respond with a warm and generous sympathy, and prompt the citizens of our country, irrespective of racial origin, to aid materially millions of their fellow human beings whose sufferings are simply incredible and who are unable to help themselves.

Probably no section in all war-stricken Europe has undergone so terrible an affliction as has the country inhabited by the Ruthenians in eastern Galicia and the northwestern part of Bukowina. Before the war, in Galicia alone there dwelt 4,000,000 of these people. Their country has been so terribly ravaged by war that it may be regarded as almost irretrievably ruined, for its people are scattered and hundreds of thousands of them are to-day homeless and lack the very necessaries of life. College professors, clergymen, lawyers, doctors, and merchants have been deprived of their all and their families reduced to destitution, and compelled actually to beg for bread. They lack necessary clothing to protect them against the cold of an Austrian winter, and many of them, according to reliable reports, are absolutely without shoes and stockings. Their country has been overrun and raked fore and aft by the most terrible war ever known, not only three or four times in general military movements, but by innumerable deadly and devastating minor skirmishes, entailing vast suffering and destitution. Since the taking of Lemberg and its recapture, and both prior to and since the siege and fall of Przemysl, there has been an uninterrupted, desolating warfare raging throughout this region, which has told most terribly upon the Ruthenian population.

No contributions or measures of relief collected or intended for the other war sufferers ever reach these Ruthenians. Theirs is a typical instance of a people who have been actually submerged; they are, in fact, a forgotten race, and yet these Ukrainians constitute a nation just as clearly and sharply defined as do the Poles, the Russians, or the Bulgarians. There are few people who understand that the Russian tongue is a language as foreign to a Ruthenian as French is to an Italian. Unfortunately these people and their country are little known either in Europe or America, although they have existed for centuries as a distinct race and nation, while their ancient capital of Kiev, on the river Dneiper, rivaled at one time in wealth and magnificence the capital of the Eastern Roman Empire, but that was before it was pillaged and destroyed by the Muscovites.

The Ukraine covers about 328,185 square miles, and its territory is therefore one and one-half times as large as the present-day Germany. In eastern Galicia, the northwest of Bukowina, and the northeast of Hungary there is a Ruthenian population of 4,200,000 souls, or rather there was such a population there before the war began, while the Ruthenian race, populating the Ukraine, numbers, or rather did number prior to the war, nearly 40,000,000 souls. Millions of them have been slain, maimed, crippled, and irreparably ruined by the belligerents on both sides, and no hand has been raised as yet in any regular or systematic way to relieve the distress of this particular people.

The first Ukrainian immigrants came to America about 40 years ago. Many of them came here to better their economic conditions; some of them fled before the political and religious persecution. This tide of immigration has immensely increased in late years, and continued until the war began. At present there are a million Ukrainians in the United States, and 200,000 in Canada. In Canada they are mostly farmers, having settled in the great wheat-producing Provinces of Manitoba, Saskatchewan, and Alberta. In the United States they are laborers, miners, farmers, skilled workmen, and business men. The conditions in America from the very beginning favored the development of the Ukrainian immigrant. The man that under the oppressive circumstances in the old country seemed doomed to eternal dependence had here in America a chance. As it is usually the case with all the Slavonic immigrants, the Ukrain-

ians settled in large colonies in different industrial centers. Having provided homes for their families, their next endeavor was to provide for their own spiritual needs, and on this they never spare money and sacrifice. So the churches were built, beneficial and educational organizations were founded, economical, cooperative institutions were started, and many Ukrainian papers founded. The Ukrainians are very much interested in all these institutions, and it is considered as a national duty to be the member of at least one of them. Usually at the churches parochial schools are organized, for the purpose of teaching the children the Ukrainian language as well as the principles upon which the American civilization is built. The Ukrainians have a full confidence in the American schools, and are eager to send their children there.

CONCLUSION.

Now, however, that the terrible plight of these people, who were almost a forgotten race, has been brought to the attention of the American Congress, and that the American President has raised his voice in behalf of the submerged peoples of the world, a glimmer of hope has even come to the Ruthenians, who were well-nigh on the brink of despair—in fact, who were actually in despair—of their receiving some temporary provisional relief. Therefore, may they hopefully look forward to some amelioration of their present condition of misery and wretchedness. Hence, Mr. Speaker, I bespeak for this resolution the unanimous vote of the House. In this appeal I am joined by my colleague, Mr. FARR, of Pennsylvania, who has enthusiastically supported and aided me in all my endeavors to have this resolution enacted.

Maj. Gen. George Armstrong Custer.

EXTENSION OF REMARKS

OF

HON. DAVID A. HOLLINGSWORTH,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Monday, February 26, 1917.

Mr. HOLLINGSWORTH. Mr. Speaker, availing myself of the liberality of general debate, I desire to submit a few observations on the life and character and my efforts in Congress to secure the erection of a suitable memorial to the memory of Maj. Gen. George Armstrong Custer, a native of my home county and district, from which he was appointed to West Point by my predecessor, Hon. John A. Bingham, one of the civic pillars of Lincoln's administration, and who, with Secretary of War Stanton, also a native of my district and before his appointment as a member of Buchanan's Cabinet prosecuting attorney and a resident of my home town, gave to the great President steadiness of purpose and stern resolve to finish the task before him when sentimental pacifists during the Civil War urged upon him peace without victory, always a dangerous thought in war if there be basic principles of right involved.

Gen. Custer was barely 25 years of age when the Civil War closed, and considering his youth was perhaps the highest ranking officer in either army. At Appomattox he lead the advance column of Gen. Grant and was first to sight the white flag of Lee's army raised as a token of approaching military exhaustion. He remained in close attendance on the two rival commanders during the negotiations which followed, resulting in peace with honor to both armies, although an acknowledged victory for the Union forces. It was the end of the war; it heralded a reunion of the States, in fact and in sentiment, North and South.

It was the greatest epoch-marking period in American annals. Gen. Custer, loyal to his oath and the Government that educated him, chose to remain in its service, and did not, as many of his companions in arms did, follow the lure of civic honors, then easily wthin his reach. He went bravely to the frontier and, with all the enthusiasm of his nature, supplementing his Civil War experience and his West Point education, engaged in the fierce struggle then at its height between civilization and savagery until his death, in June, 1876, when a climax was reached and the Custer massacre startled the whole civilized world. Although a seeming victory for savagery, Custer's entire command being annihilated, it really marked the beginning of the end of savage warfare in America. It so aroused the latent forces of civilization that, relentlessly and speedily, the red man was hunted to his lair and Indian warfare in the United States became a matter only of history.

The tragedy of the Custer massacre, like the surrender at Appomattox, marks an epoch-making period in the life of the Nation.

When I came to Congress, in 1909, I was familiar with the successes and tragedies of Gen. Custer's life, the pathos of his pitiless but heroic death, and, finding on investigation at Washington that the Government he had so faithfully served had neglected to recognize by monument or otherwise his distinguished services in the Civil War or his sacrificial offering to civilization, I early resolved to introduce a bill to erect a modest monument to his memory here in Washington, where many costly memorials had already been built to the memory of national heroes.

The amount asked was small—$25,000—and, confidently relying upon the generosity and patriotism of Congress, I had my bill referred to the Library Committee, a committee composed of men of intelligence and lofty ideals, who, I felt sure, would appreciate an opportunity to thus honor one of the country's most worthy heroes.

But time passed and I heard nothing from the committee. Reluctantly I began to realize that a change in public sentiment had come to the National Capital since my hero led the grand review along Pennsylvania Avenue in 1865. Anxiously, by letter to the chairman and otherwise, I began to urge consideration of my bill, but the committee doors remained absolutely closed. I was never given opportunity to present its merits. A clerk in the anteroom was prolific in promises, but no report of any kind on the bill was ever made to the House.

I was not a Member of the Sixty-second or Sixty-third Congress, and my successor, a young man, possibly lacking sentiment as he did comradeship with the heroes of the Civil War, chose not to revive the subject. At any rate, all efforts to do honor to this knightly hero, this sacrificial offering of civilization to frontier savagery, ended with my services in the Sixty-first Congress.

But the currents of Ohio politics are uncertain, and in 1914 I found myself coming back to this Congress without any loss of comradeship or sentiment on my part for the war heroes of the sixties, and almost my first bill offered was a renewal of my efforts to obtain just recognition from Congress of Gen. Custer's distinguished services, this time in a Congress of Custer's own political faith and with a President in agreement with it.

Sensible, however, of what seemed to be a change in public sentiment in Washington City since that greatest of all days in the history of the Nation, when the volunteer legions of Grant and Sherman, Sheridan and Hancock, sturdy veterans, their work accomplished, marched in review before the President, anxious only to lay down their arms and return to the peaceful pursuits of private life; and, thinking as I did, that possibly this change of sentiment might have to some extent influenced the Commission on Fine Arts, which assumes, by its advice, to control the placing of monuments at the National Capital, not to encourage any further monuments therein of this kind, I thought it better to provide for the placing of the memorial I contemplated where there would be no divided sentiments, where it would certainly be appreciated, at the birthplace of Gen. Custer, in the picturesque village of New Rumley, Ohio, on a hilltop, possibly the highest point in the State, and overlooking scenic environments and beauty rivaling any to be found in the Alps.

My bill read as follows:

A bill to provide for the erection of a statue to Maj. Gen. George Armstrong Custer at his birthplace in New Rumley, Ohio.

Be it enacted, etc., That the Secretary of War be, and he is hereby, authorized and directed to erect at such suitable point as may be selected by him at New Rumley, Ohio, the birthplace of Maj. Gen. George Armstrong Custer, a suitable statue or monument to his memory.

SEC. 2. That to provide for the expenses thereof there is hereby appropriated, out of any money in the Treasury not otherwise appropriated, the sum of $50,000.

It was introduced December 14, 1915, and referred to the committee on the same day. I waited hopefully, without making any inquiry of the committee until it had passed five regular meeting days, when, fearing my bill was to be again quietly pigeonholed, I prepared a statement of facts which, with a letter asking consideration, I sent to the committee. They were as follows:

JANUARY 17, 1916.

Hon. JAMES L. SLAYDEN,
Chairman Committee on the Library,
House of Representatives, Washington, D. C.

MY DEAR MR. SLAYDEN: I have introduced and have pending before your committee H. R. 4688, authorizing the erection of a modest statue to Maj. Gen. George Armstrong Custer, at his birthplace in New Rumley, Ohio. Gen. Custer is not only one of the most distinguished of Northern officers in the War between the States, but he was the commanding officer in 1876 at the Custer Indian massacre, and his friends think it only

due, at this late date, that some recognition of this character should be given him by the Government.

I have prepared and am sending you herewith a statement of facts relative to the merits of this bill, which I should appreciate if you would read and call the attention of the other members of your committee to. It presents in a weak way the full merits of this bill, but I would also appreciate an opportunity of appearing at a convenient time before your committee further to explain.

Thanking you in advance for any courtesy you may be able to show me in this matter, I am,

Very sincerely, yours,

D. A. HOLLINGSWORTH,
Member of Congress, Eighteenth Ohio District.

STATEMENT OF HON. D. A. HOLLINGSWORTH, OF OHIO, IN SUPPORT OF BILL TO ERECT MONUMENT TO MAJ. GEN. GEORGE ARMSTRONG CUSTER AT HIS BIRTHPLACE IN NEW RUMLEY, OHIO.

George Armstrong Custer was, at the outbreak of the War between the States, in 1861, an undergraduate at West Point Military Academy, but, following a youthful impulse and firm conviction of duty, he immediately entered the Federal Army and served with distinguished gallantry until the close of the war, when, at the early age of 25, having risen to the rank of major general of Cavalry, he led the final charge at Appomattox, meeting on the way, happily for our beloved land, the white flag of Lee's army.

He remained in close attendance upon Grant and Lee until the final peace stipulations were signed by the two chieftains.

Gen. Sheridan, his immediate superior, said of him at the time that he was "the greatest Cavalry general of ancient or modern times."

He was born at New Rumley, Harrison County, Ohio, of Democratic parentage, but was appointed to West Point on merit by a former Republican Congressman from my district, Hon. John A. Bingham. His standing and grades after entering the Government school were practically perfect, but his patriotic spirit would not permit him to remain longer in training when his country, as he believed, called him to active service.

A soldier by nature, instinct, and training, he did not, after the war, like many others of both armies, seek civic and political honors, which at that time came easily to deserving ex-soldiers. Had he done so, a Custer Square or a magnificent monument of bronze or marble here at the National Capital, instead of blankness everywhere, might have borne mute testimony to his sterling qualities as a military leader of distinction.

The Government he served so well on the tented field could never have been guilty of such ingratitude toward him had he sought the limelight of civic renown, as did many of his comrades whose names and fame are now perpetuated in the monumental shafts and sculptured marble of the most magnificent capital city of the world.

This is not all. On the 25th day of June, 1876, Gen. Custer, still an officer in the United States Army, in command of an inadequate Cavalry force, was surrounded in the "bad lands" of the frontier by a horde of savage Indians, and, resisting to the death like brave men, he and his troopers, numbering 254, were brutally massacred. With him perished two brothers and one brother-in-law. Not a soul of his command escaped except a friendly Indian scout.

It proved, however, fortunately for American civilization, the beginning of the end of savage warfare on our frontier. It attracted the attention of the Government to a most serious condition of life in sparsely settled regions of the West, and hostile savages were soon hunted down and destroyed, while the peaceably inclined tribes were in a sense adopted as wards of the Nation to be cared for, as they still are.

Again, in death as in life, at Appomattox he proved himself a hero of marked and intrepid courage.

Gen. Custer was not a member of any of the exclusive Army societies organized among officers during and since the war, and hence those societies have not, as they have with their own distinguished members, undertaken to erect any monument to his memory.

At the grand review in Washington, in 1865, Gen. Custer with his command was given the position of honor, the right of the line, and head of the column of 200,000 veterans fresh from Appomattox, all of whom knew that he had fairly and rightfully won it by his gallantry and heroic bearing throughout the war and at the closing scenes of the mighty struggle between the sections.

Essentially a soldier like his chief, Gen. Grant, and his rival, Gen. Lee, Custer was also like them a man of peace. Grant's famous words, "Let us have peace," rang out no clearer on that historic occasion at Appomattox than did Custer's words along the same line on the same day in an address to his brave troopers announcing the near approach of peace.

Let me quote it in part:

HEADQUARTERS THIRD CAVALRY DIVISION,
Appomattox Court House, Va., April 9, 1865.

SOLDIERS OF THE THIRD DIVISION: With profound gratitude toward the God of Battles, the commanding general avails himself of this, his first, opportunity to express to you his admiration of the heroic manner in which you have passed through the series of battles which to-day resulted in the surrender of the enemy's entire army.

The record established by your indomitable courage is unparalleled in the annals of the war. Your prowess has won for you even the respect and admiration of your enemy.

You have never lost a gun, never lost a color, and have never been defeated.

The near approach of peace renders it improbable that you will again be called upon to undergo the fatigues of the toilsome march or the exposures of the battle field, but should the assistance of keen blades wielded by your sturdy arms be required to hasten the coming of that glorious peace for which you have been so long contending, the general commanding is proudly confident that, in the future as in the past, every demand will be met with a hearty and willing response.

Let us hope that our work is done and that, blessed with the comforts of peace, we may soon be permitted to enjoy the pleasures of home and friends.

For our comrades who have fallen let us ever cherish a grateful remembrance. To the wounded and those who languish in Southern prisons let our heartfelt sympathy be tendered.

And now, speaking for myself alone, when the war is ended and the task of the historian begins, when those deeds of daring which have rendered the name and fame of the Third Cavalry Division imperishable are inscribed upon the bright pages of our country's history, I only ask my name be written as that of the commander of the Third Cavalry Division.

G. A. CUSTER, *Brevet Major General.*

Heroic and modest, he was not thinking or looking forward to monumental fame. He was content that history only should record his deeds. The tragic massacre of 1876, which rendered his name immortal, was in the future.

Of his immediate family friends, only one remains whose heart would be made glad by this delayed recognition. A faithful widow in her loneliness, as the evening shadows gather, still steadfastly cherishes with all the loving intensity of youth the memory of her soldier husband who died, some 40 years ago, a martyr, if there ever was one, to his country and to civilization. A personal letter of appreciation is my warrant for assuring the committee that the passage of this bill by Congress would be highly gratifying to her. It would also be regarded by a happily reunited country, 50 years after the last hostile shot was fired in the dreadful war drama of the sixties, and after all the departments of the Government, politically speaking, have undergone a change, for this Congress to thus honor a worthy soldier of the Northland whose command, April 9, 1865, on the last real battle line between the contending armies, received, modestly and without unseemly exultation, the white token, supposed to indicate approaching military exhaustion, from Gen. Lee, the greatest chieftain of the South, still its idol, and carried it between the lines to the commanding general of the northern Army, Gen. Grant, still believed to be the greatest military figure in American history.

It would be an honor both to the men who won and the men who lost at Appomattox.

I could not do more. Anxiously I waited, but weeks lengthened into months and months into a year or more without a word of information being vouchsafed by the committee.

Finally, with the near approach of adjournment and the crowding of the calendar with vitally important administration measures, I wrote a note of inquiry to the chairman, which he was good enough to answer promptly, but clearly indicating that I was doomed to another disappointment.

My note and the answer follow:

JANUARY 23, 1917.

Hon. JAMES L. SLAYDEN,
Chairman Committee on the Library,
House of Representatives, Washington, D. C.

MY DEAR MR. SLAYDEN: Recalling that in January, 1916, soon after the meeting of the Sixty-fourth Congress, I introduced and had referred to the Library Committee H. R. 4688, to authorize the erection of a modest monument to the memory of Maj. Gen. George Armstrong Custer, and, although I filed with it a written brief, I also requested, by letter and otherwise, the privilege of appearing before the committee, at its convenience, in further support of the measure; and, not having been given such opportunity and no action having been taken by the committee, I presume I may as well conclude, with the near approach of the close of Congress, favorable action need no longer be expected by me.

I should, however, Mr. SLAYDEN, appreciate it if you would have a report of some kind made to the House, so that the attitude of the committee may be known to the friends and supporters of the bill, and thus relieve me of seeming neglect of a proposition which I deem very worthy.

Thanking you in advance for any consideration you or your committee may give the subject, I am,

Very truly, yours,

D. A. HOLLINGSWORTH,
Member of Congress, Eighteenth District, Ohio.

COMMITTEE ON THE LIBRARY,
Washington, D. C., January 24, 1917.

Hon. D. A. HOLLINGSWORTH,
House of Representatives,
Washington, D. C.

MY DEAR MR. HOLLINGSWORTH: I have the honor to acknowledge receipt of your favor of the 23d instant with regard to the bill introduced by you to provide for the erection of a monument to Maj. Gen. George A. Custer at New Rumley, Ohio.

I regret exceedingly that circumstances have prevented favorable action on the bill in which you are interested, but you may be assured there has been no discrimination against the measure.

During the six years I have been chairman of the Committee on the Library the necessity for economy has been urged upon the committee, and repeatedly we have been asked not to report bills carrying appropriations if it could be avoided.

Consequently we have had to defer favorable consideration of many worthy projects, and in six years there have been reported from this committee but two bills carrying appropriations, one for $7,500 and the other $35,000.

At the beginning of this session I received a letter from the Speaker of the House, from which I quote:

"In view of the enormous expenses of the Government and the certainty of a great deficit, I take the liberty of suggesting to you as chairman of the Committee on the Library that it would, in my judgment, be well to refuse to entertain the idea of reporting bills that involve an expense on the Treasury for the procurement of ornaments and luxuries. Such things can very well wait until we can better afford to make such investments."

We have more than a hundred bills pending before the committee seeking to provide money for the erection of monuments, memorials, etc. Under the circumstances I do not believe the committee will report favorably any one of them.

When you filed your statement concerning the Custer monument with the committee last January I called it to the attention of the members, and I shall be glad to arrange a hearing for you. I have not previously done so for the reason that I thought you would not care to have the hearing at a time when it was improbable the measure would receive consideration.

It has not been due to lack of diligence on your part that the bill has not been reported.

Yours, most truly, JAMES L. SLAYDEN, *Chairman.*

The courtesy of this answer challenged my admiration, but when, a few days afterwards—February 9—I read in the Washington Post a report of an address made the evening before by the honorable gentleman to the Washington Society of Fine Arts all my hopes vanished. I quote one brief paragraph which,

possibly erroneously, may be thought to have a slight personal tinge:

As soon as a national hero dies there is always some one who runs to Congress for an appropriation for a memorial. Why, this city is crowded now with statues, figures, and monuments to the memory of our heroes. We should wait.

Gen. Custer's admirers have waited already over 40 years since his death to secure national recognition of his services and sacrifices.

Note also the quotation in this letter to the chairman. No bills for "ornaments or luxuries" to be reported. Shades of the Washington Monument, piercing the sky in majestic grandeur as a memorial to the memory of the Father of our Country, has sentiment for the Nation's heroes become extinct? Are patriotic memories hereafter to be wholly ignored? Have commercialism and modern art societies crushed out national ideals and sentiment among the people? Is the erection of a modest memorial by the Government he served and for which he died to the memory of a neglected hero of the type of Gen. Custer to be classed simply as an "ornament or luxury" for the living? Is there a time limit fixed on national gratitude?

I refuse, Mr. Speaker, to believe such an atrocious libel on American patriotism. It is inconceivable.

I have mentioned a possible change in public sentiment as having taken place at the National Capital since 1865, when Gen. Custer, with dusty uniform but every inch a soldier, rode down Pennsylvania Avenue the cynosure of a grateful citizenship, leading the victorious forces of the Union in review before the President, and the thought occurs that perhaps my mention of this change may call for or at least justify a brief reference to details.

Historic comparisons if truthful are instructive and ought not to be regarded as offensive. It is nether pleasant nor profitable to stir, or be charged with stirring, the embers of an embittered past. Generally, in all contests, there is some fault on both sides and forbearance is a real virtue.

Before the Civil War Washington was distinctively a southern city in sentiment and controlling influences, and this fact, to northern minds, seemed to be emphasized in many objectionable ways not now to be referred to except by students of history. During and after the war there was a change in this respect and northern control replaced southern sentiment, except in the self-satisfied exclusive circles of ancient lineage, found in all cities except in a few progressive ones where old family distinctions are not regarded.

Few excesses marked this period of change, and even in the supreme hour of victory for the Union cause exultation was avoided and no attempts were made to humiliate those in the city who had in quiet seclusion nursed a vain hope of victory for their friends of the Southland.

The seasoned veterans of the North, chastened by thoughts of the awful carnage they had witnessed, marched quietly in review down Pennsylvania Avenue thinking only of home and muster out when they would become again a part of the great civic citizenship of the Republic they had saved from destruction. Few unpleasant reminders of the war were left behind. No arc de triumph was permitted to span any of the magnificent avenues of the National Capital. No picture cut or carving was allowed to be placed in the Capitol Building to remind anyone of Vicksburg or Appomattox, of Sherman's march to the sea or the capture of Richmond. The dominant element of the Government was thoughtful and considerate of the vanquished; the right hand of fellowship and forgetfulness was freely extended after the tragic furling of the stars and bars at Appomattox.

The pact of peace between Grant and Lee has been kept inviolate in spirit and in fact, and is still held sacred by the Northland.

But, presto change. Beginning with the early deflection of President Johnson, a quiet, peaceful, persistent, but perfectly legal prosouthern agitation was instituted, resulting finally in the conditions we have to-day at Washington, aptly called by some the "southern restoration," something like the restoration of monarchy in England after the republican virtues of Cromwell were forgotten. Ante bellum emblems reappeared, ante bellum sentiment and ante bellum dominance gradually replaced the public sentiment of the war period and became as pronounced, although not so tragic, as in the dark days which led up to the Civil War when personal violence sometimes took the place of rational argument.

As suggestive of the high points of expectation in this southern renaissance, from the viewpoint of its friends, I beg to quote the words of an honorable Member of this House in a speech recently delivered at one of the numerous Confederate centers in this city and by unanimous consent printed in the CONGRESSIONAL RECORD.

The occasion was the joint anniversary of the births of Robert E. Lee and Stonewall Jackson, "whose names," said the speaker, "represent a glory, and whose deeds have illumined a cause with a radiance which shall never die."

Further quoting:

It was their own mighty spirit communicated to the Army of Northern Virginia which made it invincible upon any field of equal combat and gave it immortal renown.

Their last resting place will be found in every land where patriotic heroism has a home.

During the entire Civil War the courage and sincerity of the Confederate soldier was never questioned by his brave opponents on the battle field. The ability of Lee, of Jackson, and other great leaders of the South was never questioned or minimized. But the culmination of fraternal feeling between all classes of citizens of this great land of ours has been reserved for the year of 1917, when the survivors of Confederate veterans, in response to the recognized wish of our whole country, and it might with truth be said its invitation, will meet in reunion in this beautiful and attractive Capital in June next. The man from Maine shall meet in friendly intercourse the man from North Carolina; the man from Minnesota shall rejoice with the man from Mississippi. From ocean to ocean will be gathered together those who will share in the enjoyment of this auspicious and delightful occasion.

Beautiful thought; happy inspiration. In the unique but expressive language of our good friend from Texas, I feel like saying amen.

Yes; men of the Northland come to Washington in June, not as you came in the sixties, but as friends in the spirit of joint reunion suggested by this eloquent eulogist of Lee and Jackson. It is staged by Confederate enthusiasm, and by a resolution and appropriation of this Congress, for an epoch-marking period in American history; it is to mark the final renaissance of the "good old days before the war." You will be royally entertained, and in return courtesy requires that you overlook any regrettable changes which have taken place in the National Capital during the last half century.

Only one suggestion have I to make to the survivors of the Northern Army, and this I trust may not be regarded as out of harmony with the high points of expectancy in Maj. STEDMAN'S address:

To the gray-haired veterans who followed Gen. Custer in their youth and were with him in the last charge at Appomattox and know how richly he deserves the gratitude of the Republic, I suggest that you ask the managers of this reunion why no memorial or other recognition of the services and sacrifices of Gen. Custer appears among the many "statues, figures, and monuments to the memory of our heroes," with which, according to Chairman SLAYDEN, the city is crowded. The answer, ten chances to one, will be a blank stare and an inquiry as to who Custer was. Do not appear shocked at this, for it is only in keeping with the action of this Congress in denying him a mite of just recognition.

You men who followed Grant from Donelson to Vicksburg and from Vicksburg through the Wilderness to Appomattox, ask to be directed to his monument, and you will find near but off a short distance from the base of Capitol Hill an unfinished foundation commenced many years ago, with only a few meaningless pedestals thereon, but nothing to remind you that it is intended as a site for a memorial to the great commander of the Union forces, and no one will be found to tell you how many years this unfinished foundation has remained in its present condition, a disgrace to the Nation whose armies he led to victory and of which he was twice elected President.

Go out to Arlington, a place peculiarly sacred to Union soldiers, over 35,000 of whom lie buried there, many of them in unmarked graves, and where you have been told the Government has provided a holy sanctuary or exclusive place, as it were, for an annual display of patriotic sentiment by those who delight to remember and honor the Union dead of the Republic, and you will also find, recently erected on the same grounds, another shrine, in size and magnificence excelling all others, a veritable Confederate center for rival displays of Confederate sentiment. Do not criticize; times have changed.

Go to the Capitol Building and examine the records of this present Congress and you will find many things of which you read little in the public newspapers. You will learn that there are now pending measures to annul the thirteenth, fourteenth, and fifteenth amendments to the Constitution, vital questions supposed to have been settled by the war; bills to grant pensions to Confederate soldiers at a higher average rate than now paid to Union soldiers, and many other measures calculated to make good to the Southland the damages you are still believed to have ruthlessly caused in the sixties. Peer a little further into the record and see how complacent Congress has been toward this sentiment in fixing a special date for the delivery of enthusiastic eulogies on the life and character of Jefferson Davis.

If, after this, a lingering doubt remains of this so-called southern restoration, go into Statuary Hall and you will find a bronze statue of Grant's famous rival at Appomattox, in full

Confederate uniform, garlanded and decked with flowers, the most conspicuous figure in a group of 100 or more of the Nation's distinguished notables who have added renown to the Republic in both civil and military life.

Maj. STEDMAN and I each saw this heroic bronze figure of the Southland in life, on the battle field, but from different angles, and, in all kindness, his viewpoint as an officer in the Confederate Army being better than mine as a private soldier on the other side, I leave solely to him the pleasing task of eulogy.

But, comrades, after cordial greetings and happy exchanges of reminescence shall have brought the reunion to a close, and you get back home in the Northland, ask yourselves in all seriousness whether the changes of a half century which you have witnessed in Washington do not in fact justify all that has been said of southern renaissance and the restoration of southern ideals and sentiment at the National Capital.

Yes, Union veterans of the Northland, especially those who were at the grand review in 1865, come to Washington again in June, 1917, and hear the jubilee notes of rejoicing, pitched on a high scale but attuned, as explained by Maj. STEDMAN to strike a chord of harmony reaching from ocean to ocean and in sweetest accents acclaiming the beauties of a new day for the Southland.

It may not be epoch-marking, but it will certainly be a day long to be remembered.

Meantime, in taking leave for the present of my efforts to secure from the Government proper recognition and a modest memorial to the memory of Maj. Gen. George Armstrong Custer, hero and martyr, I repeat, as in my statement to the committee, if this Democratic Congress were to do him this simple act of justice it would be an honor both to the men who won and the men who lost at Appomattox.

It would also be a valued guaranty, a patriotic inducement to the men now asked to join the big preparedness armies of which we hear more loud talk than we see of actual enlistments, to know that they would not be forgotten or their memories be neglected by the Government if they should come home after the battle laden with laurels of victory and honor for their country.

Justice, honor, and gratitude are as essential to the well-being of a republic as they are to individual good citizenship; without these high ideals patrotism weakens, volunteer enlistments lag when most needed, and the Government is forced to resort to arbitrary methods of forcing men to join the colors, conditions in which history admonishes freemen to beware of the man on horseback.

Opposition to Borland Amendment.

EXTENSION OF REMARKS

OF

HON. ALLEN T. TREADWAY,

OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, February 27, 1917.

Mr. TREADWAY. Mr. Speaker, the futility of passing the Borland amendment appropriating $400,000 to be expended by the Federal Trade Commission for the purpose of a so-called investigation into the high cost of living is well borne out by the examples we have of investigations now in progress. The price of gasoline has, I believe, been under a so-called investigation by that commission for a somewhat indefinite period. With what result? It is practically at top-notch price to the consumer to-day. The coal situation has likewise been under investigation for a lengthy period. A resolution was adopted by the Senate on June 22, 1916, and a similar resolution was adopted by the House on August 18, 1916. What is the present status? Coal never was as high, except for a brief period during the great strike in New England and, I believe, elsewhere, as to-day. I happened to become inquisitive as to what was being done, and introduced a privileged resolution of inquiry, but have finally given up as hopeless securing any information at the present time that would be of any benefit to a poor coal consumer. A letter from the secretary of the Federal Trade Commission, under date of February 8, 1917, shows the progress that has been made along this line:

The commission has for some time been engaged on an investigation of the anthracite industry under Senator HITCHCOCK'S resolution, S. Res. 217, and of the bituminous under Representative RAINEY'S resolution, H. Res. 352. Work on the anthracite investigation under the Hitchcock resolution has been extended by the commission to cover the abnormal fall and winter prices that have developed since the date of that resolution. This work on anthracite is being pushed energetically, the field work having been completed and the results now being compiled with all possible speed in the office. The first, second, and third questions of your resolution, so far as concerns anthracite, will be covered in the commission's report. However, the third question, which relates to car shortage, is within the remedial jurisdiction of the Interstate Commerce Commission, and that body has already taken action, as set forth in Interstate Commerce Commission docket 9284, decided January 18, 1917.

As regards bituminous coal the commission has been compelled to delay somewhat the investigation in order to push the anthracite work, because the staff was not large enough to pursue both investigations actively at the same time. Very soon it is expected that a number of men now engaged on anthracite can be detailed to bituminous, and the investigation carried on as rapidly as possible. The bituminous study looks to full ascertainment of economic conditions in that industry and to recommendations for economic remedies that will tend to prevent the future occurrence of unwarranted price increases. The commission could not at the present time make any adequate presentation of facts in response to questions 1, 2, and 3 of your resolution.

With this situation before you, the commission believes that you will agree with it that the objects you have in mind in your resolution will be attained at the earliest possible date without pressing its adoption, and that the adoption of the resolution would be inadvisable under the circumstances.

This letter practically says that "considerable progress has been made" under the Hitchcock resolution in eight months in one branch of the coal industry, and practically none in the other branch in six months under the Rainey resolution.

With this record before us of the rate at which information is secured by the Federal Trade Commission, the Members can draw their own conclusions as to the length of time an inquiry will require covering the details of the Borland amendment. The people will have starved to death, and the only beneficiaries will be the undertakers if we are to await action by this well-paid board.

But the title, "investigation," sounds well, and no doubt there are still plenty of "deserving Democrats" willing to accept their share of $400,000 in the way of remunerative salaries. This will be another slice of Democratic patronage and extravagance to be added by the Democratic apologists to the list of so-called "war expenses," having no bearing whatever on the war except as it adds to the taxpayers' burdens.

The advocate of this most recent suggestion of an investigation states that it will require at least eight months to make the inquiry. Should the prices of every known commodity decrease through natural conditions by that time, this result will be a more satisfactory one to the people than any paper explanation the Federal Trade Commission could ever make.

There are a few very evident facts which we do not need to expend $400,000 in discovering. The producer is not the benefactor of the present high prices. The farmer may be receiving a slight increase over normal market prices, but there has not been nor never will be a time when the farmer will secure any adequate proportion of extravagant values. What he sells may advance slightly, but what he buys at the same time will advance tremendously.

The greedy hand of monopoly is becoming bolder and more grasping every day. There are ample laws to meet this situation, but lack of enforcement which no investigation will ever improve. The American people have been long-suffering in the abuse of monopolies and speculations. I am not a believer in governmental ownership, but if the close alliance between coal companies and railroads is allowed to continue the people will demand relief. Natural resources of the country should not be used as means of making the rich richer and the poor poorer. Abuse of private ownership will eventually force public regulation of a kind that will regulate the cost to the consumer.

The past winter in New England and in Massachusetts has brought on untold suffering, in spite of plenty of employment. It is an established fact that the coal companies have deliberately broken contracts in order to secure high prices from so-called independents who have stood ready to sell the identical coal which should have been delivered under contract at a much greater profit both to the mining companies and to themselves than would be possible. The coal dealers are as helpless in the hands of these grasping monopolists as is the public.

The condition has been so acute in Massachusetts that Gov. McCall appointed a commission which in a very short time was able to offer a very suggestive report, from which I quote herewith:

The commission on the cost of living begs to submit the following report upon the anthracite-coal situation in the Commonwealth:

The price of anthracite coal in Boston is now $9.50 a ton. One year ago the price was $8 a ton, and in December, 1914, $7.75 a ton. In many other cities and towns in Massachusetts the price is now $12 a ton or even higher. The immediate causes for these high prices are the increases in the prices charged by the mining companies, the high freight rates on water-borne coal, and the difficulty of securing addi-

tional supplies. Underlying these immediate causes are conditions and influences which seem to warrant legislative action.

A serious aspect of the situation is the domination of the anthracite coal trade by nine large companies, each of which is closely allied or at least in sympathetic operation with the railroad company on whose line it is located. These nine large companies produce about 75 per cent of the anthracite coal mined in Pennsylvania, the only source.

Although prices charged by these nine companies have been increased only 40 cents a ton over the December, 1915, prices, it appears that several of them sell their coal in markets which will best serve the revenues of the railroads to which the coal companies are subsidiary. In some cases this results in a discrimination against New England. Two or three of the companies have curtailed their shipments to New England during the present year presumably in the interests of the railroads that could secure a longer haul and more revenue by delivering coal elsewhere. This year the demand has been so heavy in markets which yield more remunerative hauls to the railroads that the orders of many Massachusetts retailers have been only partially filled and a serious shortage has resulted in numerous cities and towns in the Commonwealth.

In buying coal from these large mining companies a retailer can not follow the ordinary business practice of safeguarding himself by contracts. These companies do not make any contracts guaranteeing delivery or price. They ship coal at their own convenience on whichever orders they choose, to be paid for at the price current on the day of shipment. No matter when a retailer orders coal, he can not be sure when the coal will be delivered or what it will cost him. He is at the mercy of the coal company.

During the last few months some of the mining companies have failed to fill any considerable part of their orders from Massachusetts. As a result coal retailers have had to pay late-season prices for coal ordered early and many retailers have been driven to buy coal, frequently of poor quality, at high and perhaps exorbitant premiums from merchants and brokers representing the small independent coal-mining companies. While some of the large companies refuse to fill orders from Massachusetts on the ground that no cars are available for transportation, there seems to be no serious difficulty in securing cars for "premium" coal. So far as the coal retailers are concerned, the high prices appear to have brought hardship rather than prosperity to many of them.

Because of the conditions here summarized your commission believes that it is not only to the interest of the citizens of Massachusetts but also for the general welfare of large sections of the United States that the production and marketing of anthracite coal should be freed entirely from the control or influence of the railroads that are the initial carriers of the coal. The commission believes that the ownership of the anthracite-coal mines has become so concentrated that public interest requires that the sale and distribution of anthracite coal should be under Federal regulation. For this purpose, in addition to the existing powers of the Interstate Commerce Commission to regulate rates and allot cars to the different mines, some Federal authority should be given power: (1) To supervise the distribution of loaded coal cars and the return of empty coal cars; (2) to direct the railroads in an emergency to give the right of way to coal over other merchandise, such as stone and lumber, that is not an immediate necessity of life; and (3) to fix the maximum price at which anthracite coal may be sold at the mines.

After discussing other phases of the situation in Massachusetts and stating "that not only in the interest of the citizens of Massachusetts, but also for the general welfare of large sections of the United States, the production and marketing of anthracite coal should be freed entirely from the control or influence of the railroads that are the initial carriers of the coal," the commission offers, among others, the following recommendations:

(1) We advise that the legislature memorialize Congress in behalf of legislation which will give power to the proper Federal authorities—

(a) To separate effectively the anthracite-coal business from control, direct or indirect, by any railroads.

(b) To secure the prompt return of empty coal cars.

(c) To direct the railroads, in case of emergency, to give the right of way to coal over other traffic not involving the immediate necessities of life.

(d) To prevent discrimination in the distribution of coal to different markets.

(e) To regulate the prices at which anthracite coal is sold by the mining companies or their agents.

Another great iniquity is speculation in the necessaries of life. The gambling spirit of a certain percentage of our people will always demand an opportunity to vent itself through Wall Street. Speculation in stocks is not apt to seriously hurt anybody but the speculator. The speculation in grain, as it is so extensively indulged in in Chicago and elsewhere, is not only likely to injure the speculator but may affect the price of the bread of the workingman. I am not in favor of the Borland resolution, but if it could offer legislation to prohibit this sort of thing it would be money well expended. We all know, however, that that is not the kind of a result we will secure.

There is to-day ample coal in the country, both above and below ground, but it is not to the advantage of the companies to permit it to be readily accessible to the consumer. There is no shortage of foodstuffs, but it is not to the financial advantage of those who have control of it to permit it to reach the markets and the consumers in sufficient quantities.

Regulation of those responsible for such conditions will soon be demanded by the people, but the $400,000 so-called "investigation" by the Federal Trade Commission will not bring it about.

A Boston newspaper, The Christian Science Monitor, on Saturday, February 24, published a strong editorial on this very subject, which I insert herewith at the conclusion of my remarks:

THE REAL FOOD EMBARGO.

There is no shortage of foodstuffs or of fuel in the United States. The supply is equal to every demand for home consumption and for export. This is no mere dogmatic assertion. Government reports confirm what private investigation has long since established, namely, that inadequate distribution, rather than underproduction or overconsumption, is the cause of depleted food and fuel stocks in populous centers. An important contributory cause of the so-called shortage of food is, of course, the tying up of commodities in storage warehouses to increase prices, but this also would be removed by a free flow of transportation. Inadequate distribution makes monopoly possible. "Every city in the East," says a Washington dispatch purporting to be based upon official Federal information, "so far as known, has plenty of food for immediate requirements," and rising prices can not, it is declared, "be justly attributed to shortage."

There is plenty of food in the country, but it is largely unavailable. There are practically inexhaustible stores of coal in the country, but, except at exorbitant prices, it is beyond the reach of the people. The Leiter wheat corner of the winter of 1898 was organized on the theory that a great shortage in the cereal existed in the Northwest. Philip D. Armour reopened navigation in the Great Lakes and rivers, with the result that grain poured into Duluth, Milwaukee, and Chicago in amazing quantities. Only two things were necessary to the release of the wheat stored in the barns and small-town elevators, namely, assurance of a ready market and good prices. The West, the Southwest, and the Northwest are stocked with all kinds of foodstuffs to-day, but there is little or no assurance to the individual producer that he can get his surplus to the market. The car shortage, annually offered by the railroad companies as an excuse for their failure to handle commodities promptly, and never corrected, has left the average western producer with little opportunity of getting the things he has to sell to those who wish to buy them in reasonable time or at reasonable terms.

Forty million bushels of grain are reported from Chicago as being held up in local elevators, and 7,000,000 bushels additional are in cars, some of which should have been shipped three months ago. There is a statement from the greatest produce center in the Western Hemisphere that "Chicago is virtually closed to the farmers of the West."

It ought to be clear enough that the cause of the present so-called foodstuff shortage is the failure to bring the farm and the open market together; this, in turn, enables the food monopolists and manipulators, free as they are from wholesome competition, to name their own prices. Internal commerce is clogged. The flow of foodstuffs and fuel is impeded. With bountiful supplies in the Nation a gulf has been created between the producer and the consumer, and it is an artificial gulf that will probably never be spanned until the Government shall open and keep open every possible means of communication, by land and water, in the country.

The present transportation and distribution system has been outgrown.

The World's Food Shortage.

EXTENSION OF REMARKS

OF

HON. CARL C. VAN DYKE,

OF MINNESOTA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, February 27, 1917.

Mr. VAN DYKE. Mr. Speaker, the world is faced with a shortage in its food supply. Except by food economies unusual and in many countries most drastic will the food reserves carried over from the recent harvests hold out to feed the world's population until next season's crop. We have arrived at a condition where over half the world meat has become so costly a luxury that it is within reach of the comparatively few and for them at limited intervals; where bread is issued in rations fixed by government, and where the general food scarcity of some of the leading nations of Europe is such that it is a misdemeanor punishable by law to peel a vegetable. We have been informed by cable that even Great Britain, whose brag has always been that her merchant fleet commands the seas and the markets of the world, has prohibited all public eating places from serving any meal of more than two courses up to the 6 o'clock dinner, and that even the latter is restricted to three courses for the most aristocratic diner.

In addition to the disasters of war, which has reduced the productive capacity of one-half the civilized globe, the harvests of the world have been curtailed by drought, rust, and blight. The International Institute of Agriculture, established at Rome and representing 90 leading nations, including our own, reports the wheat production of the principal countries of Europe at only 72.5 per cent of last year's crop; while rye, barley, oats, and corn are all materially below last year's crop. Meat and dairy products throughout Europe are to-day classed as luxuries; while the shortage of crop moisture which cut down cereal production has naturally affected also the production of fruit and vegetables.

The 100,000,000 people who dwell in peace and prosperity under the flag of our Republic may well congratulate them-

selves that, to the evils of food shortage due to the failure of Jupiter Pluvius to properly furnish moisture for the crops, there is not added the havoc of war to devastate the fields, decimate the toilers, and burden the survivors with war debts and war taxes to shackle industry even unto unborn generations. But even with the blessings of peace and prosperity, our food supply has been so shortened by adverse climatic conditions that the facts of food supply, prices, and distribution have become a subject of national concern.

The Department of Agriculture reports that our wheat crop, which last year exceeded 1,000,000,000 bushels, has been reduced by the recent harvest to a little over 600,000,000 bushels. Last year's export surplus of 400,000,000 bushels has been practically wiped out. The November 1 farm price, which last year was 93 cents per bushel, has risen to $1.58, an increase of 65 cents, and the highest farm price since the establishment of the Department of Agriculture, if not in the history of American agriculture.

The damage from black rust to the spring wheat crop alone of Minnesota, North and South Dakota, and Nebraska is estimated by the Department of Agriculture at 181,000,000 bushels. The export surplus of Minnesota and the Dakotas, which last year was 240,000,000 bushels, has been cut down to 45,000,000, or reduced over 80 per cent. The total wheat export surplus of the United States, which in 1915 was 404,000,000 bushels, with a five-year previous average of 140,000,000, has been reduced, according to the department's November estimate, to 9,471,000, which would barely suffice for one week of export shipments. In other words, at the present time we have no wheat at all to spare other countries, and must see to it that we retain sufficient grain for seeding the next crop.

The per capita wheat consumption of the United States, as estimated by the Department of Agriculture, was 6.55 bushels last year, and the 15-year average is a little over 6 bushels for each person. But the production in 1916 is given as only 6 bushels per capita, as against 10 bushels in 1915, 9 bushels in 1914, and a 15-year average of 8 bushels per capita. Consequently the disaster to our 1916 wheat crop has cut off our usual export surplus of 2 to 4 bushels per capita and reduced us to the single duty of providing for our own bread wants with practically no balance to ship to the world's hungry across the sea.

The grain situation would not be so bad did it not extend to other cereals than wheat. But, compared with 1915, we have also a shortage of nearly 400,000,000 bushels in the corn crop, over 300,000,000 in oats, over 50,000,000 in barley, with parallel reductions in rye, beans, and buckwheat. Potatoes likewise show a crop reduction of 70,000,000 bushels, with similar declines in practically all vegetable crops, as well as fruit.

The natural result of this shortage in food production has been to raise the farm price of practically every staple crop. The farm price of corn, oats, barley, rye, and buckwheat on November 1, 1916, ranged 20 per cent to 50 per cent higher than in 1915. Wheat on November 1 was about 70 per cent higher than on the same date last year, and potatoes were over 100 per cent higher than a year before and still higher at the present time.

Notwithstanding decreased production and rising prices, however, our export of food productions has continued unabated. This indicates that however serious may be the conditions of food supply and prices on this side of the Atlantic the European situation is still more critical. Our exports of foodstuffs, both crude and manufactured, for the 10 months ending October last, as shown by the Department of Commerce, reached the vast total of $866,000,000. This was larger by $10,000,000 than the food exports for the corresponding 10 months' period a year ago, when our agricultural production was so heavy. For the full calendar year ending December, at the above rate, the food exports of 1916 will exceed a round $1,000,000,000. This is double the annual average value of food exports for the 15 years, 1900–1914, inclusive, and $40,000,000 greater even than the food export total for the fiscal year 1915. Part of this increase in value of food exports—in fact, a large factor in the valuation total—is the rise in price; and yet also there has been a strong increase in quantity of products exported as compared with previous years, except only the banner year of export volume—1915.

So far as the past two years are concerned, we rejoice in the fact that the American farmer has enjoyed the greatest export trade and the best prices in history. We are proud of the record that the American farm for two years past has realized approximately $1,000,000,000 per annum from its food products alone and thereby doubled the average record of the previous 15 years. We rejoice not only in the splendid trade volume, the greatest on record, but in the good prices, giving the American farm for its export surplus not a mere return for actual cost to keep the farm from mortgage foreclosure but a liberal margin of profit on the capital, such as capital would expect to enjoy in other lines of business.

We are now faced with a new situation: The bulk of most of the staple food crops of the season of 1916 has passed from farmers' hands into the control of warehousemen, wholesale dealers, and speculators. The market question now is not what the farmer shall receive but what the consumer shall pay. The middleman is in control, save in so far as the law and public protection shall interpose. The controlling volume of the country's food supply is so largely locked up in the warehouses and future contracts of middlemen that other supply factors appear of little comparative consequence.

Here, then, are the three big factors of the food equation:

First. One hundred million consumers demanding sufficient food at a just and living price to enable them to do the Nation's work.

Second. A fairly well organized body of middlemen—including warehousemen, dealers, commission men, brokers, exporters, carriers, and the financial institutions which finance them, as well as the speculators and investors who buy products, futures, shares, and other securities—in sufficient control of the country's food supply to practically dictate prices so far as the law will permit.

Third. There are the public makers and administrators of the law, whose duty it is to see that justice shall prevail and that the Nation, during the nine months before another harvest can be garnered, shall not suffer for want of food.

In facing this problem there are certain facts which begin to stand out in bold relief. Among these are the following:

First. That our total food supply is but little more than sufficient to meet the requirements of our 100,000,000 consumers until the next harvest.

Second. That the chances for importation from other countries are very poor.

Third. That the demands of Europe for food supplies are comparatively unlimited.

Fourth. That the opportunities of American middlemen to produce a general price uplift of all food supplies are exceptional and, indeed, without precedent, and, except as the law intervenes, the price is practically a question of what the traffic will bear.

Fifth. That the commercial organization and equipment of the professional and speculative interests in control of the food supply and market are such that, except for the intervention of law and public agencies, either one or both of two results may befall the country—the suffering of thousands of needy people for lack of food, and food prices for the remainder of our population at terms which will rob our industrial population and the great rank and file of our citizenship generally of the lion's share of the benefits of the prevailing prosperity.

The present and preceding Congress have fulfilled important public duties in passing the Clayton antitrust law and the act creating the Federal Trade Commission, as well as in strengthening the hands of the Department of Justice in the enforcement of law and prosecution of malefactors, and in equipping the Departments of Agriculture, Commerce, and Labor with greater facilities for gathering data for public enlightenment on industrial, commercial, and food problems.

The question is, Has Congress done enough? Is the equipment furnished efficient? Are the measures taken sufficient? Can we safely rest the cases with what has been done and trust Providence for the result?

We know that over across the Atlantic every nation of consequence has gone much further than we have in protecting its food supply and protecting the consumer against extortionate prices. We know that in Europe, both in belligerent and neutral nations, the problems of food supply and food prices are the dominant questions of the hour, both for the furtherance of the ends of war and peace. We know that the food question throughout Europe is a government question controlled by law and governmental agencies. Not only the production and transportation of food supplies but the marketing and consumption of food are prime subjects of governmental regulation.

There is no call for this country to go as far as Europe in governing food supply and prices, but we should go far enough to insure the public welfare. That is our paramount duty. The Nation's food supply is paramount to all other economic problems. What are tariffs, currency systems, railway regulation, banking laws, or even government itself to a people who have not food enough to sustain life until the next harvest?

The resolutions which I have submitted do not pretend to name a remedy for the conditions which confront us. They simply ask for report of facts by the executive authorities intrusted with the various phases of the subject, that we may

proceed to a thorough study of the problem with the best available data at hand as a guide to the consideration of remedies. With a wide and disinterested presentation of facts before us, we not only will be better prepared to consider measures to meet the emergencies of the day but to avoid the pitfalls and blunders of false remedies.

Among the measures that may be worth consideration for the development and conservation of the national food supply occur the following:

An organized movement, in which the Nation and the States may cooperate, to secure sufficient high-quality seed for an increased crop acreage of food supplies for the ensuing farm season.

An organized movement to prevent the slaughter of breeding stock and young animals of the various classes of food animals, with a view to building up the live-stock industry of the 48 States.

Extension of the Parcel Post System by amending the zone schedules for the more efficient and economical distribution of food products.

An effective administration of the waterways, in conjunction with railways, to relieve traffic congestion and reduce freight cost of transportation for heavy commodities.

Increased efficiency facilities for the Departments of Agriculture, Commerce, and Labor, with extended powers to reach more directly the problems of food production and distribution.

The limited use of the embargo for temporary periods and specified commodities when other measures fail to stem the serious loss of the Nation's food supply and the imposition of monopoly prices.

Finally, the strengthening of existing Government agencies, in particular the Federal Trade Commission and Department of Justice, in coping with the practical phases of food monopoly.

The President in his recent message to Congress has recommended conferring upon the executive arm of Government the power to commandeer the railways when the military defense of the Nation may require. There is no military requirement paramount to the problem of food supply. Food is the first military requirement which supersedes all others. If it is proper to commandeer commercial facilities for military purposes, it is proper to take similar efficient and necessary measures to insure the Nation's food supply, because military uses and purposes include the food supply. The conservation of the Nation's food supply, moreover, is both a war measure and a peace measure. It is essential to the prosecution of war; it is essential to the pursuit of industry. As long as man is a terrestrial animal and subsists on food the paramount material question of every nation is the production, distribution, protection, and conservation of the national food supplies.

It is elemental as regards the installation of any measure seeking to meet the present emergency of food supply and prices that in checking present evils it does not create other as great evils. For example, an embargo or other remedy to check present prices would accomplish little were it to check production and thereby extend the cause of high prices by curtailing the supply. On the other hand, such freedom of export as would exhaust the seed supplies and breeding stock of the country would likewise perpetuate high prices through curtailment of production. Therefore the executive departments, from which my resolution asks detailed facts and expert testimony, have no easy duty to perform. It is not an academic question which they have to answer, but a concrete problem on which it is hoped they have at hand the practical working data.

The present food problem of the country would not be so difficult were it solely governed by the simple law of supply and demand. It would not be difficult at all were all the human factors of the problem—producers, carriers, middlemen, and consumers—working together in unselfish harmony for the public good and national advancement.

The difficult, and I may say the sinister, phase of the problem looms up when one class of the human factors organizes to "do" the others and attempt to defy public agencies in the bargain. This is the phase of the problem which defeats ordinary and simple measures of treatment. It is the phase which European government has solved by drastic governmental measures. It is hoped that we may be saved from the compulsion of adopting similar drastic measures on this side of the ocean.

As an example of the dog-in-the-manger class of merchants who take advantage of conditions to organize a national holdup of the American people, take the autumn egg monopoly. It has now been well organized for a number of years. Its special habitat is the large cities, and its favorite season for extortion is just before the holidays, or before the hens begin their winter laying season.

The fall egg monopoly is not a new phenomenon. It has been in operation a number of years. The eggs are bought in the spring and early summer when the farm price is 10 to 15 cents per dozen, and they are put into cold storage and "cornered" until the price around Thanksgiving is forced up to 40 and 60 cents per dozen. This is not commerce; it is "holdup" pure and simple. The Government not long ago seized one of these cold-storage egg nests in Chicago with contents aggregating 72,000,000 eggs. A Federal grand jury hearing conducted by the Department of Justice resulted in a drop of 10 cents per dozen in the wholesale price of cold-storage eggs. In sympathy with the break-up of the egg monopoly, the Chicago price of butter dropped 4 cents per pound within a week, and potatoes 8 cents per bushel.

A study of the egg market shows that during the early spring and summer months, when there is an open market, the New York City price is only about 2 cents per dozen over the St. Louis price, which doubtless represents the cost of transportation from St. Louis to New York. But the November 1 price of eggs in New York, as shown by the Department of Agriculture, has ranged during the past eight years from 10 cents to even 30 cents above the St. Louis price. Were there a free market uncontrolled by the professional interest this November 1 disparity between St. Louis and New York would be impossible.

In April, May, and June, 1916, the average New York market price, as quoted in the monthly crop report of the Department of Agriculture, was 20 cents to 24 cents. The December 1 price of fresh eggs in New York is 40 cents to 62 cents. The November wholesale price, even of the refrigerator article, was from 33 cents to 38 cents, or 60 per cent higher than the June price of fresh eggs.

Capital is entitled to just returns on the investment, and in the egg business there may be a somewhat larger margin of risk than in some other lines of business; but certainly there is no just warrant for a profit of 50 per cent to 100 per cent on a six months' investment when money on good commercial paper may be obtained at 4 per cent.

Mr. Speaker, in common with nine other Members of this body, I represent a great agricultural State, the Commonwealth of Minnesota, which in value of farm property ranks as the tenth greatest State in the Union. I have not consulted with my colleagues of the Minnesota delegation, but I have no doubt that I voice their sentiments, as well as the sentiments of the 200,000 farm owners of Minnesota, who operate 30,000,000 acres of farm land, valued, with live stock, machinery, and improvements, at this time in the neighborhood of $2,000,000,000, when I say that if there is one thing which the middle western farmer resents more than another it is the fact that the product for which he has toiled and from which he has realized but a meager margin of profit is used as the football of the gambling pit and the jimmy of the professional trader to rob the general public.

There are thousands of consumers in the Atlantic States, and even many editors of daily and trade papers, who appear to think that it is the farmer who is holding up the workingman and the general consumer on the food staples of life. Anyone who compares the farm price, as reported by the Department of Agriculture, with the market price of the wholesaler and retailer can see at a glance who is responsible for the great bulge in price between harvest time and the holiday season. It is doubtful if the average farm in the United States, even in the most prosperous sections, earns over 6 per cent on the investment, and there are hundreds of thousands which make no returns on the investment and only a bare living for the farmer's family.

When we turn from the farm to the speculative aggregation in Chicago or Wall Street and see margins of upward of 50 per cent won by a hold-up game, in which the necessaries of life are held as hostages to extort from a hungry public an unearned share of the Nation's industrial income; when we see the great food product of America for which a rural population of 50,000,000 has toiled 12 months in the year to insure subsistence for a Nation of 100,000,000 held up by a bunch of speculative middlemen for a price, it is time for the Government to call a halt, and no one will more heartily second the call than the farmers of Minnesota and of the entire agricultural West.

Splendid work is being done in the public behalf by the various departments named in these resolutions of which the general public knows little. Congress has made liberal appropriations and furnished with high-grade equipment the Departments of Agriculture, Commerce, Labor, and Justice, and it has enacted a good antitrust law and created the Federal Trade Commission to administer it. The data collected and the results achieved remain practically unknown to the general public

until some crying evil or special emergency like the present brings this progressive work into the limelight. The adoption of this resolution will bring from our executive departments, I trust, such reports and findings as to justify the wisdom of Congress for its liberal equipment of these public bureaus and departments.

Resolution of Oklahoma Legislature.

EXTENSION OF REMARKS
OF
HON. WILLIAM W. HASTINGS,
OF OKLAHOMA,
IN THE HOUSE OF REPRESENTATIVES,
Saturday, February 24, 1917.

Mr. HASTINGS. Mr. Speaker, the Oklahoma Legislature recently passed house concurrent resolution No. 18, expressing confidence in President Wilson and indorsing his stand for a world-wide Monroe doctrine and his support of a league of nations to preserve the peace of the world I submit it herewith for the information of Members of Congress:

House concurrent resolution 18. (By Mr. Hodges.)

Whereas for two years the whole world has been shaken with the roar of the cannons of war across the seas, and
Whereas the bloodshed of the human family has been appaling, and
Whereas before peace is declared the United States Government should formulate the conditions upon which it would feel justified in asking the American people for their formal and solemn adherence, and
Whereas a lasting peace in Europe can not be a peace of victory for either side, and
Whereas peace must be followed by definite action to assure the world that no horrors of war shall overwhelm it again, and
Whereas by such definite action the United States can not withhold its participation to guarantee life, liberty, and the pursuit of happiness throughout the world, and
Whereas our Monroe doctrine has stood the test of time and is proved to have been one of the wisest acts of our former illustrious President Monroe, and
Whereas our President, Woodrow Wilson, in continuance of his policy of equal rights to all and special privileges to none, and his policy for world-wide peace with honor, has addressed the United States Senate, announcing in no uncertain terms his uncompromising stand for world-wide adoption of the Monroe doctrine: Therefore be it

Resolved by the house of representatives (the senate concurring therein), That we publicly express our confidence in President Woodrow Wilson in the action he has taken for the adoption of a world-wide Monroe doctrine, that we indorse his support of a league of nations to preserve the peace of the world, and urge Congress to uphold his hands seeking the adoption of such worthy measure; be it further

Resolved, That a copy of these resolutions be spread upon the journal of both houses, and that a copy of same be sent to the President of the United States, and each of our Representatives in Congress from Oklahoma.

Adopted by the house of representatives this 29th day of January, 1917.

PAUL NESBITT,
Speaker House of Representatives.

Adopted by the senate this 2d day of February, 1917.

M. E. TRAPP,
President of the Senate.

Prohibition in the District.

EXTENSION OF REMARKS
OF
HON. J. HAMPTON MOORE,
OF PENNSYLVANIA,
IN THE HOUSE OF REPRESENTATIVES,
Monday, February 26, 1917.

Mr. MOORE of Pennsylvania. Mr. Speaker, an address on the subject of prohibition recently delivered before the District Committee by D. Clarence Gibboney, Esq., of Philadelphia, president of the Law and Order Society of that city, is of such peculiar significance at this time that I have asked leave to extend it in the RECORD. Mr. Gibboney is a man of character and courage, whose long experience as an advocate of law enforcement entitles his utterances to careful consideration.

The address is as follows:

HEARING ON PROPOSED PROHIBITION LAW FOR THE DISTRICT OF COLUMBIA (FEB. 19, 1917).

[Address by D. Clarence Gibboney, Esq., of Philadelphia.]

Before proceeding to an analysis of the bill before you, which designs to prohibit the manufacture and sale of alcoholic liquors in the District of Columbia, I want to thank the committee for the privilege extended me to appear here.

I am an opponent of the proposed measure. I speak for the cause of real temperance, and upon that ground and in behalf of that cause, urge that your legislative action shall be consistent with common justice, and, to that extent, divert into just, honest, equitable, and effective channels the big drive now being made in this country toward the elimination of the liquor traffic.

I ask nothing more nor less, gentlemen, than that this committee and this Congress—the highest law-making body in the land—shall proceed upon the fundamental principles of equity to lay the groundwork for the ultimate and effective and permanent and honest abolition of the liquor business in the entire United States.

I am opposed to this measure because it not only fails to do that, but, if enacted into statute, would make law the instrument of the most dangerous sort of injustice, and instead of aiding would hinder and obstruct honest prohibition upon a broader scale.

In the first place, this bill was passed by the Senate and now comes before this committee of the House of Representatives without the people of the District of Columbia, whom it is designed to affect, having been permitted any voice in the proceedings, or the slightest opportunity to indicate whether such an act would or would not have the support and sanction of a majority of the community.

In a matter so inseparably involving the rights and liberties and personal habits and desires of a people, obviously and beyond the possibility of successful contradiction, this bill proposes to legalize an action that is absolutely antagonistic to the whole theory and principle of a Government such as ours, which, from the beginning, has "rested upon the consent of the governed."

The proposed action would substitute for democracy the most dangerous form of paternalism, and in so doing would, at the same time, reincorporate into our national life, and in a legislative way sanction, the hated principle of "taxation without representation," which we once wiped out with the blood of the nation—the opposition to, and refusal to accept which, well might be said to have formed the cornerstone of this Nation.

It seems to me that at no time could Congress afford to sanction such procedure, and that particularly it is to be frowned upon and summarily rejected in this hour of the country's crisis, when unquestioned respect for the wisdom and justice of the Government is to be desired above all things, and when, at any moment, national unity may be the instrument through which national honor and integrity are to be sustained and conserved.

The objections can not be overruled, nor could the potential wrong of such a law be righted, by saying, as is being said by some, that the Congress of the United States throughout the entire past has been the law-making body for the District of Columbia.

I bow to the superior knowledge of you men in an interpretation of the Federal Constitution; but as a lawyer I am frank to say that I find nothing in that section which gives to Congress the authority "to exercise exclusive legislation in all cases whatsoever over the District," to discourage, much less prohibit, the holding of a referendum in which the people of the said District might be permitted properly and with legal safeguards to register their approval or disapproval of a law such as this, which Congress has proposed for them.

Gentlemen, that's mere Americanism; nothing more, nothing less. I ask, therefore, can you, with a clear sense of duty and justice, even though so permitted by the letter of the law, ignore the spirit of the law and deprive the people of one section of this country of an inalienable right held by the people of every other section of the same country?

I fail to see how such action could be made consistent with clear reason or sound logic, or that spirit of American justice and patriotism which we will not allow any other people to flaunt.

These are days when much is being said, when the blood of men is crimsoning half the world, and human life is held cheaply in the balance again "inalienable rights." It seems to me that we could not do better at this time than to practice at home that which we have insistently, and sometimes loudly, proclaimed to the chancelleries of every other nation on earth.

This measure proposes, without the consent or approval of those to be affected, to deprive a large number of American citizens of certain personal privileges which have been theirs to use or reject since the Nation came into being, and for many years even prior thereto. I say to you that no matter how desirable a prohibitive law may be—and surely I do not underestimate its desirability, nor would I do anything but with my utmost ability urge and aid the passage of such a law, based upon that sort of justice which carried with it the promise of permanence—great dangers lie behind the methods by which it is attempted to be enacted in this instance.

If the question of personal rights—the right of the majority to first indicate to the law-making body its own desires on the subject—was the only one involved in this issue, I repeat that that question in itself still would be sufficient to justify a rejection of this proposal by this committee and by the House of Representatives.

But there is another and a more far-reaching issue involved in this measure. It is the question of property investments and property rights, legally made and legally held.

You are confronted with the necessity of an analysis of the entire liquor business—what it is, who are engaged in it, and who legalized it—if you are to act with knowledge, deliberation, and justice, and, as I already have said, by that action greatly aid the real temperance movement that aims at ultimate and permanent and effective and honest abolition of the liquor traffic of the whole United States.

This bill plans permanently and beyond redress virtually to confiscate many hundreds of thousands of dollars worth of property values, and of property investments, legally made and legally held, without providing for a penny of compensation being granted to those who made those investments under the sanction and under the full protection of the law.

It is not even argued that violation of the law by the one party, the liquor men collectively, is the justification for an utter disregard of law and the principles and precepts of justice by the other party, the people collectively, acting through their Government.

As a matter of fact, no argument is offered, no excuse is given, no alleged justification is put forward, in extenuation of this proposal deliberately to deprive a certain class of American citizens—certain American citizens engaged in a particular business—of properties established and money invested for the conduct of a business, not only condoned but actually invited, by law.

Gentlemen, as I said before, you are called upon to consider and recommend the solution of a problem far greater, much bigger, than might appear upon the surface. As a preliminary to that solution are you quite sure that you have gotten down to the elementals and the fundamentals of the entire proposition?

Have you ever asked yourselves, and answered for yourselves, the question:

Who established the legalized liquor business in the United States?

If you haven't asked yourselves that, or asking haven't answered the question, permit me to put the reply for you.

We did!

We, the people of the United States, and in lesser units of the States of the United States, established, and from the moment of establishment have maintained, the legalized liquor business of this country.

But far more important and to the point than that we have, throughout that entire period and at every stage of the procedure, been not only the profit-sharing partners, but the dominating and term-naming partners, of the legalized liquor business.

No man can deny that. No man who has given the slightest thought to the question would attempt to. It is written into the records and the history of this Nation in flaming, whisky-red letters, and it only can be effaced by a process of equitable elimination.

It seems to me that the great fallacy, the great injustice, and ultimately the cause of the great failure, of all our efforts toward an abolition of the liquor business, lie in the fact that either through ignorance or deliberate design we pretend to place all the responsibilities for the asserted evils of the liquor business upon those who engaged in it only after we had made that business a legal and law-sanctioned and law-protected one.

Have you ever realized, gentlemen, that the liquor business only was engaged in by reputable and law-abiding citizens in this country after we had made that business legal?

Have you ever realized that when we made the business legal we at the same time established ourselves as the lawful and profit-sharing partners of those who, now characterized as the liquor men, were nothing more nor less, are now nothing more nor less, than our agents in the business?

To say $3,000,000 is to speak in rather large figures, even in these days of great national wealth and sudden and vast private fortunes—yet that figure represents only what the United States alone took last year from the liquor business as its prearranged share of the profits from the whisky and wine and ale and beer and gin business.

You men who have sat in the Nation's legislative halls know without my telling you that not only have we, year in and year out, largely financed our Government from the proceeds of rum, but that in every national emergency we have looked to, and absolutely depended upon, the liquor business as a surer source of income than anything else to carry us through the hour or the year of financial or even national or governmental crisis.

The whisky business may be, as some men say, a plague. From one aspect it undoubtedly is. But it is a plague from which we have not been too good, or too moral, or too righteous, or too conscientious to take a large share of the profits for our national subsistence. And if it is a plague now, it was equally a plague when we established it and made it legal, and the danger of it was known then as well as it is known now. It is the same traffic, attended by the same evils, and the business is the same now as it was when we established and legalized it.

The records of the Nation, as I already have said, forestall any successful denial of these facts.

Let no limited or twisted viewpoint misinterpret my attitude or my argument. I am not speaking as an advocate of the rum business. I bespeak the cause of national temperance. But in doing so I have, I think, both the vision and the courage to say that the ultimate and permanent and effective end that all sincere abolitionists seek is not to be found except through a frank recognition and admission of our own responsibilities and obligations, and a course laid consistent therewith.

Sober consideration and the experience of more than a quarter of a century have convinced me that if real success, and not insincere and temporary political advantage, is our motive, it is high time that we draw a distinction between the evils of the liquor business and our heretofore evil characterization of the men who we have invited to engage in that business—our only qualification or provisions or requirement being that they share with us, the whole people, a part of the profits of every drink distilled or brewed or served across a bar.

Why, men of this committee, we, the Government of the United States have been actively and on a profit-sharing basis engaged in the booze business ever since, and even long before, the Nation was formed.

Every war that the country has engaged in since that time has been financed largely from the proceeds of our liquor business. In every national emergency we have increased the levy we took from rum. We have done it boldly, apparently with clean consciences, convinced in our own judgment that our conduct was correct and beyond reproach. The men engaged in that business, sirs, were the ones who toed the mark and produced the revenue at our every demand.

They were welcome and respected and patriotic cooperators then. Are they conspirators and dangerous criminals now?

If the liquor men have suddenly metamorphosed into conspirators engaged in a dangerous and criminal business justifying the treatment now being accorded them, what, I ask you, is the position of this Government, which has been engaged with them in the same business in a partnership for profit?

The business has not changed. Its effects are not different. The law is the same. Only our own moral conception and political attitude recently have undergone a change.

Can we, because of a changed viewpoint, with any sense of justice, or any expectation of cooperation or success, or with any degree of self-respect, say now that we, the big money-getting partners in the proposition, demand an abolition that would leave with us all the millions we have taken from the business, without having invested a dollar in the business, and not only give nothing to the other partner, but actually deprive him not only of his means of livelihood, but also of the investments made to insure that livelihood?

I believe that but one answer can be made. Such a course is inconsistent to the point of impossibility.

We have hurled anathema at the liquor business and the men engaged in it, but oh, the hypocrisy, the deceit, the downright and cold-blooded and brutal immorality with which we, the people, have tried not only to cover up our own dirty deals, but at the same time have attempted to retain to ourselves all the tainted cash that we so graspingly have turned to our own purposes after it has come to us from the gin mill, the groggery, and even the house of ill fame.

For did you ever know that in every brothel, in every club, in every speak-easy, or blind tiger in this country where liquor is sold without a license the Federal Government has collected its rum divvy, even if the city or county or State has not?

And did you ever know that in every such house of prostitution and other illegal dive or den Uncle Sam—and that means us—has placed his sign of revenue collection as evidence that he is a partner there in that business of moral and physical destruction?

To you, gentlemen of this committee, I wish to say—and I would like this statement to go over the length and breadth of the Nation—the great trouble in this whole liquor problem has been that the men who have most persistently asserted themselves the moralists of their community and time have either deliberately or through ignorance so juggled and confused the moral and the monetary aspects of the liquor question as to leave the whole issue an inconglomerate mass in which they would have you measure morality in dollars, and dollars by a moral foot rule.

Gentlemen, I feel sure that I need go no further with you into that phase of the question dealing with, yes, proving, our own actual and financial participation in the legalized liquor business of this Nation. Indeed, so far as concerns the United States Government, I need not, probably should not, qualify the sentence with the word "legalized."

For the Government of this Nation has not concerned itself, after getting its booty out of the booze business, whether it reached the consumer through legal or illegal channels. This Government—our Government—has been concerned only in getting for itself that share of liquor profits which it has declared it should have.

And, gentlemen, while you are weighing this problem remember also this: That the Federal Government which now, through you, would apply to the District of Columbia an act of confiscation without compensation against American citizens engaged in the legalized liquor business, remember, I say, that this is the same Government that empowers men, if necessary, to shoot and to kill other men who attempt to deprive the said United States Government of one farthing of what our Government by statute has ordained shall be its portion of rum profits, regardless, mind you, of where or to whom such rum is sold.

Of course, we attempt to cloak our hypocrisy under the flimsy excuse that we are trying to see that the illicit whisky distilled by the moonshiner is up to standard.

That's a lie. You know it, and I know it. We're not even slightly interested, from a governmental viewpoint, whether the whisky drinker gets good rum or bad rum. But we are very vitally concerned, from a governmental viewpoint, in squeezing out of the whisky business, legal or illegal, every penny that we can get.

Can anyone say that we have not been partners in this traffic—profit-sharing and term-naming partners—can anyone assert that in view of the whole history of the liquor business and our governmental alliance with it for profit?

Can anyone logically argue that citizens who invested money in properties used for the conduct of the legitimate liquor business were not encouraged and indeed compelled to do so?

Gentlemen, we've been the same sort of partners in the liquor business that every other nation has been that, like us, has legalized it and taken profits from it.

And yet we of this country, in this "land of the free and home of the brave," are the only Nation under the sun, so far as my knowledge goes—and I think I know the subject rather well—that has attempted to put men out of that legalized, law-fostered, law-sanctioned, law-protected, law-supervised business without some sort of just reimbursement for the inevitable property losses they would suffer thereby.

Switzerland showed a splendid example of national conscience when, desiring to abolish the absinthe business, the Swiss Confederacy, in 1910, passed an act to compensate not only the owners of distilleries and retail establishments but also the farmers and the farmers' hired hands who were engaged in the absinthe industry.

England, in the "consolidation liquor act" of 1910, provided for reducing the number of saloons, and in so doing included a scale of full compensation for those who thus would be put out of business.

And even now, in the throes of the greatest war in the whole world's history, and confronted with a national debt of more than twenty billions of dollars, and increasing daily, the lawmakers of that country are considering the total acquisition of the liquor business of that nation, under a plan that includes purchase and full compensation for those suffering property losses thereby.

Russia, regarded as the land of autocratic oppression, acquired the vodka business by purchase in 1862, and in a night, after the outbreak of the present war, clamped the lid of sobriety upon that nation without a single dollar of property loss to any individual, for the reason that, it being a Government-owned business, no individual had any money invested in it.

In 1915 France destroyed its absinthe market, but in so doing compensated the distillers and dealers whose property investments were destroyed or depreciated through abolition of the business.

Montreal and Quebec, in Canada, in 1915, also decided to reduce the number of saloons in those Provinces, but in doing so they set a standard of compensation for the reimbursement of those to be ousted from a legalized business in which they had violated none of the Government-imposed legalization qualifications or restrictions.

Australia and Denmark—we are not accustomed to look upon either as great powers or the preceptors in important governmental actions—both have adopted and have put into operation systems of abolition of the liquor traffic, with compensation for the property value thus destroyed.

We stand alone, in the galaxy of nations, we, the free and liberty-loving United States, as the only one under God's sun that, having established and profited by the liquor business, having invited men to engage in it entirely under terms of our own making, attempt to end that business with all the profits remaining in the Public Treasury, and all the losses saddled upon the men who thought, and had every reason to believe, that they were law protected when they engaged, in a law-abiding way, in a law-sanctioned business.

Sometimes men fear being swindled and tricked when they engage in a partnership business. But certainly citizens have a right to expect a square deal when they enter into a business arrangement with the United States of America.

Can you expect permanent or effective prohibition by such methods as are proposed in this bill? Can you ever divorce booze and politics by such means? Is there any justice, any equity, any American spirit of fair play in such procedure?

I speak in the cause of temperance and national prohibition, gentlemen; but I want to see it come to stay, and I want to see it made effective by the hearty cooperation and the honest effort of every law-abiding citizen.

The Bible tells us that no house can endure that is built upon foundations of sand. Jesus Christ was the world's greatest preacher, and He

preached justice and equity and square dealing. He never sought to gain converts or an advantage by sharp practices or underhand dealings. He it was who said to the world: "Render unto Cæsar the things that are Cæsar's and unto God the things that are God's." He it was, too, who gave to the world the great precept: "Let him among you who is without sin cast the first stone."

We of America stand upon a self-erected platform of justice and human rights. We gave to mankind the first Government guaranteeing real principles of personal liberty and property protection to each individual.

Our forefathers fought and bled and died, but conquered and rejected "taxation without representation."

Many of our own fathers fought in the tremendous civil conflict brought about when the so-called moralists of the North, having nothing themselves at stake, demanded the confiscation of human property held in the South, but ignored the wisdom and the pleas of that great American, Abraham Lincoln, who urged acquisition by Government purchase and ultimate freedom for the black slaves by compensation.

In the bill before you to-day there is incorporated both those hated principles, "taxation without representation" and "confiscation without compensation."

As an advocate of national temperance, as a worker for real prohibition, as an American desiring American justice and American patriotism above all things, I ask you to report this measure with your most emphatic rejection, except and only that it first be approved by a majority of the qualified electors of the District of Columbia participating in a referendum on the subject.

I thank you for the time you have given me.

Free Energy.

EXTENSION OF REMARKS
OF
HON. HENRY T. HELGESEN,
OF NORTH DAKOTA,
IN THE HOUSE OF REPRESENTATIVES,

Saturday, February 24, 1917.

Mr. HELGESEN. Mr. Speaker, on February 22, in Congress, the gentleman from Massachusetts [Mr. TAGUE] offered an amendment to the military bill, having for its object the consideration of Mr. Gäräbëd T. K. Giragossian's offer to give to this Government his claimed discovery of free energy. When Mr. TAGUE presented this amendment the gentleman from Georgia [Mr. HOWARD] said:

This is very interesting, because it is a proposition that we all desire to know something about.

As I heartily concur in that opinion, I shall present in full the two resolutions which have been introduced in Congress by Senator CHAMBERLAIN and Congressman TAGUE, respectively, also a statement by Mr. Giragossian relative to his claimed discovery, which he has named the "Gäräbëd":

Joint resolution (S. J. Res. 172) authorizing the acceptance and free use of a free-energy generator by the United States Government, and for the special protection of its discoverer.

Whereas Mr. G. T. K. Giragossian claims to have discovered a means by which energy can be generated without expense; and

Whereas the said discovered means, the free-energy generator, to be called the "Gäräbëd," can be manufactured with less expense and occupies less space and is very much lighter than the steam engine with its numerous appliances and can be used in ships and aircrafts as well as in machinery used in industrial production; and

Whereas it is claimed that heat and light can be generated through the instrumentality of this discovered means, and expenditures for heat, light, and motive power practically eliminated and human energy as well as natural wealth promoted and saved; and

Whereas the discoverer desires to give and grant to the Government of the United States for any purposes and uses of its own, free of charge, the said discovered means in consideration that he, his representatives and assigns, shall be protected in the use and disposition of the discovered means and any improvement that may be made by himself or others for the better use and application of said discovered means: Therefore be it

Resolved, etc., That the Secretary of the Interior be, and he is hereby, authorized to accept, as trustee, for the use and benefit of the United States Government, so far as it may desire to utilize the same for its purposes, assignment from the said Gäräbëd T. K. Giragossian of the use of said discovery, except as hereinafter specified: *Provided*, That the Secretary of the Interior shall also be authorized to accept, as trustee, for the use and benefit of the United States Government, so far as it may desire to utilize the same for its purposes, the assignment of the use of any device, improvement, process, equipment, apparatus, or other matter or thing developed or acquired by Gäräbëd T. K. Giragossian, his successors, representatives, or assigns, in the use of said discovered means.

SEC. 2. That the Secretary of the Interior is authorized to perform any and all acts and to make such rules and regulations and enter into such contracts as may be necessary to carry this resolution into effect: *Provided, however*, That the said Gäräbëd T. K. Giragossian shall demonstrate the entire practicability of his discovery before a commission of five eminent scientists to be appointed by the said Gäräbëd T. K. Giragossian, to be approved by the Secretary of the Interior, and if such demonstration shall prove successful, in the opinion of said scientists and the Secretary of the Interior, the United States shall recognize the said Gäräbëd T. K. Giragossian as the only original inventor, discoverer, and legal owner of said discovered means and any improvements that may be made therein or thereon, and will not issue any patent for any device, improvement, process, equipment, apparatus, or other matter or thing developed in the use of said discovery or based upon the system or correlative principle of said discovery, and will protect the said Gäräbëd T. K. Giragossian's rights and interests thereto for a period of 17 years, as well as of his representatives and assigns, in the United States and in foreign countries where such protection is afforded by treaty obligation, international law, and diplomatic representations.

The period of the special protection granted to Gäräbëd T. K. Giragossian by this resolution will expire at the end of 17 years, counting from the date of successful demonstration of the said "Gäräbëd."

The United States Government will not be placed under any expense in the demonstration of the "Gäräbëd," or for the services of the commission to attend such demonstration and examine the "Gäräbëd."

SEC. 3. That any sale or attempted sale by the said Gäräbëd T. K. Giragossian, or by his representatives or assigns, of any interest in or any title to said discovered means, or any part thereof, before the approval of the same by said commission of scientists appointed as hereinbefore prescribed and as approved by the Secretary of the Interior is hereby declared to be invalid and void, and any attempt made by the said Gäräbëd T. K. Giragossian, his representatives or assigns, to sell or dispose of any right to or interest in said discovered means shall have the effect, without further legislation, to authorize any Federal court of competent jurisdiction, upon information of the Attorney General, to enter a decree forfeiting the rights of the said Gäräbëd T. K. Giragossian, his representatives or assigns, in or to any protection that may be afforded him under the terms of this resolution in said discovered means as well as in the appliances necessary to utilize the same.

SEC. 4. That the United States Government will have the right to exercise the above-mentioned privilege simultaneously with the beginning of the public and general use of the said garabed system.

SEC. 5. That the right to alter, amend, or repeal this act is hereby reserved to the Congress of the United States.

House joint resolution 317.

Whereas Mr. Gäräbëd T. K. Giragossian, an American citizen, a resident of Boston, Mass., claims to have discovered a means by which unlimited energy can be generated without expense, said generator called by its discoverer the "Gäräbëd";

Whereas for the extraction of nitrogen from the air, the energy is the prime necessity and main source of expense;

Whereas it is claimed that the use of said "Gäräbed" will greatly facilitate the work of the Government nitrogen plants and increase the production of nitrogen, by eliminating the necessity for the use of fuel or water power;

Whereas the Government is now forced to establish its nitrogen plants in those localities where water power is available, but by the use of the aforesaid "Gäräbëd" it is claimed that these nitrogen plants could be established in any locality whatsoever;

Whereas, as mentioned in section 124 of Public statute No. 85, Sixty-fourth Congress (H. R. 12766), called "An act for making further and more effectual provision for the national defense, and for other purposes," the Congress has authorized the President of the United States to expend $20,000,000, or any part thereof, for an investigation into the best and cheapest method by which nitrates can be manufactured, and for other purposes;

Whereas an estimated appropriation of many millions of dollars for fuel-storage space is recommended by Admiral Harris; but by the use of the "Gäräbëd" its discoverer claims that such expense to the Government would be saved, as the "Gäräbëd" requires no fuel; furthermore, the building of tanks at various points between the Atlantic and Pacific coasts for the purpose of storing fuel to be used by War Department tractors would be rendered unnecessary;

Whereas since it is claimed by its discoverer that the "Gäräbëd" needs no fuel whatever, and that the heaviest automobile truck that the War Department may require can be run from coast to coast without any expense whatsoever for motive power;

Whereas it is also claimed by its discoverer that by the use of the "Gäräbëd" the greatest obstacle to the use of aircraft is eliminated, as any air machine can be operated by its use without fuel.

* * * * * *

SEC. 3. That, owing to the pressing need for the manufacture of nitrates, which by present processes will involve the expenditure of many millions of dollars, the Secretary of War is hereby authorized to immediately accept the offer of Mr. Gäräbëd T. K. Giragossian to demonstrate his "Gäräbëd," since he claims that by its use the aforesaid millions of dollars can be saved to the Government of the United States and the nitrates manufactured at any point within the territory of the United States without the use fuel or water power.

I omit the balance of Mr. TAGUE's resolution, as it is identical with the one introduced by Senator CHAMBERLAIN.

These resolutions were introduced because Mr. Giragossian is unwilling to acquire a patent for his invention or discovery, although it is patentable. Any person fully conversant with the procedure necessary to obtain a patent could not expect him to secure one.

Our patent laws are useful to cover simple devices, improvements, and so forth, but do not offer adequate protection to great inventions, particularly to such an epoch-making discovery as a free-energy generator.

So long as an original invention can be imitated and stolen by the use of a few changes in its shape or form, under the pretext of improvement, which can likewise be patented; so long as the litigation of a patent lawsuit is unbearably expensive; and so long as a patent case can be dragged from court to court and prolonged from 10 to 20 or 30 years, there is no adequate legal protection for important inventions or discoveries. Whether or not we admit the fact, our inventive geniuses are left to the unmerciful grasp of the professional invention stealers and legal patent pirates.

Referring to existing patent laws and conditions, Mr. Thomas A. Edison says in the New York Herald of May 9, 1915:

Unhappily, there is absolute certainty that under our present patent laws the poor devil of an inventor would never receive any reward for it.

I have never made anything out of inventing. The money that keeps all these men busy in the works here I got from manufacturing, and I have long ceased to expect anything else. I suppose I invent as much as ever, but the pathway to the Patent Office isn't quite so hot with my footsteps as it used to be.

So far as I am aware, the principal objection to the resolutions to which I have referred is that their passage would establish a precedent, as a consequence of which the Congress would be flooded with requests or bills of a similar character. But we must remember that the affairs of the Congress are conducted with careful and rational discrimination and discernment. With due regard for and appreciation of even the smallest devices, they should not be confounded with original and rarely exceptional inventions.

Such a precedent as the passage of these resolutions would establish, would naturally create, a great incentive and give a forcible impetus to the inventive geniuses among our people that would serve to bring forward yet undreamed-of exploits, upon which depend the progress, happiness, and economic salvation of mankind.

Apparently, President Wilson is also interested in this subject. Two letters which I herewith quote, signed by the President, indicate such interest:

THE WHITE HOUSE,
Washington, June 27, 1916.

MY DEAR MR. GIRAGOSSIAN: I am very glad indeed to learn that you had a helpful conference with the Secretary of Commerce, and I beg leave to acknowledge with appreciation the receipt of your letter of June 22. I sincerely hope it will be possible for you to make satisfactory proof of your invention.

Cordially, yours, WOODROW WILSON.

Mr. GĂRĂBĔD T. K. GIRAGOSSIAN,
815 Twelfth Street NW., Washington, D. C.

—

THE WHITE HOUSE,
Washington, July 4, 1916.

MY DEAR SIR: I thank you for your letter of July 1. I am sorry to say that I can not do all that you have suggested, but I would like very much to be of such service to you as I can, and my suggestion is this: That you demonstrate your invention to Secretary Redfield and Dr. Stratton, of the Bureau of Standards. I can assure you of the absolute integrity of these gentlemen, and that the knowledge of what you have invented will be perfectly safe from disclosure in their hands. After seeing the thing demonstrated, they will be able, I hope and believe, to advise you what it is best for you to do.

Very truly, yours, WOODROW WILSON.

Mr. GĂRĂBĔD T. K. GIRAGOSSIAN,
815 Twelfth Street NW., Washington, D. C.

The suggestion is made in these letters that Mr. Giragossian disclose the secret of his discovery or demonstrate its practicability before some body of men, after which, if it is found satisfactory, the Congress may consider the matter; but, without questioning the integrity of any person, what assurance or protection is thereby offered Mr. Giragossian against a possible "leak"? We are only too familiar with the new and official definition of this word. Were such a plan adopted, Mr. Giragossian would be obliged to place himself at the mercy of some man or men and take his chance on the possible loss of his work, without any protection whatsoever.

There are many persons of such great integrity that all the riches of the world can not corrupt them; but, unfortunately, we are often disappointed in this respect. Moreover, this is not alone a question of morale or integrity but of the resistant capacity of a brain against a powerful temptation. Without an actual trial the resistant power of any man can not be decided or positively relied upon. Furthermore, a person may repeatedly prove his unshaken integrity or honesty against many great and attractive enticements only to become corrupted by others of even slighter temptation.

Therefore for many reasons this suggestion is unfair, unjust, and unpractical, and will remain fruitless.

A man who has meditated and studied over a discovery or invention for more than a quarter of a century, who has toiled for more than 17 years amid heartrending hardships and sacrifices to develop his ideas can not be expected to surrender or disclose the secret of his final accomplishment without the desired protection.

I do not believe in perfection, but progress. As every sage has his own faults, likewise no parliament can be wholly free from errors. The United States Congress has erroneously sacrificed in the past some valuable discoveries and inventions through its mistaken doubts and indifference. For instance, the Loomis aerial-telegraph bill for the exploitation of Dr. Loomis's discovery of wireless telegraphy, was introduced in the United States by Senator Charles Sumner, who asked for an appropriation of $50,000 to assist in its further development. In 1873, on January 16, the Loomis bill for $50,000 was passed by the United States Congress and received the signature of President Grant, but Congress failed to provide the money, and Dr. Loomis died in despondency. The Congressional Globe of January 13, 1869, gives a full account of the discussion before the Senate.

By the disappointment and death of Dr. Loomis the United States lost its claim to the honor of the world-famous discovery of wireless telegraphy, for the system of Dr. Loomis involved every principle claimed to be of more recent discovery. The Scientific American Supplement of January, 1911, says:

A description of the actual conditions under which wireless telegraphy is to-day commercially successful would differ little from the theory advanced in the debates on [Loomis aerial] wireless telegraphy to which the House of Representatives listened with dreamy indifference 38 years ago.

Many similar cases can be enumerated of inventions which have been lost to the United States and to mankind through lack of necessary encouragement and adequate protection; yet, notwithstanding so many great losses and bitter experiences, I fear that to-day we are repeating the same indifferent, repellent, and discouraging attitude toward the claim of the discovery of free energy.

Any responsible man who has opposed or may oppose an opportunity for this claimant, Mr. Giragossian, or who may prevent the promised advent of such a great achievement may well ask himself what equivalent he can give in return to mankind and science, or what reparation he can make for the possible great loss to humanity for which his effort may be responsible.

If Mr. Giragossian is not granted the desired opportunity by our Congress, he will be forced by these unfavorable circumstances to withhold his secret from the public. Truly, it will be a most deplorable loss if his claimed discovery shall some day perish with him—this discovery which the entire army of scientists and inventors may not be able to rediscover in an eternity, as is the case with many of the ancient "lost arts."

In event of failure to receive due consideration, Mr. Giragossian is justified in his determination to cross the Atlantic and dispose of his discovery in a foreign country. In such an undesirable eventuality, if his claimed discovery is genuine, the greater number of our manufacturers must close the doors of their factories, or pay a heavy royalty for free energy, the discovery of which is now claimed in America.

Let us consider for a moment the possible moral and material effect on the Government, in case of the failure of Mr. Giragossian to verify his claim.

Mr. Giragossian's request is not for money, belief, or credence, but for moral and political assistance against an infringement, assistance which can be granted solely on the principle of fairness, generosity, and encouragement, therefore with no possible loss of any kind to the Government.

On the other hand, what will be the probable gain to the Government or to mankind by the success of his claims?

First of all, let it be distinctly and clearly understood that Mr. Giragossian's claimed discovery is not the so-called "perpetual motion," nor is it spontaneous movement.

Mr. Giragossian claims that one of his free-energy generators, built at the same expense as a good cooking stove, can supply five ordinary families with sufficient heat, light, and energy for domestic purposes without expense.

It is claimed that the free-energy generator will furnish the motive power for automobiles and tractors of farmers, thus eliminating the expense of traveling and transportation motive power, while at present, owing to the difficulty and expense of transportation, farm products to the value of immense sums of money are annually lost.

It is claimed that by the use of the free-energy generator our largest ships can be made to travel over 100 knots an hour, without expense for motive power. By this new agent aerial navigation, it is said, will be made a greater success and the mastery of the air accomplished.

If this discovery, as stated in Congressman TAGUE'S resolution, can eliminate the necessity for the use of fuel or water power in the production of nitrogen, then it will make possible the establishment of nitrate plants in any locality whatsoever, consequently this country will be provided with abundant fertilizer and the productivity of the land multiplied. The realization of this promise means the dawn of a new era, the beginning of an age of real prosperity.

Mr. Giragossian's claimed discovery will render to irrigation and reclamation of lands incalculable service which the entire wealth of the civilized world can not render.

A simple and conservative computation will indicate the gigantic rôle which this claimed discovery will play in agricultural circles alone.

If every one of our millions of farms should use on an average a 50-horsepower free energy generator, it would make a total of about 350,000,000 horsepower. The production of 350,000,000 horsepower by steam at $50 per single horsepower 12 hours per day for one year would cost $17,500,000,000 per annum.

According to the opinion of competent experts, New York City alone can utilize as much free energy as the United States is now consuming yearly at a cost of about $3,000,000,000 for the present expensive energy.

Leaving aside the herein-mentioned extra services of the claimed discovery, if it can only eliminate the "smoke nuisance" and save from daily consumption in this country approximately 2,000,000 tons of coal and more than a half million barrels of petroleum, and can in the meantime supply us with the same amount of heat, light, and energy which are now supplied by the coal and petroleum, and that, too, without expense and without toil, it is a magnificent work and worthy of especial attention.

The ever-increasing demand and consequent higher price of fuel is disturbing the mind of the Nation and is attracting the attention of the United States Congress. Instead of expending in vain so much energy, time, and money for the purpose of reducing the oppressive price of fuel or gasoline, is it not infinitely better for the United States Congress to give to Mr. Giragossian the proper opportunity and protection to demonstrate his claimed discovery? Who knows? He may be able to abolish fuel by eliminating forever the necessity for fuel in the production of motive power, heat, and light.

Taking into serious consideration the incalculable utility and inconceivable value of such a singularly exceptional invention or discovery, I hope that the Congress of the United States will accept the offer and grant the desired protection to this claimant, Mr. Giragossian, in order that his claimed discovery may not be longer withheld from the public.

I would call your attention to the following description of this claimed discovery, entitled "The Doom of the Steam Engine," which is written by Mr. Giragossian:

THE DOOM OF THE STEAM ENGINE.

It is a self-evident fact that motive power or energy, the prime necessity of life and progress, is a source of wealth, comfort, and happiness. The question of energy is as old as humanity, and, owing to the progress of civilization and human development, has become a very important and powerful one.

The ever-growing demand for energy has attracted the profound attention of thinkers both of ancient and modern times, and this truly seductive problem has baffled numberless masterful minds which have given this subject much thought and has ever been regarded as most difficult of solution; indeed, one never likely to be solved. But with the onward march of science and the ever-increasing acquaintance with the hitherto unknown laws of nature and the mysteries of the universe we become more qualified to make incredible discoveries and inventions. Theories which were yesterday considered, even by scientists, as fanciful and ridiculous have to-day been experimentally proven as facts and are now in practical use.

There were problems the solution of which was once regarded as beyond the possible, but which have been now solved in a most wonderful manner. And so at last, in spite of the opinion of every class of skeptics and smatterers, this, one of the greatest problems of the centuries, has been solved in Boston by a discovery which has determined the doom of steam as a motive power and put an end to the era of the steam engine, giving birth to a new epoch.

This historical change will take place when we produce energy by the Gäräbĕd, the power of which is unlimited, inexhaustible, and inexpensive, except for the usual trifling expense of wear and tear of machinery. When it is said without expense, or free energy, it is not implied that power is to be produced from nothing. It is not the so-called perpetual motion, nor is it spontaneous movement.

In order to form an idea of the Gäräbĕd we have to imagine a working engine the motive power of which is not steam, but something else which can be obtained freely.

The size of this motor and the quantity of energy to be produced by it are dependent upon our will and enterprise. It can be manufactured with less expense and occupies less space and is very much lighter than the steam engine, with its numerous appliances. It is portable and can be placed and put into operation wherever there exists a spark of human life. Consequently the steam engine will become obsolete and the innumerable legion of them will vanish as the dew before the morning sun.

The future generation will see it only in museums and curiosity halls. They will stand before its huge boilers and will with skeptical eyes stare blankly upon the monstrous instruments which have rendered incalculable services to humanity and at the same time left behind its victims, toilers worn to a skeleton, and disastrous and innumerable destructions.

* * * * * * *

The Gäräbĕd being free from boiler and furnaces, there wil be no more explosions, no more victims, no more smoke, no more danger, and no more toilers to produce energy.

In an area not larger than Boston Common (48 acres) sufficient power can be produced under the new system to supply the wants of the whole industrial world.

Temperature, place, and time will have no effect on the action of the Gäräbĕd. It can work with equal advantage in the Arctic or the Torrid Zone; it can work on high mountain tops with the same regularity and order as in a dense forest; it will work without human assistance, automatically, ceaselessly, by day and by night.

The conditions are so favorable that from pole to pole, from east to west, in every place, and for every time the entire surface of the globe will be inundated with free energy. The ideas of man shall no longer be bound and his enterprise be limited and prevented as they are to-day on account of scarcity of energy.

Housekeepers in their cellars or inhabitants of a district in a center can jointly asign a place for the Gäräbĕd and use luxuriously free energy for domestic purposes. It will also afford excellent facilities for pumping water from natural wells, rivers, and seas, thus increasing the supply for artificial ponds and for washing the streets of cities.

* * * * * * *

The fire and lights of cities and farms, as well as the whole civilized world, will be supplied by electricity through free energy. Coal stoves, oil heaters, furnaces and fireplaces, gas pipes, lamps, and chandeliers will forever be expelled from houses. Smoke and ashes will disappear from rooms and chimneys will vanish from housetops.

The enormous quantity of material which we are to-day destroying by burning will serve more or less to benefit humanity, and it is most probable that petroleum will supply the soap of the entire world. The present communities, seeing with their own eyes these wonderful revolutions, will be filled with profound regret for the miseries of modern men, as we feel sorry for our ancestors who suffered in the

The world's production of coal in 1900, as nearly as could be ascertained, was 844,680,413 tons. The production of petroleum in the United States in 1900 was over 63,000,000 barrels; in Russia, 77,230,561 barrels. Adding to these two latter products the amount of petroleum and lignites produced in Germany and other countries and reducing them theoretically to coal in proportion to their heat-raising power, the coal consumed in one year would be more than 1,000,000,000 tons.

Except in times of coal famine and in improper places, the price of coal is from $3 to $6 for the wholesale consumers, from $6 to $9 for the well-to-do, and for the poor from $9 to $15 per ton. The average price of coal being from $5 to $6 per ton, the coal-consuming communities are paying from $5,000,000,000 to $6,000,000,000 annual taxes for fuel.

More than that, fuel can not be burned without additional expense and sacrifice, while, on the other hand, the imperious demand of the insatiable monster of fire is growing steadily and rapidly. The authoritative estimate has already passed the colossal mark of two thousand millions of dollars which the United States is spending yearly for energy, i. e., heat, light, and motive power.

Most truly the expenditure and sacrifices of the inhabitants of this earth in this respect are too enormous. Fortunately, however, the garabed can deliver the human race once and for all from such an unbearable burden, as it will save from waste the most useful and precious natural wealth, fuel, for the destruction of which the United States alone is paying daily $6,000,000.

Furthermore, it is very obvious that naturally the use of energy increases if the cost of generating it diminishes. But when it can be acquired without expense and without toil, then the magnitude and extent of its utilization would be beyond conception and calculation. Inasmuch as there is a boundless field for the use of energy, upon a conservative computation it can be said that one of our States would utilize more free energy than the whole federation is now consuming regularly. Hence, one State of the Union will become, through free energy, richer than the United States is to-day.

* * * * * * *

Free energy will put cities, countries, and farms on an equal level of civilization, destroying utterly the formidable wall which stands between them, as it will be of great service in communication and reviving home industries by eliminating the expense for motive power in travel, transportation, etc.

The present system of agriculture will be materially changed. Besides a good many novelties, every farmer will have ever-pouring spring water and an artificial pond on his farm and abundant fresh water to irrigate his fields. Graziers, who are handicapped in the arid fields on account of scarcity of water, not only will find water to appease the thirst of their cattle but will also have water to construct ponds where they can bathe their flocks.

The garabed will naturally be a most capable factor, and an ever-inspiring and stirring stimulus for the reclamation of sterile lands, as well as for a general higher cultivation of our planet. There are millions of square miles of sterile lands, some of which are not only useless but are detrimental to the best interests of man.

It is obviously plain that the fundamental cause of that barrenness is the want of water, while through the heart of some barren or semifertile regions great rivers run useless and defiant, as well as the soundless and invisible subterranean streams which also flow beneath the same arid lands, as here and there under the scorching sands can be often found so-called underground lakes or waters.

In fact, splendid mechanical improvement and its scientific application offers excellent facilities to draw water from hitherto inaccessible rivers or underground waters, but the excessive cost of motive power makes it generally prohibitive and unprofitable.

As nature has once more revealed a valuable secret to man so he can, with great advantage and benefit, not only draw water from rivers or underground waters for irrigation, but can have additional abundant free energy or electricity for the development of natural resources, etc.

The enterprising and adventurous spirit of man never hesitates to take advantage of such unique opportunities, therefore he will, in the proper time, put into active operation and useful service every available instrument or contrivance which human toil or ingenuity can ever produce so as to flood every profitable arid land.

When the streams of animating water rush upon the parched soil and appease the thirst of ages, then the sandy bare earth will be covered with delightful verdure, as it will bloom out into flowers and gradually become ornamented with spices, vines, groves, and trees abounding in fruits and perfumes.

When the uncontrollable mighty torrent of civilization deluges the deserts and wilderness of Africa as elsewhere, when the operation of the mines or the development of natural resources commences, and when the electrical handsaws or useful instruments of many descriptions get ready for their marvelous services of clearing swamps and jungles, then the banishment or extermination of all wild, ferocious, and mischievous or useless animals, as well as venomous reptiles, is foredoomed.

To the hissing of the serpents and snakes will succeed the sweet and captivating warbling of nightingales or other chanting birds. The dreadful roarings and howlings of the brutes will fade away and vanish about the time of the advent of the bleating flocks of sheep, goats, gazelles, etc., and the deathly silence and stillness of the solitary deserts will be stirred by the melodious sounds of music and cheerful songs of children.

Splendid houses will rise on the meadows surrounded with orchards and vineyards. These ideal garden homes, steadily growing in number and spreading wide and far, will create, one after another, flourishing and thriving garden cities.

By virtue of her opulent, cultivated lands, prosperous industries, and rich cities, once obscure, poor, and darkest Africa will become one of the brightest spots of the world, as well as more wealthy than the combined wealth produced by all civilized nations to-day.

Australia, or any other suitable colony or protectorate, can be more prosperous and wealthier than the British Empire is at present.

The agricultural, mineral, and industrial gain of incalculable value which one considerable Province of Russia can enjoy by free energy

will make the whole produced wealth of the mighty Slavic Empire appear as a pigmy in comparison with it.

Our deserted farms or arid regions, aggregating millions of acres, will be transformed into vineyards, orchards, meadows, and groves.

Thus the garabed will offer to our agricultural States, South America, Australia, Africa, and similar regions more benefit and blessings by just supplying them with abundant water than all the mines of gold and diamonds could have done in the past.

* * * * * * *

The working class will be immensely benefited by the garabed, as it will become a great factor in the solution of the labor problem. The millions of employees who are toiling, directly or indirectly, to produce energy will become idle, and on the other hand free energy will be lavishly used in every possible work and will naturally give a forcible impetus to the unrestrainable tendency to invent labor-saving machines. The inevitable result of the industrial improvement will enforce the abolition of labor at both tender and mature ages and will reduce the hours of labor.

Under the free-energy system, the present employees, working slowly three hours per day, will be able to produce more than ten times the whole product of to-day. The inexhaustible dust will easily be transformed into immense wealth, as well as the atmosphere indirectly into food, by extracting its nitrogen for fertilizer, and by electrifying the plants, so as to grow faster and be more fruitful.

To the exuberance of the necessities of life, clay, too, promises to be indirectly a most generous contributor with its everlasting and boundless source of illimitable aluminum. While it has fallen from $200 to 35 cents per pound, it can yet be produced exceedingly cheaper and more and more abundantly by free electricity. Therefore, it seems as if aluminum is predestined to supersede wood, particularly in ship or house building, and also in the manufacture of wooden materials, as furniture, cars, etc. This substitution can not fail to have a far-reaching beneficent effect on plants, as in reforesting, increasing fruit trees, expanding pastures, etc., as it will decrease the calamities of conflagrations, the burning of ships at sea, and diminish the ravages of floods and droughts.

However, in a thousand ways free energy, multiplying the producing capacity of industry and increasing many times the productivity of our earth, will sink the present prosperity and world's produced wealth into insignificance. Consequently, it can be safely said that poverty will be abolished. Thanks to the advancement of science and art, there will be no poverty wherever free energy may have free exercise. Everything becoming abundant, the question of "bread and butter" will be perfectly solved. The cruel war for the necessities of life will cease. The uneducated, ragged, destitute persons and beggars will disappear from the streets.

Thus the splendid industrial and social reforms which free energy will afford in 10 years, all the factors of the entire world could not have accomplished in centuries.

* * * * * * * *

A great revolution in the navigation world is inevitable. The problem of a fast vessel is not yet substantially solved, and the solution is confronted with great difficulties. The speed of a ship has not increased in proportion to the fuel combustion. To increase the speed of a ship which requires 15 hours to cover a certain distance and the consumption of 100 tons of coal, so that it can travel the same distance in 10 hours, requires the consumption of about 200 tons of coal.

To obtain this higher speed it becomes necessary to make several changes. For example, the carrying capacity for cargo and fuel must be decreased; the engine and boiler room staff would likewise have to be materially increased. Because of these disadvantages a trans-Atlantic steamship of average size has 4 single and 12 double-ended boilers, 20 feet 4 inches in length and 16 feet in diameter. She has 112 furnaces burning daily 570 tons of coal. The coal bunkers hold about 5,000 tons.

The Gärăbĕd will remove these troubles and unnecessary expenses and the propelling power and the speed of a ship will easily be increased. Thanks to the circumstances that the larger the ships are the higher the rate of speed at which they are propelled, and the higher the rate of speed the greater the increase of safety. Then, the future ship will be larger, faster, safer, and more profitable than we can even desire to-day. She will be without dirty coal, infernal fires, annoying smoke, and at the same time free of from four or five thousand tons of superfluous burden and numerous toilers. She will cease to be a "naval monster, breathing flames and smoke," and will become a graceful queen, a floating paradise.

Some of the trans-Atlantic trips are made in five and one-half or six days by the fastest ships. The maximum speed is 23 knots an hour. In the immediate future the minimum speed will be 100 knots an hour. It will take 30 hours to sail from Boston to London and 40 hours to Constantinople.

Manila will be nearer to us than San Francisco is to-day. The East Indies will be regarded as close a neighbor as the West Indies are now. Asiatic fruits will reach Boston fresher than we can get them from California to-day. Boston and Constantinople, San Francisco and Manila will become close neighbors, and the stream of civilization will take a wider, more powerful, and more general spread. The dawn of universal prosperity and knowledge will succeed to the darkness of poverty and ignorance.

* * * * * * * *

The service of the Gärăbĕd in aerial navigation will be very great and highly valuable.

Nothing as yet has more fascinated and more attracted the human mind than the soaring eagle or its rivals in the air.

Man's fanciful dreams and lofty aspirations have put into ceaseless motion his imitative instinct and inventive genius, so as to contrive a flying device. Through the centuries, with enormous sacrifices and hardships, once ridiculed, the visionary illusion of the past is a demonstrated fact to-day. Man has at last created a flying instrument.

However, it is yet an object of wonder and curiosity, and not generally in useful service, mostly through the lack of an adequate engine and sufficient motive power. The existing appliances can not provide it with abundant energy and powerful propeller so as to overcome the difficulties and to meet the requirement of aerial navigation.

Fortunately, the Gärăbĕd possesses all those requisites and necessary qualities for the successful conquest of the air. It can supply the airship with an immense quantity of energy, tens of thousands of horsepower, or as much as necessary. The airman will be able to encircle the globe as many times as he pleases without descending to the ground because of scarcity of energy.

The abundance of energy will make it possible to equip aircraft with huge and powerful gyroscopes, if they would assist its stability. Furthermore, there is said to be already the possibility of lifting substances from the ground by electricity, neutralizing or counteracting gravity. It will not be altogether visionary to hope that the airship some day may be floated aloft by electrical means.

The genius and exertion of man has developed from the simple crude log the magnificent floating palace of to-day, and undoubtedly all that long experience and accumulated useful knowledge of the centuries, as well as the present scientific learning and practice, will assist the same ingenuity for the creation of a more sublime and more charming flying mansion.

If ever man has imagined that some day he will pilot a flying *Titanic*, he should be congratulated on his being on the threshold of the realization of his most fantastic dream by the advent of the Gärăbĕd. Man's sacrifices will be rewarded, as his aspiration for the mastery of the air will be appeased and satisfied, when he sees the majesty of the air fly from Arctic to Antarctic, above the stormy clouds, over inaccessible mountains, untrodden deserts, and as yet impenetrable forests.

* * * * * * * *

Let it be remembered that these words, "The doom of the steam engine" express only a small fraction of the obvious and countless probabilities of the Gärăbĕd. Then what blissful and miraculous possibilities has it in store for mankind? Its inventor disclaims the wisdom of prophesying or conjecturing about them. But without great foresight or deep scientific knowledge any man of common sense can easily discern that when scientists and inventors have at their disposal unlimited free energy they will create many kinds of undreamed of worlds of wonders. It is entirely reasonable also to hope confidently that under the Gärăbĕd system the redeeming angels of science and art will establish happiness at home and fraternity among mankind.

GĂRĂBĔD T. K. GIRAGOSSIAN.

BOSTON, MASS., P. O. BOX 1597.

Yale Corporation Places Itself on Record as Supporting the President.

EXTENSION OF REMARKS

OF

HON. JOHN Q. TILSON,

OF CONNECTICUT,

IN THE HOUSE OF REPRESENTATIVES,

Monday, February 26, 1917.

Mr. TILSON. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include brief resolutions passed by the Yale University Corporation.

The resolutions are as follows:

Voted, That the Yale Corporation places itself on record as supporting the President of the United States in the steps he has taken to uphold international law and American rights.

Voted, That the Yale Corporation assures the governor of the State of its readiness to cooperate with him by placing the facilities of the university at his disposal in any ways that may seem feasible in carrying out the plans he has initiated for helping to safeguard the interests of the State and Nation. (Corporation records, Feb. 19, 1917.)

Mines and Submarines.

EXTENSION OF REMARKS

OF

HON. J. HAMPTON MOORE,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, February 15, 1917.

Mr. MOORE of Pennsylvania. Mr. Speaker, during all this preparedness discusssion I have supported increases of the Army and Navy, particularly of the Navy, because that constitutes our first line of defense. I have favored the construction of submarines and have voted with those who wanted the largest number of submarines constructed. But many of our big newspapers are warring against submarines as used by other nations, and are dating their complaints back to the incident of the sinking of the *Lusitania*. This opposition to the use of submarines by foreign powers has induced me on several occasions to ask the exponents of international law on this floor why the United States is building submarines. I can not conceive that we are building them for joy rides or to keep as ornaments, not to be used in an emergency or to defend or assert our rights upon the high seas. I believe the submarine is a fighting craft and that this Government is building them for fighting purposes, if need be.

But to clear up much of the haze that has enveloped the *Lusitania* case I have been looking up the facts. A short newspaper paragraph from the Philadelphia Record of February 8 gave point to this inquiry. It referred to the defenses set up by the Cunard Steamship Co., a British corporation, to avoid the payment of damages resulting from the sinking of this great British ship. This newspaper notice was as follows:

"LUSITANIA" CLAIMS CLOSED—LIMIT FOR FILING EXPIRED DECEMBER 26 LAST COURT DECIDES.

NEW YORK, *February 7.*

All persons, except two, who failed to file their claims on or before December 26 last will be debarred from participation in damages against the Cunard Steamship Co. resulting from the sinking of the passenger liner *Lusitania*, according to an order of the Federal district court here to-day. Already claims aggregating $5,000,000 have been filed, and the steamship company has made a stipulation to pay only $100,000, the extent of its liability on freight and passenger money.

LUSITANIA—CUNARD CO.'S BRIEF.

Now, what is the international law status as revealed by the court proceedings? First, let us turn to the petition of the Cunard Steamship Co. (Ltd.), as filed by Messrs. Lord, Day, & Lord, proctors for that company in their request for a "limitation of liability," as filed September 19, 1916, in the United State district court, southern district of New York. That petition tells the story from the viewpoint of the Cunard Steamship Co. more accurately than it has yet been told. The whole petition, which seeks to avoid the payment of a possible $5,000,000 of claims, is as follows:

To the honorable the judges of the United States District Court for the Southern District of New York:

The petition of the Cunard Steamship Co. (Ltd.), as owner of the steamship *Lusitania* in a cause of limitation of liability, civil and maritime, alleges as follows:

First. At all the times hereinafter mentioned the petitioner, The Cunard Steamship Co. (Ltd.), was and still is a corporation duly organized and existing under and by virtue of the laws of the United Kingdom of Great Britain and Ireland, having its principal office in Liverpool, England, and an agent at 21 State Street, in the Borough of Manhattan, city of New York, in this district. At the times hereinafter mentioned it was the sole owner of the British steamship *Lusitania* and her pending freight.

The steamship *Lusitania* was a steel turbine steamship, built by John Brown & Co., at Clydebank, Scotland, in 1907, and was classed 100 A1 at Lloyd's. She was 785 feet in length over all, and 760 feet between perpendiculars, 88 feet in beam and 60 feet 4½ inches in depth of hold, of 30,395 tons gross and 12,611 tons net register, and 41,440 tons displacement. She had a cellular double bottom and was divided transversely by eleven principal bulkheads into twelve sections; the two forward bulkheads were collision bulkheads without doors; the remaining bulkheads had water-tight doors, which were closed from the bridge by hydraulic pressure; a longitudinal bulkhead on each side of the vessel separated the side coal bunkers from the boiler room and engine rooms. At the time of the occurrence hereinafter mentioned she had 48 lifeboats on board, accommodating 2,607 persons, and in addition she had on board 2,325 life jackets and 35 lifebuoys.

The boats, life jackets, and lifebuoys were inspected at Liverpool March 17, 1915, by the British Board of Trade engineer and surveyor, and again on April 16 and 17, 1915, by the British Board of Trade emigration officer, and on both occasions were found to be in good order and seaworthy condition. The boats were also examined by the ship's carpenter at New York at the commencement of the voyage in question and were then found to be in good order and seaworthy condition. At the times hereinafter mentioned, the *Lusitania* was engaged in the regular service of the petitioner as a passenger liner between New York and Liverpool, carrying passengers, cargo, and mails.

Second. On May 1, 1915, the *Lusitania* being fully and efficiently manned, equipped, and supplied, in charge of a duly licensed and competent master, who had been in the service of the petitioner since 1883, and having completely fulfilled all the requirements of both the British and the United States laws, and being in all respects seaworthy, sailed from New York with 290 first-cabin passengers, 600 second-cabin passengers, 367 third-cabin passengers and a crew of 702 members, making a total of 1,959 persons on board, together with about 1,400 tons of general cargo and United States mail, bound for Liverpool, England. The *Lusitania* was unarmed and had the status and was entitled to the rights, privileges, and immunities of a merchant vessel, among which are freedom from attack by an enemy vessel without previous visitation, search, or warning, and without provision being made for the safety of her passengers and crew.

Third. The *Lusitania* proceeded on her usual course until she was off the south coast of Ireland. At that time all the vessel's lifeboats under davits had been swung out ready for lowering, all her bulkhead doors had been closed except such as were required to be kept open in order to work the ship, and all her portholes had been closed. The lookout on the ship was doubled, two men being stationed in the crow's nest and two men in the eyes of the ship. Two officers were on the bridge and a quartermaster was on each side on the lookout. Up to 8 a. m. on the morning of May 7, 1915, the vessel had maintained a speed of about 21 knots. The speed was then reduced to 18 knots, in order to effect the ship's arrival outside the bar at Liverpool at about 4 o'clock on the morning of the 8th, when the tide would be sufficiently high to enable the vessel to cross the bar into the Mersey without delay at that point. A little before noon land was sighted which the captain took to be Brow Head, but as he could not identify it with sufficient certainty to enable him to fix the position of his vessel on the chart, he kept the ship on her course, which then was south 87° east and about parallel with the land, until 12.40 p. m., when, in order to make a better land fall he altered his course to north 67° east, and shortly thereafter sighted the Old Head of Kinsale. He then at 1.40 p. m. altered his course back to south 87° east. At about 2.15 p. m., when the vessel was 10 or 15 miles off the Old Head of Kinsale, and proceeding at 18 knots an hour, the weather being clear and the sea smooth, a lookout on the starboard side of the forecastle head saw a burst of foam about four points off the starboard bow followed by the wake of two torpedoes which were rapidly approaching the vessel, one a little behind the other, approximately at a right angle to the ship's course. He immediately called through a megaphone to the bridge: "Torpedoes coming on the starboard side." Within a few seconds thereafter the *Lusitania* was struck by the torpedoes on the starboard side between the third and fourth funnels, the explosions of the torpedoes tearing a great hole in her hull, and causing the sea to rush in. Both these torpedoes were discharged by a German submarine or submarines. Shortly afterwards a torpedo was launched from another German submarine on the port side of the *Lusitania*, but this torpedo did not strike the vessel. The hostile attack by the German submarine or submarines was not preceded by visitation and search, by a signal to heave to, or by any warning or signal of any nature or kind, and no submarine had been sighted before the torpedoes were discharged.

The master was on the bridge at the time the *Lusitania* was struck and remained there giving orders until the ship sank. He went down with the ship and was subsequently rescued. When the *Lusitania* was struck he immediately ordered the lifeboats lowered to the rail and ordered that the women and children be placed in them first. Almost immediately the *Lusitania* took a heavy and increasing list to starboard. Her engines were disabled by the explosion of the torpedoes and could not be reversed. There was, therefore, no way of checking the headway of the vessel. The Marconi operator immediately sent out an S. O. S. call, and another message reading, "Come at once, big list, 10 miles south Head Old Kinsale," which messages were repeated continuously and were acknowledged. All the collapsible boats were loosened from their lashings and freed so that they could float if the vessel should sink, and the crew distributed lifebelts to the passengers. On account of the vessel's list to starboard and her continued headway difficulty was experienced with the launching of the boats. The port boats were thrown inboard and the starboard boats swung outboard. Some of the boats, with great difficulty, were lowered with passengers, but in spite of all possible efforts to save all on board the vessel sank within a few minutes, with a heavy loss of life.

Fourth. The sinking of the *Lusitania* and the loss of the lives of some of her passengers and crew, the injuries sustained by others, and the loss of her cargo, baggage, and mail, resulting therefrom, occurred without the privity or knowledge of the petitioner and were due to and caused solely by the act of a public enemy, to wit, by the unlawful torpedoing of the *Lusitania* by a German submarine or submarines without any previous signal or warning and without making provision for the safety of her passengers and crew, in violation of the law of nations and of the laws and usages of war as recognized by civilized nations. The losses occasioned by the sinking of the vessel as aforesaid were not caused or contributed to by any fault or negligence on the part of the petitioner, its servants or agents, or of anyone for whose acts the petitioner is responsible.

Fifth. Sixty-seven actions at law and suits in admiralty have been begun against the petitioner in various courts in the United States, including the United States District Court for the Southern District of New York, the New York Supreme Court, the United States District Court for the District of Massachusetts, and the United States District Court for the Eastern District of Illinois, for loss of life, personal injuries, loss of baggage, and other damages and injuries, respectively, resulting from said attack and the consequent sinking of the *Lusitania*. The total amount claimed in the said actions and suits so far as at present known to the petitioner is $5,883,479. Other claims may be made and actions begun against the petitioner for losses and damage resulting from said attack and the consequent sinking of the *Lusitania*. A detailed list of the actions and suits pending against the petitioner in the United States, together with the amount of each claim, the name of the proctors or attorneys, and the court in which each action or suit is pending, is hereto annexed, marked "Schedule A," and is made a part of this petition. The said amount of $5,883,479 greatly exceeds the value of the wreck strippings saved from the *Lusitania* and her pending freight and passage money.

Sixth. By reason of said attack upon and the consequent sinking of the *Lusitania* she became an actual total loss, and her value in her sunken condition is therefore nothing. The value of the wreck strippings from the *Lusitania*, consisting of lifeboats and life rafts which reached shore, does not exceed the sum of $768. The freight earned on cargo shipped on the voyage does not exceed the sum of $5,904. The passage money received on the voyage amounted to the sum of $84,624. The total amount of the petitioner's interest in the steamship *Lusitania* and in her pending freight does not for the purposes of this proceeding exceed the sum of $91,296. There are no demands, unsatisfied liens, or claims of liens against the vessel or her strippings on her pending freight, nor any suits pending in the United States, so far as is known to the petitioner, except such as are referred to in article fifth of this petition. Subject to an appraisal of its interest on a reference, the petitioner offers herewith an ad interim stipulation for value in the sum of $100,000.

Seventh. The petitioner denies that it is liable to any extent, as owner of the *Lusitania*, for the losses, damages, or injuries occasioned or resulting from said attack or the consequent sinking of the vessel as aforesaid, or for the claims for damages that have been made, or may hereafter be made on account of the said attack or sinking, and it alleges that it has a valid defense to all such claims; but if this court shall adjudge that the petitioner is liable to any extent in the premises, then the petitioner claims the benefit of the limitation of liability provided for in sections 4283, 4284, and 4285 of the Revised Statutes of the United States and the various statutes amendatory thereof and supplementary thereto, and to that end is ready and willing to give a stipulation with sufficient surety for the payment into court of the amount of its interest in said steamship and her pending freight whenever the same shall be ordered by this court as provided by the statutes aforesaid, by general rule 54 in admiralty and by the rules and practice of this court.

Eighth. All and singular the premises are true and within the admiralty and maritime jurisdiction of the United States and of this honorable court.

Wherefore the petitioner prays—

1. That this court will cause due appraisement to be made of the amount or value of the petitioner's interest in the steamship *Lusitania* and her pending freight upon a reference to be ordered herein.

2. That the court will make an order directing the petitioner to file a stipulation with surety to be approved by the court for the payment into court of the amount of the petitioner's said interest whenever the same shall be ordered by the court.

3. That the court will make an order directing the issuance of a monition to all persons claiming damages for any loss, damage, or injury caused by or resulting from said attack and the consequent sinking of the *Lusitania* aforesaid, citing them to appear before a commissioner to be named by the court in said order, and to make due proof of their respective claims, and also to appear and answer the allegations of this petition, according to law and the practice of this court at or before a certain time to be fixed by the said monition.

4. That the court, on the filing of such stipulation as may be determined to be proper, or on the filing of an ad interim stipulation, will issue its injunction restraining the prosecution of all actions and suits now pending against the petitioner in the United States, and the commencement or prosecution hereafter of any suit, action, or legal proceeding of any nature or description whatever, except in the present proceeding, against the petitioner or against the wreck strippings of the *Lusitania* or her pending freight in respect of any claim or claims arising out of the said attack or the sinking of the *Lusitania*.

5. That the court will adjudge that the petitioner is not liable to any extent for any loss, damage, or injury, nor for any claim whatsoever in any way arising out of or in consequence of the said attack or the sinking of the *Lusitania;* but if this court shall adjudge that the petitioner is liable, than that the liability of the petitioner be limited to the amount or value of the petitioner's interest in the steamship *Lusitania* and her pending freight, and that the moneys paid or secured to be paid as aforesaid be divided pro rata among the claimants as provided by law, and that a decree may be entered discharging the petitioner from all further liability.

6. That the petitioner may have such other or further relief as may be just.

LORD, DAY & LORD,
Proctors for Petitioner.
J. PARKER KIRLIN,
LUCIUS H. BEERS,
Advocates.

—

UNITED STATES OF AMERICA,
Southern District of New York, County of New York, ss:

Richard L. Walker, being duly sworn, says: I am assistant to the general agent in the United States of the Cunard Steamship Co. (Ltd.), the petitioner herein. The foregoing petition is true to the best of my knowledge, information, and belief. The sources of my information and the grounds of my belief as to the matters not within my own knowledge, are statements made by surviving officers and members of the crew of the steamship *Lusitania,* and reports of investigations made by the petitioner and by the British court of inquiry into the sinking of the *Lusitania.* The reason that this verification is not made by the petitioner is that it is a foreign corporation, and none of its officers is in the United States. The reason that it is not made by the general agent is that he is not at present within this district.

RICHARD L. WALKER.

Sworn to before me this 14th day of September, 1916.
[SEAL.] J. DEL GIUDICE,
Notary Public, Westchester County.

Certificate filed in New York County.

ANOTHER VIEW OF INTERNATIONAL LAW.

On behalf of one of the claimants, the widow and children of Mr. Albert Lloyd Hopkins, who was president of the Newport News Shipbuilding & Dry Dock Co., a denial is set up that "the torpedoing was unlawful or that the same was in violation of the law of nations or of the laws and usages of war as recognized by civilized nations." The answer filed on behalf of the Hopkins family and others by A. Gordon Murray, a proctor in admiralty, in New York, presents an entirely different view of international law from that asserted by the proctors of the Cunard Co. I append this answer, which charges the owners of the *Lusitania* with endeavoring to avoid responsibility, in full. In addition thereto I append a further statement by Mr. Murray, with certain citations of international law:

UNITED STATES DISTRICT COURT.
SOUTHERN DISTRICT OF NEW YORK.

IN THE MATTER OF THE PETITION OF THE CUNARD STEAMSHIP CO. (LTD.), AS OWNER OF THE STEAMSHIP "LUSITANIA" FOR LIMITATION OF ITS LIABILITY. IN ADMIRALTY NO. 69–169. ANSWER.

To the honorable the judges of the United States District Court for the Southern District of New York:

The answer of May Davies Hopkins, individually and as administratrix of the goods, chattels, and credits of Albert Lloyd Hopkins, deceased; Anna B. Mills, individually and as administratrix of the goods, chattels, and creditors of Charles Veitch Mills, deceased; Winifred H. Brown, individually and as administratrix of the goods, chattels, and credits of William H. H. Brown, deceased; Elizabeth Burke, individually and as mother and next of kin of Alice Burke and Dora Burke; and Allison Buchanan, individually and as representative of the parent and descendants and next of kin of Mary Buchanan, deceased; having duly filed claims herein against the above-named petitioner with Alexander Gilchrist, jr., Esq., the commissioner appointed to take proof of claims to the petition of the Cunard Steamship Co. (Ltd.), as owner of the steamship *Lusitania* for limitation of liability, civil and maritime, allege on information and belief as follows:

First. They admit the allegations of the first article of the petition, except that they have no knowledge or information sufficient to form a belief as to whether the equipment was inspected and examined as in said article mentioned.

Second. They admit the allegations of the second article of the petition, except that they deny that the said steamship *Lusitania* was fully and efficiently manned.

They have no knowledge or information as to whether the *Lusitania* was unarmed, but they deny that among the rights, privileges, and immunities of a belligerant merchant vessel, in times of war, are immunity from attack by an enemy vessel without previous visitation, search, or warning, or without provision being made for the safety of her passengers and crew.

Third. They admit the allegations of the third article of the petition, except that they have no knowledge or information as to whether the lifeboats under davits had been swung out ready for lowering, or bulkhead doors had been closed or her portholes closed, or that the lookout had been doubled, or that two officers were on the bridge or a quartermaster stationed on each side on the lookout.

They have no knowledge or information as to the speed of the vessel prior to 8 a. m. on the morning of May 7, 1915. They admit, however, that her speed was reduced, but whether to 21 or 18 knots or below they know not, but they allege that at the time of the torpedoing hereinafter mentioned, she was not proceeding at a greater speed than 18 knots, and probably less.

Fourth. They deny that the sinking of the *Lusitania* or the losses incurred thereby occurred without the privity or knowledge of the petitioner, as stated in the fourth article of the petition, and they admit that it was due and caused by the act of a public enemy, but they deny that the said torpedoing was unlawful or that the same was in violation of the law of nations or of the laws and usages of war as recognized by civilized nations, and they deny that the losses occasioned by the said sinking were not caused or contributed to by any fault or negligence on the part of the petitioner, its servants, or agents, or of any one for whose acts the petitioner is responsible.

Fifth. They have no knowledge or information as to the allegations of the fifth article of the petition, except they severally admit that they had each begun an action in admiralty against the petitioner to recover their damages occasioned by the sinking of the steamship *Lusitania* in the United States District Court for the Southern of New York.

Sixth. They have no knowledge or information sufficient to form a belief as to the allegations of the sixth article of the petition, except that they admit that the sinking of the *Lusitania* was the result of a hostile submarine attack.

Seventh. By way of answer to the allegations of the seventh article of the petition, they allege the liability of the petitioner herein for the losses occasioned by the sinking of the steamship *Lusitania,* and they deny that the petitioner is entitled to the benefits of the limitation of liability provided for in sections 4283, 4284, and 4285 of the Revised Statutes, or any statute amendatory thereof or supplementary thereto, as alleged in the said seventh article.

Eighth. The claimants above named for a further answer to the petition and by way of contest thereof, upon information and belief, allege:

1. That the loss and damage occasioned to them as stated in their respective claims duly filed herein, as hereinbefore mentioned, by the sinking of the steamship *Lusitania* while on the voyage mentioned in the petition herein was caused by the fault and negligence of the petitioner, the Cunard Steamship Co. (Ltd.), its agents and servants, in that with the knowledge or privity of the petitioner, the said steamship *Lusitania* was being navigated imprudently and negligently in that she was well within the war zone duly proclaimed by the Imperial German Government and was not maintaining her usual full, maximum, or ordinary speed, but on the contrary and in fact had reduced her speed to 18 knots or less, by reason of which reduction she became an easy mark for attack by hostile submarine vessels, and in addition thereto, as claimants are advised and believe, the said steamship *Lusitania* was not otherwise being navigated as prudence required in that she was not following the course prescribed by the British admiralty as a proper course at that time for vessels destined to and from the port of Liverpool and the ports of North America, but on the contrary the course actually pursued by the steamship *Lusitania* was dangerous as exposed to attack by hostile submarine torpedo boats, and the region was known to be infested with such hostile torpedo vessels, and, further, such course was not protected by the British admiralty for freight and passenger vessels of British nationality.

2. Petitioner, as owner of and operating the said steamship *Lusitania,* was negligent in that it gave no directions to the commander of the steamship *Lusitania* that he should follow such designated course or courses, or obey implicitly any warnings, orders, advices, or instructions that he might receive by wireless telegraph or otherwise from the British admiralty, or any of its ships or agencies whatsoever, and as a consequence of such neglect, recklessness, and imprudence the said steamship *Lusitania* was sunk, and claimants' intestates lost their lives and claimants and claimants' minor children or dependents lost the care and protection and support of the decedents.

Ninth. The above-named claimants allege that on or about August 4, 1914, the United Kingdom of Great Britain and Ireland formally declared war on the Imperial German Government and the people composing the German Empire, and that subsequent thereto the Imperial German Government formally declared war upon the United Kingdom of Great Britain and Ireland and her subjects.

That on or about February 5, 1915, the war thus declared was still in full and bitter force, and on May 7, 1915, the state of war was still existing between the two nations as aforesaid and their respective allies. That on or about February 5, 1915, the Imperial German Government duly proclaimed to the world that the commanders of its submarine torpedo boats had received instructions that on and after February 18, 1915, all vessels of Britain or enemy nationality would be torpedoed upon sight when encountered within a radius of 30 miles around the British Isles, and that the said declaration or decree, duly promulgated, was in full force and effect May 7, 1915, the day upon which the said steamship *Lusitania* was torpedoed, and the petitioner well knew that such was the case.

The said steamship *Lusitania* was a British vessel and was sailing under the British flag, and consequently under the circumstances prevailing at that time the said steamship was being navigated imprudently and negligently in the war zone as aforesaid and was not using her utmost speed to traverse the said zone, within which she had ample reason to believe that she was open to attack.

Tenth. The petitioner and its agents had duly advertised and made known that the said steamship *Lusitania* was capable of achieving and maintaining a speed of 25 knots or more, but at the time of the claimants' losses, by reason of being shorthanded in manning and in order to effect a saving in the consumption of coal, a portion of her boilers had been uncoupled from the main engines and were cold, in consequence of which the *Lusitania* was not capable of accomplishing 25 knots or anything approximating thereto, and no notice had been given to the traveling public, and especially to the claimants' decedents, that the said steamship *Lusitania* would be so reduced or curtailed in power, but claimants' decedents took passage on the said steamship *Lusitania* with the full knowledge and understanding and in the belief that the said steamship *Lusitania* was capable of accomplishing a speed of 25 knots and relied upon such knowledge, understanding, and belief, not knowing that the same had been in any respect reduced or curtailed.

Claimants allege that the said reduction in power was done for the purpose of economizing labor and coal consumption, but that there was no consequent reduction in the passage money that the claimants' decedents were required to pay as a necessary consequence of the relation of passengers and carriers.

Eleventh. The said reduction was made as a result of due deliberation on the managing director or directors of the petitioners, and the said reduction was continued after the said managing director or directors had full knowledge that hostile submarine torpedo boats were around bent upon the destruction of British vessels, including merchant and passenger vessels.

Twelfth. Claimants allege that the said steamship *Lusitania* was designed to be a British auxiliary cruiser; that the said vessel was carried on the British admiralty list and was capable at all times of quick conversion into a cruiser, and at the time of the sinking aforesaid she was or had been painted with the war colors of all British naval vessels and she had from time to time sailed under neutral flags as a ruse deguerre.

Wherefore the claimants herein pray that the court will decree that the sinking and loss at sea of the said steamship *Lusitania* was due to the fault and negligence of those in charge of her operation and management; that such fault and negligence was done with the knowledge and privity of the petitioner; that the loss and damage to these claimants were done, occasioned, and occurred not without the knowledge and privity of the petitioner or its actual fault.

That the petitioner is not entitled to limitation of its liability as prayed for in the petition, or otherwise.

That these claimants may be awarded their damages as indicated by the claims heretofore filed with the commissioner herein and duly proved according to law, together with interest and costs out of any fund that may now be or hereafter come into the hands of the trustee herein, or generally for any deficiency thereof, and that they may have such other and further relief as may be just, and that the court will further decree that the petitioner unto the end that the facts may appear to the court, answer the interrogatories annexed to this answer according to the rules and practice of this court.

A. GORDON MURRAY,
Office and Post Office Address, No. 68 William Street, Borough of Manhattan, City of New York, N. Y.

Proctor for May Davies Hopkins, individually, and as administratrix of the goods, chattels, and credits of Albert Lloyd Hopkins, deceased; Anna B. Mills, individually, and as administratrix of the goods, chattels, and credits of Charles Veitch Mills, deceased; Winifred H. Brown, individually, and as administratrix of the goods, chattels, and credits of William H. H. Brown, deceased; Elizabeth Burke, individually, and as mother and next of kin of Alice Burke and Dora Burke, and Allison Buchanan, individually, and as representative of the parent and descendants and next of kin of Mary Buchanan, deceased.

—

SOUTHERN DISTRICT OF NEW YORK, *ss:*

A. Gordon Murray, being duly sworn, deposes and says that he is the proctor for all of the above-named claimants, and that none of them are within the city of New York. The sources of deponent's knowledge and information are letters, communications, and instructions received by him from the various claimants and each of them, and from his knowledge of the proceeding and proceedings which have preceded this proceeding, and from his knowledge as proctor, and he declares that the document affirmed to is true to the best of his knowledge, information, and belief.

A. GORDON MURRAY.

Sworn to before me this 4th day of January, 1917.

FREDERICK W. STELLE,
Notary Public, New York County.

WAS INTERNATIONAL LAW VIOLATED?

On May 7, 1915, Mr. Albert Lloyd Hopkins, an American citizen, lost his life because of the sinking of the steamship *Lusitania*. Mr. Hopkins was 42 years of age, was the president of the Newport News Shipbuilding & Dry Dock Co., and he left a wife and a daughter aged 7 years. Mr. Hopkins's body was recovered and returned to this country.

May Davis Hopkins, the wife, was in due time appointed administratrix of the estate. On April 27, 1916, she began a suit in personam in admiralty in the United States district court for the southern district of New York against the Cunard Steamship Co. (Ltd.) to recover damages for the death of her husband, as indicated. I was duly retained as proctor in admiralty to conduct Mrs. Hopkins's suit. There can be no doubt of the right of Mrs. Hopkins to maintain an action. (La Bourgogne, 210 U. S., 93; The Titanic, 233 U. S., 718.)

On September 19, 1916, instead of interposing an answer, the Cunard Steamship Co. (Ltd.) filed a petition for limitation of its liability, as owner of the steamship *Lusitania*, and thereby sought to contest, as well as to limit, its liability. This proceeding was pursuant to sections 4283, 4284, and 4285 of the Revised Statutes of the United States, and the general admiralty rules of practice, duly promulgated by the Supreme Court of the United States.

The company set up three general grounds of exemption from liability:

First. "The *Lusitania* was unarmed and had the status and was entitled to the rights, privileges, and immunities of a merchant vessel, among which are freedom from attack by an enemy vessel without previous visitation, search, or warning, and without provision being made for the safety of her passengers and crew." (Par. 2.)

Second. "The hostile attack by the German submarine or submarines was not preceded by visitation and search, by a signal to heave to, or by any warning or signal of any nature or kind, and no submarine had been sighted before the torpedoes were discharged." (Par. 3.)

Third. "The sinking of the *Lusitania* and the loss of the lives of some of her passengers were due to and caused solely by the act of a public enemy, to wit, by the unlawful torpedoing of the *Lusitania* by a German submarine or submarines, without any previous signal or warning, and without making provision for the safety of her passengers and crew, in violation of the law of nations and of the laws and usages of war as recognized by civilized nations." (Par. 4.)

In view of the fact that a serious controversy has arisen between this country and Germany as to its policy of conducting submarine warfare, will you permit me, in the interest of the citizens of the United States who are maintaining in the courts of the United States suits on causes of action which they are advised lies open to them, to outline the legal aspects that would seem to lead to the conclusion that the position of our Government in regard to such controversy is at least not free from serious doubt.

In "Outlines of International Law," by Charles H. Stockton, rear admiral, United States Navy, retired, Scribner's, 1914, chapter 20, entitled "Maritime warfare," section 151, page 333, it is stated:

"151. Laws and usages of war at sea: The special objects in maritime warfare are the capture or destruction of the military and naval forces of the enemy, of his fortifications, arsenals, dry docks, and dockyards, of his various military and naval establishments, and of his maritime commerce; to prevent his procuring war material from neutral sources; to aid and assist military operations on land; and to protect and defend the national territory, property, and sea-borne commerce."

In Elements of International Law, by George B. Davis, Judge Advocate General, United States Army, Harper & Bros., 1908, Chapter XI, page 364, it is stated:

"Destruction of captured vessels: As the present tendency of neutral States is to close their ports to maritime prizes, such disposition of prizes is more likely to increase than decrease in frequency. The practice of destroying prizes has been objected to, but rather on the ground of humanity than legality. If the right to capture enemy property at sea be admitted, the right to destroy it follows as a natural consequence. The title of the original owner has been forcibly divested by an act of war. If any injury has been inflicted upon the belligerent, that injury consists in the fact of capture, which amounts to a destruction of the property in so far as the owner and his Government are concerned. It can matter little to either what disposition is made of the property after the owner's title has been extinguished. The right to destroy neutral prizes and their cargoes stands upon a different footing, however, and has not received such general acceptance as to warrant the practice to be regarded as a lawful disposition of captured neutral property."

And in Chapter XV, page 483:

"THE RIGHT OF SEARCH.

"Nature of the right: The belligerent rights which have already been discussed—of capturing enemy property at sea, of seizing contraband of war, and of blockading the coasts and harbors of an enemy—could none of them be made effective were not belligerents also accorded the right to stop and search all neutral merchant vessels on the high seas, for the purpose of ascertaining their nationality and destination, the character and ownership of their cargoes, and to effect their capture, should the result of such examination show a liability to capture to exist.

"How exercised: The manner in which the belligerent right of search is to be exercised is determined by the usage of nations, except in those cases in which it has been made the subject of treaty stipulation. The duty of submitting is only incumbent upon neutral merchant vessels. Public armed vessels are not subject to visitation, either in time of peace or war, and the merchant vessels of a belligerent are justified in resorting to any measures, either of flight, resistance, or deception, which are calculated to enable them to escape search and inevitable capture. The right of search may be exercised by the regularly commissioned ships of war of a belligerent, or by duly authorized privateers in the service of those States which still retain the right to use that species of naval force in time of war."

In the convention providing for the establishment of an international prize court, adopted at The Hague October 18, 1907, Article VII provides that where there is a treaty in force between a belligerent captor and power, any controversy must conform to the requirements of such convention. In default of such stipulations, however, the court applies the rules of international law. On account of certain divergency of view as to what constituted international law, which became apparent at the conference at The Hague, Sir Edward Grey, Great Britain's principal secretary for foreign affairs, invited the various maritime powers to a conference to be held in London on December 4, 1908, and a declaration was framed, known as the declaration concerning the laws of naval war, and known commonly as the declaration of London, which bears date February 20, 1909. The declaration of London was never ratified by Great Britain and therefore never became effective, but its principal value is that it contains a codification of the international maritime law as understood at that time. It was signed by the delegates of all the principal powers, including Great Britain, Germany, the United States, France, Russia, and Japan. It consists of nine chapters of 71 articles. Chapter I, article 1, provides.

"A blockade must not extend beyond the ports and coasts belonging to or occupied by the enemy."

Chapter IV, articles 49, 50, 51, and 52, refer to the subject of the destruction of neutral prizes. Article 50 provides:

"Before the vessel is destroyed all persons on board must be placed in safety, and all the ship's papers and other documents which the parties interested consider relevant for the purpose of deciding on the validity of the capture must be taken on board the warship."

In no other provision is reference made to the lives and safety of passengers or crew. It will be noted, therefore, that this provision applies only to the destruction of neutral prizes.

Under the authority of the law of 1884 a prize code for the German Empire was promulgated August 3, 1914. Part VIII deals with the disposition of captured vessels. Section 113 deals with the destruction of neutral vessels. Where the same is subject to condemnation, and the bringing her into port would subject the capturing vessel to danger or would impede the success of the operations in which it is at the time engaged, destruction is permitted.

Section 115 deals with the damages for illegal destruction of a neutral vessel and section 116 deals with the safety of persons on board:

"116. Before proceeding to a destruction of the vessel, the safety of all persons on board and, so far as possible, their effects, is to be provided for, and all ship's papers and other evidentiary material which, according to the views of the persons at interest, is of value for the formulation of the judgment of the prize court are to be taken over by the commander."

This provision clearly refers only to the destruction of neutral vessels. This view is substantiated by what purports to be its foundation, upon article 50 of the declaration of London.

In the second note of protest, dated June 9, 1915, and signed by Robert Lansing, as Secretary of State ad interim, to Ambassador Gerard in Berlin, occurs these words:

"Only her actual resistance to capture or refusal to stop when ordered to do so for the purpose of visit could have afforded the commander of the submarine any justification for so much as putting the lives of those on board the ship in jeopardy. This principle the Government of the United States understands the explicit instructions issued on August 3, 1914, by the Imperial German Admiralty to its commanders at sea to have recognized and embodied, as do the naval codes of all other nations, and upon it every traveler and seaman had a right to depend. It is upon this principle of humanity as well as upon the law founded upon this principle that the United States must stand."

It is obvious that there was a confusion as to the rights of destruction to a belligerent and to a neutral vessel. There can be no question of the belligerent character of the *Lusitania*, and nowhere in all the law and writings that have been commented upon and examined does there appear any prohibition against putting in jeopardy the lives of

passengers and crew on a belligerent vessel. The lines of travel are kept open, however, by strict provision for the securing of the lives of passengers on a neutral vessel. I personally have been unable to see any inhumanity in requiring passengers to travel on an American or a neutral vessel.

The determination of the German Imperial Government to embark on its course of submarine warfare was notified to the world in a proclamation of February 4, 1915, as follows:

"Proclamation 1. The waters surrounding Great Britain and Ireland, including the whole English Channel, are hereby declared to be war zone. On and after the 18th of February, 1915, every enemy merchant ship found in said war zone will be destroyed without its being always possible to avert the dangers threatening the crew and passengers on that account.

"2. Even neutral ships are exposed to danger in war zone, as, in view of the misuse of neutral flags, ordered on January 31 by the British Government, and of the accidents of naval war, it can not always be avoided to strike even neutral ships in attacks that are directed at enemy ships.

"3. Northward navigation around the Shetland Islands, in the eastern waters of the North Sea, and in a strip of not less than 30 miles width along the Netherlands coast is in no danger.

"VON POHL,
"Chief of the Admiralty Staff of the Navy."

Accompanying the same was a memorial of the Imperial German Government respecting retaliatory measures rendered necessary by the means employed by England contrary to international law in intercepting neutral maritime trade with Germany. This memorial complains bitterly of the conduct of Great Britain in disregarding the declaration of London and violating the declaration of Paris, and it concludes as follows:

"Finally they have declared the North Sea in its whole extent to be the seat of war, thereby rendering difficult and extremely dangerous, if not impossible, all navigation on the high seas between Scotland and Norway, so that they have in a way established a blockade of neutral coasts and ports, which is contrary to the elementary principles of generally accepted international law. Clearly all these measures are part of a plan to strike not only the German military operations but also the economic system of Germany, and in the end to deliver the whole German people to reduction by famine, by intercepting legitimate neutral commerce by methods contrary to international law.

* * * * * * *

"The German Government have in vain called the attention of the neutral powers to the fact that Germany must seriously question whether it can any longer adhere to the stipulations of the declaration of London, hitherto strictly observed by it, in case England continues to adhere to its practice, and the neutral powers persist in looking with indulgence upon all these violations of neutrality to the detriment of Germany. Great Britain invokes the vital interests of the British Empire which are at stake in justification of its violations of the law of nations, and the neutral powers appear to be satisfied with theoretical protests, thus actually admitting the vital interests of a belligerent as a sufficient excuse for methods of waging war of whatever description.

"The time has come for Germany also to invoke such vital interests. It therefore finds itself under the necessity, to its regret, of taking military measures against England in retaliation of the practice followed by England. Just as England declared the whole North Sea between Scotland and Norway to be comprised within the seat of war, so does Germany now declare the waters surrounding Great Britain and Ireland, including the whole English Channel, to be comprised within the seat of war, and will prevent by all the military means at its disposal all navigation by the enemy in those waters.

"To this end it will endeavor to destroy, after February 18 next, any merchant vessels of the enemy which present themselves at the seat of war above indicated, although it may not always be possible to avert the dangers which may menace persons and merchandise.

"Neutral powers are accordingly forewarned not to continue to intrust their crews, passengers, or merchandise to such vessels. Their attention is furthermore called to the fact that it is of urgency to recommend to their own vessels to steer clear of these waters. It is true that the German Navy has received instructions to abstain from all violence against neutral vessels recognizable as such; but in view of the hazards of war, and of the misuse of the neutral flag ordered by the British Government, it will not always be possible to prevent a neutral vessel from becoming the victim of an attack intended to be directed against a vessel of the enemy.

* * * * * * *

"The German Government announces this measure at a time permitting enemy and neutral ships to make the necessary arrangements to reach the ports situated at the seat of war, etc."

A perusal of the correspondence between the Government of the United States and the Imperial German Government, in the matter of the danger to passengers on vessels at sea, shows clearly that the German Government has consistently insisted that its submarine warfare was aimed at enemy shipping, and in the note of May 4, 1916, to the American ambassador in Berlin in which the German Government notifies the Government of the United States that they had instructed their naval commanders to observe the general principles of visit and search as to all merchant vessels both within and without the war zone and that the same should not be sunk without warning and without saving human lives unless these ships attempt to escape or offer resistance. The note concludes:

"Accordingly the German Government is confident that in consequence of the new orders issued to its naval forces, the Government of the United States will now also consider all impediments removed which may have been in the way of a mutual cooperation toward the restoration of the freedom of the seas during the war as stated in the note of July 23, 1915, and it has no doubt that the Government of the United States shall now demand and insist that the British Government shall forthwith observe the rules of international law, universally recognized before the war as they are laid out in the notes presented by the Government of the United States to the British Government on December 28, 1914, and November 5, 1915. Should the steps taken by the Government of the United States not attain the object it desires to have the laws of humanity followed by all belligerent nations, the German Government would then be facing a new situation in which it must reserve itself complete liberty of decision."

The Secretary of State, under date of May 7, 1916, to Ambassador Gerard, referred to this intimation by saying:

"In order, however, to avoid any possible misunderstanding the Government of the United States notifies the Imperial German Government that it can not for a moment entertain, much less discuss, a suggestion we receive by German naval authorities that the rights of citizens of the United States upon the high seas should in any way or in the slightest degree be made contingent upon the conduct of any other Government affecting the rights of neutrals and noncombatants."

The German Government have insisted that the blockading of the neutral ports of Sweden, Norway, Denmark, and Holland is a violation of their rights under international law and is directly contrary to Chapter I, article 1, of the declaration of London, and that England's attempt to starve the civilian population of Germany is no less inhuman than Germany's effort to bring about the same condition in the British Isles by a rigorous and relentless submarine warfare against their ocean carrying power.

There would seem to be no answer to their position except an arbitrary demand on the part of the Government of the United States that American citizens are entitled at will to travel on belligerent vessels in a time of war in a duly proclaimed dangerous area.

It would seem, furthermore, that the United States is, to use the Secretary of State's language, on the very verge of war on a mistaken conception of the law of nations on a question which is vitally material under the allegations of the petitioner, the Cunard Steamship Co. (Ltd.), in its suit to free itself from responsibility for the losses by the steamship *Lusitania*.

Our courts would therefore be in the necessity of determining, if the claimants' position were sound in effect, that the United States was engaged in an unjust war and that it did not have the duly recognized sanction of the usage and practice of nations. The United States has no right to say what England or what Germany shall do. It has a right to rely upon the practice of nations in times past so uniform that such practices have become the custom of nations, but it is not right to say to another nation such and such a practice is inhuman and therefore will not be permitted, any more than it has to say to another nation that a practice of starvation is equally inhuman and should not be permitted. In such cases the United States would be setting itself up as a general international policeman, which it is not the desire of any to see.

We have for a century maintained the Monroe doctrine in America that aggressions by European nations in America would not be looked upon as anything but an unfriendly act. The corollary of this proposition is equally true and therefore entails the duty of abstinence from interference in the affairs of Europe.

A. GORDON MURRAY,

(Armed ships. See the *Nereide*, 9 Cranch., U. S. Repts.; Chief Justice Marshall.)

IF NOT SUBMARINES, WHY MINES?

So much for the case of the *Lusitania* as it comes to us through the court records. I now submit two very pertinent letters on mines and submarines from Mr. George H. Earle, jr., of Philadelphia, one of our foremost financiers and business men:

FEBRUARY 13, 1917.

Hon. J. HAMPTON MOORE,
House of Representatives, Washington, D. C.

MY DEAR MR. MOORE: I have been reading your illuminating discussions relating to the question of whether we should go to war because of the sinking of foreign ships without notice by submarines because of the presence of citizens of this country, even though those ships were engaged in carrying munitions for one or the other of the combatants; but I have been disappointed that the discussion has not cleared up a point in which I am sure many of us are deeply interested, and I would like to ask you whether Congress or the President may not explain why, if it is a cause of war and uncivilized to sink merchantmen through submarines without notice, it is not equally so to sink them by mines without notice? Where is the difference, either in cruelty or danger? If there be a difference, is it not rather in favor of the submarines? A submarine, certainly in most cases, must give a little more chance of escape, for the mine is instantaneous; and, no matter how cruelly submarines have acted, there are many instances where they have given assistance, whereas a mine leaves a boat sinking, often with nothing living within sight or call.

If we are to be guided by the substance of things, I repeat I would like to be enlightened as to why the strewing of the sea with mines is not a cause of war if a noncombatant is killed, whilst a thing no more destructive seems to be. Can you or Congress enlighten me upon this matter? I am sure that you will place many other citizens, besides myself, under deep obligation.

If we have the right to sail the high seas free from the danger of sudden, unexpected death, what difference does it make whether the mine that kills you unaware is left to strike you or floats to you? Except in the motion of the mine, where does a submarine differ from other mine layer?

Believe me to be,
Very respectfully,

GEORGE H. EARLE, Jr.

FEBRUARY 14, 1917.

Hon. J. HAMPTON MOORE,
House of Representatives, Washington, D. C.

MY DEAR MR. MOORE: Replying to your valued favor of the 14th, I beg leave to say that if my very hasty and crude letter will be of any service to you in the very good work that you are doing it is at your disposal.

What I wanted to make plain, and what I think you are doing effectively, is to show that if we are acting on the basis of civilization and making that the controlling consideration that is to shift us into an uncivilized and bloody war we have a very large field to cover, only one phase of which is not being contested. Enormous areas of the sea have been mined without any effective protest or suggestion of war, although the only difference between mine layers and submarines is that the torpedoes are dropped by undersea boats in the one case and surface boats in the other. In all other particulars the mines are the most deadly and uncivilized. If we are fighting to keep the great highway of the world—that is, the ocean—open or fighting because of humane principles, we should certainly declare war on mine laying as well as on ejecting mines from submarines.

As to international law, this war has demonstrated that there is no such thing. Both parties to it now are trying to win by starving the women and children of the other. You can have a code of ethics with no sanction to enforce it and call it "international law," if you please; but as the only way to enforce it is war, which is an end to

law and a resort to violence, all this talk about what international law does or does not do seems to me trivial and wasted breath.

I have read the account of the Belgium relief ship sinking from a mine, and I have read the account of the *Lusitania* sinking from a submarine mine. One seems to me as good a cause of fighting as the other. I meet no one that wants us to remedy bloodshed by joining in ourselves. I meet very few who are impartial and do not want one side or the other whipped by somebody else. But personally I agree with you that we should not be swayed by these harrowing tales, most of which prove to be untrue and put out for a purpose, into becoming a bloody nation ourselves. If we have rights to defend, that is well and good; but if we defend them all by force it must be obvious to any fair man that we will have to fight both sides, which I do not think this country is at all ready for.

Believe me to be,

Your obedient servant, GEORGE H. EARLE, Jr.

ENGLAND'S SUBMARINE DISCUSSION BEFORE THE WAR.

But even more to the point as affecting the foreign submarine controversy and our own relation to it since the German submarine blockade of British ports, I submit some very remarkable antewar articles from the London Times, which have been forwarded to me by Miss Fannie R. M. Hitchcock, of Philadelphia, a student of war problems and a writer of distinction.

I am taking the liberty—

Says Miss Hitchcock—

of sending you a copy of the discussion on the submarine and its use in warfare, published in the London Times during June and July, 1914, before war was declared. The main part of it comprises a review by Admiral Scott, of the British Naval Board, answering, as he says, the numerous questions that had come to the board and to himself on various points connected with the uses and limitations of the submarine as a war vessel. He took up the subject very exhaustively in his second letter of June 10, but all of the letters are worth reading, as being practically an official statement of the way the naval board of the British Government would view the use of the submarine. England herself had no need of instituting such a warfare against Germany, as German commerce was practically destroyed at the beginning of the war by English war vessels; but, so far as I have been able to ascertain, the British Government has never officially criticized the mode of the German blockade, and the naval board is given a free hand in naval matters, as it refused to be subject to the counsel of landsmen, who they said did not understand naval warfare and its needs. The letter from Lord Sydenham published on July 14, and included in this discussion, was an open one to Admiral Scott and stigmatizes the rules of warfare by submarines as laid down by Sir Percy Scott as barbarous, but Sir Scott's answer is very suggestive. It seems to me that if our Government is going to make the German submarine warfare against England a cause of war between this country and Germany, we are going to tie our hands in case of war in such a manner as to prevent our making use of the submarine in such mode as is outlined in these letters, while any other nation will be at liberty to do so. Great Britain has always carefully refrained from committing herself to any restrictions that she might regret in time of need.

[From the London Times letters, edition of June 5, 1914.]

THE SUBMARINE MENACE—SIR PERCY SCOTT'S VIEWS—THE USELESSNESS OF GREAT BATTLESHIPS—FUTURE NAVAL WARFARE.

"But the strength of navies can be reckoned not only in dreadnaughts, and the day may come when it will be reckoned in dreadnaughts not at all." (Mr. Churchill, Mar. 26, 1913.)

"The whole system of naval architecture and the methods of computing naval strength are brought under review by the ever-growing power, radius, and seaworthiness of the submarine, and by the increasing range and accuracy of its fatal torpedoes." (Mr. Churchill, Mar. 17, 1914.)

The communication which we print below must attract general attention, both at home and abroad alike, from the personality of the distinguished writer and the crucial importance of his subject. Admiral Sir Percy Scott is a naval officer who has not only shown himself on several occasions able to think ahead of his contemporaries but has made good his prophecies. To him we owe the presence of the naval guns at Ladysmith, which saved the situation—if not South Africa. He it was who made possible the advance in marksmanship with heavy guns which has been such an important feature in naval efficiency of late years. To him, too, it is due that the navy was recently provided with a "director," which has enormously increased the possibilities of hitting at long ranges, and enabled broadside salvo fire to be carried out with a precision before unknown.

Sir Percy Scott now tells us that everything that he has done to enhance the value of the gun is rendered useless by the advent of the submarine, a vessel which has for its principal weapon the torpedo. Battleships, and, indeed, all vessels which have not the quality of submersion are to become obsolete. Dreadnaughts and superdreadnaughts are doomed, because they can no longer be safe from the submarines at sea nor find security in harbor. On the ocean, as in narrow waters, they are at the mercy of the submersible torpedo carrier.

Sir Percy Scott goes still further in his forecast of the future, for, assuming that submarine can not fight submarine, he sees the end of sea warfare altogether. Neither numbers nor skill are to avail. Nothing will live afloat, for if opposing nations have provided themselves with a sufficiency of submarines they can destroy everything which can not hide from these vessels below the surface. The position, apparently, will become one of the greatest disadvantage to the nation which depends for its existence upon water-borne supplies. Indeed, the only obvious benefits which these islands will derive from the change is the removal of all fear of invasion, seeing that if battleships and cruisers can not cross the submarine-infested harbors neither, of course, can transports.

Sir Percy brings a very serious charge against those in authority who waste the nation's money on ships that will be unable to fight. It is for them, he suggests, to defend that policy by explaining what part the battleship will play in war. How she can be made safe from destruction by the submarine at sea or in port, and how her situation is to be kept secret from aircraft. He would have the money voted for their construction spent on building more submarines and aeroplanes.

The questions raised by Sir Percy Scott are not, of course, new. They have, as our columns have testified for some time past, much exercised naval architects. They are directly concerned with the problem of warship design, which, as our readers will remember, formed the subject of a series of articles published last October by an exceptionally well-informed correspondent, who wrote: "There has never been a time when the application of scientific methods to the illustration of naval questions was so imperatively demanded as the present day." Last year another writer pointed out in these columns that the big ship's guns were admittedly insufficient protection against the use of the torpedo, and that now the seaplane had given eyes to the submarine the latter bade fair to exert a supreme influence upon the volume of floating and water-borne commerce within the area disturbed by war. This aspect, he said, demanded the attention of merchants and shipowners and many others not professionally interested in naval affairs.

The following is the text of Sir Percy Scott's communication:

LARGE SHIPS OR SMALL?

To the EDITOR OF THE TIMES:

SIR: Although I have retired from His Majesty's Navy, many people have written and are still writing to me as to whether we should build small battleships or large. My opinion is that we should not be building either. My reason for holding this opinion will be found in a letter which I wrote you some time ago, and a copy of which I herewith inclose.

I am, yours, very truly, PERCY SCOTT.

52 SOUTH AUDLEY STREET, *May 31, 1914.*

52 SOUTH AUDLEY STREET,
December 15, 1913.

DEAR SIR: In reply to your letter, I have seen the correspondence in the press suggesting building smaller battleships, and also the arguments as to whether two or four battleships should be laid down in 1914. If we have battleships, we must have thick armor on them to keep out the enemy's shot, and we must have speed to give tactical advantage in bringing our fire on the enemy; these are axioms among naval officers. For battleships our nation and all other nations have very properly decided to have big ships, big guns, thick armor, and high speed.

The other question is, Are we in 1914 to build two or four battleships? The "little navyites" say two, in order to save money; the "big navyites" say four, to, as they think, save the country. If battleships are of use in saving the country, the "little navyites" are foolish and unpatriotic. If battleships are of no use, then the "big navyites" are wrong in putting the country to the expense of building four more; the real question to settle before even talking about building more battleships is, Are they of use or are they not?

For some thousands of years armored vessels floating on the surface of the water have been used for attack and defense; these vessels vary in size to-day from the canoe carrying one man armed with a spear to the 32,000-ton battleship armed with 15-inch guns. And these craft, whether large or small, all float on the water and are visible. In this island we depend upon our food supply coming from oversea, hence it has been necessary for us to have a large number of armored ships to protect our commerce and safeguard our food supply. This protecting force or insurance of our country is called the "royal navy," and to-day consists of a large number of ships that swim on the water and can be seen, and a few that swim under the water and can not be seen.

The introduction of vessels that swim under the water has, in my opinion, entirely done away with the utility of the ships that swim on top of the water. The functions of a vessel of war were:

DEFENSIVELY.

1. To attack ships that came to bombard our ports.
2. To attack ships that came to blockade us.
3. To attack ships convoying a landing party.
4. To attack the enemy's fleet.
5. To attack ships interfering with our commerce.

OFFENSIVELY.

1. To bombard an enemy's ports.
2. To blockade the enemy.
3. To convoy a landing party.
4. To attack the enemy's fleet.
5. To attack the enemy's commerce.

The submarine renders 1, 2, and 3 impossible, as no man-of-war will dare to come even within sight of the coast that is adequately protected by submarines; therefore the functions of a battleship as regards 1, 2, and 3, both defensively and offensively, have disappeared. The fourth function of the battleship is to attack the enemy's fleet; but there will be no fleet to attack, as it will not be safe for a fleet to put to sea. This has been demonstrated in all recent maneuvers, both at home and abroad, where submarines have been employed, and the demonstration should have made us realize that now that submarines have come in, battleships are of no use, either for defensive or offensive purposes. And, secondly, building any more in 1914 will be a misuse of the money subscribed by the citizens for the financing of the empire.

As regards the protection of our commerce on the high seas, we must examine who can interfere with it.

Turkey, Greece, Austria, and Italy must pass through the narrow Straits of Gibraltar to get at our commerce. Cypress, Malta, and Gibraltar, well equipped with aeroplanes to observe the enemy's movements and submarines to attack him, would make egress from the Mediterranean very difficult. Spain and Portugal have ports open to the Atlantic and could interfere with our commerce, but war with those countries seems very improbable, and they are not very far from Gibraltar. France, from Brest, could harass our commerce; but if the homeward-bound ships gave that port a wide berth and signaled by wireless if they were attacked, fast cruisers and submarines from Plymouth could be very soon on the spot. Rome and Germany are very badly placed for interfering with our commerce. To get to the Atlantic they must either run the gantlet of the channel or pass to the north of Scotland, and even if they get out they have nowhere to coal. America could attack our commerce, but they would have a long way to come. If by submarines we close egress from the North Sea and the Mediterranean, it is difficult to see how our commerce can be much interfered with.

It has been suggested to me that submarines and aeroplanes could not stop egress from the Mediterranean; that a fleet could steam there at night. With aeroplanes that would report the approach of the fleet and 30 or 40 invisible submarines in the narrow Straits of Gibraltar, trying to pass through them at night would be a very risky operation.

Submarines and aeroplanes have entirely revlutionized naval warfare. No fleet can hide itself from the aeroplane eye and the submarine can deal a deadly attack even in broad daylight. Under these circumstances

I can see no use for battleships and very little chance of large employment for fast cruisers. The Navy will be entirely changed. Naval officers will no longer live on the sea, but either above or under it, and the strain on their nerves and system will be so great that a very lengthy period of service will be not advisable; it will be a Navy of youth, for we shall require nothing but boldness and daring. In war time the scouting aeroplanes will always be high above on the lookout and the submarines in constant readiness, as are fire engines at a fire station. If an enemy is sighted, the gong sounds and the leash of the flotilla of submarines will be slipped. Whether it be night or day, fine or rough, they must go out in search of their quarry; if they find her she is doomed and they give no quarter; they can not board her and take her as a prize, as in the olden days. They now wait until she sinks and then run home without even knowing the number of human beings they have sent to the bottom of the ocean. Will any battleship expose herself to such a dead certainty of destruction? I say no.

Not only is the open sea unsafe. The battleship is not immune from attack even in a close harbor, for the so-called protecting boom at the entrance can be easily blown up. With a flotilla of submarines, manned by pushing young officers, of which we have plenty, I would undertake to go through any boom, into any harbor, and sink or materially damage all the ships in that harbor.

If a battleship is not safe, either on the high seas or in harbor, what is the use of the battleship? It has been argued to me that if a foreign power destroys our submarines we are at the mercy of the dreadnaughts. There can be no doubt about the accuracy of this statement, but submarines are difficult to destroy, because it is difficult to attack what you can not see. The power that sends out ships to look for and destroy submarines will be courting disaster. The submarine when in the water must be kept away from, not looked for. Submarines will be hauled up on land, with arrangements for instantly launching them when required; they can only be attacked by airships dropping bombs on them. What we require is an enormous fleet of submarines, airships, and seaplanes, and a few fast cruisers, provided we can find a place to keep them in safety during war time.

It has been argued to me that our enemy will seize some island in the Atlantic, get some fast cruisers there with plenty of coal, and from this island prey upon our commerce. This is ridiculous. The moment we hear of it we send a flotilla of submarines towed by an Atlantic liner, she drops them when just in sight of the island, and she brings them back to England when they have sunk everything they found at the island.

If we go to war with a country that is within striking distance of submarines, I am of the opinion that that country will at once lock up their dreadnaughts in some safe harbor; we shall do the same; their aeroplanes and airships will fly over our country; they will know exactly where our ships are and their submarines will come over and destroy anything and everything that they can get at. We shall, of course, do the same; but an island with many harbors and large shipping is at a great disadvantage if the enemy has submarines.

I do not think that the importance of submarines has been fully recognized, neither do I think that it has been realized how completely their advent has revolutionized naval warfare. In my opinion, as the motor vehicles has driven the horse from the road so has the submarine driven the battleship from the sea.

PERCY SCOTT.

—

[From the Times, Friday, July 10, 1914.]

THE SUBMARINE MENACE—SIR PERCY SCOTT'S REPLY—FOOD AND OIL SUPPLIES THREATENED—UNDERWATER WARFARE.

The question has often been raised whether existing naval types will change and whether the great ships of dreadnaught architecture will some day follow the mammoth and the mastodon into a convenient and highly desirable distinction. Those who believe that that time will come—and they are a considerable school—point with a warning finger to the ever-growing power of the submarine and to the new and expanding possibilities of the air, and they ask whether the day will not come when, guided by information out of the sky, a blow may not be struck beneath the water which will be fatal to the predominance of great battleships—at any rate in the narrow seas.

The time has not come yet for an ultimate decision and a naval war still rests with them who can place in the line of battle fleets and squadrons which in number and quality, in homogeneity, in organization, in weight of metal, and in good shooting are superior to anything they may be called upon to meet.—Mr. Churchill, November 10, 1913.

The opinions with regard to future naval warfare which Admiral Sir Percy Scott expressed in a letter which we published on June 5 have created widespread discussion. The questions he raised were not new, but his uncompromising reply gives to them fresh point and enhanced importance. Sir Percy Scott is admittedly a vigorous thinker, a man of stimulating ideas, and a naval officer with a distinguished record of activity. When, therefore, he announced his belief that the introduction of vessels that swim under the water had entirely done away with the utility of ships that swim on top of the water, it would have indeed been surprising if such a sweeping pronouncement from such a quarter had not raised a storm of controversy and dissent.

To the widespread attention which Sir Percy Scott's declaration has received everywhere our columns bear testimony; not only in this country but on the Continent and in America the subject has been and is being debated and a wide diversity of opinion revealed. Very few appear to have reached the precise position which the admiral has taken up, though many recognize to the full the possibilities of the new weapons, but deprecate hasty conclusions. By far the largest number, however, desire further enlightenment, or utilize the admiral's declaration and follow his tactics for advocating a larger expenditure on submarines and aircraft and the effort to watch for and take advantage of every fresh development of naval warfare.

In a letter we publish this morning Sir Percy Scott replies severally to those who have little faith in the torpedo as a decisive weapon and to those who find the limitations in the powers of the submarine a bar to its being the arbiter of sea supremacy and to those who question the capacity of any instrument which dare not come out in the open, but acts by stealth to achieve the dominion of the seas. The following is the text of his communication:

SUBMARINES AND SEA PLANES—THE PRIMARY WEAPONS OF SEA POWER.

To the EDITOR OF THE TIMES.

SIR: The question of whether battleships shall be large or small was publicly under discussion. Many people wrote to me for my views upon the subject. I replied that in my opinion the time had arrived when we should cease building battleships and spend the money in increasing the number of our aircraft and submarines. You, sir, were kind enough to publish in your paper of June 5 my reasons for coming to this conclusion. Many naval officers have written that they agree with me. On the other hand, many critics have expressed themselves that I am premature; that I have assumed what might be a possibility in the future to be a fact to-day; that in warfare the torpedo has been disappointing; and that the submarine is blind, slow, and easily destroyed. None of my criticics has given a satisfactory explanation of what our battleships would or could do if we should be at war with a nation well equipped with submarines.

Annexed are replies to some of the remarks that have appeared in the press.

I fully realized that my appraisals would be commented upon and criticized. I hoped that I was ignorant. I hoped that the battleship was still "lord of the ocean," and that we were right in continuing to build them instead of submarines. I hoped that this would be clearly demonstrated by many far more able men than

Your obedient servant,

PERCY SCOTT,
52 South Audley Street, Grosvenor Square W.

JULY 9, 1914.

I.—THE TORPEDO IN REAL WAR.

1. In the Russo-Japanese War the damage done by the torpedo fell far short of reasonable expectation. (Lord Sydenham.)

On the first evening after the declaration of war the Japanese, with torpedoes very inferior to those in use now, did sufficient damage to the Russian battleships to drive them into Port Arthur, and the menace of another torpedo attack prevented this fleet from again coming out of harbor at night.

II.—THE INEFFICIENCY OF SUBMARINES.

2. The submarine periscope is plainly visible at a very great distance.

My experience is that even at a short distance it is difficult to see the periscope of the submarine. The periscope is small and painted much the same color as water.

Naval officer writes: "During the last maneuvers I was in a first-class armored cruiser in the North Sea. We had an idea that submarines were about because several of our ships had been sunk somewhere about where we had been the previous day. We consequently were keeping a particularly bright outlook for them. The day was ideal for seeing them, nearly calm and quite clear. To our dismay one came to the surface less than a hundred yards from us and signaled: 'I have fired two torpedoes into you and claim you out of action.'"

3. Submarines can not find their prey at night.

A submarine lying on the surface at night would have no difficulty in seeing a battleship or any other ship. The difficulty would be for the ships to see the submarine.

4. Submarine torpedoes being fixed, straight firing with them is difficult.

The submarine modifies this difficulty by firing at such short range that there is very little chance of missing.

5. Attacks by submarines upon ships lying in a defended harbor would in all probability entail disaster to the submarine.

As submarines can enter a harbor without being seen, I don't see why attacking ships in a harbor should entail disaster only to the submarine; but if it does, the loss of a submarine is very small in comparison with the loss of a battleship.

6. If the number of ships claimed to have been struck by torpedoes from submarines in recent naval maneuvers were examined in detail by a competent and impartial critic, I imagine that they would be heavily discounted. (Lord Sydenham.)

The actual number of battleships claimed to have been sunk by submarines is, of course, confidential. Lord Sydenham imagines that the claims should be discounted. From what I know, Lord Sydenham has no good ground for contending that their claims should be discounted.

7. All maneuvering experience is too laughably uncertain to attach any importance to the results obtained.

Maneuvering experience is, I know, sometimes unreal, but I can not go so far as to admit that we should not attach any importance to the results obtained.

8. Submarines require for their existence a parent ship. (Lord Sydenham.)

Submarines, like all other ships, require to replenish their ammunition and fuel, and must have a base to work from; the base need not necessarily be a ship; it may be a harbor. The suggestion, therefore, that a submarine always requires a parent ship in attendance on her is erroneous.

9. Submarines can easily be destroyed by gunfire when on the surface.

Submarines do not wait upon the surface to become targets for guns; they dive and watch for another opportunity.

III.—THE EFFECT OF THE INTRODUCTION OF SUBMARINES AND AIRCRAFT ON NAVAL ATTACK AND DEFENSE, AND WHETHER THE INTRODUCTION OF SUBMARINES AND AIRCRAFT HAS CAUSED A REVOLUTION IN NAVAL WARFARE.

10. Submarines and aircraft are only adjuncts to naval forces. Their advent has not produced any material change in the problems of attack and defense.

Submarines have, in my opinion, entirely changed the problems of attack and defense. "R. N." admits that "the submarine will affect grand tactics profoundly," and Admiral Bacon asks us to realize that it "will undoubtedly exercise a vast influence on naval operations, both tactical and strategical."

11. The idea of attacking commerce by submarines is barbarous. (Admiral Bacon.)

All war is, of course, barbarous; but in war the purpose of the enemy is to crush his foe; to arrive at this he will attack where his foe is most vulnerable. Our most vulnerable point is our food and oil supply. The submarine has introduced quite a new method of attacking these supplies. Will feelings of humanity restrain our enemy from using it?

12. The question is rather how we shall use the instruments of war we have than what instruments of war we require.

The introduction of the submarine and aircraft has certainly compelled us to consider whether our battleships are of use or not. Does it not also compel us to consider what instruments of war we require to meet the new conditions?

IV.—THE NECESSITY OF HAVING BATTLESHIPS.

13. Sir Percy Scott does not provide for the important duties which devolve upon the battleship in war, viz, the support of the cruisers protecting our food and raw material supply, as well as of the squadrons blockading the ports of the enemy.

If battleships in war attempt to blockade the ports of an enemy who has submarines, the battleships will probably go to the bottom. Battleships must keep away from the ports of the enemy if he has submarines.

14. We must have battleships and large cruisers to send out to capture our enemy's colonies.

If the enemy has submarines at their colonies, it will be futile to send out battleships and large cruisers.

15. There must be battleships and cruisers to protect our commerce on the high seas.

Why protect it on the high seas if we can not protect it at the entrance of our harbors; and why should our enemy go out into space to find our food ships? Why not wait at the mouth of the Thames, or any other port, where he will find them coming in like railroad trains?

16. During the first part of a war the fight will all be between the mosquito craft, such as torpedo boats and submarines; when these have been exterminated the battleships will come out.

To exterminate the submarines is a difficult task. An easier task would be for the enemy's submarines to exterminate us by stopping our food supply.

17. We must still look to the gun for a decision between organized sea forces of rival nations, as it surpasses the torpedo almost infinitely.

I like the gun and I have done all that I can for it; but if the submarine destroys the ship, which is the floating gun carriage, then the gun is, within certain limitations, gone.

18. The ports of a country, adequately protected by submarines, would certainly be immune from bombardment; but our battle ships are not built only for bombarding ports.

If it be allowed—and I think it should be—that submarines preclude ports from being bombarded, then one of the functions of a battleship is gone.

19. Our shipping can be made quite safe against attack of submarines by mining the entrance to our harbors.

To lay mines at the entrance of all our harbors will take a long time; the enemy's submarines will operate at once.

20. The safety of battleships in harbor is not the all-important consideration.

If there is no ultimate use for the battleship, it is not the all-important consideration.

21. It is the seaman's business to find the enemy and destroy him.

It was the seaman's business to find the enemy; now it is the airman's business. It is still the seaman's business to destroy the enemy if he can. The seaman's difficulty will be to destroy the submarine.

22. The submarine has introduced a factor of proven invisibility. Searchlights are useless, the gun is helpless, and the submarine can wait outside the boom if it can not get over it. Dreadnaughts will not be driven from the ocean, but they will be driven out to the ocean. (Lieut. A. C. Dewar, retired.)

These remarks imply that when war is declared our dreadnaughts, for fear of submarines, will be driven out to ocean. If so, they must come back sometime or another to coal. Then what a harvest for the submarines! I think our dreadnaughts had better be shut up in a harbor, if we have a safe one.

V—THE QUESTION OF COST.

23. According to the theory of Sir Percy Scott, the inexpensive submarine will replace the expensive battleship. This will be a great saving of money. We shall not require fortresses, as submarines will guard the coast from invasion. This will be a further saving in money.

On the contrary, the additional expense will be enormous, as we shall require such a great number of submarines. The "little navyites" must not think that it is going to cheapen our defense. It is going to make it more expensive and more efficient. It will save money in fortresses, because a fort will only keep a battleship 4 miles off. The submarine will keep her 40 or more miles off.

24. Sir Percy Scott suggests scrapping our dreadnaughts.

I have never suggested scrapping our dreadnaughts, but I should have great pleasure in reading that Canada was going to give us £8,000,000 worth of submarines and aircraft instead of three dreadnaughts.

Sir PERCY SCOTT.

—

[From the Times, July 14, 1914.]

THE FUTURE OF NAVIES—LORD SYDENHAM'S REPLY TO SIR PERCY SCOTT—A DANGEROUS DOCTRINE.

To the EDITOR OF THE TIMES.

SIR: The interesting correspondence which has been evoked by Admiral Sir Percy Scott's manifesto illustrates the difficulty of discussing questions of such wide scope and intricacy in the columns of a newspaper. Considerations of space cause each contributor to deal only with a few aspects of the matter, drive him to express his views in dogmatic fashion, and exclude the close reasoning which is essential to sound conclusions. Thus none of your contributors has attempted to show how an attack by a slow craft on a fast-moving vessel in motion has to be carried out in such a way as—chance apart—to give high probability of success. Nauticus points out that the submarine must approach from ahead of the target and must fire its torpedo at close range, which is certain. Admiral Bacon, writing with great experience, shows the special and inherent difficulty of navigating the submarine, and he significantly adds that "operations on paper are so simple without sea conditions to contend with." The tactical problem to which I refer would require more than a page of the Times for its elucidation, even if an attack on a ship holding a zigzag course were excluded, and it goes to the root of the whole matter.

Speaking broadly, it may be said that the balance of opinion expressed in your columns turns heavily against the theory of Sir Percy Scott, and that the naval contributors are practically unanimous in this sense. Mr. Arnold White, on the strength of a story of maneuvers disposed of effectively by "R. N.," begs the whole question by asking: "What is the use of a ship that can not remain in harbor and can not come out of harbor?" But Mr. John Layland, who has studied history, recalls Admiral Aube's dangerous mistake, and wisely decides that "we must hasten slowly." I think it may be said with confidence that the young naval officers who are accustomed to handle our submarines do not follow Sir Percy Scott, although they naturally and rightly believe in the efficacy of their weapons within due limitations.

It is impossible within the limits of a letter to deal with all of the statements in Sir Percy Scott's second manifesto, many of which require lengthy treatment in order to bring their accuracy to the test of the knowledge and experience which we have at our disposal at the present time. The whole of section 4, headed "The necessity for having battleships," is based upon the initial assumption that "the submarine has driven the battleship from the sea." Accepting the theory, we must agree with Sir Percy Scott's estimate of what must necessarily follow. This theory, however, remains in the region of pure conjecture, unsupported by war experience or by reasonable probability.

Sir Percy Scott takes me to task for saying that in the Russo-Japanese War the performance of the torpedo "fell far short of reasonable expectations," and he refers to the damage effected on the "first evening." He omits to recall the fact that the Russian fleet on this occasion culpably neglected the precautions available and suffered in consequence. The unprepared opponent may give the torpedo craft its opportunity, but the plain moral is not the efficacy of the torpedo but the danger of unpreparedness. In the interesting discussion at the Institute of Naval Architects, Admiral Sir R. Constance stated that of 5½ per cent of torpedo hits obtained in this war 3½ per cent were upon ships at anchor or not in motion. A further deduction must be made for hits obtained in the absence of due precautions or upon ships previously rendered hors de combat by gunfire; but net results show the war efficacy of the torpedo to be distinctly disappointing.

Again, Sir Percy Scott will not admit that the submarine's success in naval maneuvers must be "heavily discounted," as I claimed. From his point of view he is right, because if these successes can not be trusted the only foundation of his theory must disappear. In maneuvers the most anxious care is exercised to avoid injuring the submarine. In war the utmost eagerness to destroy the submarine will be manifested. It requires little imagination to understand the inevitable effect of this vital difference of conditions upon the action of the submarine. A touch from a ship's stem will send her to the bottom. The entry of a single small shell, and the destroyer can fire 100 such in a minute, and may be enabled to add immensely to this total, would render the submarine helpless. The submarine, if she is to attempt any offensive action, must frequently rise to the surface, may then be drenched with small projectiles and lose her periscope, and in addition be liable to aeroplane attack. No naval maneuvers can give the faintest idea of the terrible strain which will be thrown on the personnel of the submarine in war, and this strain alone must tell heavily upon her theoretical efficiency.

Sir Percy Scott does not refer to the amazing strategy which formed a part of his original thesis, but he reasserts his belief in the employment of submarines to attack commerce, which Admiral Bacon stigmatizes as "barbarous." The capture of vessels at sea is an old right of war. The right to kill unresisting noncombatants, engaged in peaceful avocations, has never been recognized. The submarine can not capture and must destroy. We do not believe that the sentiment of the world in the twentieth century would tolerate for a moment proceedings which have hitherto been associated only with piracy in its blackest form. Considerations of humanity apart, there are strong reasons for believing that this relapse into savagery would not serve the purpose of the navy which so far degraded itself, and I doubt whether Sir Percy Scott has thought out this part of his program. I do not gather that he claims that the submarine can destroy the submarine, and it must follow, on his theory, that our food supply is already defenseless against the attack of any power which possesses a fleet of submersible craft.

The general conclusions which I am prepared to defend at length, but which I am compelled to state in a dogmatic form that I greatly regret, are the following: There is at present no valid reason to suppose that the surface ship, especially the battleship, is doomed to disappear, and it would be most dangerous to act upon the theories of Sir Percy Scott. Only a very foolish person would attempt to set limits to future developments, whether of aircraft or of submarines. While continuing to maintain our naval strength in its present form we must go steadily on improving the new weapons. The war performances of surface-torpedo craft have fallen far short of the confident expectations which were once prevalent. It would not be possible now to create a scare based upon the potentiality of the surface vessels, and only the introduction of submersible boats has led to the present controversy. We are prevented from carrying out practical experiments with these boats because of the grave risk to life which they would involve. This is unfortunate because some of the claims set up for them—that of breaking into a protected harbor, for example—might otherwise be brought to an effective test. Our true policy is perfectly plain. As we did when the advent of the torpedo boat was regarded as a serious menace, so now, when the submarine is extolled, we must endeavor by all possible means to increase our powers of attacking the newcomer. "Wars," as Lord Charles Beresford truly says, "were always won by attack and never by defense." It is the essential weakness of the submarine in its present form that it seeks to operate by evasion, and such methods, whether on sea or land, have never obtained more than local and partial success. The introduction of the submarine entails a new risk upon fleets at sea. The measure of that risk we have at present no means of determining with accuracy; but judging from all past experience it will prove much less than the protagonists of the submarine now imagine. As matters stand, I firmly believe that any naval administration which acted upon the discredited doctrine now revived would court disaster, and that any naval commander in chief who locked up his battle fleet in port could securely count upon defeat. On one point I agree with Sir Percy Scott. "The additional expense" involved in translating his theory into practice "will be enormous." Had this been made clear at starting, support to his views might not have been forthcoming in some quarters.

I am, sir, yours, obediently,

SYDENHAM.

JULY 11.

—

A REMARKABLE BEFORE THE WAR PREDICTION.

[From the London Times, edition of July 10, 1914.]

SIR PERCY SCOTT'S REPLY TO LORD SYDENHAM.

To the EDITOR OF THE TIMES:

In a letter which you published from me of July 10 I replied to most of the criticisms of my views which had already appeared. Yesterday Lord Sydenham raised a further question in your columns which seems to call for an answer. With the greater part of this letter it is unnecessary for me to deal. Lord Sydenham is not a seaman, but a soldier, and he can not be expected to appreciate the technical points in my argument. With reference, however, to the question of an attack on our commerce by submarines, he says:

"The capture of vessels at sea is an old right of war. The right to kill unresisting noncombatants engaged in peaceful avocations has never been recognized. The submarine can not capture, but must destroy. I do not believe that the sentiment of the twentieth century would tolerate for a moment proceedings which have hitherto been associated only with piracy in its blackest form. Considerations of humanity apart, there are strong reasons for believing that this relapse into

savagery would not serve the purpose of the navy which so far degraded itself, and I doubt whether Sir Percy Scott has thought out this part of his program."

This I consider a most dangerous and misleading doctrine, because it is calculated to make the British public believe that their food supply would be safe in time of war. In order to make this fallacy manifest I will quote the following extract from a letter written by a foreign naval officer:

"If we went to war with an insular country dependent for its food supplies from overseas, it would be our business to stop that supply. On the declaration of war we should notify the enemy that she should warn those of her merchant ships coming home not to approach the island, as we were establishing a blockade of mines and submarines. Similarly, we should notify all neutrals that such a blockade had been established and that if any of their vessels approached the island they would be liable to destruction, either by mines or submarines, and therefore would do so at their own risk."

Such a proclamation would, in my opinion, be perfectly in order; and once it had been made, if any British or neutral ships disregarded it and attempted to run the blockade, they could not be held to be engaged in the peaceful avocations referred to by Lord Sydenham, and if they were sunk in the attempt it could not be described as a relapse into savagery or piracy in its worst form. If Lord Sydenham will look up the accounts of what usually happened to the blockade runners into Charleston during the Civil War in America, I think he will find that the blockading cruisers seldom had any scruples about firing into the vessels they were chasing, or driving them ashore, and even peppering them when stranded with grape and shell. The mine and the submarine's torpedo will be a surer deterrent. Trade is timid. It will not need more than one or two ships sent to the bottom to hold up the food supply of the country.

I am, sir, your obedient servant, PERCY SCOTT.

52 SOUTH AUDLEY STREET, GROSVENOR SQUARE W., *July 15, 1914.*

STILL THE QUERY: WHY OUR SUBMARINE?

Any American student of war or international law will find these "before-the-war" letters in the London Times intensely interesting in association with our present submarine discussions. Evidently, Sir Percy Scott, whom the London Times highly eulogized in its edition of June 5, 1914, foresaw the development of the submarine as a menace to Great Britain. He read the military and naval trend with more accuracy than his critics, and the London Times gave publicity to his views. In the light of these letters, might we not again ask why we are building submarines in the United States? And might we not go one step further and ask why we are not building more aircraft? It is evident from this before-the-war discussion in England that England was taking too much for granted in the matter of both submarines and aircraft. The lesson to the United States is obvious.

Under a False Flag—Advocates of the Proposed Flat Rate of Taxation on Margarine Ignore the Real Points at Issue.

EXTENSION OF REMARKS

OF

HON. GUY T. HELVERING,

OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, February 27, 1917.

Mr. HELVERING. Mr. Speaker, in common with other Members of this body I have given considerable attention to the amendment proposed in the other legislative branch of this Government, an amendment which proposes to change the present law with regard to the tax on margarine or oleomargarine from a rate of one-fourth cent per pound on the uncolored and 10 cents per pound on the colored to a flat rate of 2 cents per pound on all oleomargarine.

For the past 10 days I have been in receipt of a great deal of literature and of correspondence with regard to this proposal and it has led me to make a careful study of the facts. I am in sympathy with every movement designed to reduce the cost of living, for I recognize that this burden falls the heaviest on those least able to bear it. Likewise I am concerned with every legitimate proposition to provide revenue in order to meet the unusual expenditures which have been made necessary as the result of unusual world conditions. Therefore, from my standpoint, the proposition to change the rate of taxation on oleomargarine should be judged from these two angles: Is it a legitimate source of revenue? Will it reduce the cost of living to those who can least afford the present burden of providing a living?

I would be willing to have the decision as to the adoption of this tax measure rest on the evidence available as to either of these propositions. In my opinion taxes should be levied on articles of consumption only when absolutely necessary. Taking the maximum amount of revenue which it is expected we will derive under the proposed amendment—some $5,000,000—and the gain over the amount derived from the present tax does not commend it from a revenue-producing standpoint. Therefore the question simmers down to this one proposition: Will the proposed tax reduce the cost of oleomargarine to the consumer? If it does not, then the proposition to make a change is indefensible.

During the past year there were manufactured in this country 149,164,260 pounds of oleomargarine which were taxed. Of this amount, just 3,403,287 pounds paid the 10 cents a pound tax as colored oleomargarine, and the balance, 145,760,973 pounds paid a tax of only one-fourth cent per pound. Under the proposed change in the rate the tax on the vast amount of uncolored oleomargarine sold would amount to $2,550,817.03. As this would be on the grade of oleomargarine which is referred to often as "the poor man's butter," how is it to be expected that this increased taxation will result in a reduction in price? I have a sincere regard for the gentleman who is the author of the proposed amendment and admire his intellect, but if he has discovered a method by which the consumer can be taxed into prosperity then he is in position to overturn all of our ideas as to political economy and will have to turn his back upon the very things he has been standing for in the years which have passed.

Any question as to the food value of oleomargarine should not enter into this discussion, but I notice that the men who favor the proposed amendment are basing their arguments almost wholly upon that very proposition. We will admit that oleomargarine is a wholesome article of food, but it is so, and if we are assured that it is to continue to be so then we need the most rigid Government inspection in the factories, for the chances of fraud are too great and human life must be conserved. In that case, I am firmly of the opinion that the claim of the friends of oleomargarine, to the effect that it is "the poor man's butter," should be carefully analyzed, and if we agree to that contention then in the interest of the great mass of the people we should remove the tax in its entirety and put no barrier between producer and consumer, other than the cost of the inspection which is essential in the interest of the same consumers.

From the foregoing it can be plainly seen that instead of endeavoring to prevent the manufacture and sale of oleomargarine, I would encourage it to the end that those who can least afford to pay the price of dairy butter can get a substitute guaranteed as to quality and at a price which is within reason. But I will not favor any proposition which will legalize the offering of this oleomargarine, not as a substitute for butter, but as the article which it is supposed to come in competition with. Selling oleomargarine as oleomargarine is legitimate, but to sell oleomargarine as butter is indefensible, and this Congress should not do anything which would aid in bringing such a thing to pass.

To limit the sizes of the package in which oleomargarine is to be sold is good, and we should do that no matter whether we adopt the proposed amendment, retain the present rate of taxation, or prohibit the manufacture of artificially colored oleomargarine and remove all tax, which is the method that I would suggest.

To make it imperative that all packages should be plainly stamped so as to indicate the nature of their contents is good and, in my opinion, should be adopted.

But if the advocates of the proposed change are sincere in their desire to protect the consumer, as they say they are, then they will join with me in urging the adoption of a few changes in the law which will absolutely protect consumers as far as it is the ability of legislators to do.

First, let us adopt the French law which prohibits artificial coloration of oleomargarine. Furthermore it provides that no store which handles butter can sell oleomargarine and that the product must be handled in special stores. As with Government inspection in the factory we could easily trace the sales and thus restrict it to these special stores we would remove largely the present objection that creameries are able to buy oleomargarine, "doctor" it up, and sell it as creamery butter.

Second, let us provide that every hotel, restaurant, and lunch room which handles oleomargarine should so state in every bill of fare, and that a sign printed with letters of a specified size should be in a conspicuous place so that all who visit these places can understand what they are to expect. Surely this would be a protection to the millions who of necessity are forced to live in hotels, lunch rooms, and boarding houses. If they want butter, they will go where it is served and pay for it; if they prefer oleomargarine, then they will know where to be accommodated. Surely the advocates of the proposed amendment who are so solicitious with regard to the "poor man's butter," can not object to these safeguards. If they are advocates of an honest food product—and I believe that it is—then let it be sold and used for just what it is.

I have no patience with those who demand a flat tax rate, for the reason that under the present scale of taxation the Government is being defrauded. If it is defrauded, it is because men are striving to sell oleomargarine as butter and for gain, and to make it easier for them to do this is merely to save to Government officials the worry of law enforcement while it is made all the easier for the consumer to be deceived. Legislation of that nature does not appeal to me. It would be just as legitimate to demand that we take off all internal revenue on whisky or reduce it to a negligible amount, so as to put an end to moonshining, as it would be to propose to permit coloration of oleomargarine, for the reason that the law which taxed such coloration is now violated.

And the argument which is so often made that if we prohibit the coloration of oleomargarine we should do the same thing with regard to butter does not appeal. Butter is never colored so as to sell as oleomargarine, but oleomargarine is colored for the one and only reason that it can be sold as butter, and thus command a higher price than if it were put on the market for what it really is.

Now, with reference to the effect on the price, if we enact the amendment to the revenue act which is proposed: At the outset we know that the tax on the uncolored oleomargarine, which constituted 97¾ per cent of all that was sold in this country last year, will be increased 700 per cent. Surely no one will pretend that such an action will reduce the selling price. But the more you throw down the barriers between butter and oleomargarine the more you will aid in bringing the price of the two to a more equal level. Undoubtedly, in my opinion, the price of 40-cent butter would be reduced to a point which would probably destroy the dairy business, but at the same time the price of the imitation butter would inevitably rise. Uncolored oleomargarine now sells at about 20 cents per pound and the colored article at about 30 cents. Put it on an equal footing with a flat rate of taxation and you inevitably increase the price. What, then, becomes of the contention that the poor man will be the gainer?

I firmly believe that the adoption of the flat rate will drive butter out of the market, except to the extent that the rich are willing to pay for what they know is real butter, and in that event we will be at the mercy of oleomargarine manufacturers whose price will be regulated by only their greed and by the necessity of the consumer.

It was a matter of amusement to me to read one argument made by a distinguished gentleman who favors the reduction in the tax on colored oleomargarine. He is in the habit of camping out on his vacation trips and finds that butter will not keep, when he occupies a dirty camp. Therefore he wants oleomargarine on such trips. For the life of me I can not see why the uncolored oleomargarine would not suit his purpose just as well, but the point I do want to emphasize is this: Butter absorbs the poison in the dirty camp and gives fair warning of it to the taste and smell. If the camper uses it under such conditions he knows the risk he is taking. But oleomargarine absorbs just the same poison and gives no warning. Is it not an insult to our intelligence to bring such an argument as a means of convincing us of the necessity of making it easier to color oleomargarine?

The proponent of the change in the present tax is frank in stating that one of the objects aimed at by him is to reduce the cost of colored oleomargarine. Taking him at his own word if reducing the tax on 2¼ per cent of the amount now sold will correspondingly reduce the price to the consumer, does it not inevitably follow that by increasing the tax on the 97¾ per cent to the extent of 700 per cent the price will be increased to the consumer? Can you escape the logic of that?

And while I do not desire to enter into any controversy as to the merits of oleomargarine as a food product, in fact would be willing to admit that it is all that its friends claim for it, for the sake of argument, I do protest against the statements made which would tend to discredit butter and its manufacturers. I will join with any person who seeks to throw every safeguard around the manufacture and sale of butter, will advocate the most rigid inspection, and am ready to vote for any measure designed to protect the consumer of this or any other food product. But I do object to the means taken to discredit the great majority of the manufacturers of butter, for the reason that I do not believe their statements are grounded on fact.

To quote a report of the Department of Agriculture made in 1912 as the result of an inspection of 1,554 lots of cream and to deduce from that that 61 per cent of the cream used in butter making is now impure is not warranted. It is a far cry in the way of pure-food products from 1912 to 1917 and the conditions are entirely different. We have acquired knowledge with the passing of the years and the various States have passed laws supplementary to our national legislation in order to safeguard human health. But I prefer to let one who has knowledge of the facts to a greater extent than I have deal with this and I submit to your attention a letter written to Senator PAGE, of Vermont, by Mr. Carl Vrooman, Assistant Secretary of Agriculture, on July 27, 1916. Mr. Vrooman wrote as follows:

DEPARTMENT OF AGRICULTURE,
OFFICE OF THE ASSISTANT SECRETARY,
Washington, July 27, 1916.

MY DEAR SIR: Your letter of June 14, with reference to House resolution 137, popularly known as the Linthicum resolution, is at hand. I agree with you that it is decidedly unfortunate that the report referred to in this resolution is being made use of without more adequate explanations.

To begin with, this report was based upon an investigation made by the Bureau of Animal Industry over four years ago, the investigation having been begun on April 10 and having ended June 30, 1912, before either Secretary Houston or I became connected with the Department of Agriculture. Furthermore, the report itself was based on an investigation of but 144 creameries and cream-buying stations out of a total of 6,000 creameries and some 40,000 cream-buying stations.

The Federal Department of Agriculture is completely out of sympathy with current misunderstandings and misinterpretations of the 1912 report. That report does not mean to say or to infer that the dairy industry is on a lower level or has lower standards of purity and cleanliness than the other industries of the country. If the department were to make out a score card for the different foods and drinks that are being produced and consumed throughout this country to-day, and especially for the vegetables, fruits, and other foods exposed for sale at the average market and grocery store, it would find that in a majority of cases similar conditions exist to those disclosed in the dairy industry. In other words, it would be shown: First, that ideal conditions do not exist; second, that existing conditions can be greatly improved; and, third, that the improvements recommended are commercially feasible. These are the three points that the Department of Agriculture attempted to bring out in its 1912 creamery report, and any attempt to read other meanings into that report, any attempt to discredit the dairy industry, is an attempt that the Federal Department of Agriculture does not sympathize with and will have no part in.

Moreover, a lot of work has been done by the Federal Department of Agriculture and the State and municipal boards of health and by the various dairy organizations during the past four years to improve dairy conditions. Plans are now being worked out which we are satisfied will steadily improve dairy conditions by raising the standard of cleanliness and purity in dairy products from one end of the country to the other. If worked out intelligently there is no reason why these improvements can not be rapidly introduced without cutting down the legitimate profits of dairymen and creamery men. It is true that some additional capital will be called for, but it is also true that the plans of the department involve a provision for a proper return to the dairy interests on all additional capital required.

It seems to me a self-evident fact that better results can be attained through the active cooperation of dairymen and creamery men, Federal department officials, and State and municipal authorities, in a winning campaign in favor of recognized essentials of cleanliness and purity than can be secured by frittering away our energies working at cross-purposes and bickering over nonessentials and unnecessary misunderstandings of each other's motives and purposes.

Very sincerely, yours,

CARL VROOMAN,
Assistant Secretary.

Mr. Vrooman's letter is sufficient answer to those who would strive to arouse prejudice as the result of investigations made in the past. We are profiting in this country by evolution, and the faults of yesterday are not indicative of the faults of to-day. The dairy industry of this country is legitimate in every sense, and it is an industry which we should encourage if we are to secure diversity and get away from the idea of our farmers depending upon one crop or upon one branch of agriculture. In encouraging it we aid in securing fertilizers for the soil, and we can do this without in any way assailing oleomargarine. There is a great field for the use of that commodity, and we have no desire to curtail it, but we do insist that it make the fight as oleomargarine and not as butter.

In conclusion I would say that I can not support any measure designed, as the proposed tax is, to encourage fraud and to increase the cost of living to those who can least afford it. As a revenue measure it is not defensible, for the reason that it makes an increase in cost on a staple article of food. As a measure designed to protect the Government it can not be defended, for it throws the door open for fraud. As a measure designed to increase the cost of oleomargarine, it can be defended, for that would inevitably be its result; and can we here afford to do this at a time when the cost of living is a source of anxiety to all of us, and at a time when necessity is driving many to riot in protest against the fate which is theirs?

Not one legitimate argument has been advanced as to the necessity of the proposed change in the tax on oleomargarine. Its advocates are sailing under a false flag, and their arguments disprove their own contentions. I will join with any man or combination of men who are legitimately striving to reduce the cost of living and throw proper safeguards around the health of the consuming public, but I will not join with men who strive to legislate to the end that substitution in food products can be made easier and at the same time the consumer is exploited to the greed of a combination of manufacturers or of dealers.

Naval Appropriation Bill.

EXTENSION OF REMARKS
OF
HON. OSCAR CALLAWAY,
OF TEXAS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, February 27, 1917.

Mr. CALLAWAY. Mr. Speaker, if we could rid these war and preparedness questions of promotions, profits, and politics, it would not be difficult to reach a sane and sound conclusion as to what we ought to have nor as to what the danger of invasion is. I know better than to argue with the man who has a personal interest or the man who takes orders.

I do not expect to give peace of mind to either, nor convince those who have a different idea of the relation of the masses to the Government, nor to convince those who want a military establishment to change the traditional policies and purposes of this Republic. Many do not agree with my confidence in the willingness and readiness of the masses to defend their country in time of danger. They look at the military establishment as our sole defense should the unforeseen happen. I look to the American citizen in such case who has always been our defense and will necessarily always constitute our Army in times of war. They think a Regular soldier, paid to fight, can alone be depended on. We are not going to maintain a sufficient number in times of peace to constitute the needed force in times of war; besides, I had rather depend upon a citizen defending his country and his home in time of supreme test than paid soldiers fighting for pay or fear.

If the Government were an entity which called the citizens when it felt the need, instead of the machinery of the citizens through which they call themselves when they think there is need, the entity might call them many times to defend its imaginary ills and have no response. When the masses no longer regard this Government as their institution, serving their interests, and refuse to defend it, the Government will not be worth defending. When it has to maintain a military force subject to its call, which can be ordered to do its bidding irrespective of what the masses think of the cause, it will have ceased to be a truly representative Republic.

We want sufficient military establishments to protect us against every danger of invasion to be reasonably expected. We do not consider all the dangers possible to conceive of. Many dangers might be imagined. What are the probable dangers? That is the question. That is tangible. We can discuss the dangers reasonably to be apprehended. I have too much confidence in the sober judgment and sound common sense of the people to believe they are willing to spend real money to maintain a military establishment to protect us against imaginary dangers.

YOU CAN NOT BY FALSE GUISE MAKE A CAT'S-PAW OF PEOPLE.

I deny the right of profit seekers to disguise their real purpose and march under the banner of patriotism. If each of their leaders will disclose his exact connection with the concerns expecting profit, a great light will fall on their patriotism. If they will state definitely what they want as preparedness, what they want it for, and how they want and ultimately expect to obtain it, they will be entitled to more confidence.

We do not want a military establishment for conquest nor aggrandizement. We do not want to grind the faces of the masses to build up an army and navy to protect one class against another. We should not build up an army and navy at the expense of the whole people for the benefit of a preferred few.

Some contend that we should extend our trade by force. Bismarck said:

> Commerce obtained and maintained by force always costs the Government more than it is worth.

He said:

> A nation which can not obtain and maintain commerce with the price mark and diplomacy should strengthen its diplomacy and work on its price mark instead of attempting to force it with a military establishment.

He said that—

> Commerce obtained by the price mark and diplomacy was the only commerce worth while.

THE NEED MUST BE REAL.

I can not agree with those who desire a military establishment to "protect and further some imaginary destiny of this Republic not to be seen with the physical eye; some intangible and visionary thing written in the lines of poets." When we vote money for an army and navy, when we vote to put citizens on the battle line, when we call on women to surrender their husbands, sons, and brothers, it should not be for some intangible, visionary destiny that you can not see; it should be real, practical, substantial danger. When we vote to send the tax-gatherer to every home to support a military establishment on land and sea, it should not be to carry out some visionary destiny of America which lies written in the lines of poets; it should be for some real purpose that is tangible.

Mr. Speaker, with the people who want a military force to protect us from invasion, to protect our country, to protect our homes from every real danger to be reasonably apprehended, to protect our institutions, I join hands, and so do the earnest, honest citizens of the land from sea to sea. We are willing and ready to protect our homes and to protect our Government, but we are not willing to support a military establishment for conquest, nor to fight our own people, nor to force commerce, nor to further some intangible and visionary destiny of America which lies written in the lines of poets.

WE HAVE AN ADEQUATE MILITARY FORCE.

We have a military force at the present time ample to protect us against every danger which may be reasonably expected. Our ships, ship for ship, and our guns, gun for gun, at the time they were made are as good as any in the world. We excel in the weight of a broadside from our major guns every nation except England. The weight of a broadside from our major guns is, according to Admiral Badger (hearings, p. 1962), 289,430 pounds. The weight of a broadside from the German guns, same class, is 284,610 pounds. We exceed the Germans by 4,820 pounds.

"Our Navy is in good condition," said all the experts before the committee. Some thought it could be improved by this and others by that, but all were agreed that it was in good shape. All of them wanted more navy; they wanted all they could get. They do not consider the cost of it. They said the expense of it was a matter of policy for Congress and the taxpayers to consider and not for them to take cognizance of.

We have 42 battleships, 75 submarines, 74 torpedo boats, 22 gunboats, and "more auxiliary craft," says Admiral Blue, "than any other nation maintains in time of peace."

We have—

Says Gen. Weaver, Chief of Coast Artillery—

> the best coast defenses in the world. The guns now mounted and those contemplated will give us an entirely satisfactory defense.

Gen. Miles said:

> During the last 30 years the Government has spent approximately $200,000,000 for our coast defense. I am prepared to say that our coasts are as well defended as the coasts of any country and with the same class of high-power guns and heavy projectiles. They are better in some respects than the guns that are mounted at the Dardanelles, which have resisted the most powerful ships of war of the British and French Navies.

We have back of that—

Says Gen. Miles—

> 10,000,000 men capable of doing effective military service should the demand come, more than a million men, considering those of military age who were in the Spanish-American War, those who have passed through the Army and the National Guard, who have received military instruction; 136,000 graduates from our agricultural colleges, drilled and instructed under Regular Army officers.

If we have in our Navy, in our fortifications, in our Army, and in 10,000,000 men capable of doing effective military service sufficient force, as it is to-day, to protect us, why further grind the faces of the people to maintain a more expensive organization and one that is a menace to our institutions?

THE DIFFICULTIES OF WAGING WAR ACROSS SEAS.

It is next to impossible to wage war across a great expanse of water. It has never in the history of mankind been successfully done against a Nation of anything like equal size.

Admiral Knight, president of the War College and member of the Navy General Board, said:

> It would take me a very long time to go into that subject at all satisfactorily, Mr. CALLAWAY, and show you the difficulties under which a fleet 7,000 miles from its home ports would labor. Ships break down. Out of a large number of ships a certain number are bound to be crippled in one way or another. The supplies needed to maintain the fleet would be very extensive. Five or six hundred thousand tons of coal would be needed as a minimum for a very short campaign there. That coal must be delivered and transferred from colliers to ships. It can not be done at sea except under the most favorable possible conditions. It must be done in sheltered waters. The bottoms of the ships would gradually get foul. They ought to have docks where the bottoms can be cleaned. They are subject in their progress over that 7,000 miles, throughout a large part of the time, to the possibilities of attack from the enemy's torpedo craft and other craft of that kind. Their lines of communication, after they get to the point 7,000 miles away, are constantly liable to interruption and would inevitably be interrupted; and yet they depend on those long lines, stretching away back to the home ports, for the very vital things necessary to their life—for coal and

supplies and reenforcements, if reenforcements become necessary, and all sorts of things. A fleet going out there would be accompanied, necessarily, by a tremendous attendant fleet, a train, as we call it, of auxiliary ammunition ships, hospital ships, and so forth. The problem of conducting such a train as that in going thousands of miles through hostile waters is probably the most serious problem that could possibly be put up to a commander in chief.

The personnel, the officers and men, of a fleet moving under those conditions would be subject to conditions which are so trying that it is very difficult to picture them without some little experience. Constantly on the watch, constantly threatened, constantly on the alert to guard against some danger which may come out of the darkness or out of the fog at any moment upon them, after moving that distance they would be broken down, they would be tired, they would need rest. They would have no secure place to rest. Your fleet would get out there with its material in very bad condition, its personnel in perhaps worse condition, and when it got there it would have no place to go for refitting or for any purpose whatever. It would be not unlike the proposition which confronted Admiral Rojestvensky when he went out to the East and met the Japanese fleet, and you know what happened to him. He had a larger fleet than the enemy had, distinctly.

I would not like to be considered as attempting anything like a complete answer to your question, nor could I give such an answer without talking here all day.

If it is well-nigh impossible for this country to wage war against Japan because of the ocean, why fear Japan?

NO DANGER FROM GERMANY.

The German Imperial Chancellor, Von Bethmann-Holweg, and Von Jagow say the idea of Germany having any thought of war against the United States is preposterous. Germany can not even get milk from outside for her babies; we can not get analine dyes from her to color our Easter eggs. No danger from that quarter now. After the war is over, is she going to brave 4,000 miles of the deep, the perils of which have been infinitely multiplied by submarine and torpedo, in an effort to levy tribute on us? Germany, bankrupt and a cripple, with a navy, measured by the weight of a broadside from her guns, smaller than ours?

She has lost in this war in killed, wounded, and imprisoned more than 2,000,000 of her sons. There is crape on every door. There is a cripple in every home. She is bankrupt. Her mothers, sisters, daughters, and fathers are horrified by the grim ports, for the very vital things necessary to their life—for coal and specter of war. Is she going to cross 4,000 miles of ocean, with an enemy at her back, and attack the United States?

All the nations engaged in this war have incidentally injured us during its progress. We have been patient. We have sent them supplies, from bread and meat to Christmas presents. We have done what we could to alleviate their sufferings. Are they for that and in their condition at the close of the war going to arrange their differences, bury their hatreds, grudges, and suspicions and combine against us? Will the others of them forget their jealousies and allow one, if one of them could, to attack us for the purpose of recouping its bankrupt treasury? No; and no sane man thinks they are.

I will tell you the danger. It is not from any foreign power. It is that powder stocks, ordnance stocks, steel stocks, shipbuilding stocks, General Electric stocks, and International Nickel stocks will slump at the close of this war unless a new market is developed for their products. The stockholders, knowing full well the value of advertising, are working up a new customer. When the market abroad ceases they hope to have one developed here that will buy "all they can construct."

Admiral Knight said:

The dangers of transporting a fleet across a great expanse of water and maintaining it are almost insuperable. (Hearings, p. 2084.)

Admiral Fletcher said:

It has been recently forcibly demonstrated that ship attack on forts are futile. This war has conclusively demonstrated what every military strategist knew before—that it is impossible for sea craft to successfully attack land fortifications.

Gen. Miles said:

The results at Alexandria, Port Arthur, and at the Dardanelles furnish sufficient evidence that guns on board ship are no match for coast fortifications and submarine guns.

Germany would have 4,000 miles of ocean to cross, a navy, in weight of shells greater than her own, to put out of the way, the perils of the deep, which Admiral Knight says are almost insuperable, to brave, and then the forts to pass, which Admiral Fletcher and Gen. Miles say this war has demonstrated can not be done, before they could invade this country.

But that is not all. If a foreign country, bankrupt and on crutches, should leave homes that have crape on every door, horrified by the grim specter of war, brave the perils of the deep, and with an enemy at her back, sweep our fleet from the ocean, and pass our fort guns and mines, have they any chance still to imperil this country? We can live indefinitely and build almost without limit whatever we need for defense or offense without having access to the seas. When some country has braved the perils of the deep, annihilated or bottled up our Navy, and passed our land fortifications, they have still, said Gen. Miles—

to meet the physical strength of this Nation—10,000,000 men capable of doing effective military service, 1,000,000 who have received military instructions under Regular Army officers, and 136,000 graduates from our agricultural colleges to officer them.

Gen. Miles has a right to know what the American citizen is when called to arms. He had service with the Volunteers fighting by his side against volunteers during the Civil War. They were Americans meeting Americans. He went through four years of it. He is able to speak with authority on the citizen soldiers of the United States:

Mr. KAHN. You think the German conscript is a pretty good soldier, do you not?

Gen. MILES. Yes, sir. However, I would match a volunteer American, defending his liberties and his Government, against any German soldier.

Again, he says about landing troops on our shores:

I will suppose an unsupposable case. Suppose they could put an army on a fleet of 500 ships and move it across the Atlantic without being disturbed by any naval power and they could land. They certainly could not go into any port. They could not go into our ports any more than they could go through the Dardanelles. That has been demonstrated. Our forts are equipped and fortified as well as the Dardanelles. Suppose they got that far—as to land at some remote point—if we could not gather enough men in the Army and militia and by other means to destroy that army before they could send their ships back and get another load, I would want to move to some other country.

APPLY SOME COMMON SENSE.

Preparedness advocates contend that nothing but the experts should be heard. We have heard the experts. A civilian ought to be able to reason. If he has munitions to sell or stocks affected by "preparedness," I do not expect him to reason, and I hope the American people know better than to expect him to reason or to be just. He can talk, he can advertise, he can shout, he can villify, he can complain, he can march in a parade and write a book, but never delude yourself into the belief that he can reason. The matter hits him at the pocket, below the reasoning faculty. It strikes him at the place to make him active but not logical.

One of the ridiculous phases of this preparedness agitation is the attitude of the New Yorkers, Bostonians, and Philadelphians. They are really all for preparedness; and what they mean by preparedness is what the Army and Navy bluntly ask, "all they can get." The money is poured out along the Atlantic seaboard. It goes straight into the pockets of the Bostonians, New Yorkers, and Philadelphians, and other places along the Atlantic coast. Of course, they are for preparedness. It is money to their locality. They have had books written, moving-picture shows staged showing New York, Boston, and Philadelphia taken without the firing of a gun or the loss of a life; but when the question of turning loose the Philippine Islands—the most dangerous military liability the United States Government has—came up every mother's son of them voted against it. They are not only a liability from a military and naval standpoint—they cost this Government a hundred million dollars a year—but there is some trade to New York, Boston, and Philadelphia in them, and some citizens of those places have investments there. It has cost us since we have had them more than a billion dollars, yet these scared ones from Massachusetts, New York, New Jersey, and Pennsylvania fought desperately against turning this scarecrow loose. Are they scared? Their wail to me has the sound of self-interest and hypocrisy.

REASON FOR NAVAL BOARD'S REPORT.

I think the public generally ought to know what led the Navy General Board to prepare the report which changed the program they had been following since 1903. They *did not* voluntarily change the policy and present a new program. They did not do it because of an emergency. They did not do it because of any apparent danger. They did it in obedience to an order.

Admiral Badger said:

Yes; the July program was only for one year, and the order by which that program was drawn up was stated as follows [reading]: "In July last the General Board was called upon to express its opinion to the department 'as to what the Navy must be in the future in order to stand upon an equality with the most efficient and practically serviceable,' and to submit 'a program * * * formulated in the most definite terms.'"

It was on that order that the July program was drawn up, based on utilizing all the facilities for building that could be obtained.

THE FIVE-YEAR PROGRAM.

Admiral Badger says, page 1967, hearings, that recommendation was not approved, and—

The board was instructed to get up a five-year program, to cost for new construction $500,000,000, or about a hundred million dollars a year, and the October recommendation was made in view of that instruction and to comply with it.

Mr. CALLAWAY. Then the board submitted, in accordance with that request, a five-year plan?

Admiral BADGER. Yes, sir.

Mr. CALLAWAY. And submitted it in accordance with that request to submit a five-year plan that would cost so much?

Admiral BADGER. Yes, sir.

Mr. CALLAWAY. This five-year program did not have in contemplation any emergency, did it, Admiral?

Admiral BADGER. No, sir. That program was made according to order.

Now let us review this program and the reason for it. The Navy General Board was called on in July by the Secretary of the Navy "to express its opinion to the department as to what the Navy must be in the future in order to stand upon an equality with the most efficient and practically serviceable." The board, encouraged by that request, submitted a plan which would "utilize all the facilities for building until our Navy reached the first place." What was the reason for the change from a normal and regular growth in 1914 to "the most adequate in the world" in 1915? Had any new dangers suddenly loomed up? Had there been any sudden change in our national or international policies? Had there been any sudden change in the relative size of the navies of the world?

The President in his annual message, December 7, 1915, said:

I have had in mind no thought of any immediate or particular danger arising out of our relations with other nations. We are at peace with all the nations of the world. I am sorry to say that the gravest threats against our national peace and safety have been uttered within our own borders.

No witness pointed out any emergency, nor any new danger, nor any new-developed reason for changing the policy of normal, regular growth. The President said there was none. Then why the call for a change?

The Secretary himself was before the committee. He did not give a reason. He sent the first order. The July program was furnished, based on what could be built by all the shipyards and ordnance factories working to the limit. Then a specific five-year program, costing $500,000,000 was called for. It was furnished in October. What reason for the first call? What reason for the second call? No danger is pointed out. The only reason I have heard was given in the News and Observer, Secretary Daniels's paper at Raleigh, N. C., under a Washington date line of October 20, as follows:

The plan of Secretary Daniels to increase the Navy for five years, until it is able to compete with that of any other nation, with one exception, has taken the wind out of the sails of the critics who say that the Wilson administration is neglecting national defense.

The President approves Mr. Daniels's plan and will urge Congress to adopt it. President Wilson and Secretaries Daniels and Garrison have virtually destroyed the "issue" of "preparedness" thrust upon the United States by the European war and seized by certain desperate Republicans for the political capital they could make out of it. Leading Republicans must now work and vote for the Daniels program or eat their words.

Five hundred million dollars to take the wind out of the sails of the critics! I can not agree to such a scheme to take the wind out of their sails. It is too expensive.

NAVAL BOARD AND MUNITIONS MEN IN HARMONY.

Mr. Speaker, what the Navy General Board wants is all the building facilities of the country can accommodate. They bluntly state it. I am going to read from the testimony of the president of the War College and a distinguished naval officer, Admiral Knight:

Mr. BUTLER. Admiral Knight, do you think that the number of ships you have recommended here at this time would enable us to catch up with the other fleets if they would continue to build as they have done?

Admiral KNIGHT. I do not. May I enlarge?

Mr. BUTLER. You may. It will be a pleasure to have you do it.

Admiral KNIGHT. I took some care this morning to make it clear that the program which I suggested to you was the program which I believed could be laid down at once. I also urged that a committee be appointed to investigate, organize, and mobilize the shipbuilding reserve of this country, so that next year we might be ready to do a tremendously greater amount than we can do now. If Mr. Browning is right in believing that the establishments of this country can this year lay down a larger number of capital ships than I have recommended, please understand me as recommending them with all possible emphasis. In general terms, I think that this year's program should provide for every ship that can possibly be laid down this year.

Mr. BUTLER. When would you have it in your own mind that it would be advisable for us to have on hand, ready for operation, the largest fleet in the world?

Admiral KNIGHT To-morrow.

Mr. BUTLER. Would you advise calling upon all the industrial facilities of the United States to assist us in constructing a great fleet?

Admiral KNIGHT. I should. That is what I have already advised.

Mr. BUTLER. Let me ask you—I want to ease my own mind, if the committee will permit me—why should we prepare any defense if it is not one that will succeed? Anything short of actual defense means defeat, does it not?

Admiral KNIGHT. Yes. The General Board, in studying this subject, had before it two sides to the shield. First, what do we want and when do we want it? We want a Navy equal to the largest maintained by any nation in the world, and we want it now. That is one side of the shield. The other side of the shield is, When can we get it? We questioned them as to the present facilities of the shipbuilding yards of this country, including the navy yards, the facilities of the armor plants, etc. We then said in substance this: We are limited this year with regard to the amount of work that can be done, apparently. Let us provide for the doing of that amount of work this year. Let us at the same time encourage Congress and the Navy Department to get very busy to see if they are by any happy chance larger than we think they are, getting the shipbuilders together. Let us try to get everybody working together, in the hope that very soon we may be able to develop facilities which will enable us to enter upon an accelerated program.

* * * * * * *

We can go on from year to year, each year taking advantage of the best that we know at that time. Build all we can this year with what we know now. Build all we can next year with what we know next year.

Mr. KELLEY. And in view of the uncertainty of our needs, and the long time it would take to reach the point where you say we ought to be, don't you think this would be a good time to stick to the original plan we have followed for 20 years and just try to get into second place as quickly as we can?

Admiral KNIGHT. I do not think we ought to stop there. I think the situation is such that we ought to try to get everything that can possibly be built this year. I think it ought to be provided for. We will not make any mistake. It will not carry us too far.

Mr. KELLEY. Do you think the plan for building, for five years, a certain number, such as the General Board worked out, at the request of the department, is a better arrangement than the second-place plan which we have held to for so long?

Admiral KNIGHT. I think the plan which the General Board had in mind, of building every ship that it is possible to build this year and every ship that it is possible to build next year, and to keep on building as fast as possible, is the most rational plan.

I will also quote Admiral Blue, head of the personnel bureau:

Mr. HENSLEY. Do you mean to tell me that you shape your views, your views as expressed here before the committee with reference to the needs of the Navy, upon what you glean to be the sentiment of the people of the country?

Admiral BLUE. To some extent: yes, sir. It has always been an axiom that we have to cut the cloth according to what we are likely to get. That is the principle upon which the Navy has been run ever since I have known it.

That is all the steel and ordnance manufacturers and shipyards want. They do not ask for more orders than they can take care of. The munition manufacturers seem to be in perfect accord. The Raleigh News and Observer said the five-year program would "take the wind out of the sails of the critics."

IT COSTS NOTHING.

That five-year program did not "take the wind out of the sails of the critics." The critics continued to demand a market for all the war materials the munition manufacturers could turn out, all they could furnish, and the naval officers are with them and argue that it costs nothing. That is the consolation they give the public. That is the sugar coating over the pill.

The Army and Navy News, published at San Francisco, Cal., December, 1915, in the discussion of the same subject, says:

The second alleged reason is utterly without foundation. Military preparedness costs us nothing. The few hundred dollars we spend for imported drugs for the medical departments of the Army and Navy is an entirely negligible item. Everything else we get right in the United States, and the money is kept right at home. We construct our own ships and guns in our own yards and factories from materials that come from our own mines. The wool and cotton for clothing come from our own fields; the provisions come from our own farms and ranches. No money leaves the country. It stays right at home, making our shipyards and factories hum with activity and providing employment for thousands of good Americans. Instead of being hoarded, the money is kept in circulation and everybody is benefited.

But for fear somebody would say these were not up to the standard, I want to quote from an admiral who is regarded as one of the biggest in the Navy, Admiral Grant. I quote from his testimony before the Committee on Naval Affairs:

Mr. CALLAWAY. If one has to have his bigger than the other, and the other has got to have his bigger than the one, then what?

Admiral GRANT. You may not know, Mr. CALLAWAY, but I do not see that we are running ourselves to death by building a battleship. Some people consider that money thrown away. I do not, because of every cent that goes into a battleship half of it goes into the labor product and the other half for material goes originally for the labor and material to produce that material. It is not money wasted, in my opinion. You will find it universally stated—that is, a great many men state it—that this $18,000,000 for this battleship is money wasted and thrown away. I do not consider it so. That is my opinion only.

Mr. CALLAWAY. Your opinion is that the money is still among us?

Admiral GRANT. Yes, sir.

Mr. CALLAWAY. And that the $18,000,000 put into labor and put into material is still with us, and that money is laid out here and there has been no waste at all?

Admiral GRANT. That is my opinion. That is the way I look at it.

Mr. HENSLEY. On the same theory, why should we not tear down these magnificent buildings and reconstruct them again?

Admiral GRANT. I do not think that is on the same line at all.

Mr. BRITTEN. We are using the buildings.

Admiral GRANT. I have known in the West, in the early days, of men who furnished money to laboring men to move sand from one side of a lot to the other to give them employment.

Mr. HENSLEY. Do you regard that as a necessity?

Admiral GRANT. Very philanthropic.

Mr. HENSLEY. A good investment?

Admiral GRANT. Good charity.

Hudson Maxim, in his book, Defenseless America, either an economic fool himself or taking the public for such, says:

The result is that the Nation as a whole is not impoverished in the least by the burden of armaments, but is rather benefited by their support. * * *

The money spent by the Government in building fighting ships could not be esteemed so much money lost, even if the ships were useless. The Government taxes the people for the money to build the ships, and then pays the money back to the people again for the ships. The people get their money all back and the Government gets the ships. The peo-

ple lose nothing, and the Government is the gainer to the value of the ships. The result is that the fighting ships have cost nothing. On the contrary, their production has benefited all. Everybory is made better and richer through the building of them. When we have looked upon our Navy, remembering what the pacifists have told us about its enormous cost, we are strongly impressed with the colossal expenditure, not realizing that the Navy has actually cost nothing. Its production has been a source of profit and benefit to the people.

If Maxim, Grant, and the Army and Navy News be correct, then why not stimulate all the industries of the country by feeding them from the Treasury? When all industries are fed from the Treasury, then pension all individuals and we will all live fat and easy.

The President said in his message of December 7, 1915, "These are the essential first steps." Was he at St. Louis indicating a second step when he said, "I want incomparably the most adequate navy in the world"?

Secretary Daniels said, according to newspaper reports on the naval appropriation bill, that his five-year program was considered by him the minimum that should be provided, not the maximum. The Secretary made a speech at Philadelphia on April 28 before the American Academy of Social and Political Science. He said:

My prediction is that Congress will authorize as many battleships, submarines, and destroyers as public and private yards can construct. We are beginning to take an inventory of every factory in America to see what it can do for preparedness. We must spend billions for munitions.

Take that statement with the President's statement at St. Louis February 3, "The American Navy ought, in my judgment, to be incomparably the most adequate navy in the world," and that ought to "take the wind out of the sails of the critics." Munition manufacturers and naval officers have not asked for more than that. They do not want any building to go abroad. They want it all done in this country and by themselves.

The paid and interested critics do not disturb me. I can not follow the President nor the Secretary nor the naval officers; neither do I have any sympathy nor tolerance for the munition manufacturers' demands that we furnish them a market for their wares when the foreign war closes. What the American people want and all they ought to have of militarism is enough to protect their country. More than that is more than the faces of the people should be ground to maintain; more than that is more power than should be concentrated in the Commander in Chief; more than that is more tax on the resources of the country in money and men than is justified; more than that is an unnecessary development of militarism, the thing that has destroyed every free government that has gone down; more than that is an unnecessary menace to our democratic institutions.

We buried the five-year program. The only reason I have ever heard for it was given in the Raleigh News and Observer:

The plan of Secretary Daniels to increase the Navy for five years has taken the wind out of the sails of the critics who say the Wilson administration is neglecting national defense.

The experts who testified before our committee state that the size of a navy is a relative matter and that no man can tell what the relative size of the navies of the world will be when this war is over. They said that in all human probability the war would close within a year. Secretary Daniels said the conclusion of the war would likely be the best time in the history of the world to bring about a general agreement for disarmament. All were agreed "that was a consummation devoutly to be wished." Admiral Badger said:

No man could tell how soon this war abroad would end; no man could tell what the relative size of our Navy and the other navies of the world would be at the conclusion of it.

That is the statement of Admiral Badger, ex-commander in chief of the Atlantic Fleet and member of the board, and regarded as one of the ablest men in the Navy. He says the five-year program was made up on an order.

Mr. CALLAWAY. This five-year program did not have in contemplation any emergency, did it, Admiral?

Admiral BADGER. No, sir. That program was made according to order, without the General Board having under consideration anything outside, but being a direct order to produce such a program with those limitations.
